The people are beginning to characterize the duty on sugar as a hunger tax. A removal of the tax would be a great blessing to the entire community. As far as the beet industry is concerned, the farmers have received no more for their beets since the tax was reimposed than when sugar was free, in the years 1891, 1892, and 1893.

And it was true at that time.

What Mr. Oxnard says is of little account.

What Mr. William Bayard Cutting attaches his signature to is of account. He states over his own signature that the beet-sugar industry is profitable under conditions of absolutely free trade, and that the United States being an agricultural country the industry has nothing to fear even from the annexation of Cuba.

Mr. Henry T. Oxnard, Mr. President, is perhaps our pioneer beet-sugar man. I think he is the first one who demonstrated successfully the possibilities of sugar-beet culture in this country. He thus testified before a House committee, I think in 1900, upon this subject:

Do the beet-sugar men contemplate a time when they can stand on their own legs and compete with everybody, or do they look all the time for a high-protective tariff to enable them to make sugar at all?

Answer. The sugar beet is being bred up every year so that we are getting more and more sugar all the time out of good sweet beets. Science is being devoted to developing a high-grade beet, and they are gradually getting 1 per cent more and 1 per cent more, and every per cent means more pounds of sugar. Some exceptional beets have been produced containing 25 per cent of sugar to the weight—a quarter of the whole weight was sugar. My hope is that we will breed the beet just as you have bred the trotters from 2.40 down to 2 minutes. We are hoping every day to secure that high standard, and when we have attained it, if that day comes, as I firmly believe it will, we can compete with the whole world.

It is true that this gentleman attempted in 1911 to modify this statement by saying that he had only beet sugar in contemplation, that he did not consider cane sugar, and that the statement is perfectly true as to the former. But "the whole world" included both, and I shall show by some statements of that gentleman, previously made, that he meant at that time precisely what the purport of his words indicates.

We have long since reached the German standard. It was developed before the Hardwick committee that the general yield of beets has reached 14 tons to the acre and the content of sugar has reached 15 per cent. That is equal, if not superior, to the German standard. You will note that in this prediction of Mr. Oxnard he makes no mention of labor cost; he makes no mention of other production costs. The elements he then considered important were increases in tonnage and sugar content. These were his sole determining factors; but when beet production was only 9 or 10 tons per acre, with 10 or 12 per cent

of sugar content, Mr. Oxnard said that the industry would thrive without protection.

This gentleman was then floating bonds or selling stocks, or both, and issued a prospectus in support of his enterprise, and to that I wish to refer for a moment.

This circular was issued by Messrs. Oxnard and Cutting in 1899. It was published in the New York Evening Post of December 12, 1901. It is somewhat lengthy, and I shall not read all of it; but I wish to insert it in the RECORD as a part of my remarks upon this occasion, because it is pertinent and should be, upon this subject, all important.

The circular begins by saying:

In 1889 the possibilities of the beet-sugar industry in the United States recommended themselves to the Messrs. Oxnard and Cutting and determined them to invest in its development. It commended itself to them not only on account of its probable profits and its introduction of a new manufacturing industry of great magnitude, but very largely because it seemed to provide that which the country sorely needed—a new agricultural industry of large possible benefit to the farmer, suffering from overproduction and unprofitable prices for his cereals.

Mr. Oxnard then refers to the various difficulties which he encountered from time to time in his efforts to make this a substantial and paying industry. On page 2 he says:

This is the experience, however, that gives wisdom, and it may be said now in a general way, first, that the world contains to-day, it is believed, no more perfect factories than those owned by the Oxnards and Cuttings.

It thus appears that as early as 1899 the existing factories in this country had no superiors in the world, and therefore could produce beet sugar as cheaply as it could be produced anywhere else.

The circular continues:

Perhaps it may be well to draw attention to one or two features of the industry.

(1) Its product is a staple of universal consumption and of the readiest sale.

(2) The product is a finished article, the sugar being turned out refined and granulated, the manufacturer not being dependent upon the Refiners' Trust for his market.

(3) Competition by home production is so remote as to be scarcely worth consideration. The United States is now compelled to import three-quarters of its consumption, and it would take at least 300 factories of a daily capacity of 300 tons of beets to produce present importation.

He then discusses the future development and permanency of the industry, and of that he says there can be no doubt, for the following reasons:

(1) Of the tropical countries which it is proposed to annex to the United States Porto Rico is too small to cut any figure, and the Philippine Islands have not the necessary elements for the expansion of the sugar business sufficiently rapid to give any concern to those interested in the production of sugar from beets in this country for the next 25 years to come.

(2) The island of Cuba is so situated that its sugar industry can rapidly recover the ground lost during the insurrection, provided that the labor question there can be satisfactorily settled. There is, however, no fear that Cuban production, even under an annexation to the United States, can in our day expand to the point where the United States would become exporters of sugar instead of importers, and hence that protection would no longer protect.

(3) Greater than all of the above assurances of the permanency of the sugar industry in the country is the fact that sugar can be produced cheaper here than it can be in Europe.

The sugar industry is, after all, merely an agricultural one. We can undersell Europe in the production of all other crops, and sugar is no exception. The sugar consumed in the civilized world consists of 3,000,000 tons of cane sugar grown in the Tropics and 5,000,000 tons of beet sugar grown on the Continent of Europe. Therefore, in considering any given sugar enterprise, if it can meet and overcome the competition of sugar on the Continent of Europe, it is perfectly safe to say that it has a permanent future.

(4) In addition to all the above, the main fact is to find out what the conditions would be under free trade in this country. This was tested practically by admitting the raw sugars of the world free to compete with us in the period from 1891 to 1894. During these three years the duty was entirely removed from raw sugars coming from foreign countries, and in place of this duty a bounty of 2 cents per pound was given to the home producers, which was paid out of the National Treasury until the McKinley law of 1890 was repealed, and in its place the Wilson tariff bill was substituted on the 28th day of August, 1894.

The average prices of granulated sugar during the years 1891, 1892, and 1893, taken from Willett & Gray's Journal, which is the recognized authority in the sugar world, are as follows:

	Cents a pound.
1891.....	4.041
1892.....	4.346
1893.....	4.84

The average price of sugar in 1890, before the duty was removed, was 6.17 cents per pound. Taking the lowest year, say, 1891, it is found that sugar sold at an average price during that year of 4 cents per pound. This was under free trade, admitting all the raw sugars of the world to our markets duty free. Therefore, if the lowest price (4 cents) be taken as an average, it will give a guide to go by in the event that we ever again return to absolute free trade. During 1898 the Chino factory—

This was one of Mr. Oxnard's factories—produced 256 pounds of granulated sugar per ton and the Norfolk 250 pounds per ton. In the new factory at Huene—

That is in California—

a production of about 270 pounds, which is the product of 1 ton of beets manufactured into granulated sugar. If we multiply this figure

by four, it gives us \$10 as the net result from a given ton of beets manufactured into granulated sugar at free-trade prices.

There is a seven years' contract in our new factory at Hueneme paying \$4 as an average price for beets. If we add to this the cost of manufacturing these beets into sugar, we will find that \$3 would cover every expense. Our figures, based on averages in our factories located in California and Nebraska, show that \$2.50 per ton covers the actual expenses of manufacturing sugar, and in the new factory which is three times as large as the Chino factory, we expect to reduce the cost below \$2, but, for the sake of conservatism, we will place the figures at \$3.

Then follows this table:

	Per ton.
Beets	\$4
Expense of working beets into sugar	3
Total	7
Amount realized from the sale of the product at 4 cents per pound	10
Net profit per ton	3

The factories are capable of manufacturing at least 350,000 tons of beets into sugar per annum; 350,000 multiplied by \$3 would give \$1,050,000 (this at 4 cents a pound, at 3 cents per pound, 25 per cent less, \$789,000), as the income to be derived under absolute free trade, should the price of sugar be at the lowest price prevailing during the years when all duty was removed from raw sugar.

The annexation of the Hawaiian Islands, if anything, is more advantageous to the home producers than the treaty conditions of free sugar produced by contract coolie labor. Now they must manufacture sugar under the labor and tariff laws of the United States, instead of the coolie-labor system. It is a fact that the total consumption of sugar in the United States doubles every 15 years. The consumption in 1882 was 1,061,220 tons, whereas in 1897 the consumption was 2,096,263 tons. Total production to-day in the United States, including the Hawaiian Islands, is only 400,000. The annual increase in consumption is about 300,000 tons, which is the average production of cane and beet sugar in the United States proper to-day.

I am not reading consecutively from the circular.

From the above it will be seen that there is absolutely no fear of competition from internal sources for the next quarter of a century at least.

Mr. President, the conclusion is as confidently stated and as optimistically expressed in this circular of 1899 as to the ability of this industry to sustain itself under all conditions as the predictions of coming disaster are now gloomy and despondent.

I have an editorial from the New York Evening Post of December 12, 1901, relating to this circular, which I ask leave to print.

The PRESIDING OFFICER. Without objection it will be so ordered.

The matter referred to is as follows:

[New York Evening Post, December 12, 1901.]

THE BEET-SUGAR INDUSTRY.

The Evening Post bids the heartiest welcome to every American industry that can stand on its own bottom and make its way without leaning on the poor rates. Among these self-supporting industries, we are glad to know, is the production of beet sugar. At all events, it was such two years ago. We publish elsewhere a letter written in 1899 and signed by Mr. Oxnard and Mr. Cutting, the chiefs of the industry on the eastern side of the Rocky Mountains, showing that this was the happy condition of the trade at that time. If parties masquerading as beet-sugar producers are besieging the President and Congress at this moment and pretending that they will be ruined if Cuban sugar is admitted for six months at half the present rate of duty, their false pretenses ought to be exposed.

The letter of Messrs. Oxnard and Cutting was probably written for the purpose of inducing the farmers of the Mississippi Valley to go more largely into the cultivation of beets for the sugar factories. This was a laudable motive for telling the truth and showing the large profits which awaited both the beet grower and the manufacturer, if the industry were perseveringly and intelligently prosecuted. To this end it was pointed out that farmers could clear \$65 per acre by cultivating beets, and might even make \$100. But in order to assure the cultivator that he would not be exposed to reverses by possible changes in the tariff, they proceeded to show that the industry stood in no need of protection.

The beet-sugar industry, these gentlemen say, "stands on as firm a basis as any industry in the country." They point out the fact—a very important one—that their product comes out as a finished article, refined and granulated. It is not, like cane sugar grown in the West India Islands, a black offensive paste, which must be carried into wagons to the seaboard and thence by ships to the United States where, after another handling, it is put through a costly refinery and then shipped by rail to the consumer, who may possibly be in Nebraska, alongside of a beet-sugar factory which turns out the refined and granulated article at one fell swoop. Indeed, the advantages of the producer of beet sugar for supplying the domestic consumption are very great. We have no doubt that Messrs. Oxnard and Cutting are within bounds when they say that "sugar can be produced here cheaper than it can be in Europe." The reasons of this are that:

"The sugar industry is, after all, merely an agricultural one. We can undersell Europe in all other crops, and sugar is no exception."

It follows naturally as the making of flour from wheat. If we can produce wheat cheaper than Europe, then naturally we can produce flour cheaper, as we do.

But the writers of the letter do not depend upon a priori reasoning to prove that they can make sugar at a profit without tariff protection. They point to the fact that under the McKinley tariff of 1890, when sugar was free of duty, the price of the article was 4 cents per pound. Yet a net profit of \$3 per ton was made by the beet-sugar factories under those conditions, not counting any bounty on the home production of sugar. They boast that they made this profit while working under absolute free trade, and they have a right to be proud of this result of their skill and industry. Many beet-sugar factories had been started in by-gone years—back in the sixties and seventies of the nineteenth century—and had failed, because the projectors did not understand the business. Since then great progress has been made

both here and abroad in the cultivation and manipulation of the beet; what was impossible 30 years ago is now entirely feasible. The industry is already on a solid and enduring basis. There are factories in the United States, these gentlemen tell us in their letter, capable of using 350,000 tons of beets per annum at a profit of \$3 per ton, and this would make a profit of \$1,050,000 as the income to be earned under absolute free trade.

It must be plain to readers of this letter, signed by the captains of the beet-sugar industry, that the people in Washington who are declaiming against the temporary measure which the President of the United States urges for the relief of the Cuban people are either grossly ignorant of the subject or are practicing gross deception. The tenable ground for them is to say: "Other people are having protection that they do not need, and therefore we ought to have more than we need." This would be consistent with the letter of Messrs. Cutting and Oxnard, but nothing else is so.

Mr. THOMAS. In this connection I desire, for the purpose of showing the profits of this industry, upon a basis of 4 cents per pound for sugar, to refer to another letter of Mr. Chester S. Morey, written on the 19th day of March, 1910, and printed in the testimony of the Government in the pending case:

MY DEAR Mr. THOMAS: Inclosed herewith I hand you copy of the financial exhibit and income statement. This is the form in which we expect to publish these statements, and they will also be used when we make application to list our stock on the New York Exchange.

You will notice that this year, in addition to the regular 2½ per cent depreciation which we have been deducting for the last three years, we have set up \$1,000,000 in depreciation reserve. I do not want this year's earnings to appear as large as they would if we had not made this entry. Of course this can be changed if the board of directors does not approve of it.

You will note that our total surplus is shown by these statements as a little over \$5,000,000. This does not include any surplus from the Billings Co., the Great Western Railway Co., and other corporations, which really add nearly \$2,000,000.

Our sugar is invoiced at 4 cents—

Not the market price—

and judging from present market indications there is at least \$1,000,000 profit that will show up in next year's business. The value of our real estate and railroads over and above the amount at which they are carried is at least \$5,000,000, so that the actual surplus is nearer \$9,000,000 than \$5,000,000.

Am pleased to say that at some of our factories the farmers are signing up acreage and feel more encouraged than I did a week ago.

This company at that time was barely five years old. Its capitalization I shall refer to later on. At the end of five years, and after constantly paying dividends upon its preferred stock, it was obliged to resort to the extraordinary alternative of charging off \$1,000,000 to an account called "depreciation reserve," in order to conceal the enormous profits that it had derived from the manufacture of beet sugar.

To my mind there can be no other conclusion than the one at which I long ago arrived, that however desirable a tariff on sugar may be for revenue purposes, however its removal may affect the sugar industry of Louisiana, the beet-sugar industry of the United States needs no protection; but it can and will survive and prosper, and I trust will be compelled to recognize the all-important fact that its actual and not its manufactured capital should be the basis of its charges as well as of its profits, whatever may be the final verdict of the people upon the tariff.

Let me at this juncture refer to the matter of overcapitalization.

The cost of beet-sugar mills was formerly placed by manufacturers of sugar-mill machinery and by the sugar men at \$1,000 per ton of slicing capacity. There was no question about it 10 or 15 years ago. That figure then seemed to be sufficiently large, notwithstanding the fact that most of the machinery then employed in the industry was imported from Germany. Our manufacturers at that time had not reached the point in production where they were able to supply the demand for such machinery. A thousand dollars per ton of slicing capacity, therefore, seemed then to be ample. But since then other sugar men have estimated the cost of sugar factories at \$1,250 to \$1,500 per ton of slicing capacity. I refer again to Mr. Blakey on this subject. At page 46, he says:

The capitalization per ton of daily slicing capacity in 1889—

He is referring now to the capitalization of the mills then in existence—

was \$1,097; in 1904, \$1,502; and in 1909, \$2,458. The additions of machinery for extraction of sugar from the molasses by the osmose and Steffens processes, for drying pulp and numerous other improvements account for a part of the increase, but most of it in both periods, as regards capitalization per ton capacity, is probably fictitious.

Sugar machinery was much more expensive and much less efficient in 1889 than in 1912, yet the capitalization based upon it has increased nearly 125 per cent.

Let us see what that capitalization amounts to. In January, 1913, the total number of beet-sugar factories in operation was 76. Their total daily slicing capacity was 63,550 tons. This represents an investment of capital, at \$1,000 per ton, of \$63,500,000; at \$1,250 per ton, \$79,437,500; at \$1,500 per ton, \$95,325,000. The total capitalization was \$141,410,000. The differ-

ence between the actual cost and the issue of capital of these companies, at \$1,000 a ton, is \$77,860,000; at \$1,250 a ton the difference is \$61,972,500; at \$1,500 per ton the difference is \$46,085,000.

In other words, taking the highest estimate of cost per ton of slicing capacity as the basis, the fictitious capital injected into this business, to pay dividends upon which the American people are taxed for a prime necessity of life, is \$46,085,000. But if we take the actual cost of plant, as heretofore universally conceded, this extra capitalization amounts to \$77,860,000. Now, let us take some typical company and see how these conditions have been applied to it.

The American Beet Sugar Co. is Mr. Oxnard's concern. This is capitalized at \$5,000,000 preferred and \$15,000,000 common or watered. His excuse for issuing \$20,000,000 of capital upon \$5,000,000 of investment, and probably less, is that his bankers required him to do so as a condition of financing the concern. His testimony appears in the lobby investigation, page 1234, which I will refer to for a moment in this connection:

Mr. OXNARD. Just let me say that the American Beet Sugar Co. was organized in 1898, and issued \$5,000,000 preferred and \$15,000,000 of common stock. Now, the \$5,000,000 of preferred stock represented the investment and the \$15,000,000 represented water.

Senator REED. That is what I wanted to get at.

Mr. OXNARD. I thought you would find that I could answer it if you would let me answer it that way.

Senator REED. What dividend did the preferred stock represent?

Mr. OXNARD. Six per cent.

Senator REED. And has that always been paid?

Mr. OXNARD. Always. Now, I think, in justice to myself—

Senator REED. Who holds that preferred stock, or held it originally?

Mr. OXNARD. It is held by Tom, Dick, and Harry, scattered.

Senator REED. When it was first issued was it not issued to you gentlemen who were putting up this money?

Mr. OXNARD. No; it was issued to the bankers who formed this corporation.

It was issued to Kuhn, Loeb & Co. and Spencer, Trask & Co., who organized this American Beet Sugar Co.

Senator REED. They got all the preferred stock originally?

Mr. OXNARD. They got the preferred stock; yes.

Senator REED. And they put up \$5,000,000?

Mr. OXNARD. I want to be more accurate, because, now you speak of it, I forgot something. We only had \$4,000,000 of that preferred stock issued and left \$1,000,000 in the treasury, and that \$1,000,000 came out later on. That \$1,000,000 is all in now.

Senator REED. Kuhn, Loeb & Co. advanced this money?

Mr. OXNARD. Yes.

Senator REED. And you turned over to them the preferred stock?

You authorized \$5,000,000 of preferred stock, but actually issued \$4,000,000 and turned that over to them?

Mr. OXNARD. Yes.

Senator REED. How much of the common stock did you turn over to them at the same time as a bonus?

Mr. OXNARD. As nearly as I remember, we turned over about \$5,000,000 to the bankers.

Senator REED. The bankers put up every dollar that went into the thing?

Mr. OXNARD. Yes.

Senator REED. They got the face of their advancement in preferred stock, and then they got a \$5,000,000 bonus in common stock?

Mr. OXNARD. Yes.

Senator REED. And you have since issued \$1,000,000 more of the preferred stock; and when that stock was issued, was it taken by Kuhn, Loeb & Co.?

Mr. OXNARD. I think that was taken by Spencer, Trask & Co.

Senator REED. Another banking concern?

Mr. OXNARD. Yes.

Senator REED. How much common stock did you give them?

Mr. OXNARD. We did not give them any of it, because the company had been firmly established as a going financial concern, and they did not ask for any common stock.

Senator REED. Who was it, then, that got the remainder of this \$15,000,000 of common stock?

Mr. OXNARD. The \$10,000,000 of common stock went to W. Fulton Cutting, R. Bayard Cutting, and Henry T. Oxnard.

Senator REED. What for?

Mr. OXNARD. For the plants that we turned over.

Senator REED. But the money had been paid for those plants, had it not?

Mr. OXNARD. Yes; but there was good will.

Senator REED. Ah! How much good will?

Mr. OXNARD. I said that was all water to begin with—\$15,000,000.

Senator REED. You had \$10,000,000, then, that you divided up of the common stock among the various promoters of this plant?

Mr. OXNARD. Yes.

Senator REED. That is the truth about it?

Mr. OXNARD. Yes.

Senator REED. That is the present plan of the capitalization of the American Beet Sugar Co., is it not?

Mr. OXNARD. Yes; it has not varied a bit; but I want to make an explanation after you get through.

I now turn to page 1239:

Senator REED. So that as a matter of fact it stands this way, and we will not figure it out now. We can all figure it out afterwards.

Originally, in what year was it that you put in the \$4,000,000?

Mr. OXNARD. In 1898.

Senator REED. In 1898 you put in \$4,000,000?

Mr. OXNARD. Yes.

Senator REED. And that is all you did put in of original capital?

Mr. OXNARD. That is all.

Senator REED. Until 1908, and then you added an additional million?

Mr. OXNARD. That is right.

Senator REED. And now you have your factories and your increased value of the factories of \$3,500,000 and you have taken down these various dividends and have this surplus?

Mr. OXNARD. That is right.

Senator REED. We will figure that out afterwards.

Mr. OXNARD. Yes; but that would not show more than 12 or 13 per cent on the total investment, would it?

Senator WALSH. A little better than 15 per cent.

Mr. OXNARD. About 12 or 13 per cent.

Senator REED. It shows that you got your money back twice and still have your money.

Mr. OXNARD. Yes; but I am going to show you some figures—

Senator NELSON. You have not figured in that what you got out of the common stock that you sold?

Mr. OXNARD. Well, let me see. Suppose we sold it at 25, then; \$4,000,000 at 25 would make a million dollars.

Senator REED. You did not, as a matter of fact, sell as much of that stock as low as 25?

Mr. OXNARD. An awful lot of it.

Senator REED. Has not the common stock run up in these factories so that it has been above 50?

Mr. OXNARD. It has been to 77, but it is down now to 22 or 23.

Senator REED. Which is about 22 or 23 times what it originally cost.

Senator NELSON. Do you not think that you could have paid the farmers a great deal more for their beets if you had not juggled with this common stock?

Mr. OXNARD. No; I do not think that had anything to do with it, Senator.

Senator CUMMINS. You say the common stock has been on the market as high as 77 per cent?

Mr. OXNARD. Yes.

Senator CUMMINS. Will you give us an idea of why people believed this stock was worth 77 per cent? Was it because they believed that these companies could earn money to pay dividends upon the entire \$15,000,000?

Mr. OXNARD. Yes, Senator; that was the reason.

I now turn to pages 1243 and 1244:

Senator NELSON. Do you not think it was wicked to unload that kind of a stock on the public and you and the other men pocket the money from it?

Mr. OXNARD. I think this, Senator, that it was entirely overcapitalized—too high.

Senator NELSON. Do you not think that was a great moral wrong?

Mr. OXNARD. Well—

Senator NELSON. Or have you no compunctions about it?

Mr. OXNARD. You know Wall Street's conscience. I thought it was overcapitalized. I am not going to justify that procedure—that part of it.

Senator NELSON. If you had not overcapitalized as you did, could you not have paid the farmer more for his beets?

Mr. OXNARD. I do not think that had anything to do with it.

Senator WALSH. Of course, you got the very best price that you could get for your stock that did sell?

Mr. OXNARD. Yes.

Senator WALSH. You had not any compunctions about taking anything you could get for it?

Mr. OXNARD. No, sir; not the slightest.

It appears, then, from the testimony of the president of this company that upon an actual investment of \$4,000,000, placing it liberally, a company was organized by him called the American Beet Sugar Co. and capitalized at more than four times the amount of the money actually invested; that the preferred stock, representing the actual capital invested, was sold at par, the proceeds of which were paid to him and his associates; and that, in addition, they retained \$10,000,000 of water, the remainder going to the bankers, which, through the alchemy of modern financial jugglery, was sold, as he himself declares, without any compunction, at from \$25 to \$30 and \$35 per share and the proceeds pocketed by himself and associates; for he tells us that he and his family now own less than 1 per cent of the stock of this concern. And, notwithstanding what he said in 1899, this gentleman has created a corporation capitalized in millions whose value was probably based upon an estimate of probable earnings and profits, and now seriously demands that the American people must continue to be taxed upon a necessity of life in order that his own and similar combinations may flourish and wax fat. I can conceive of no more monstrous outrage upon business morality and fair dealing, an outrage which lays upon the American people who consume this product a burden four times in excess of what that burden should be.

Let us take the Great Western. That was originally capitalized at \$10,000,000 preferred and \$10,000,000 common, and the shareholders of constituent or absorbed companies, chief among whom was the Sugar Trust, came in upon a basis of two shares for one. It was afterwards increased to \$15,000,000 preferred and \$15,000,000 common. The capitalization of some of the local or constituent companies entering into the combination was arbitrarily increased before joining the merger, the Windsor Co. from \$650,000 to \$750,000, the Fort Collins Co. from \$1,000,000 to \$1,250,000. (See Hardwick hearings, p. 2959.)

It was done because of the contemplated merger, to the end that the new shares might participate in this huge enterprise at two shares for one, wringing further and greater profit from the American people on a necessity of life, supported by the protective policy of a great Government.

The proceedings of the American Sugar Refining Co. which preceded and accompanied the organization of this company were revealed to the Hardwick committee. All the details were arranged in advance. Mr. Havemeyer had gone so far as to name his directors or at least to suggest them. The little com-

panies had all been gathered in. The ship was about to be launched and here is the story of the launching:

Meeting of the board of directors of the American Sugar Refining Co.—

This company, which now is said to be very desirous of destroying its own offspring and depriving itself of the value of one of its greatest investments—

held at 117 Wall Street, New York, on Wednesday, January 11, 1905, at 2 o'clock p. m.

Mr. Havemeyer stated that as the board desired to discuss the proposed Great Western Sugar Co. of New Jersey, and as he was personally largely interested in the Agricultural Investment Co. of New Jersey and the several Colorado sugar companies whose property the Great Western Sugar Co. of New Jersey intended to acquire, he would not take part in the discussion and that he would withdraw from the meeting.

Modest and conscientious Mr. Havemeyer! He had a personal interest in what was about to be accomplished. He had arranged all the details, he had provided that every dollar he placed in this enterprise would come back to him with another dollar added. But the proprieties required that he should not immediately take part in the actual consummation of the arrangement, and he therefore withdrew from the meeting.

After Mr. Havemeyer had left the room Mr. Donner reported that the incorporation of the proposed Great Western Sugar Co. of New Jersey was in progress, it having been determined that the capital shall be \$20,000,000, one half preferred and one half common stock; he reported further that all of the stockholders of the Great Western Sugar Co., the Fort Collins (Colo.) Sugar Co., the Longmont Sugar Co., the Eaton Sugar Co., the Greeley Sugar Co., and the Windsor Sugar Co. were willing to sell their stock or to join in proceedings for the sale of the properties of their companies to the new company at the rate of 200 per cent for their stock, payable by the new company in its stock, one share of preferred and one share of common of the new company for each share of the stock of the former companies. It was thereupon, on motion,

Resolved, That the company will sell its stock in the said companies on the same terms; that the board directs Messrs. Donner and Helke to make the sale, and that Mr. Donner be, and hereby is, authorized to represent and act for the company in respect of all matters necessary to consummate the transaction; and

Resolved further, That the company consents and requests that all persons, including any officer or officers of this company interested in the Agricultural Investment Co. of New Jersey, sell at the same rate, payable in the stock of the Great Western Sugar Co. of New Jersey, as above.

This quotation is from the Hardwick hearings, page 2962. I come now to the—

Regular monthly meeting of the board of directors of the American Sugar Refining Co., held at 117 Wall Street New York, on Tuesday, December 12, 1905. The president stated that the Great Western Sugar Co. would issue after January 1, 1906, \$1,000,000 of its preferred stock and would offer it to its stockholders at par for cash; and on motion it was resolved that this company take all of the stock to which the other stockholders of the Great Western Sugar Co. will not subscribe. (Hardwick hearings, 2963-2964.)

Regular monthly meeting of the board of directors of the American Sugar Refining Co., held at 117 Wall Street, New York, on Tuesday, January 9, 1906.

The parties representing the company's interest in the Great Western Sugar Co. were authorized to assent to an increase of the Great Western Co.'s capital from \$20,000,000 to \$30,000,000, one-half to be preferred, the other half common stock. (Hardwick hearings, p. 2964.)

Now, Mr. President, before these constituent companies came into the combination their profits were divided among its framers; some of them a smaller undivided profit than others, one having as much as \$53.50 per share. These were the melons cut by Mr. Havemeyer and Mr. Morey and their associates prior to turning over the contracts, mills, factories, and the business to this doubly watered combination and received their doubly augmented proportions of the stock. In other words, they stripped the treasures of the constituent companies of their funds, transferred them to their pockets as stockholders, and then obtained two shares of the stock of the new company for every share of the old companies which they possessed. Before then another company was organized, called the Sterling Sugar Co., and on the 28th of February, 1905, at a—

Meeting of the executive committee, held at 117 Wall Street, New York, on Tuesday, February 28, 1905, it was resolved that the company's subscription—

That is, the American company's subscription—

to the Sterling Sugar Co. of Colorado be canceled, and that the company, so far as its interest is concerned, consents to the sale of the machinery and equipment of the Saginaw factory to the Sterling Sugar Co. for \$300,000, and consents also to a contract between the Sterling Sugar Co. and the Great Western Sugar Co. for the erection of a factory by the Sterling Sugar Co. to use the machinery and equipment of the Saginaw factory, and to provide such other machinery as will provide and equip a factory at Sterling capable of cutting 600 tons of beets daily, and for the purchase of the same by the Great Western Sugar Co. at \$1,500,000, payable half in preferred and half in common stock of that company. If the Great Western Co. desires to use the Steffens process an additional price to be agreed upon. (Hardwick Hearings, p. 3036.)

Now, the American company's interest in the Sterling Co.'s plant was \$300,000, which doubtless represented all its machinery. Its slicing capacity was 600 tons per day, or the equivalent of the original investment of \$600,000. That was

thrown into the combination at \$1,500,000, or two and a half times the amount of money actually invested.

The largest item of profit these mendicants for governmental favor acquired is that which they realized from stock inflation. And that is true of nearly every one, I think. It is absolutely true of every corporation in which the American company has an interest.

The first cost, then, more than comes back to the builders through this overcapitalization. It is perhaps as well to state here as any other place in this discussion that every dollar placed by the investors in the constituent companies of this great concern that was affiliated with the American Sugar Refining Co. has come back to them, either in the shape of dividends or of fictitious capitalization, or both, and in some instances it has come back more than once, notwithstanding which these poor gentlemen insist that they should receive the further benignant protection of the Government by a tariff duty which will enable them to enjoy an indefinite harvest of dividends upon their manufactured capital by increasing the cost of a necessity of life to the consumers of the Nation.

And, too, there are profits on real estate, which are incidental to some of the sugar companies and to some of them their principal sources of revenue. Some of them, Mr. President, are called sugar and land companies. I have here a document called "Sugar at a Second Glance," upon page 41 of which appears some letters which are also brought out in these investigations, and which relate to one of these land and sugar enterprises, the stock in which has been issued upon the basis of land holdings and dividends have been paid through the sale of land which has risen in value, and which had as much to do, perhaps, if not more, with the organization of some of them than the industry itself.

At the home of my friend, the Senator from Kansas [Mr. THOMPSON], there is an institution called the United States Sugar & Land Co., capitalized for \$8,000,000. It represents an investment of \$900,000, and the promoters have been able, upon the strength of their enterprise and credit of the men behind it, to make sale of an enormous volume of their fictitious capital at prices more than enough to entirely reimburse them, and at the same time give them much of the capital essential for the construction of the factory. I read from a letter dated June 27, 1906. I will first read one of June 8, 1906, to Mr. Havemeyer from Mr. Morey:

THE GREAT WESTERN SUGAR CO.,
Denver, Colo., June 8, 1906.

MR. H. O. HAVEMEYER, New York.

DEAR SIR: The inclosed letter from Mr. Boettcher explains itself. Would like to know if you see any way to check this kind of competition. I sometimes think it is a mistake not listing our stock and offering it for sale; if people want to buy common stock we ought to give them a chance to come in—

That is very good advice—

This is simply a suggestion. We are doing everything we can to discourage the building of any more factories until the matter of tariff legislation is more settled than it is at present. We are using that as a basis of argument against the building of any more factories.

Promoters like the Garden City and the Sheridan people are claiming that trusts have made great profits out of the business and in that way selling their stock.

Respectfully, yours,

C. S. MOREY.

The letter which he inclosed of date June 27, 1906, follows:

THE GREAT WESTERN SUGAR CO.,
Denver, Colo., June 27, 1906.

MY DEAR MR. MOREY: I had an interview to-day with the Colorado Springs people in reference to their contemplated factory to be built at Sheridan, Wyo.

Sheridan is situated on the Burlington route, a distance of 140 miles from Billings. If this factory is built, of course they will come in direct competition with our local points of the Billings factory. I was in hopes that I would be able to have these Colorado Springs people take an interest in our Billings factory and keep them from building this contemplated plant, but I fear I will not be able to do anything with them, as they tell me they have sold their common stock of the Garden City plant, which they are now building, at \$50 per share and upward. They frankly admit that this common stock is all water and does not represent anything; that is the way they are making their money. They feel they can do the same thing in Sheridan and claim they have a ready sale for their common stock. Most of their stock is sold. They also expect to make a large profit on land they have purchased, and expect to build a number of ditches and sell out the land at a large profit.

There is nothing I can say to them that would be attractive enough for them to discontinue their building the Sheridan factory, and I fear they will build a plant to be ready for the crop of 1907. The promoters of the scheme put in very little money of their own, as they seem to have the faculty of having their people put up the money, and they are getting the benefit of the common stock for themselves.

I will not read all the letter. It is signed Charles Boettcher. There is in my State, at Sugar City, a company known as the National Sugar Co. It is the offspring of what was originally a land enterprise. It obtains its supply of water from Twin Lakes in the mountains; this is diverted into the natural channel of the Arkansas River and applied to land distant, if

we follow the meanderings of the stream, something over 150 miles. During the hearings before the House committee last winter Mr. Carey, the president of that concern, appeared in protest against the reduction of tariff duties on sugar, and called attention to the magnificent enterprise which he had builded there upon the faith of the law and in reliance upon the assumption that it would be continued for his protection, and stated that but for this enterprise the land surrounding that prosperous little town would not have been reclaimed, but would have remained a part of the desert, and that it would relapse into its original condition with the repeal of the sugar duty. Against such an act of vandalism he earnestly protested. It was a most pathetic appeal and came apparently from the depths of Mr. Carey's heart, and to those who knew nothing of the facts I have no doubt it proved most effective.

But the fact is, Mr. President, that the sugar enterprise of this land company was merely an annex to its general land scheme organized and operative long before the thought of sugar had entered the minds of the excellent gentlemen who organized it.

Mr. Carey referred to the values which the land around Sugar City had acquired in consequence of the institution of this splendid enterprise there and also predicted that these values would disappear if sugar went upon the free list. Yet within a very short time after his appeal to the committee was made the annual meeting of the shareholders of the National Sugar Manufacturing Co. was held at Sugar City, at which Mr. Carey made this announcement concerning the lands of his company:

I am authorized by the board of directors to announce that we will not sell an acre of our cultivated land at any price, and the price of our sod land after June 1, 1913, will be \$200 an acre, and we will only sell a small part of our sod land to desirable farmers even at that price. In my opinion, the prices at which lands are selling in this locality are absurdly low and our company has no more land to sell at such prices. Alfalfa land, with its three water rights, is worth \$250 an acre in our neighborhood, and we have proved that intelligent farming can make a handsome profit with land at that figure. But, however that may be, our company has no more \$150 an acre land for sale. We can use it ourselves to better advantage, and will proceed to do so by putting it into cultivation. (Bent County Democrat.)

This is the last utterance of the gentleman whose swan song was sung before the House committee last January, the pathetic wailings of which must have penetrated the most hardened and sordid soul who heard them. I know of no better illustration than this of appeals designed to influence the party in control of this country in its proposed work of revenue reformation by picturing disastrous and overwhelming consequences to established industries and prosperous communities.

When such appeals are followed by announcements like this it is not too much to say that the committee was imposed upon, that the condition of the industry was misrepresented, and that they were addressed only to be deceived and misled.

We now come to the Michigan Sugar Co., another of Mr. Havemeyer's organizations. It has a daily slicing capacity of 5,450 tons. Its actual cost, therefore, was about \$5,500,000, but it is capitalized at \$12,500,000, or \$7,000,000 of water. The company's last balance sheet gives "good will" as the consideration for \$5,000,000 of this water. This good-will item was valued at \$500,000 on all preceding annual statements. That sum has now been multiplied by 10, and the result represents that indistinct and shadowy thing called "good will." It represents nothing, Mr. President, except the power of monopoly to place prices upon commodities sufficiently great to assure the payment of dividends upon so much additional stock.

In 1910 this company showed a surplus of \$3,025,000 after paying dividends on both common and preferred. That figure is equal to 12.2 per cent upon \$12,500,000, and is the equivalent of 60½ per cent upon the capital actually invested. Its dividends, if my notes are correct, have been 7 per cent on the common and 6 per cent on the preferred stock.

In addition to this the company paid a stock dividend some time ago of 35 per cent to its holders, while the Union Sugar Co., of California, in 1910, paid a dividend of 100 per cent upon its capitalization. The statement was made here some days ago that this money was realized from the sale of its lands and not from the manufacture of beet sugar. But, Mr. President, it makes no difference what the source of the income is, the fact remains that if a company receives 100 per cent upon its capital stock its property has been paid for absolutely and stands as an asset, against which there should be no charge whatever.

The American Beet Sugar Co., with its preferred stock of \$5,000,000 and its common of \$15,000,000, according to the Beet Sugar Journal of April, 1911, made a high record of profit. I shall not read this, but ask to include what is here stated in my remarks.

The PRESIDING OFFICER (Mr. PITTMAN in the chair). The matter referred to by the Senator from Colorado may be inserted in the absence of objection. The Chair hears none.

The statement referred to is as follows:

AMERICAN BEET SUGAR CO. SETS NEW HIGH RECORD.

The report of the American Sugar Co. for the year ended March 31, 1911, shows total income of \$8,357,012, an increase of \$1,347,368 over the previous year, and a surplus, after preferred-stock dividends, of \$1,643,659, equal to 10.95 per cent earned on the \$15,000,000 of common stock, compared with \$1,097,252, or 7.31 per cent, earned in the previous year. The common stock has not yet paid any dividends. The preferred pays 6 per cent. Comparative results for the past three years follow.

Then are given the figures for 1911, 1910, and 1909. For 1909 the gross receipts were \$7,135,326; total income, \$7,156,855; expenses, interest, tax, etc., \$5,863,713; balance, \$1,293,143. Well, now, we will take 1910: Gross receipts, \$6,983,772; total income, \$7,009,644; expenses, tax, interest, etc., \$5,612,391; balance, \$1,397,252. For 1911: Gross receipts, \$8,344,792; total income, \$8,357,012; expenses, interest, tax, etc., \$6,413,353; balance, \$1,943,659. Preferred dividends, \$300,000 in each of the years 1911 and 1910 and \$245,400 in the year 1909, leaving a surplus of \$1,643,659 in the year 1911, \$1,097,252 in the year 1910, and \$1,047,743 in the year 1909. The general balance sheet as of March 31 shows total assets of \$22,577,371.

The reserve for working capital is \$1,825,637, against \$832,151 a year ago, and there is a reserve for betterments and improvements of \$377,246, a new item. Bills payable to the amount of \$1,266,000, which appeared in the previous balance sheet, have been paid off. H. R. Duval, president, says: "The surplus has been applied to working capital, which is now adequate for ordinary operations. The company is now free of all debt. There was an increased production of 196,741 bags, exceeding that of any former year. The increase was principally due to California, though Grand Island increased 31,704 bags. In Colorado the decrease was 88,624 bags. Due largely to increased efficiency of the plants, the cost of making sugar, as compared with previous campaigns, was somewhat diminished. Taxes increased \$30,989, of which \$25,560 was the Federal corporation income tax. Depreciation and maintenance cost, \$344,842, was \$13,119 less than last year." The design of this expenditure (included in the above statement in expenses) is to keep the plants up to their original condition.

Mr. THOMAS. I next invite your attention to a statement in the American Sugar Industry of March, 1912, in reference to the profits of this same company—the American Beet Sugar Co.—for the year ending March 30, 1912:

The net earnings of the American Beet Sugar Co. for the fiscal year ending March 31, 1912, will probably not exceed 12 per cent, instead of the 15 per cent estimated last December. The reason assigned for this is that the company began to sell its 1911 crop too early. Sales were made in advance of production in order to take advantage of what seemed a very flattering profit. Sugar prices advanced, and it is estimated the difference to the company amounted to between \$300,000 and \$500,000. The company then went to the other extreme and held back the remainder of the 1911 crop on a declining market.

On the 4th day of September of last year and during the progress of the campaign, the Denver Times published, and evidently with authority, this announcement:

The American Beet Sugar Co. is expected to earn \$2,600,000 net profit this year after paying all operating expenses, interest on bonds, and fixed charges of all kinds as a result of its big crop in southern Colorado and California. The company operates three plants in this State, and is getting ready to begin the cutting of the 1912 crop.

Last year and the year before the plants in this State were not operated to full capacity. This year there will be sufficient beets to keep them running for the full season of 100 days.

The company is reported to be much encouraged concerning the future, since Congress has adjourned without enacting any new sugar laws. The directors are considering the advisability of erecting a million-dollar plant at Durango, and the outlook for that project is understood to be favorable.

The fiscal year of the company ended April 1, 1912, and for the past year it earned, net, \$2,025,573, or 13½ per cent on its \$15,000,000 common stock, in addition to 6 per cent on its \$5,000,000 preferred stock.

Now, that sum is 40.1 per cent on \$5,000,000; with dividends paid it is 46 per cent on its \$5,000,000 actually invested, and this takes no account of its charge of \$751,000, or 15 per cent of the capital actually invested, to depreciation.

These companies are making so much money, Mr. President, that they find it necessary to hide the fact from the public. Therefore they charge huge sums to depreciations and create artificial accounts that apparently represent sums which offset loss due to the ravages of time and nature, sums which in themselves are enormous when compared with the amount of the capital invested. The accuracy of the Denver Times article was never challenged as to the amount of profits estimated upon the crop of 1912, yet on January 3 following the press dispatches informed the country that—

The directors of the American Beet Sugar Co. decided to-day not to declare the usual dividend on the common stock. They issued this statement:

"Resolved, That in view of the large stock of manufactured sugar on hand and sold no action be taken on payment of the dividend on the common stock at present."

The common stock was placed on a dividend-stock basis in 1911. Announcement of the action of the directors was followed by heavy selling of the common stock on the exchange, which broke violently from 47½ to 43½.

That dividend was suspended merely to affect the market. The company unquestionably had these profits to divide, but because of the threat of tariff legislation the dividend was withheld and a false reason given, to wit, the presence of a large

stock of manufactured sugar. The stock fell. Of course it fell; it was bound to fall under the circumstances, and it was intended that it should fall, that public opinion might be affected, the action of Congress controlled, the tariff maintained, and the power of the company to plunder extended.

Mr. President, the assessed valuation for purposes of taxation of the plants of these companies is in striking contrast with the valuation placed upon them when capitalized and also when the large sums invested are prominently brought to the attention of congressional committees. The American Beet Sugar Co. has three plants in Colorado and they were assessed last year for local taxation. Its plant at Lamar has a slicing capacity of 400 tons and an assessable value of \$100,000; its plant at Las Animas has a slicing capacity of 800 tons and is assessed for taxation at \$234,000; its plant at Rocky Ford has a slicing capacity of 1,000 tons and is assessed for taxation at \$331,000; its land, live stock, and so forth, are assessed for \$191,000, or a total of \$856,000.

The total slicing capacity of all the company's mills is 5,300 tons. Its three plants in Colorado have an aggregate slicing capacity of 2,200 tons. Its total capitalization of \$20,000,000, therefore, makes the capital value of the plants in Colorado \$8,301,887, of which its assessed valuation for taxation is barely 10 per cent.

In this good work of tax dodging, of fixing valuations at a minimum, when the burdens of the Government are to be carried, the American company has a very healthy and successful rival in the Great Western Co., of northern Colorado, which in 1910 had a surplus of \$9,000,000, being at the rate of \$1,500,000 a year for the five years of its existence, and which, at a similar rate of increase, had a surplus last year, exclusive of dividends, of not less than \$12,000,000. This is 40 per cent of \$30,000,000; it is 80 per cent of \$15,000,000; and it is more than 100 per cent of the actual investment. But this surplus pays not a cent of taxes into the treasury of the State of Colorado, nor does that of the American company. They escape taxation altogether, being immune in New Jersey, where they were spawned, and in Colorado, where they operate.

Now, let us see what the assessment for taxation of the Great Western Co. was for 1912. Their Loveland plant has a slicing capacity of 1,800 tons, and was assessed at \$311,420; their plant at Greeley, 900 tons, and assessed at \$192,370; at Eaton, 1,000 tons, and assessed at \$191,140; at Fort Collins, 1,800 tons, and assessed at \$359,580; at Windsor, 900 tons, and assessed at \$215,510; at Longmont, 1,800 tons, and assessed at \$440,220; at Sterling, 800 tons, and assessed at \$285,220; at Brush, 900 tons, and assessed at \$264,780; at Fort Morgan, 700 tons, and assessed at \$239,445; a total of 10,600 tons, and assessed at \$2,499,685. Its total slicing capacity is 13,400 tons. Ten thousand six hundred tons would therefore represent \$23,731,343 in a capitalization of \$30,000,000, against which there is an assessed valuation of barely 10 per cent.

These patriotic concerns, clamoring here at the doors of Congress for leave to continue their power to levy tariff taxation upon every stick of candy in every baby hand in this country, go before the assessors of the State where their plants are located and register their valuation at the beggarly ratio of 10 per cent of their capitalizations, upon which are paid these enormous dividends and are piled these enormous surpluses.

Mr. President, in the discussion I have thus far dwelt upon the fact that these companies only capitalize the money that they invest and the good will that is created, whatever that may be, and the tariff laws of the United States. I now emphasize the additional fact that they capitalize the transportation rates of the country as well. Everything contributes to their profit; all is grist that comes to their mill. They levy tribute upon the people because of the money they invest, which is perfectly proper; upon the good will which they are said to have created, which may or may not be legitimate; upon the tariff laws of the country, which give them a special privilege; and, lastly, upon the freight rates, which are manipulated in their interest everywhere, particularly in sections like that in which I live, which have not even the ghost of potential water competition, and which therefore must pay whatever the magnates of the railroads, identified, as they always are, with these great business institutions, shall determine. These rates are cunningly contrived and then utilized for the robbery of the consumers in the interior, not only as to sugar but as to all other commodities. This is done by adding the freight rate to the New York or prevailing market price of the particular commodity and collecting it from the consumer. I have here a table of prices of sugar on March 15, 1913, for both beet and cane sugar at various points in the United States, which I shall not read, but ask to have printed in my remarks.

The PRESIDING OFFICER. Without objection, permission to do so will be granted.

The table referred to is as follows:

Prices quoted Mar. 15, 1913, on beet and cane sugar at New York and various western points.

Points.	Beet.		Cane.	
	Cents.		Cents.	
Guthrie, Okla.	4.56	4.76		
Omaha, Nebr.	4.48	4.58		
Denver, Colo.	4.80	5.00		
Kansas City, Mo.	4.48	4.58		
Salt Lake, Utah.	4.95	5.15		
Seattle, Wash.	4.61	4.81		
Tacoma, Wash.	4.61	4.81		
Helena, Mont.	5.25	5.45		
Boise, Idaho.	5.25	5.45		
Carson, Nev.	5.25	5.45		
Los Angeles, Cal.	4.61	4.81		
Phoenix, Ariz.	5.59	5.79		
St. Paul, Minn.	4.47	4.57		
Chicago, Ill.	4.38	4.48		
Milwaukee, Wis.	4.58	4.68		
Topeka, Kans.	4.56	4.66		
Atchison, Kans.	4.48	4.58		
Louisville, Ky.	4.58	4.68		
Cleveland, Ohio.	4.37	4.47		
Bay City, Mich.	4.43	4.53		
Saginaw, Mich.	4.43	4.53		
Detroit, Mich.	4.37	4.47		
Pittsburgh, Pa.	4.35	4.45		
Buffalo, N. Y.	4.35	4.45		
New York, N. Y.	4.25	4.30		

Mr. THOMAS. These rates show a market price for cane sugar of \$4.30 per hundred pounds at New York and of beet sugar of \$4.25. On the same day the rate in Denver on cane sugar was \$5.50 and on beet sugar \$4.80, the price being higher than this in some places and lower in others, but always above the New York rate; and the rate in my State, and in your State, and in the State of the Senator from Nevada, and in every beet-sugar producing State west of the Missouri River, with the possible exception of California, is the New York price plus the freight added. Of course that is clear profit to the company, because the sugar is not shipped to New York or to the Missouri River points and then brought back. It is a cunningly contrived arrangement for the robbery of the men, women, and children of the country, to whom this commodity is a necessity of life.

Let me refer to Mr. Blakey again. He says (p. 250):

The rates of the Colorado factories are the same whether the sugar goes to Missouri River points, St. Louis, or Chicago.

The California, Utah, and Colorado groups of factories have practically blanket rates to this wide belt of territory, though the farther west the territory is located the wider its belt, and this gives it a comparatively greater advantage over its competitors. California factories can ship to Colorado for 65 cents, but Colorado factories have to pay 85 cents to get to California. Similarly the rate from California to Utah is less than the rate in the opposite direction, and the rate from Colorado to Utah is less than the rate from Utah to Colorado.

The overland rate, New York to San Francisco, is \$1.08, but for the shorter distance from New York to Salt Lake City it is \$1.27, from Michigan to Salt Lake \$1.44, and from New Orleans to Salt Lake \$1.45.

On page 252 this author says:

Rates can be so fixed as to accentuate or to neutralize natural advantage, trust control, and tariffs; hence an adequate regulation of one factor involves careful attention to the others.

And I assert, Mr. President, as an indisputable fact that every consumer of sugar in my State is and for 14 years has been compelled to pay from 35 to 50 cents a hundred more for the sugar consumed, although manufactured at his very door, than is charged for the same sugar at Omaha, Kansas City, and other Missouri River points where the trade extends. To illustrate: The consumer in Longmont can go to Omaha and buy sugar manufactured in the factory at Longmont, pay the freight upon it, bring it back, and thereby get it cheaper than he can buy it at the door of the factory; and the same is true all over the West. This is one effect of that infamous system of overcapitalization that is crushing out the economic life of this country and placing a burden upon the consumers of the land so great that the price of living has long since overtaken the income of the average toiler. I say it is infamous, and the more so because the sugar men are not the sole beneficiaries of the practice. They are simply doing what representatives of other industries in other lines are also doing.

I heard a very eloquent appeal on the floor of this body not long ago by the distinguished Senator from California [Mr. WORKS], whose voice was raised in protest against the reduction of the duty upon the citrus fruits of his State and who pictured in dismal colors the disastrous consequences which a reduction of duty would inflict upon the votaries of that industry. I asked him whether the people of my State were not compelled to pay for California citrus fruits the New York price

plus the freight from the Atlantic seaboard into the interior. He was unable to answer definitely whether that was so or not. I therefore obtained outside information upon the subject, and find that with reference to California fruits, and lemons in particular, conditions are quite as bad as they are with sugar. The rate upon citrus fruits or upon lemons—and I will confine myself to them—from California points to Atlantic seaboard points is a dollar a hundred, or 84 cents a box. That rate is the same, Mr. President, whether these fruits go to Denver or to New York, whether they go to Garden City or to Philadelphia, whether they go to Chicago or to Portland, Me. With the single exception of the extreme southeastern part of the Union, the rate is the same. What is the rate from the seaboard west? To Denver per hundred pounds in carload lots it is \$1.48, in less-than-carload lots \$2.38, per box in carload lots \$1.26, in less-than-carload lots \$2.03; so that we have to pay for our lemons the current New York price plus the freight of 84 cents from Los Angeles to Denver, plus \$1.26, the freight from New York back to the city of Denver, although, of course, the freight does not traverse that enormous stretch of country.

Is there any justice in this or any defense for such conditions? I tell you, Mr. President, it is these conditions which account for the high cost of living. This fearsome problem must find its ultimate solution, first, in sweeping away the enormous issues of fictitious overcapitalization which overburden the commerce of the land, the most infamous system of public robbery ever devised by greed and avarice for depriving the people of their substance; and, second, by such rigid regulations of freight traffic as will make these robberies impossible. I shall welcome public ownership of transportation lines whenever public control becomes, as I think it soon will become, a demonstrated failure.

I am not inveighing against the men who profit by these things, Mr. President. I have no doubt if I were in the business I would have to avail myself of it, for I am neither better nor worse than they are. But I protest against the injustice of a system which encourages the creation of huge industrial institutions, dropsical with watered stock, reaching out in every direction to secure the profits upon their tremendous issues, and coming into the Halls of the Congress of the United States to demand that the Government shall perpetuate its iniquitous partnership with them, that they may continue their system of legalized robbery of the substance of the Nation.

Mr. President, I have a letter, dated May 31, 1913, written by Mr. J. M. Davis, a merchant at Sterling, where a large sugar factory is located, showing the prices of sugar at that point during the years 1910, 1911, and 1912, which, without reading, I will ask to have incorporated in my remarks.

The PRESIDING OFFICER. In the absence of objection, permission is granted.

The letter referred to is as follows:

STERLING, COLO., May 31, 1913.

Senator C. S. THOMAS,
Washington, D. C.:

In response to a letter received the 23d instant from Edwin V. Brake, State labor commissioner, relative to facts and conditions pertaining to the sugar-beet industry of this section of the State, I beg to advise that the following report is true, to the best of my personal knowledge, to wit:

For the last two years I have paid the following prices for sugar at the local sugar factory, which does not include the cost of delivery from said sugar factory to my store: February, 1910, \$5.70 per hundredweight; November, 1910, \$5.25 per hundredweight; March, 1911, \$5.35 per hundredweight; August, 1911, \$6.30 per hundredweight; February, 1912, \$6.40 per hundredweight; and November, 1912, \$5.50 per hundredweight. The prices I pay for sugar at the local sugar factory, owned and operated by the Great Western Sugar Co., are the wholesale prices of sugar at Missouri River points plus the freight from said river points to Sterling, Colo.

The sugar factory at this place runs on or about 100 days in each and every year and employs about 250 men. The class of laborers employed in the factory are Americans, Japs, and Russians; the minimum wage is 17½ cents per hour and the employees work 12 hours out of every 24 hours.

Russians, Japs, and Italians are employed in the beet fields, and work 16 out of every 24 hours. They receive \$20 per acre for hoeing, thinning, and topping the beets. One man, working 16 hours a day, can care for about 7 to 10 acres of beets in one season.

I believe I am voicing the sentiment of all true progressive Democrats of this section of the country when I say that we are in favor of free sugar, and we heartily commend you for the position which you have taken in the matter.

Respectfully, yours,

J. M. DAVIS.

Mr. THOMAS. It will be perceived that the wholesale price of sugar to Mr. Davis is far in advance of the prevailing published market rates, and what is true of Sterling is true of every community in the West.

In this connection, Mr. President, I wish to refer to a statement that has been made here several times to the effect that when the price of sugar was raised in 1911 by the cane-sugar people the beet-sugar people came to the rescue and, by a reduction in the price, performed a work of nation-wide philanthropy

that forced the octopus to its knees and relieved the people of the country from the peril of its greed. It would be a singular thing if any of these concerns, independent of any question of their control or ownership, should so far disregard the laws of trade as to allow philanthropy and a desire to relieve human suffering to influence them in the presence of a cornered market. It is unbelievable to begin with, and it is not true in fact to end with. The circumstances are simply these, that in 1911 the beet-sugar companies anticipated the market and made their sales in August for delivery, I think, in October and November, and in the meantime a tremendous rise in prices of sugar occurred of which they could not take advantage, but of which they would have taken advantage very quickly if they had been in condition so to do. They have never failed to get all they could for their commodity. Of that I am not complaining, but I do criticize that hypocrisy which essays to convert a commercial error into an act of public philanthropy. It is of a piece with the whole sugar propaganda.

Mr. President, the population in 1910 of the seven States of Idaho, Utah, Montana, Wyoming, Colorado, New Mexico, and Arizona was 2,541,642. If we place the amount of money annually taken from these people because of the added freight rates to the prevailing prices of sugar which they consume at 35 cents per hundredweight—and that is placing it at a very small figure—the result is \$710,659. Every year this sum over and above the cost of production plus a profit plus the tariff is exacted from the people of our section simply because the sugar people have the power to do so. The annual excess charge to the people of my State at that rate is \$223,726.65, or a total for the past 14 years of \$3,132,173.10. If these gentlemen, armed with shot-guns, had gone upon our highways and held up every man, woman, and child who came along and deliberately filched from their pockets 35 cents apiece, the law would have punished them, and justly so; but because it can be done through the medium of watered stocks and railway rates coupled with control of a necessity of life, it becomes easy, safe, and certain. It is high finance; it has lost all features of a crime and has been transformed into a respectable and eminently legal practice. I say it is wrong; and I reiterate, Mr. President, that the ills of which our people justly complain find their origin largely in discriminations in freight rates effected through manipulations of our great lines of transportation for the benefit of the huge business aggregations of this country, all of which are rapidly centralizing under a common control.

Mr. Blakey says upon this subject (p. 241):

In no case that we have been able to ascertain have the consumers gotten the benefit of competition in the sense that local manufacturers have sold to them upon the basis of cost of production and delivery. The factories and refineries, even if they were not in the combine, have taken advantage of the opportunity to dispose of their product at approximately the prices maintained by the combine, or, in the common parlance, they have stood under the umbrella held by the trust.

But, Mr. President, I shall not occupy further time in the discussion of this feature of the question.

There are two or three others, however, to which I wish to refer. I have hitherto emphasized the interest which is displayed by the Sugar Trust for the welfare of the beet producer, who is now the chief subject of its philanthropic concern. But it was not always so.

In 1909, prior to the enactment of the Payne-Aldrich law, the duty upon sugar beets was 25 per cent ad valorem. The framers of that law, eager to increase prevailing rates of duty wherever monopoly demanded it, deftly and quietly lowered this duty from 25 to 10 per cent ad valorem. It is not too much to assert that the change was prompted by the refiner, because the importation of sugar beets from Canada by the Michigan sugar refiners at once began. In 1909 these importations amounted to 37,731 tons; in 1910 to 57,750 tons. The money value of the beets imported in 1911 was \$265,396.55. These are trivial items, Mr. President, but they demonstrate the hypocrisy of that spirit which finds expression in protest against tariff reduction, because of its effect upon the producers of sugar beets.

When these great interests were writing the law to suit themselves they paid scant consideration to the man who produced the raw material. Now that the people are writing their own law, these interests can not too strongly emphasize the producer's needs.

Mr. President, the control of the industry by the Sugar Trust has in this, as in other lines of production, been made effective by the suppression of competition. Rival enterprises have been strangled at their birth. I know that in my State a number of abortive efforts have been made to build independent factories, but in general they have been unsuccessful. It is true that we have what are called independent factories, but the establishment of genuinely independent concerns over the oppo-

sition of the American and Great Western Sugar Refining Cos. is virtually impossible.

I shall not recount the experiences of would-be investors along these lines, but they are well known to the men of the West.

Those which have not yet been absorbed are independent in name only. The prices of the trust, both to producer and consumer, are their prices. They live by sufferance only, and any infraction of the requirements of the trust means absorption, suppression, or ruin. Capital shrinks from investment in the face of such conditions, and the domination of the combine is secure.

Mr. President, I have said that this industry is not dependent upon the tariff or upon any other governmental support; that it will survive the removal of duties, flourish and pay large dividends upon the capital actually invested. It needs neither tariff nor subsidy. Its product is in constant demand, and there is practically no limit to the possibilities of the pursuit.

But, Mr. President, there is a weak spot in the beet-sugar armor, a condition which may at any time suspend its operation. It has been recognized by some of the witnesses who testified before the Hardwick committee, and it is a condition for which the greed of the refiners is alone responsible. The industry could be paralyzed within a year if the source of its seed supply should for any reason be cut off.

All of the sugar-beet seed used in this country comes from Germany. We raise none of it here. We have been too busy manufacturing sugar stock and paying dividends upon it, and have no time to devote to seed culture. Our stock of beet seed is annually purchased by the companies, and by them sold to the farmers who raise the beets. We have been too eager to make all possible profit out of this business, too impatient for the rewards of our investments, to give any thought or attention to the growth of seed at home. The process is too slow; it requires too much time. The beet is a biennial; it is too sluggish for American enterprise. We manufacture sugar—let Germany provide our seed; we can not spare time or beets for such a purpose. It is cheaper to import than produce, and so Germany has the industry in its power.

In the Hardwick hearings Mr. GARRETT interrogated Mr. Oxnard upon this subject:

Mr. GARRETT. You say all the seeds are imported?
Mr. OXNARD. Yes; they are all imported. It is, I think, a very serious condition for the beet-sugar industry, and I have been talking with the Agricultural Department about that.

Mr. GARRETT. What does the seed cost?
Mr. OXNARD. It costs about 10 cents. You can buy it for less than 10 cents—about 8 cents a pound.

Mr. GARRETT. And you say you put about 20 pounds to the acre?

Mr. OXNARD. About 20 pounds. For instance, if there was a European war some time, a continental war in Europe, it might be impossible for the American beet-sugar industry to get their seed if they do not go at it. Suppose continental Europe—France, Germany, Austria, and those big countries—get into a war, it would be a serious condition.

Mr. GARRETT. Why is it we have not been doing something in that direction as long as the industry has been going on in this country?

Mr. OXNARD. Because it requires a tremendous amount of hand labor on these seed farms. It is a question of going along and picking out what appears to be a good mother beet and making a chemical analysis and examination of the beet specimens, and all that sort of thing. That labor is so cheap in Europe that we can not begin to compete with it and grow seed in this country as cheaply as they can over there. We are, however, making a start in that direction. In the State of Washington—Fairfield—a man named Morrison is putting in a thousand acres of beet seed.

Mr. Blakey, on page 143, says:

There have been a few efforts to grow seed in the United States, some of them fairly successful, but most of them have been given up when serious difficulties were encountered. But the recent European crop shortage will probably handicap the American industry very seriously for a year or two, and may bring about an effective attempt to produce home-grown seed in order to avoid such occurrences in the future.

Mr. President, this inexcusable situation does not find its genesis in tariff legislation. It is due to the greed of the refiner, who can not wait for the slow processes of nature to supply him with a prime essential to his industry so long as it can be obtained from other sources. But suppose we should have a trade war with Germany. Suppose unhappy differences between that country and ours should lead to actual hostilities. Suppose that for any reason an embargo should be laid by Germany upon the exportation of beet seed to this country. The sugar industry would disappear, temporarily, perhaps, but it would disappear, and with it the abundant supply of a wholesome and essential article of daily food consumption. This industry has been established with an improvidence that is inexcusable. Our sugar barons, eager to make as much profit as possible, have lost sight of or wholly ignored the fundamental fact that its permanency depends, not upon legislation, not upon tariffs, not upon freight rates, not upon combinations, not upon manipulation, but upon seed, for the supply of which we are entirely dependent upon a foreign country. There, to my mind, is the

one serious danger to this industry, one which can be easily removed; and if prudence, knowledge, and foresight have any place in American economy they should manifest themselves in the early establishment of domestic beet-seed production.

I come now to a discussion of beet culture as a means of soil fertilization. This is the capstone in the argument for a high tariff on sugar. We are told that this industry must perish without protection, and that it is a prime essential, not alone because it produces a necessity of life; not alone because it competes with cane-sugar production and thereby reduces the range of cost to the consumer; not alone because under the shelter of protection it will increase and multiply until it shall equal, if not exceed, the volume of our home consumption, but because the benefits which the beet imparts to the soil through its culture and growth, independently of all other considerations, make it the best and most valuable crop the farmer can grow. It enriches instead of impoverishing the land, thus blessing the farmer with the fruits of its harvest and the deposit of its fertilizing elements in the soil.

This is a somewhat recent development of the sugar propaganda. It seems to have been created to fill what may be well termed a long-felt want. It is yet so novel that it retains some of that interest which novelty always commands. It is the offspring of that distinguished vocal beet raiser, Mr. Truman G. Palmer, the president, general manager, and treasurer of the Domestic Sugar Growers' Association.

Mr. President, several weeks ago I listened with much interest to a criticism by the Senator from Utah [Mr. SMOOT] of a pamphlet of the Department of Commerce and Labor, relating to some features of our foreign and domestic trade. In the course of his remarks, the Senator said:

Whenever statistics are gathered from the realm of speculation and with no other object in view than to demonstrate some pet idea, the information sought to be conveyed by them necessarily becomes misleading, and such a practice should be condemned, no matter by whom indulged in.

I heartily approve of that sentiment, and I desire to apply it to the so-called statistics of Mr. Palmer and his lieutenants upon the matter of soil fertilization by the culture of beets. No one, not even in Germany, suspected the existence of this unique virtue of the sugar beet until the last few years. It is true that any form of intensive cultivation is beneficial to the soil. Intense cultivation must result, to a greater or less extent, in improved and increased capacity for production. The raising of sugar beets is not agricultural; it is horticultural. It is the most intensive of all systems of plant cultivation upon a large scale. As a consequence, the soil is thoroughly worked out and worked over, and any subsequent crop will necessarily give evidence of the benefits of such previous culture by increased production, no matter what the crop may be—more so, perhaps, with some than with others. But up to 1909 the entire tariff propaganda, both of the beet-sugar and of the cane-sugar men, was based upon the plea of needed revenue, protection to labor, and the importance of establishing a great home industry adequate to the demands of home consumption. Fertilization of the soil had not occurred to the fertile minds of the astute gentlemen having this propaganda in charge. But the old arguments had lost much of their force by the test of time and by constant iteration. It was necessary to obtain something new, perhaps something less partisan, and, if possible, something more effective. It is not surprising, therefore, that Mr. Truman G. Palmer should have perceived that without some novel stimulant his occupation might soon be gone, and that something new should be presented to the jaded appetites of the sugar barons. With that end in view Mr. Palmer, on the 6th of April, 1908, wrote Henry T. Oxnard, president of the American Beet Sugar Association, an elaborate letter, in which he said:

For three years I felt more or less fortified, inasmuch as for that length of time I held back the strongest matter which Stewart gathered in the Philippines. But, as you know, when it looked as though they had us in close quarters two years ago, I used this ammunition in the strongest manner I was able, and it came near being the cause of finally disposing of Mr. Taft by relegating him to the Supreme Bench.

We have held them down for six years now, but for the forthcoming fight we are liable to have Mr. Taft in the White House instead of in the War Department or as governor of the Philippines, and we are only equipped to thrash over old straw.

I say to you frankly that I feel the need of some new thunder to present to these committees. Some one else might get it, but I ought to get it myself and present it first hand. I can and have quoted statistics by the page, by the volume, and I continue to do so; but I sincerely believe that the exigencies of the occasion demand that I should get at first hand a convincing mass of material that can not fail to carry conviction when properly presented.

If I make this proposed European trip I would go not only as representing this industry, but the Department of Agriculture—

Just here let me digress by saying that the lobby investigation reveals an intimate association between the beet-sugar industry

and the Agricultural Department. It has enjoyed the benefit of the influence of that great division of the executive branch of this Government; and here Mr. Palmer was doubtless fully justified in stating that if he makes these trips for the purpose indicated he proposes to go not only as the paid agent of a private industry, but as the representative of the National Government, combining the two, of course, in a common enterprise, the benefits of which would go to the private end of the association—

and would interview the secretary of agriculture of every European beet-sugar producing State. They are no more anxious than are we to see a new and great sugar-producing center established in the Philippines, which would eventually cause the Cuban and Javan sugar to be dumped onto European markets.

In this letter Mr. Palmer outlines his course of procedure, how he would obtain his information, how it could be utilized, and ends by saying:

The trip as I have mapped it out would not be an inexpensive one. The cities I would visit are the most expensive in Europe, and, representing our Department of Agriculture, or even if I did not, the meeting of our own representatives and of the officials of foreign Governments would preclude living at any but first-class hotels if the best results are to be obtained.

This was high-class information, which could be obtained only by a high-class man, representing a high-class Government as well as a high-class interest, and who must necessarily be expected to patronize high-class hotels while obtaining the information which his mission was designed to secure, but which was predetermined before the trip was planned.

Mr. Palmer in a letter to Mr. Hamlin, dated August 8, 1911, again emphasized the importance of his project. In that letter, which is found on page 1467 of the lobby hearings, he says:

Since appearing before the committee I am more convinced than ever that this is the particular feature of the industry which we should exploit in order to gain favor with people who are not protectionists and even people who are free traders. Not only does it take the subject out of politics, but the indirect benefits so far overtop the mere saving of \$100,000,000 or \$200,000,000 a year that an elucidation of this fact gains the instant attention of thinking men, and I believe that between now and fall several hundred thousand copies of this document ought to be mailed out.

Having determined to obtain statistics "to demonstrate his pet idea," and having had a painful experience with an existing committee which doubtless manifested some impatience toward his stale reiterations of old ones, his anxiety to give his new propaganda the apparent sanction of a European investigation as a representative of the National Government prompted this appeal to Mr. Hamlin, then at the head of the lobby organization.

In this correspondence lie the beginnings of the somewhat notorious pamphlet known as *Sugar at a Glance*, which afterwards secured abundant circulation as a public document under senatorial franks.

The genius of Mr. Palmer having directed the attention of his employers to something new in the public discussion of beet sugar found prompt recognition from Mr. Hamlin. That gentleman, in searching for a proper press representative, seems to have encountered in 1911, on the 23d of October of that year, Mr. Hazard, who wrote to Mr. Hamlin as follows:

My idea of your needs in this cause is that you should gradually hammer into the public intelligence not so much a loud demand for higher tariff or no tariff tinkering, but the conviction that the beet-sugar industry is an American institution of tremendous importance to the West and Middle West; that all good Americans should do their utmost to help it along; and that there is big money in it for every man that plants a beet. As soon as this percolates through their skulls not an M. C. west of the Hudson will dare vote for a tariff reduction. Of course an occasional stinger in the shape of a promised scrap, like that given out by you the other day, will help immensely, but for the most part I do not think I'd feature the thing as a matter of dollars and cents in which the association is interested. Your enemies would have too good a handle to lay hold of. "The Beet-Sugar Trust" will be their howl. "Why, what's the difference between that and the Refiner's Trust? Let's down 'em both for the consumer."

So, in our travels here and there, I'd reiterate the latter part, and I think the best part of your Colorado Springs interview, to wit, the farmer's end. Ring the changes on that phase. Show how a farmer may convert a few dozen of unproductive acres into a paying beet farm, how a few sensible farmers can pool their issues, establish a factory, and be the upbuilders of a great section of a State. The conservation end that you mentioned in your interview is worthy of good display on its own merits. The conservationists are strong throughout the West. Make them boost your crusade by appearing to boost theirs.

In your hotel interviews around the beet-sugar States or the potential beet-raising States seems to me it would be an excellent idea to say that you are in town to consult a number of prominent men with a view to acquiring a tract of land to go into the beet-raising business. Every paper thereabouts that goes in for local "improvements" will editorialize to beat the band, and almost before they know it they'll be planting beets and making them into sugar—on paper, anyway. You can get all the newspaper space you want if you only give the papers something they think will make a hit with their readers' pockets.

And on the 2d day of April, 1912, Mr. Baird, of the Michigan division of the beet-sugar industry, wrote to Mr. Hamlin upon

the same subject. I read from page 1403 and following of the hearings:

Mr. C. C. HAMLIN,
United States Beet Sugar Industry,
901 Union Trust Building, Washington, D. C.

DETROIT, MICH., April 2, 1912.

DEAR SIR: Your letter of March 29 at hand, and I wish to thank you for this. I think the suggestion is very good. I have noticed a great many statements in the various opposing papers lately, comparing the cost of beets in Europe with those here. I think it would be very well to get additional information on the cost of beets here, and evidence which will emphasize the fact that the price of beets in Europe is that of those delivered to the factory, while the price discussed here is that paid the farmers at the nearest railroad station or siding; also some evidence which will emphasize the fact that in most of the districts beet dumps are furnished free to the farmers for unloading from wagons.

I am bringing with me a number of letters from feeders showing the value of dried beet pulp in the milk and cattle industry. Any additional evidence of this kind would be of advantage. Also if you could obtain from the Agricultural Department statements which would show the value of returning the lime to the soil it would be of good advantage.

Our opponents are fighting the whole matter along the line of reducing the cost of sugar to the consumer. We must either admit that this cost will be reduced or admit we have no kick coming. It seems to me wiser to admit the reduction and then meet it by showing that it means destruction to the industry, and that this destruction means a positive loss to agriculture in general, and therefore an increased price in the other products of agriculture which will more than balance the saving from sugar. I believe we have not emphasized this part of the matter sufficiently, and while our time is short to do it we should lay special emphasis on all the information we have gathered and gather all the additional evidence obtainable. Mr. Palmer, of course, has a large mass of it. I have a little; but if we could bring in outside evidence from the Agricultural Department and from individual farmers and independent producers, it would have greater weight than coming from us.

Mr. Palmer went to Europe, where, as the representative of the Government, he easily found what he went to find, since he had found it before he went to find it. He returned with statistics—both preferred and common—all demonstrating that but for the sugar beet German agriculture would have perished from inanition long ago. His researches were carefully formulated and launched upon a surprised and delighted public in a speech by the senior Senator from Massachusetts [Mr. Lodge], made on the floor of this Chamber on the 27th day of July, 1912—a speech which was replete with historical and statistical information and bristling with prophecies of disaster to the industry and to the soil should the sugar duty be removed or reduced—a speech which was evidently prepared with the most exhaustive care by the Senator in conjunction with the Palmer bureau and generously circulated all over the country by the latter. Copious extracts from it were reproduced in *Sugar at a Glance*, of which document I shall speak hereafter.

Mr. President, the ascription to the sugar beet of unusual and exceptional faculties of soil fertilization is without merit. It is true, as heretofore stated, that soil fertilization does ensue from beet culture, but this is merely the effect of intense cultivation, and would result as well from any other crop similarly cultivated. The contention that the beet possesses some peculiar efficacy for that purpose is simply part of the tariff propaganda. Mr. Blakey has given this subject considerable thought, and at page 147 he says:

Successive beet crops on the same land not only exhaust the soil and lower the quality and tonnage of beets, but they also frequently result in the introduction and perpetuation of diseases. This is one of the serious difficulties now being encountered in some localities in the West, and sugar companies unable to cope with the problem have appealed to the Government for assistance.

At page 134 he says:

We may conclude, then, that on the whole practically all the direct profits in beet raising in the United States are those of growers and owners of land, who get more than average returns. In view of the great increase of land values all over the United States in the last decade, it is doubtful if as much of the increase in beet-growing States can be attributed to the sugar industry as some think.

Mr. Blakey gives a table showing the increase in the price of farm lands throughout the country. I have prepared from his table a smaller one showing comparisons of the prices and the increase in the value of lands, both in beet-growing and in non-beet-growing States, during the past decade, which I ask leave to have printed in my remarks.

THE PRESIDING OFFICER. Without objection, it will be so ordered.

The matter referred to is as follows:

Increase—	Per cent.
In farm lands, United States, 1900 to 1910 (per United States census)	117.4
In average value per acre	108.7
Increase for beet-growing States:	
Michigan	43.3
Per acre	34.7
Colorado	301.6
Per acre	181
California	109
Per acre	116
Utah	147.9
Per acre	200.3
Idaho	519.8
Per acre	276.1

Increase for nonbeet-growing States:

	Per cent.
Missouri.....	107.9
Per acre.....	104.3
Kansas.....	189
Per acre.....	177.6
Nevada.....	165.7
Per acre.....	151.3
South Dakota.....	377.1
Per acre.....	249.7
North Dakota.....	321.3
Per acre.....	130.4

Mr. THOMAS. These figures demonstrate, I think, the fact that increases in land values have been practically universal. It is clearly a result of some general cause. While a particular industry may have a local or transient influence upon a rise in values, it can not explain a rise which is practically universal.

One of the best and most experienced farmers in my State is State Senator John A. Cross. He has given a great deal of attention to this subject. He is respected wherever he is known. As a Democrat, he has been honored in a very strong Republican county by repeated election to various offices of public trust. Writing to me upon this subject on the 16th day of July, 1913, he says:

Raising sugar beets exhausts the fertility of the soil. When we first commenced to raise beets the sugar company brought men from Utah to show us how to plow the ground and prepare the seed bed and tend the beets. The deep plowing and intense cultivation that is absolutely necessary in order to raise sugar beets kills every weed and puts the ground in such splendid condition that it will raise one good crop of grain the next year, and then it is necessary to renew the soil by seeding to alfalfa or fertilizing in some other way. The greatest benefit the farmers have received from raising sugar beets has been in learning how to do good farming. The farmers have been exploited by the sugar company in every way possible, the same as the sugar consumers have. The next great industry in Colorado will be dairying; and then the farmers will be truly prosperous if we can break the grip of the sugar monopoly and have some independent sugar refineries to run in connection with dairying. We will have the most prosperous farming community in the world, but the Great Western Sugar Co. uses every possible means to keep out competition and discourage the extension of the beet-sugar industry.

Mr. Blakey, on page 47, publishes a table showing the effect upon soil fertility of nearly all the staple agricultural products, including beets, which I ask leave to print with my remarks.

The PRESIDING OFFICER. Without objection, it will be printed.

The table referred to is as follows:

	Nitrogen.		Phosphorus.		Potassium.		Chicago prices.	Colorado prices.
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.		
Wheat, 50 bushels.....	96	\$14.40	16	\$0.48	58	\$3.48	\$18.56	\$24.00
Oats, 100 bushels.....	97	14.55	16	.48	68	4.08	19.11	25.00

Mr. THOMAS. Mr. Blakey says that beets are about as exhaustive as corn and somewhat more so than wheat and oats. Clearly the method of cultivation, not the character of the crop, must account for the benefit which the soil receives.

Mr. President, the cultivation of any root crop—beans, peas, and other lentils—especially when plowed into the soil, greatly enhances its fertility. They are quite as productive of good results as is the culture of the beet. Soil fertilization by crop culture is not peculiar to beets, and the tremendous increase in crop production in Germany, so boastfully advertised by Mr. Palmer and his employers, may be ascribed in part, perhaps, to the intense cultivation essential to beet growth, but are due much more largely to scientific methods of cultivation and to the enormously increased use of fertilizers.

I have a letter from Mr. W. Kathol, written last May, a competent authority upon and thoroughly familiar with the subject, which I will ask leave to print, with its accompanying tables, without reading.

The PRESIDING OFFICER. Without objection, it may be printed.

The matter referred to is as follows:

On pages 34 and 35 of the pamphlet by Mr. Truman G. Palmer, *Sugar at a Glance*, are diagrams showing how Germany has increased the yield of wheat and rye by planting fields to sugar beets and other hood crops one year in four. According to chart 25, the number of bushels of wheat harvested per acre in Germany increased in the years 1894 to 1909 from 25 to 30 bushels. Assuming, for the sake of argu-

ment, that the planting of beets caused this increase, the conclusion must be correct; in a period where the yearly beet crops decrease the wheat yield per acre must also decrease. If we now look for the statistical facts, we find the following: In the year 1894 the production of sugar beets in Germany was 14,521,000 tons (Rathke, p. 20); the yield of wheat per acre in the same year was about 25 bushels (Sugar at a Glance, p. 34). Within the 17 years from 1894 to 1911 the average production of beets in Germany was about 12,800,000 tons per year. Thus we had in that period a decrease of 1,721,000 tons, or more than 13 per cent. But did the yield of wheat during that time also decrease? No; the yield of wheat per acre did not seem to be influenced at all by the beets. It increased from 1894 to 1909 from 25 to 30 bushels, or 25 per cent. How does this fact correspond with the theory of the American beet-sugar men?

Certainly the beet-sugar cultivation in Germany has been beneficial to the fields, just as the raising of common beets, chicory roots, and potatoes. However, there are other causes more important than the raising of beets which contribute to augment the productive power of our soil, especially the use of so-called artificial manure (potassium and phosphates), deep plowing, scientific selection of seed, and last, but not least, intensive and rational work of the farmer.

Yours, very truly,

W. KATHOL.

Table 1 is a translated copy taken from the *Dungerfibel* by Dr. Hoffman, editor, Berlin, Deutsche Landwirtschafts-Gesellschaft (German Agricultural Society). Table 2 has been compiled by me from figures given in above-named book and in Rathke's *Adressbuch*. Both tables show clearly—

1. That the use of artificial manure in Germany since the year 1890 has increased more than 350 per cent.

2. That during this period the yield of 1 hectare of rye increased about 56 per cent; wheat, 50 per cent; barley, 48 per cent; oats, 37 per cent; potatoes, 47 per cent; and meadow hay, 40 per cent.

3. That during the same time the yield per hectare of beets did not increase, but remained nearly constant.

What I tried to prove in my letter of May 12 indirectly I think is here demonstrated directly beyond all doubt. In 1890, when the increase of yield of cereal crops started, we had already 400 beet-sugar factories in Germany. The farmers must have known at that time what benefit they had for the other crops by raising sugar beets. Why do they pay more than 500,000,000 marks yearly for artificial manure if the increase of cereal crops is to be ascribed in such a positive manner to the planting of beets as Mr. Truman G. Palmer will make people believe in his *Sugar at a Glance*? And how can this gentleman explain the increased growth of meadow hay (40 per cent) by the influence which beet crops have on the soil? Beets in Germany are not raised in the meadows.

I would call your attention to the interesting fact that the sugar content of the beets since 1890 has also increased from 12.9 to 16.5 per cent. How this is to be explained I do not know. The improvement of the seed by scientific selection can scarcely be the reason—at least not alone. Last year we had the highest percentage of sugar, while a great amount of Russian seed had been imported, which is considered generally of inferior quality. When recently I had the pleasure of accompanying Mr. Spreckels through the beet fields of this district we met a hard-working simple farmer. Mr. Spreckels asked him how much manure he would use on his field, and the man replied, "I can never use enough; the more the better." Mr. Spreckels was astonished to see the healthy development of the dark-green leaves of the beets in contrast to the fields he had seen in France. He said he guessed it must be the influence of niter which made this luxuriant foliage in our beet fields, and the leaves, Mr. Spreckels observed, "are the lungs of the beets, by which they inhale the carbon, to be changed in the cells of the root into wood fiber and principally sugar." At that time I did not have the data on which the inclosed tables are based, but I thought often of Mr. Spreckels's remarks. Since, it struck me, how in conformity is the increase of the use of artificial fertilizers and the increase of the sugar in the beets. Of course, I would not dare to express a definite opinion at this time how far the one increase is the cause of the other, but I think it will be worth while to assemble more data about this matter. With kindest regards, I am,

Yours, very truly,

W. KATHOL.

TABLE 1.—Consumption of artificial manure in Germany during the years 1890 to 1912.

	1890	1900	1910	1912	Value.

1912.....	7,352,700

Mr. THOMAS. These tables disclose the tremendous increase in the use of artificial fertilizers in the German Empire, not only in beet culture but in the production of all other crops. But of this practice, Mr. President, we have heard nothing in the course of these debates.

Moreover, Mr. President, the increase of soil fertility in Great Britain, if we are to credit her statistics, is quite as marked as in Germany, although in Great Britain beet culture is practically unknown.

It is painfully evident, Mr. President, that soil fertilization is a new proposition, an ad captandum argument thrust into the arena of eleventh-hour tariff discussion to befool the farmer, to distract the public mind, and to gloss over the iniquities of the tariff. It has the doubtful merit of novelty, a plausible but unsubstantial basis of fact for its support, and a well-fed organization to assert and disseminate it.

But, Mr. President, while the question as to whether the cultivation of sugar beets operates as a fertilizer may be a debatable one, no one who has read the testimony of the Senate lobby committee will challenge the virtue of beet sugar as a fertilizer. It has fertilized the lobbyists of the country for many years; it has fertilized the press, both rural and metropolitan, ever since its entrance into the domain of American industry; it has fertilized and is still fertilizing public opinion through the dissemination of so-called literature, the preparation and distribution of boiler plate and patent insides for the weekly newspapers, through inspired discussions before industrial and commercial gatherings, and by systematic and widespread propaganda; it has fertilized the hotels, the market places, and the print shops in the city of Washington; it has recently fertilized chambers of commerce, boards of trade, and the telegraph and telephone companies from ocean to ocean. Its fertilizing funds have flown from its tariff beneficiaries at 1 cent a bag, 2 cents a bag, or 3 cents a bag, according to the emergency. What matters it, since the people pay? Mr. Oxnard, the original beet-sugar lobbyist, and still faithful at his post at a salary of ten thousand a year, whose demands upon the lobby treasury are made in the form of oral vouchers, told how hundreds of thousands had been gathered and cast upon the waters. It is still alert, grinding away at its familiar task as though unconscious that the old order has passed and a new one now prevails.

The manner in which this industry fertilized the Government Printing Office and brought forth Sugar at a Glance as a public document is an interesting story. It was told to the lobby committee last June. It reveals the methods of this association so graphically that all men should be apprised of it.

Summarized, the story is that Sugar at a Glance had its origin in 14 charts, which were prepared by Mr. Palmer and duly hung upon the walls of this Chamber by the Senator from Massachusetts [Mr. Lodge] on July 27, 1912, at which time he entered into an elaborate review of the beet-sugar industry and its dependence upon the tariff. Upon that occasion the Senator asked and was granted leave to have them printed as a public document in this language:

Mr. President, I am going to ask first that some graphic tables which I have had prepared showing various statistics relating to sugar and comparing it with other products may be reduced to small tables in black and white and printed as a Senate document.

After this, Mr. Palmer—
went over them carefully meanwhile to see if there were any errors and eliminated any that I found.

And he said he found but few. But as Senator REED's examinations proceeded they disclosed a condition which I trust for the good name of the Senate has never been duplicated. It was developed from the lips of Mr. Palmer and of many other witnesses that this very active gentleman utilized this request

of the Senator from Massachusetts by substituting for it an essay, copiously illustrated with 56 charts, lithographs, and other decorations, consisting of 63 pages—
concerning national economy and the high cost of living as affected by the increased yield of other crops when grown in rotation with sugar beets.

He very generously inserted into his production an elaborate extract from the Senator's speech, preceded by an introduction of his own, gave the world a graphic picture of Mr. Oxnard's California factory, a tribute which that very modest gentleman doubtless suggested, and dubbed his child "Senate Document No. 890."

This composite work has the stamp of the Government Printing Office. It saw the light on October 28, three months after the Senator's speech had been delivered.

In this commendable work of manufacturing a public document for the professed purpose of public education, Mr. Palmer, on page 1022 of the hearings, says that he was acting for the Senator from Massachusetts. Senator REED followed this startling statement with this query:

So we have a representative of the beet-sugar people in Washington acting as a representative of a United States Senator and assuming the authority not only as a United States Senator but of the entire Senate? That is the conception of your business?

The witness replied:

You can call it as you like. I acted in the spirit of that resolution. But this conclusion is utterly false. For the Senate resolution of July 27, 1912, the only one which the Senate ever adopted, does not appear anywhere in Mr. Palmer's work. Instead of it appears a spurious and manufactured one of a wholly different character and bearing a different date, which has been published as the basis of the document. It reads:

IN THE SENATE OF THE UNITED STATES,

August 1, 1912.

Ordered, That the charts and data prepared by Truman G. Palmer concerning the sugar industry, the increased yield of other crops when grown in rotation with sugar beets, and the rise in price of farm and food products be printed as a document.

Attest:

CHARLES G. BENNETT, Secretary.

That, Mr. President, is an order which the Senate never made, which the Secretary of the Senate never signed, which can not be found in the records of this body, and which had its origin outside the limits of this Chamber. The person responsible for this spurious order has not yet been fully disclosed. The Senate investigating committee has not unearthed him, although it has carefully questioned every attaché of the Senate who would be likely to know all about it, and all of whom deny all responsibility for it. Mr. Ansel Wold, the Senate printing clerk, to whom, if genuine, it would have been delivered, never saw the original. He accepted the title-page of Sugar at a Glance because it was coming back in proofs and because it was to be submitted to the Senator from Massachusetts for approval or disapproval. He also says that the real order has disappeared from the files of the Senate.

Mr. B. S. Platt, enrolling clerk of the Senate, through whose hands this order should have passed, never saw it, never wrote it, never gave it to the Secretary for his signature, and does not know where it came from. His records are silent concerning it. These orders go through his hands to Mr. Wold on their way to the Public Printer.

Mr. Harry A. Austin and Mr. Charles Benthelm, both in Mr. Palmer's employ, do not enlighten us. Mr. Austin never saw it until the proofs of Sugar at a Glance came back from the Government Printing Office with that printed on it. Mr. Benthelm first saw it when the outside flyleaf was given to him on the 5th, 6th, or 7th of August by Mr. Palmer. It was then given to him "on a slip to paste on along with his letter." This traces its first appearance to Mr. Truman G. Palmer himself, who protests that he knows not how it originated. The public may or may not accept his assurances of innocence, albeit he admits his authorship of the document which, without the spurious order, could have had no admission to the mails of the Government for free distribution.

Mr. President, it is a serious matter of national concern when the name of the Secretary of the Senate can be forged to a fictitious order. It will be far more serious if such a wrong can be committed with impunity. If one interest may do so, all of them may. That it was done in this instance and that the beet-sugar lobby were thereby enabled at public expense to circulate this compilation over the country is beyond dispute, and the man apparently responsible for it has impudently sworn that what he did was done as the representative of a Senator.

It was mailed under the frank of the distinguished Senator from Massachusetts [Mr. Lodge], to whom it was submitted for final consideration before it assumed its present and final form. Three hundred and twenty thousand copies, which at 5

cents a copy would have cost the Beet Sugar Association \$16,000 for postage—320,000 copies of that spurious document have enjoyed the free mailing facilities of the country.

Of course, this is not unusual. Mr. Palmer testifies to the circulation of vast numbers of other documents under other franks, but I know of no more flagrant instance. Mr. President, of the abuse of this privilege than that here presented. It is a signal instance of the audacity of a great moneyed combination organized to control the legislation of the country and using its great powers to that end. "Sugar at a glance" becomes momentous when that glance reveals conditions such as these to the eyes of the people.

I am very glad the opportunity came to the Nation through the appointment of the lobby committee to expose this unpardonable fraud, and I think it is due to the dignity and the good name of the Senate that it should ascertain, if it be possible to do so, all the details of this affair, who the real culprits are, and whether they can be reached by the processes of the courts.

But, Mr. President, I have already detained the Senate too long in the somewhat elaborate discussion of the subject, which is of great importance in my section of the country and which has assumed an undue importance in legislation here in consequence of the interests which have been engaged in its promotion.

Before yielding the floor I must refer to some material reasons for my conviction that the beet-sugar industry is or should be self-sustaining and that its ultimate and permanent place will be found in the farther reaches of the continent. The laws of nature supply to the sugar beet in the western half of the Republic all the protection that it needs. The class legislation of man may give it great artificial advantages, but that can only be at the expense of the many. In the upland regions, near the crest of the continent, in the arid and semiarid States of the West, will be found, in my judgment, the ultimate home of this great industry, regardless of what human legislation concerning it may be. It will obey the edict of nature's laws, and these have decreed its future in America. Let me read an extract upon this subject from Prof. Taussig, who expresses more graphically than I am able to do the conditions to which I am referring:

Two circumstances are dwelt on by those well informed concerning the conditions favorable to beet growing in this western region—the climate and the special advantages of irrigation. The variety of the beet suitable for sugar making flourishes in a cool climate, but it needs plenty of sun. Abundance of sunshine is essential to the highest development of sugar in the beet. Other things being equal it may be said that the richness of the beet will be proportional to the amount—not intensity—of the sunshine. Evidently the cool region of cloudless sky in the arid West, including the high-lying parts of Arizona and New Mexico, meets this condition perfectly.

Again:

In respect to moisture, the sugar beet is peculiar in some respects. There are three periods in the life history of the sugar beet which demand entirely different treatment so far as moisture is concerned: (1) The germinating or plantlet period; (2) the growing period; (3) the sugar-storing period. During the first the beet needs sufficient moisture and warmth to germinate and start it, but never an excess. During the second the beets need little if any moisture. During the third or sugar-storing period the plant should be given no water. The conditions desirable at this period are plenty of light and dry, cool weather. If the beet is given moisture to any considerable extent it will be at the expense of both sugar and purity.

It is clear that the irrigated regions of Colorado, Utah, Idaho, and Montana supply just the right combination of climate and moisture—cool temperature, abundant sunshine, moisture as needed, absence of moisture when harmful. Hence Colorado and Utah are described as the ideal beet-sugar States. Considering everything, Utah is the ideal beet-sugar State. Its natural conditions are quite similar to those of Colorado. In Colorado 12 to 25 tons of beets to the acre are readily secured; even in the early days 15 to 17½ tons were got on the average, whereas in European countries not only is the tonnage per acre less, but the sugar content smaller. Some of the districts of California have the required combination of soil and moisture without irrigation or with little irrigation. California has some further advantages. Its equable climate enables the beet-sugar campaign to be spread over a longer period than elsewhere, and its beets have a very high sugar content.

These reflections, Mr. President, are true. We depend in the far West not upon the caprice of nature for our supply of moisture, but the hand of man furnishes it at regular and needed intervals. Irrigating ditches spread over the face of the land, and their waters are eagerly drank by the grateful soil at times when most propitious for good and scientific husbandry. We have 322 days of sunshine every year, and the coolness of our nights has passed into a proverb. These are ideal conditions for the beet-sugar industry. Not tariff laws, not railroad rates, but the laws of nature declare that there will be the home of this great industry; there will be its permanent abiding place when the soils of the Mississippi and Missouri Valleys yield reluctant harvests to the husbandman.

Mr. President, it is somewhat consoling to know that the Democratic attitude concerning a tariff upon sugar finds many Republican precedents to support it. We are not alone in believing that this is a hunger tax, one that rests upon a neces-

sity of life, a commodity that should be made as cheap as possible to all the people.

Senator Sherman said 40 years ago that no amount of protection could ever establish sugar as an independent industry in Louisiana, and the character and present condition of that industry as portrayed here this summer abundantly justifies the accuracy of his prophetic vision.

In later years the Republican Party itself determined to place this commodity upon the free list, and on the 20th day of May, 1890, Mr. McKinley, the author of the tariff bill of that year, when presenting his measure to the House said:

I would have preferred, Mr. Chairman, if the article of sugar could have been left in the tariff schedule on the dutiable list. This, however, was not practicable in the presence of an almost universal sentiment in favor of the removal of the entire duties upon this article of universal family use.

Shortly afterwards and during the discussion Mr. Dingley, the author of the tariff bill which subsequently bore his name, said:

The duty collected on sugar and molasses the last fiscal year was \$55,975,610, or nearly 2 cents per pound. Adding to this the increased cost of 275,000,000 pounds of sugar produced in this country, equivalent to the duty of 2 cents a pound, and the duty imposed on these articles was practically a tax of \$63,500,000, or \$1 per head on the people of this country.

Inasmuch as there is scarcely another article of common use not now on the free list which can not be promptly produced or made here nearly or substantially to the extent of our wants the transfer of sugar and molasses to the free list will afford conspicuous relief to the people of this country.

And Hon. Joseph G. Cannon also said:

Mr. Chairman, the placing of sugar on the free list will relieve each inhabitant, rich and poor, of \$1 per annum of tax and at least 50 cents of extortion levied by the sugar refiners.

The gentleman from California asks, Why give a bounty to the producers of sugar in the United States? Well, I answer my friend, I am not anxious to give a bounty if you do not want it. My principal anxiety is to place sugar on the free list and relieve the people from this great burden of taxation.

On the 11th day of July, 1894, Mr. Allison said:

Whatever duty we place on sugar must in the very nature of things be added to the price.

Again on June 8, 1904, he said:

If I had my way, I would strike from this bill every vestige which provides a duty on sugar.

Senator Aldrich, the great apostle of protection, the dominating master of the Sixty-first Congress, said June 5, 1894:

They have signalized that friendship to-day—

Speaking of the Populists—

They have signalized that friendship to-day by joining their Democratic allies in forcing upon the people of the United States this unjustifiable, indefensible, and infamous sugar tax. I said this tax was infamous, and if I could employ any stronger word than that I should be glad to do so.

Mr. President, I have endeavored this afternoon to answer some of the main arguments that have characterized the speeches of Senators protesting against the provisions of the sugar schedule. I have sought to establish the alliance between the sugar-refining companies, with one or two exceptions, and the beet-sugar interests of the country, and to refute the contention that they are in antagonism here. I have endeavored to show that the cost of beet-sugar production is quite as great in Germany as it is in America; that the enormous profits which have been made upon this commodity have been realized, first, through its monopoly; second, through the tariff; third, through freight-rate manipulation; and, fourth, upon its enormous overcapitalization and the control of prices, by which it can pay large profit upon its real and its manipulated wealth.

I have endeavored, Mr. President, to show that argument based on soil fertilization through beet culture is only a Macedonian cry, the last resort of a great monopoly, cunningly designed to divert the mind from the central issue of protection in its final struggle for the maintenance of an unjust law.

I have also endeavored to fortify our position by recalling the attitude of great Republican statesmen of the past upon the question. I am as confident as I am of my own existence that nothing which this or any other Congress may do to reduce the public burden will either injure or destroy the great industry which has been the subject of this discussion.

ADJOURNMENT TO THURSDAY.

Mr. SMITH of Georgia. I move that when the Senate adjourns to-day it adjourn to meet at 2 o'clock p. m. on Thursday next.

The motion was agreed to.

DEVELOPMENT AND IMPROVEMENT OF WATERWAYS.

Mr. ASHURST. Mr. President, the floods last March in Ohio and Indiana, causing such cruel loss of human life and destruction of property of the estimated value of more than \$100,000,000, have induced our countrymen seriously to think

and to try to ascertain what, if any, means may be adopted to preclude a recurrence of such pathetic loss of life and ruthless waste of human endeavor represented by the property destroyed.

It is stated upon reliable authority that in the city of Dayton, Ohio, which had a population of perhaps 130,000 persons, over 14,000 homes were flooded and nearly all of the business portion of the city was inundated. The Senator from Ohio [Mr. POMERENE] on April 15, 1913, presented to the Senate a preamble and resolution, addressed to the Congress of the United States, adopted by the city council of the city of Dayton. The Senator from Ohio was wholly within his rights in presenting this resolution. It was a courageous thing for him to do, and I doubt not that the resolution, respectful as it was in its terms, struck other Senators as forcibly as it did myself. The resolution was a severe and, I am fearful, a just arraignment of the Government of the United States. Indeed, Mr. President, I do not overstate the matter when I say that no paper recently presented to Congress, within my knowledge, laid more severe strictures or brought a more terrific indictment against Congress than this resolution.

I ask unanimous consent that I may include in the RECORD as a part of my remarks the resolution of the city council of the city of Dayton, Ohio:

A resolution offered for consideration to the council of the city of Dayton, State of Ohio.

Whereas the Great Miami River is controlled as a navigable stream by the Federal Government, it is the duty of the Government to examine plans for all bridges and to prevent the channel from being encroached upon by private interests; and

Whereas the Government has failed to perform its obligation in regard to the inspection and supervision of our waterway and is thus directly responsible, in our opinion, to the people of Dayton for the great calamity from which they are now suffering; and

Whereas the neglect of the Government in this instance has resulted in a great loss of life and a monetary loss to Dayton of more than \$100,000,000, through the disastrous forces with which we are too weak to cope; and

Whereas the Federal Government should not continue its neglect of this condition, but should at once appropriate a sufficient amount of money to place the city of Dayton beyond the liability of another disaster such as that through which we have just passed: Now, therefore, be it

Resolved by the council of the city of Dayton, State of Ohio, That we now respectfully demand some just reparation from the Government for the neglect from which we are suffering; this demand is made because it is just and because we are entitled to that protection which the Federal Government affords and gives to all cities located along navigable waterways; and

That we now petition the Congress of the United States to provide sufficient funds to cut a new channel for the Great Miami River and to supervise the work of cutting this new channel; and

That the clerk of council be, and he is hereby, directed to certify copies of this resolution to the Senate and House of Representatives of the Congress of the United States.

Adopted by council April 9, 1913.

WM. D. HUBER,
President of Council.

WAYNE G. LEE,
Clerk of Council.

I hereby approve the foregoing resolution this 11th day of April, 1913.

EDWARD PHILLIPS,
Mayor of the City of Dayton, State of Ohio.

I, Wayne G. Lee, clerk of council of the city of Dayton, State of Ohio, do hereby certify that the foregoing is a true and correct copy of a resolution duly adopted by the city council at a special meeting had and held in the council chamber of the city of Dayton, State of Ohio, on the 9th day of April, A. D. 1913, and which is duly recorded in the minute book C-I, page 435, of the records of the council of said city of Dayton, State of Ohio.

[SEAL.]

WAYNE G. LEE,
Clerk of Council, City of Dayton, State of Ohio.

Mr. President, the action of the President of the United States in directing the Secretary of War to see to it that all assistance should be given to the people of the flooded region was entirely proper. The President's view that this disaster was a "national calamity" was eminently correct. There are, however, some American statesmen, and their conscientiousness is not to be questioned, who, in the President's situation, would have spent days and probably months debating and delaying before extending the Federal aid, in order that they might ascertain whether the Federal aid should be extended at all; and if so, would such Federal aid improve navigation or would it protect farm lands from overflow, or would it do both.

It will be observed that the council of the city of Dayton charges that the Great Miami River is controlled as a navigable stream by the Federal Government, and that the Government of the United States failed to perform its obligation in regard to the inspection and supervision of that waterway and, therefore, is directly responsible to the people of Dayton for the great calamity from which they are now suffering. The resolution further alleges that the neglect of the Government in this instance has resulted in a great loss of human life and in a

monetary loss amounting to more than a hundred million dollars. The resolution further states that the people of that city are entitled to that protection which the United States affords and gives to all cities located along navigable waterways, and concludes by demanding some reparation from the Government for the neglect from which the people of Dayton are suffering.

This charge, so specific in its terms, and coming from the source whence it does, is not, so far as I am concerned, to be passed over without some thought.

That calamities, far-reaching and destructive in their consequences and affecting in a powerful degree the people of some particular section of our country, will continue to happen from time to time, there is no doubt. That some accidents at sea will happen in the future, there is little doubt; that in the future some destructive floods and fires will occur, there is little doubt. It is, of course, somewhat questionable if mankind shall ever be enabled to regulate the forces of nature so completely that the possibility of accident and misfortune will entirely be removed and precluded. But civilized government can and should take care to see that these disasters are minimized and reduced to the lowest possible percentage. I believe that a solution of the question of the control of the flood waters is the passage of the Newlands river-regulation bill, so called, and my purpose in rising to-day was to speak in support of that bill.

The present temper of the country is such that it will brook no more delays. The Nation wants constructive work, not postponement; progress, not procrastination. The Nation demands action, not investigation. What the Nation now demands—and I believe that Congress will heed that demand—is protection from floods and prevention of floods as well. The country demands river regulation to stop the flood waters that have been running uncontrolled to the sea, carrying death and destruction in their path. The country demands that these destructive and wasteful waters shall be put into the rivers in the low-water season, so that boats may be floated upon the same, to the end that the water-borne commerce of this Nation shall be carried on inland waterways all the year round; to the end that these rivers may be made navigable at all times and thereby aid and expand the interstate commerce of the United States. The Newlands river-regulation bill, S. 2739, proposes to unite all the hydrographic activities of the Government into one harmonious plan, the idea being to impound and store, as far as practicable, the waters of the upper reaches of the rivers for irrigation and water power; to provide channels as the rivers flow to the sea sufficiently large to carry away floods and at the same time to serve as waterways for commerce. With this plan goes the reclamation of the swamps and reforestation of the mountains to check sudden floods. In my judgment this bill is extremely meritorious and ought to be passed by Congress. Under this bill the rivers will be examined as to their possibility for freight-carrying and power purposes. Practical plans will be formulated for improvements and estimates of the cost made. It is a large undertaking and will require the expenditure of much money for preliminary work, but the expense is inconsequential and negligible in comparison to the good that will be accomplished. Accurate facts may then be secured and the Federal Government enabled to proceed upon the work on the waterway improvements in a systematic manner and not in the haphazard way which is so frequent occurrence. Under the methods which have heretofore existed immense sums of money have been appropriated in past years for improvements without comprehensive plans or continuous work. In past years we have expended hundreds of millions of dollars for improvements on our rivers, and we have comparatively little to show for the money thus expended. In my judgment, we shall continue to waste money in this same way unless we systematize the work as is provided in this bill or some other bill involving the same general principles. Every winter and spring we scarcely read a newspaper unless our eye strikes the oft-repeated item that the Missouri, Mississippi, and other rivers are again raging torrents, doing millions of dollars of damage to property and causing much loss of human life. Annual and semiannual floods devastate the valleys. Is it not time that this matter should engage our attention?

The Newlands river-regulation bill, so called, combines the admirable features of a unified, comprehensive system in the hands of a commission. I have no doubt that the commission will be able to evolve a plan whereby the falling waters will be conserved and stored in the soil, instead of rushing in their destructive courses to the sea. The bill provides for carrying the surplus water out over the arid and semiarid districts, so that it may gradually percolate through the soil. It is not entirely beyond the domain of practicability to conserve every drop of rainfall, and in this connection I ask unanimous consent to in-

clude in the RECORD as a part of my remarks a short letter upon this subject from Mr. Freeman Thorp, of Hubert, Minn.:

WASHINGTON, D. C., January 24, 1913.

DEAR SIR: The big problem toward the solution of which my efforts have been directed for many years is conservation of the water supply on the dry lands of the great central plateau of the North American Continent, where we have within the United States 300,000,000 acres now idle, for want of sufficient rainfall, for ordinary farm production by the old methods, but the best soil in America for scientific farming, if we compel the filtration into the soil of all the limited precipitation, instead of allowing a part of it to run off over the surface, carrying with it by soil erosion some of the best soil and flooding the streams with muddy water, which is carried into the Mississippi River, swelling its floods with water, every drop of which is badly needed in the soil that it falls upon as rain or snow. Ordinary methods of cultivation and surface drainage facilitate the run-off and increase the evils of the problem.

The fact of this enormous run-off and waste of one of our greatest natural resources, with its attendant evils of soil erosion and disastrous floods, can no longer be ignored, and now that a thoroughly practical way has been found to prevent this run-off our duty plainly is to direct our efforts to getting it into general use as fast as possible.

The method of doing this is now well past the experimental and demonstration stage on my experimental dry-land tract for farming and forestry experiments at Hubert, Minn., near the headwaters of the Mississippi River. I have land there from the surface of which under the new method not one drop of rain or melting snow has been allowed to run off for 17 years, with the result that it doubles the diameter growth of forest trees, which quadruples the amount of lumber in the tree; it doubles the amount of grass grown and greatly increases the growth of cultivated crops. This method eliminates necessity of the summer fallow alternate years for getting moisture into the soil, and enables profitable crops annually upon any soil that receives even 10 inches of precipitation.

The method is very simple and thoroughly practical for the average farmer. It costs no more to prepare a field for a crop by my method than to prepare it by the ordinary method, and when prepared by my method there will be no run-off of the precipitation, no soil erosion, and practically no soil drifting.

On all soils having less than 24 inches of precipitation annually the total precipitation should, and by my method will, be filtered into the soil, reclaiming the dry lands without irrigation and making them as productive as any in the world. My method is applicable also to all forest and pasture lands in humid regions, and to all deep, sandy soils in those regions. In its working details it retards the run-off to a great extent from cultivated fields in humid regions, where from the character of the soil it is not practical to hold it all, and it prevents soil erosion on all such soils. When put into general use it will lessen by 30 to 40 per cent the present run-off of flood waters. The working details of my method for the farmer's use need not encumber this article further than to say it is a complete system of contour embankments and alternating ridges, all made with the plow and disk harrow, holding the rain and seeping it into the soil exactly where it falls, instead of accumulating it on the low portions of the field, running it onto the low wet lands to their detriment and into the streams as floods.

Theoretical criticisms against my method are effectively answered by its actual operation on my land. Its application to cultivated fields costs nothing; to lands that are now, and to remain, in permanent pasture the cost of the back-furrowed ridges, which should be sown to bromus grass, is small, and it doubles the grazing, much the best part of which will be on these ridges. Its application to present forest lands costs more, but is not prohibitory, and once made endures forever.

The enormous benefits to be realized from the general use of this method entitles it to the support of every true conservationist. I neither expect nor desire any personal benefit for originating; my desire being that the method, varied by individual intelligence to adapt it to local conditions, may be brought into general use for the benefit of the world upon all lands having insufficient rainfall for ordinary farming.

With great respect,

FREEMAN THORP.

The opportunity offered to Congress now to pass the Newlands river regulation bill is the presentation of an opportunity to do a great and patriotic service for this country. It is difficult to exaggerate the benefits that would come to the Nation by the passage of this bill. It would safeguard those who live in the river valleys from the ravages of the floods, which now leave death and destruction in their paths.

The bill provides for the construction of levees and dikes. The levee system has accomplished a vast deal to protect property and lives and reclaim overflowed lands; but the levee system is not alone sufficient, and this work has from time to time in the past been done by piecemeal. The American people are disgusted with delays and demand effectiveness and directness.

It should be a byword with this Nation, that "After Panama, our rivers." The vast equipment and organization assembled at Panama, which is now completing the canal, should be put to work upon our rivers. I thoroughly agree with Senator NEWLANDS that in order to accomplish anything in this direction we must undertake the work in a proper way, just as we did the Panama Canal.

A question often asked is: "Shall we retard, divert, or confine our flood waters?" The reply to that question is: "We shall retard, divert, and confine our flood waters."

Parton, the historian, writing in 1860, gives a very interesting description of the waste caused from year to year by the Mississippi River. He says:

The Mississippi is apparently the most irresolute of rivers; the bed upon which it lies can not long hold it in its soft embrace. Wearing away the concave side of its numberless bends, rushing through new channels, slicing off acres in an hour, leaving lakes where it found forests, holding dissolved in its yellow tide land enough for a plantation, and carrying down in one season more trees than the Black Forest

can boast, it reaches at last the Delta—that general emptying place for half a continent. Arriving there with its deep, narrow volume of waters—200 rivers in one—it can no longer contain itself, but breaks into several channels and pushes its way through the black ooze of its own depositing in a manner which looks helpless and sprawling, but which is in reality the shortest and directest way by which that prodigious torrent could find its way to the deep waters of the Gulf. There are so many streams, bayous, lagoons, and branches of the great river in the Delta that it looks on the map like a damaged spider's web.

This region is the crowning marvel and mystery of the Mississippi River. It is a forming world. Nature is there, as at Niagara, caught in the act. That dreary scene of impassable swamp, trembling prairie, firm prairie through which men dig for fish, stagnant bayou, rank reeds, dense forest, and habitable land is geology transacting openly before men's eyes. The materials with which nature works are lying about loose, subject to inspection. Dead level as it is, the mass of deposited matter is inconceivable. They have bored down into the Delta 600 feet without piercing through to the original bottom of the Gulf, finding still the trunks and stumps of forests that once waved their foliage over the stream. Yet nearly the entire mass is as incohesive as when the river first left it on the shore.

It has been suggested, however, that this Newlands river-regulation bill is the vision of a doctrinaire. Mr. President, in every line of human endeavor, wherever there is a newly awakened aspiration for better things, we have always found, and probably always will find, our efforts for social, industrial, and economic betterment characterized as dreams. We can not escape our obvious duty by characterizing the wholesome measures we do not have the time and inclination to investigate as visionary or impossible. The public is tired of aphorisms. For years some public men have been able by epigrams to hurdle great problems. An epigram avoids but never solves a problem. Men of high ideals are often disparaged as "impractical," as "visionaries," as "dreamers"; but some of the greatest of the world's accomplishments have been thought out and wrought out by men and women called dreamers. In fact, it has been the dreamers of this world who have carried on their work sturdily and unflinchingly to success. It is the dream, the imagination, the vision, the sentiment, woven into the work which prevents the prosaic monotony of the work-a-day world and enables us to travel the untrodden way to success. It is the dreamer only who knows the keen enjoyment of fighting grimly for a high and excellent purpose; and at the end of the fight, should failure and not success be the result, very few dreamers have vain regrets; but, on the contrary, many, if not most, are sustained by the thrill and inspiration of their noble endeavor.

But to those who believe that the Newlands river regulation bill is the plan of a dreamer or a doctrinaire I would invite attention to Report No. 1339 on Senate bill 122, Sixty-second Congress, third session, where will be found, collated, editorials from leading magazines and newspapers of the Nation, publicists and statisticians of wide note and large experience, all commending this bill, and I quote an editorial from the Stockton Daily Record, of Stockton, Cal., under date of November 22, 1912:

The man with a vision is being called into the public service. In a hard-headed, practical age, society is turning for relief and hope to the dreamer of great dreams.

One was reminded of the fact last evening in listening to the closing words of Senator NEWLANDS's address on our country's river problems. Sentiment is not indigenous to levees. Landscape art is hardly expected to gather its inspiration from dams and ditches. Esthetic conceptions are not searched for in the reclamation of swamps. The figures that tell of the devastation wrought by floods do not sing in poetic strain. The possibilities of water conservation and distribution have never been the inspiration of epic or flowery prose.

But the human mind is breaking from the throngs of purely utilitarian conceptions of values. Senator NEWLANDS, in his plea for his bill, urged it at once as a business measure and as one that would lead the people into easier, happier, and fuller enjoyment of the bounties of nature. His call was for men of vision, for men whose perspective could sweep far beyond the half billion dollars the Government is asked to spend for irrigation, flood protection, and navigation. He asked that man fix his mind not on piles of profits counted in shimmering gold, but on the desert that would be made to bloom as the rose, on the river running free and clean in the interests of peaceful commerce, on the mountain water storage lakes from which the thirsty valleys could drink deep and long for their nourishment.

It was a pleasure to hear the Nevada Senator extol a noble, humanitarian sentiment; it was a pleasure to learn that he bases his plea for his magnificent project on the good it would do mankind rather than the profits it would bring to "business." It was even more interesting to note that such sentiments found ready response in an audience composed largely of business men. Our citizenship seems to be far more receptive to great visions than it was a few years ago. The dull, dreary grind of the business man and the laboring man has not lessened, but both of them—equally victims of the system evolved by the sordid past—are looking forward to the day when the peace and plenty spread in the lap of nature by the Creator shall be the common, free, and full heritage of all mankind.

SOURCES OF OBJECTION TO THE BILL.

Mr. President, it will, of course, be asked if this bill be so salutary, why this delay in putting it into effect? I respond by stating that I fear forces which delayed the construction of the Isthmian Canal for a quarter of a century seem to be unfriendly to this proposed legislation. It is known to every well-informed person that the transcontinental railroads prevented an isthmian canal for nearly a quarter of a century.

These same and other railroads fear the water competition that undoubtedly would follow systematic development of the rivers. If anyone should doubt that the railroads of the country fear waterway competition or should doubt that the railroads are actively supporting the policy which proposes simply to levee against floods without doing anything else, because that method of protection will not result in waterway improvement, let him read the report of the Commissioner of Corporations on Transportation by Water in the United States, Part IV, issued December 23, 1912, especially that chapter entitled "Railroad control of water carriers," and he will be convinced that in lending no support whatever to the Newlands river-regulation bill the railroads of the country are fighting to prevent waterway transportation competition just as they fought the construction of the Isthmian Canal. Competition between water carriers in the United States has been completely ended, the railroads controlling both the terminals and the vessels.

Indeed, Mr. President, the eight transcontinental railroads are so powerful that they have even induced some statesmen in the British Empire to take the position that the United States may not allow its own coastwise vessels to pass through the Panama Canal without the payment of tolls.

Mr. President, in order to support the statement I made to the effect that carriers by railway are not friendly to legislation improving commerce on the rivers, I ask permission at this point to insert in the RECORD as part of my remarks certain excerpts and analyses from the Report of the Commissioner of Corporations on Transportation by Water in the United States, Part IV, dated December 23, 1912:

The extensive water traffic between New York City and the New England ports is almost completely controlled by a single railroad—the New York, New Haven & Hartford (New Haven system)—or by the Eastern Steamship Corporation, in which the New Haven system is at present a considerable stockholder, though claiming to have no voice in the management. The only line from New York to Portland, Me., is owned by the Eastern Steamship Corporation, and this is true of the only direct water line from New York to Boston. In the Long Island Sound traffic all the regular lines are controlled by the New Haven system, except five companies, with only a few small boats, and two of these are controlled by other railroads—one of the Central Vermont Transportation Co., a subsidiary of the Central Vermont Railway, and the other the Montauk Steamboat Co. (Ltd.), controlled by the Pennsylvania Railroad. The New Haven system, moreover, owns a majority of the stock of the Merchants & Miners' Transportation Co., itself a shipping merger, operating, among other services, lines between Boston and Philadelphia and between Boston and Newport News, Norfolk and Baltimore. No other steamship line operates between Boston and the ports named.

Most of the steamship interests of the New Haven system are held by an intermediary holding company, the New England Navigation Co.

Between New York and Norfolk there is only one steamship line, the Old Dominion Steamboat Co., and a controlling interest in this is owned by five railroads—the Atlantic Coast Line, the Southern Railway, the Seaboard Air Line, the Chesapeake & Ohio, and the Norfolk & Western.

Between New York and Savannah there is only one steamship line, the Ocean Steamship Co. of Savannah. This is owned by the Central of Georgia Railway, control of which is held by the Illinois Central. About one-fifth of the latter's stock, in turn, is owned by the Union Pacific Railroad.

Between New York and New Orleans there is now only one steamship line, that of the Southern Pacific Co., which long ago bought up two formerly competing lines. A working control of the Southern Pacific Co. has for years been held by the Union Pacific Railroad, but this has recently been declared illegal by the Supreme Court of the United States.

Between New York and Galveston there are two water lines. One of these is a railroad-owned line (Southern Pacific), while the other, the Mallory Line, is owned by a shipping consolidation, the Atlantic, Gulf & West Indies Steamship Lines. This consolidation also owns the Texas City Steamship Co., operating between New York and Texas City, which on through traffic is virtually a part of the port of Galveston. The acquisition of this line was preceded by a severe rate war.

The principal local lines on Chesapeake Bay and its numerous tributaries are owned by the Pennsylvania Railroad Co., through railroad subsidiaries, while the three through lines between Baltimore and Norfolk are also under railroad control.

Again, nearly all the important anthracite coal fleets engaged in the North Atlantic coastwise trade are owned by the few great anthracite railroads.

On the Great Lakes all the important through passenger and package-freight lines are owned by railroads. In the local package-freight traffic there are a large number of independent water carriers. In the transportation of bulk freight, other than grain, such as ore, coal, and lumber, the railroad boat lines have practically no part. Several of the principal Lake fleets handling these products, however, are under the control of important industrial concerns, the largest being that of the Pittsburgh Steamship Co., controlled by the United States Steel Corporation.

On the Mississippi River system steamboat lines have largely succumbed to railroad competition or to natural difficulties. Most of the few remaining packet lines are independent of railroads, but are usually feeble competitors. The principal item of traffic to-day on the Ohio and Mississippi Rivers is bituminous coal, and the great bulk of through traffic in this commodity is handled by a single industrial consolidation, the Monongahela River Consolidated Coal & Coke Co., a controlling interest in which is, in turn, owned by the Pittsburgh Coal Co.

On the Pacific coast independent steamship lines are a much more important factor in domestic coastwise traffic. Several important water lines, however, including the Pacific Mail Steamship Co., chiefly engaged in foreign trade, and the San Francisco & Portland Steamship Co., are controlled by the Union Pacific-Southern Pacific Railroad system.

The Southern Pacific Co. also controls a fleet of oil vessels belonging to the Associated Oil Co., in which it owns a majority stock interest. There are also other water lines under railroad control.

Considering only water lines directly operated or in which railroads own a majority of the stock, and excluding harbor craft, this report shows that 20 railroads control steam vessels engaged exclusively in domestic trade of approximately 610,000 gross tonnage and line barges with about 200,000 gross tons, or a grand total of 810,000 gross tons. The tonnage of the New Haven system is the largest, aggregating a little over 200,000 gross tons, of which 156,500 tons is in steam vessels and 43,600 tons in barges and miscellaneous craft. Next in importance is the Union Pacific-Southern Pacific, with a grand total, excluding tonnage engaged in foreign trade, of over 150,000 gross tons. The Pennsylvania Railroad Co.'s water lines have 68,500 gross tons in steamers and 8,500 tons in barges; the New York Central, over 50,000 gross tons; the Central of Georgia Railway, over 40,000 gross tons.

The total capitalization of water lines controlled by these railroads—this not covering holding companies and several very important unincorporated services—aggregates \$55,339,375 in stock and \$31,263,887 in bonded debt. Of the stock \$40,223,800 and of the bonds \$19,211,137 are owned by 18 railroads or their subsidiaries. In most instances railroads own practically all the stock of the separately incorporated water lines which they control. Important exceptions are the Pacific Mail, in which the Southern Pacific owns only a trifle over one-half the \$20,000,000 stock, and the Merchants & Miners' Transportation Co., in which the New York, New Haven & Hartford Railroad owns only a bare majority interest. Instances where railroads own stock in a water line, but less than a majority interest, are comparatively few.

Of the regular line traffic on the Atlantic and Gulf coasts not controlled by railroads, the great bulk, as stated, is controlled by two important consolidations—the Atlantic, Gulf & West Indies Steamship Lines and the Eastern Steamship Corporation. With few exceptions, the constituent companies of these consolidations had been subsidiaries of an earlier merger—the Consolidated Steamship Lines—which collapsed shortly after its formation in 1907.

The larger of these consolidations—the Atlantic, Gulf & West Indies Steamship Lines, a holding company—controls, chiefly through subsidiaries, 72 vessels (exclusive of harbor craft) with 226,736 gross tons. Nearly one-third of this tonnage, however—that of the New York & Cuba Mail Steamship Co. (Ward Line)—is engaged in foreign trade with the West Indies and Mexico. The domestic lines owned by this consolidation are the Clyde Steamship Co., with 54,700 gross tons; Mallory Steamship Co., 46,500 gross tons; New York & Porto Rico Steamship Co. (of Maine), 337,100 gross tons; Texas City Steamship Co., 13,300 gross tons; and the Southern Steamship Co., 6,200 gross tons. In addition there are a few subsidiary terminal or lighterage companies. The issued capital stock of the Atlantic, Gulf & West Indies Steamship Lines is \$29,933,400; its bonded indebtedness is \$12,623,000, and that of its subsidiary companies \$17,432,000.

Except for railroad-owned lines and services to Porto Rico, there is hardly a competing line of importance operating between the domestic ports served by the Atlantic, Gulf & West Indies Steamship Lines.

PURPOSE OF CONTROL OF WATER LINES.

In acquiring their extensive control over domestic water carriers railroads have had in general three purposes: First, to eliminate the competition of water carriers; second, to obtain an entrance into territory not open to their rail lines; and, third, to secure valuable feeders, mainly local lines.

In the case of the New Haven system all these purposes are apparent. For some time past the New Haven system has pursued a determined policy of suppressing any effective competition on Long Island Sound; several, at least, of its recent acquisitions must be regarded as due to this policy. On the other hand, some of its earlier acquisitions came about largely as an incident to the merger of different railroad properties into the present system. Control of the Merchants & Miners' Transportation Co. is claimed by New Haven interests to have been sought in order to secure direct access to southern territory. However, elimination of competition was also an important factor.

Mr. President, the essential principles of this bill are indorsed by no less a person than the President of the United States, whose grasp of national problems is as ready and as comprehensive as any man's in this world to-day and whose zeal for the public good is not measured by partisanship, but by a sincere desire to promote the good of this country, which has called him to its honorable service. I now read a copy of the following telegram:

SEAGIRT, N. J., September 22, 1912.

HON. FRANCIS G. NEWLANDS,

Irrigation Congress, Salt Lake City, Utah:

Please express to the National Irrigation Congress my hearty approval of the policy it is met to promote, and especially of the policy of supplementing bank and levee protection by storage of flood waters above for irrigation and water power, turning floods from a menace into a blessing and at the same time abundantly feeding navigable waters.

WOODROW WILSON.

So, Mr. President, when we remember that the newspapers of the Nation for over two years have been urging the passage of the Newlands river-regulation bill, and when we remember that the reports made by Maj. J. W. Powell, first Director of the United States Geological Survey, and later surveys, investigations, and reports of the Geological Survey; also reports of Gen. Hiram M. Chittenden, of the Engineer Corps of the United States War Department, Engineer Charles Ellet, Jr., and others; also surveys and investigations made by the Pittsburgh flood commission, have shown the practicability of control of the flood waters of the rivers of the whole country; when we recall that the platforms of all the great political parties for 1912, which I will not pause at this time to read, declare for the spirit and effect of this bill; when we reflect that devastating floods that might have been prevented, or at least absorbed by thirsty soils, have cruelly destroyed many human lives and millions of

dollars' worth of property, and thus swept away the result of countless hours of human toil—surely this arraignment of Congress by the Chamber of Commerce of the city of Dayton must strike us with extreme force and compel us to search our own consciences as to whether or not we are guilty of the delays and neglect so specifically set forth against us by the Chamber of Commerce of the city of Dayton.

Mr. President, we can not alter the past, but the future is ours, and we may do with it as we will. We may neglect the opportunity to pass the Newlands bill; we may in the swirl of events which we erroneously believe to be more important put aside this duty until a more convenient season; but the floods in the valleys and lowlands, wearing away the rich alluvial soils and destroying lives and property, will be a perpetual reminder that we have not done our duty.

Mr. President, I ask unanimous consent that I may incorporate in the Record, as appendices to my remarks, the declarations of the platforms of the Democratic, Republican, and Progressive Parties in 1912 upon this subject, a short editorial from the Reno (Nev.) Journal of October 25, 1912, and also Senate bill 2739.

The PRESIDING OFFICER (Mr. PITTMAN in the chair). In the absence of objection, permission is granted.

The matter referred to is as follows:

[Declarations of the platforms of the Democratic, Republican, and Progressive Parties in 1912 relative to the improvement of the waterways.]

DEMOCRATIC PLATFORM.

We renew the declaration of our last platform relating to the conservation of our national resources and the development of our waterways. The present devastation of the lower Mississippi Valley accentuates the movement for the regulation of river flow by additional levee and bank protection below, and the diversion, storage, and control of the flood waters above, and their utilization for beneficial purposes in the reclamation of arid and swamp lands and the development of water power, instead of permitting the floods to continue, as heretofore, agents of destruction. We hold that the control of the Mississippi River is a national problem. The preservation of the depth of its water for the purpose of navigation, the building of levees to maintain the integrity of its channel and the prevention of the overflow of the land, and its consequent devastation, resulting in the interruption of interstate commerce, the disorganization of the mail service, and the enormous loss of life and property, impose an obligation which alone can be discharged by the General Government.

To maintain an adequate depth of water the entire year and thereby encourage water transportation is a consummation worthy of legislative attention and presents an issue national in its character. It calls for prompt action on the part of Congress, and the Democratic Party pledges itself to the enactment of legislation leading to that end.

We favor the cooperation of the United States and the respective States in plans for the comprehensive treatment of all waterways with a view of coordinating plans for channel improvement with plans for drainage of swamp and overflowed lands, and to this end we favor the appropriation by the Federal Government of sufficient funds to make surveys of such lands, to develop plans for draining the same, and to supervise the work of construction.

We favor the adoption of a liberal and comprehensive plan for the development and improvement of our inland waterways with economy and efficiency, so as to permit their navigation by vessels of standard draft.

REPUBLICAN PLATFORM.

The Mississippi River is the Nation's drainage ditch. Its flood waters, gathered from 31 States and the Dominion of Canada, constitute an overpowering force which breaks the levees and pours its torrents over many million acres of the richest land in the Union, stopping mails, impeding commerce, and causing great loss of life and property. These floods are national in scope, and the disasters they produce seriously affect the general welfare. The States unaided can not cope with this giant problem; hence we believe the Federal Government should assume a fair proportion of the burden of its control, so as to prevent the disasters from recurring floods.

We favor a liberal and systematic policy for the improvement of our rivers and harbors. Such improvement has been made upon expert information and after a careful comparison of cost and prospective benefits.

PROGRESSIVE PARTY PLATFORM.

The rivers of the United States are the natural arteries of this continent. We demand that they shall be opened to traffic as indispensable parts of a great nation-wide system of transportation in which the Panama Canal will be the central link, thus enabling the whole interior of the United States to share with the Atlantic and Pacific seaboard in the benefit derived from the canals. It is a national obligation to develop our rivers, and especially the Mississippi and its tributaries, without delay under a comprehensive general plan covering each river system from its source to its mouth, designed to secure its highest usefulness for navigation, irrigation, domestic supply, water power, and the prevention of floods. We pledge our party to the immediate preparation of such a plan, which should be made and carried out in close and friendly cooperation between the Nation, the States, and the cities affected. Under such plan the destructive floods of the Mississippi and other streams which represent a vast and needless loss to the Nation would be controlled by forest conservation and water storage at the headwaters and by levees below, land sufficient to support millions of people will be reclaimed from the deserts and the swamps, water power enough to transform the industrial standings of whole States would be developed, adequate water terminals would be provided, transportation by river would revive, and the railroads would be compelled to cooperate as freely with the boat lines as with each other. The equipment, organization, and experience acquired in constructing the Panama Canal soon will be available for the Lakes-to-the-Gulf deep waterways and other portions of this great work, and should be utilized by the Nation in cooperation with the various States at the lowest net cost to the people.

[From the Reno (Nev.) Journal, October 25, 1912.]

CURBING THE MISSISSIPPI.

The Democratic plan to harness the Mississippi is in response to a demand that has been made for years. It comes not alone from the people of the South, but the North and West as well. Every year disastrous floods sweep down through the channel, ruining crops worth millions of dollars, devastating the land, and inundating cities. Not infrequently the rush of waters claim a toll of human life.

The people who live on the lands that flank the great stream want the waters curbed.

The people of the West ask that the flood waters be impounded and held to irrigate their lands.

It is simply a question of the people of the South joining hands with those of the West and acting together, each to get what they want.

If the flood waters are held in great reservoirs they will be checked.

Woodrow Wilson's ideas meet with those of the people east and west. He is in accord with the progressive thought of the day. He is a man who responds to the wishes of the people. It is because he catches the drift of public sentiment that he is endorsed by men of all sections. He has enlisted in the movement long ago started by Senator NEWLANDS to save the water for those who need it and from those who do not.

This question of harnessing the waters of the Mississippi has been discussed for half a century. It has been dodged by men and candidates.

Now, after decades of agitation, it would seem that something shall be done by bringing together in a perfectly simple manner the people of the West and the South in an enterprise that will mean the saving of untold millions for each section of the country.

Mr. NEWLANDS introduced the following bill, which was read twice and ordered to lie on the table.

A bill (S. 2739) to create a waterways commission and a board of river regulation to promote interstate commerce by the development and improvement of the rivers and waterways and water resources of the United States and the coordination of and cooperation between rail and water routes, and by providing a fund for the regulation and control of the flow of rivers and for the maintenance at all seasons of a navigable stage of water in waterways and for the connection of rivers and waterways with the Great Lakes and with each other, and as a means to that end to provide for flood prevention and protection and for water storage and for the beneficial use of flood waters for irrigation and water power, and for the conservation and use of water in agriculture and for the protection of watersheds from denudation and erosion and from forest fires, and for the cooperation in such work of Government services and bureaus with each other and with States, municipalities, and other local agencies.

Be it enacted, etc., That the sum of \$60,000,000 annually for each of the 10 years following the 1st day of July, 1913, is hereby reserved, set aside, and appropriated, and made available until expended, out of any moneys not otherwise appropriated, as a special fund in the Treasury, to be known as the "river regulation fund," to be used to promote interstate commerce by the development and improvement of the rivers and waterways of the United States and their connections with the Great Lakes and with each other, and by the coordination of and cooperation between rail and water routes and transportation, and the establishment and maintenance of adequate terminal and transfer facilities and systems and their maintenance, improvement, and protection, and by the making of examinations and surveys and by the construction of engineering and other works and projects for the regulation and control of the flow of rivers and their tributaries and source streams, and the standardization of such flow, and by the maintenance of navigable stages of water at all seasons of the year in the waterways of the United States, and by preventing silt and sedimentary material from being carried into and deposited in waterways, channels, and harbors, and by the conservation, development, and utilization of the water resources of the United States, and by flood prevention and protection, through the establishment, construction, and maintenance of natural and artificial reservoirs for water storage and control, and the protection of watersheds from denudation, erosion, and surface-wash and from forest fires, and the maintenance and extension of woodland and other protective cover thereon, and the reclamation of swamp and overflow lands and arid lands and the building of drainage and irrigation works in order that the flow of rivers shall be regulated and controlled not only through the use of flood waters for irrigation on the upper tributaries, but also through controlling them in fixed and established channels, in the lower valleys and plains, and by doing all things necessary to provide for any and all beneficial uses of water that will contribute to its conservation or storage in the ground or in surface reservoirs as an aid to the regulation or control of the flow of rivers, and by acquiring, holding, using, and transferring lands and any other property that may be needed for the aforesaid purposes, and by doing such other things as may be specified in this act or necessary to the accomplishment of the purposes thereof, and by securing the cooperation therein of States, municipalities, and other local agencies, as hereinafter set forth, and for the payment of all expenditures provided for in this act; the ultimate purpose of this act being the maintenance at all times of a navigable stage of water in all inland waterways, and flood prevention and protection, and river regulation and the control of the volume of water forming the stage of the river from its sources, so as to standardize the river flow, as contradistinguished from and supplemental to channel improvement as heretofore undertaken and provided for under the various acts commonly known as river and harbor acts.

CREATION OF THE WATERWAYS COMMISSION AND THE BOARD OF RIVER REGULATION.

SEC. 2. That a commission is hereby created, to be known as the waterways commission, consisting of the President of the United States, who shall be the chairman of said commission, with the power of veto, the Secretary of War, the Secretary of the Interior, the Secretary of Agriculture, and the chairman of the board of river regulation, to be appointed as hereinafter provided. The chairman of the Interstate Commerce Commission and the chairman of the Panama Canal Commission shall be ex officio advisory members of said waterways commission.

The waterways commission shall have authority to direct and control all proceedings and operations and all things done or to be done under this act, and to establish all rules and regulations which may in their judgment be necessary to carry into effect such direction and control consistent with the provisions of this act and with existing law and with any provisions which Congress may from time to time enact.

All plans and estimates prepared by the board of river regulation, as hereinafter provided, which contemplate or provide for expenditures from the river regulation fund, shall be submitted to the Waterways Commission for final approval before any of the expenditures therein provided for or contemplated are authorized or made, or any construc-

tion work undertaken or contracts let under or in pursuance of such plans: *Provided*, That in case of an emergency the chairman of the board of river regulation shall have full power to act, and shall report in detail his action in every case to the Waterways Commission at its next meeting after his action.

The members of said commission shall serve as such only during their incumbency in their respective official positions, and any vacancy on the commission shall be filled in the same manner as the original appointment.

A board is hereby created, to be known as the "board of river regulation," consisting of the Chief of Engineers of the United States Army, the chairman of the Mississippi River Commission, the Director of the United States Geological Survey, the Director of the Reclamation Service, the Forester of the Department of Agriculture, the Chief of the Bureau of Plant Industry of the Department of Agriculture, the Secretary of the Smithsonian Institution, one civil engineer, one sanitary engineer, one hydroelectric engineer, one expert in transportation, and a chairman of the board. The last five shall be appointed by the President and hold office at his pleasure, and they shall each receive an annual compensation of \$10,000, except the chairman, who shall receive \$12,000, and they shall receive a per diem in lieu of actual expenses when absent from headquarters on official business, to be determined by the Waterways Commission. Such compensation and per diem, together with all the general expenses of the board, shall be payable out of the appropriation hereinafter apportioned to the Smithsonian Institution. The members of said board, with the exception of the five members appointed by the President, shall serve as such only during their incumbency in their respective official positions, and any vacancy on the board shall be filled in the same manner as the original appointment.

The five members of the board appointed by the President shall constitute an executive committee, of which the chairman of the board shall be chairman, and said executive committee shall have the general executive direction and supervision of the operations of said board of river regulation under rules and regulations to be established by the Waterways Commission.

A secretary of the board shall be appointed by the executive committee, and shall hold office at their pleasure, and he shall receive an annual compensation of \$5,000 and a per diem when absent from headquarters on official business, to be determined by the Waterways Commission, payable out of the appropriation hereinafter apportioned for the Smithsonian Institution.

All formal action taken and all expenditures made or authorized by the board of river regulation shall be reported to the Waterways Commission and shall be by the commission transmitted to Congress annually, or at such more frequent times as may appear to the commission desirable, or at such times as Congress may require.

Whenever in their judgment it may be advisable, in order to expedite construction, the Waterways Commission may order such construction work as they may determine to be done under the immediate direction, by contract or otherwise, of the executive committee, in which case such work shall be paid for from the apportionment of the service or bureau or organization under which it would otherwise have been done, such transfer and application of any apportionment made by this act being hereby authorized.

The Waterways Commission shall further have power to temporarily provide for disbursements under this act, other than those above provided for, by transfers from one apportionment hereunder to another: *Provided, however*, That such transfers shall be equalized and the money so diverted restored to the apportionment from which it was transferred, as nearly as may be, within the period of 10 years covered by this act.

The Waterways Commission may, if at any time it shall be in their judgment advisable, appoint from the public service additional members of the board of river regulation; and they may also create and appoint from the public service the members of subordinate boards or commissions to promote the purposes of this act and expedite and facilitate the administration thereof and operations and construction thereunder.

COOPERATION WITH STATES, MUNICIPALITIES, AND OTHER AGENCIES.

SEC. 3. That the board of river regulation shall, in all cases where possible and practicable, encourage, promote, and endeavor to secure the cooperation of States, municipalities, public and quasi public corporations, towns, counties, districts, communities, persons, and associations in the carrying out of the purposes and objects of this act and in making the investigations and doing all coordinative and constructive work provided for herein, and it shall in each case endeavor to secure the financial cooperation of States and of such local authorities, agencies, and organizations to an extent at least equal in amount to the sum expended by the United States; and it shall negotiate and perfect arrangements and plans for the apportionment of work, cost, and benefits according to the jurisdiction, powers, rights, and benefits of each, respectively, and with a view to assigning to the United States such portion of such development, promotion, regulation, and control as can be properly undertaken by the United States by virtue of its power to regulate interstate and foreign commerce and promote the general welfare, and by reason of its proprietary interest in the public domain, and to the States, municipalities, communities, corporations, and individuals such portion as properly belongs to their jurisdiction, rights, and interests, and with a view to properly apportioning costs and benefits, and with a view to so uniting the plans and works of the United States within its jurisdiction, and of the States and municipalities, respectively, within their jurisdictions, and of corporations, communities, and individuals within their respective powers and rights, as to secure the highest development and utilization of the waterways and water resources of the United States.

The board may receive and use any funds or property donated or subscribed to it or in any way provided for cooperative work, but no moneys shall be expended under any arrangement for cooperation until the funds to be provided by all parties to such arrangement shall have been made available for disbursement.

ENCOURAGEMENT OF INDEPENDENT INITIATIVE AND CONSTRUCTION.

SEC. 4. That all things done under this act shall be done with a view not only to constructive cooperation, as herein provided, but also with the definite and specific object of enlarging the field of accomplishment contemplated by the act through promoting and encouraging independent initiative and construction by States, municipalities, districts, and other local agencies and organizations, and creating object lessons and building models and making demonstrations that will have that effect and influence, and induce such supplemental and independent action and construction.

CONFERENCE AND COOPERATION OF BUREAUS AND STATES.

SEC. 5. That it shall be the duty of said board to coordinate and bring into conference and cooperation the various scientific and constructive bureaus of the United States with each other and with the representatives of States, municipalities, public and quasi-public corporations, towns, counties, districts, communities, and associations, and of foreign nations on international streams, in the carrying out and accomplishment of all the provisions, purposes, and objects of this act.

The board shall have authority to call upon and to bring into cooperation any other Federal department or bureau whose investigations or assistance may be found necessary to the carrying out of the provisions of this act, and the board is hereby authorized to defray the expenses of such investigations or assistance through a transfer of so much of its appropriation as may be necessary to the Federal department or bureau thus brought into cooperation.

CORRELATION, COORDINATION, AND ADMINISTRATIVE ECONOMY.

SEC. 6. That the board shall harmonize and unify and bring into correlation and coordination the investigations made, and information, data, and facts collected and obtained by the various bureaus or offices of the Government relating to or connected with the matters and subjects referred to and the questions involved in this act, and to print, publish, and disseminate the same, and it shall exercise such general supervision as may be necessary to provide against duplication or unnecessary, inadequate, unrelated, or incomplete work in connection therewith, and shall make such recommendations to the Waterways Commission as it may deem advisable at any time for the accomplishment of that end or in the interest of harmonious cooperation, efficiency, and economy in carrying out the purposes of this act. The special function of the board at all times shall be to promote the adoption of the best and most approved methods and systems of investigation, administration, construction, and operation, in carrying out such specific improvements, works, and projects as are authorized by this act, or which may be from time to time authorized by Congress, if within the scope of the work of the said board as herein set forth; and it shall further be the special function of the board to effect the largest possible saving as the result of the unification, correlation, and coordination of the work of the various bureaus in the investigations and administrative and constructive work provided for in this act in accordance with existing law or with such provisions as Congress shall from time to time impose.

REPORTS, PLANS, AND ESTIMATES BY THE BOARD.

SEC. 7. That the functions of the board shall be to obtain full information through its members concerning all proposed expenditures provided for within the scope of this act. Each bureau or service chief member shall report to the board the work proposed by the bureau or organization which he represents, and shall present full plans and estimates covering such proposed construction or action. The findings and conclusions of the board and plans adopted by it for construction and action shall be binding upon the members thereof in so far as may be consistent with existing laws.

REFERENCES TO AND INSTRUCTIONS FROM THE PRESIDENT.

SEC. 8. That all matters involving apparent conflict with departmental authority, jurisdiction, or procedure, or as to which the board may desire suggestions or advice, shall be laid before the President, who may thereupon call into conference the Waterways Commission, and after consideration of such matters by the commission, suitable instructions shall be issued by the President to heads of departments with a view to securing unity of action along the lines approved by the President and the commission.

EXECUTION OF PLANS AND WORK BY THE SEVERAL BUREAUS.

SEC. 9. That in the execution of all plans and duties entrusted or delegated to the several bureaus the respective chiefs thereof, acting under departmental regulations and procedure, shall execute the work according to the methods prescribed by law, the functions of the Board of River Regulation being those of a consulting and advisory body with power to make recommendations to the President and the Waterways Commission, and through the President to the heads of departments, with a view to effective coordination and cooperation as to all things proposed by this act, and to carry out such work as Congress shall from time to time prescribe or has prescribed in this act.

COMPREHENSIVE PLANS FOR RIVER REGULATION.

SEC. 10. That the Board of River Regulation shall develop, formulate, prepare, consider, and determine upon comprehensive plans for the conservation, use, and development of the water and forest resources of the United States in such manner as will best regulate the flow of rivers and their tributaries and source streams, and the stage of water in inland waterways, and the confinement of all rivers and waterways at all times within fixed and established channels, and embracing, with that object, the construction of levees and revetments and all works necessary for the fixation of channels and flood protection, drainage, and the reclamation of swamp and overflow lands; water storage in natural and artificial reservoirs; the beneficial use of waters for irrigation and for all domestic, municipal, and industrial purposes; the maintenance and development of underground water supplies and the storage of water in the ground and in irrigated lands and underground reservoirs; the enlargement of the areas and raising of the levels of the ground waters; the construction of flood-water canals, by-passes, and restraining dams; the control and regulation of drainage and the replenishment of streams by return seepage; the perpetuation of forests and maintenance of woodland cover as sources of stream flow; the prevention of denudation and erosion; the protection of channels and harbors from eroded soil materials; the clarification of streams; the utilization of water power; the prevention of the pollution of streams and rivers; the sanitary disposal of sewage and purification of water supplies; the best distribution of forests, woodlands, and other growth, and of cultivated and irrigated areas in their relation to river flow; the protection of forested and woodland areas from destruction by fire or insects; the reforestation of denuded areas; the planting of forests and establishment of forest plantations; the preservation and planting of woodlands and any other growth and protective cover on watersheds; the increase and development of the porosity and absorbent qualities and storage capacity of the soil upon which rain or snow may fall; the making and furnishing of plans for flood-water storage and other works for irrigation and power for farms, towns, and villages; the acquisition, subdivision, and settlement in small, intensively cultivated farms of lands for water storage by irrigation; the building of the irrigation systems for such lands, including reservoirs, dams, canals, ditches, and all necessary works; the protection of farms, villages, towns, and municipalities from damage by freshets and overflow; and the impounding of flood waters in artificial lakes and storage reservoirs.

to prevent floods and overflows, erosion of river banks, and breaks in levees, and to regulate the flow of streams and reinforce such flow during drought and low-water periods, the ultimate object of all such work being to regulate and, so far as possible, standardize the flow of rivers and their tributaries and source streams, and in the accomplishment of that object to induce and secure the cooperation of States, municipalities, districts, counties, towns, and other local agencies and organizations.

SMITHSONIAN INSTITUTION.

SEC. 11. That it shall be the duty of the Secretary of the Smithsonian Institution to give especial attention to the acquisition from foreign countries and from all sources of all obtainable knowledge concerning the problems involved in the work of the board and to diffuse and disseminate the same, and to establish and maintain a Museum of Water and Forest Resources in which such knowledge shall be placed before the people, with object lessons illustrating the disastrous consequences that have resulted from the neglect of such conservation and particularly the failure to conserve the forest and water resources in other countries of the world, and to utilize the resources of the institution under his charge, which may be available for that purpose, to aid in the education of the public in the elements of knowledge which lead to the successful regulation of water and of the flow of rivers and the use of water in connection with agriculture and the intensive cultivation of land, and in connection with all other industries.

BUREAU OF PLANT INDUSTRY.

SEC. 12. That it shall be the duty of the Chief of the Bureau of Plant Industry to collate and bring together for the information of the board the results of all investigations with reference to soil and the production of crops through the use of water as a fertilizer and stimulant to plant growth, and of the relation of water in excess or deficiency to successful crop production. He shall recommend for the consideration of the board such further investigations as may properly be conducted in connection with the purposes for which the board is created and which shall lead to the largest and most valuable results being obtained through the use of water in connection with successful plant growth and increased crop production, and the establishment of a national system for the information of the people in the intensive cultivation of small tracts of land, with a view to increasing food production and thereby reducing the cost of living and encouraging suburban and rural settlement and homemaking, and the beneficial use of water in connection therewith as an ultimate influence for river regulation in aid of interstate commerce.

FOREST SERVICE.

SEC. 13. That it shall be the duty of the Forester of the Department of Agriculture to present to the board all essential facts bearing upon the relation of forests to the various problems under consideration and the value and importance of forests and woodland and other growth and their proper control and extension and protection from fire; also such facts as may be essential to the proper enlargement of forested areas for the protection of watersheds and the maintenance of the flow of rivers during the low-water season and the prevention of denudation and erosion, with consequent silting up of waterways and harbors, and to prepare and present to the board comprehensive plans for the protection of the forests from fire and other destructive agencies.

GEOLOGICAL SURVEY.

SEC. 14. That it shall be the duty of the Director of the Geological Survey to recommend to the board appropriate surveys and examinations, and upon proper approval cause to be executed topographic surveys of each drainage basin, these being planned with reference to the work contemplated by the board and the immediate demands and needs of the board. Such surveys shall include and show in addition to the topography the character of all lands embraced therein, and it shall be his duty to classify the same and designate the best use to which said lands may be devoted in carrying out the provisions of this act. The topographic maps shall be of such scale as will bring out the existence of feasible storage or reservoir sites. He shall make such additional surveys of specific localities as may be required by the constructing engineers, and in such surveys he shall establish monuments based on geodetic horizontal and vertical control. The surveys shall be of such nature as to provide adequate bases for geologic investigation and engineering works. He shall also cause measurements to be made of the flow of streams at such places as may be designated by the board as yielding results of largest importance in the discussion of the problems in hand and the execution of proposed engineering works, and shall carry on such studies in river pollution and purification, in water-power possibilities, and other stream investigations as the board may designate. It shall be his further duty to examine all forested lands or lands intended to be afforested or reforested which it is proposed to purchase under this act, and to report whether the control and use of such lands will influence the preservation of water supplies or stream flow or tend to regulate the flow of navigable rivers on whose watersheds they are located.

RECLAMATION SERVICE.

SEC. 15. That it shall be the duty of the Director of the Reclamation Service to bring before the board the results attained in the construction of works of irrigation and reclamation throughout the arid and semiarid regions of the United States and the application of the experience thus obtained to the conditions existing in the more humid sections of the United States. He shall extend the surveys and investigations and construction of irrigation works such as are authorized in the act of June 17, 1902, known as the reclamation act, throughout the United States and including reclamation of land by drainage as well as by irrigation: *Provided, however*, That no part of the fund created by the act of June 17, 1902, shall be expended for this purpose. Such further investigations and construction and operations in States and Territories other than those covered by the original act above referred to and amendments thereto shall be made in accordance with such rules and regulations as shall be established by the Secretary of the Interior, and shall be subject to such of the terms, provisions, and requirements of said reclamation act as the Secretary of the Interior shall determine are to be made applicable thereto, but shall be at the expense of the river-regulation fund created by this act, and expenditures from said last-mentioned fund may be similarly made in any State or Territory. He shall construct, operate, and maintain, until otherwise provided by law, such irrigation and drainage works and systems as the board may determine are needed for the regulation of the streams and rivers and the improvement of agricultural conditions, or for the proper control, disposition, and utilization of sewage or other waste waters which, without such regulation, would pollute the streams or injuriously affect the health or prosperity of the community.

He shall also present to the board proposed plans for cooperation with irrigation or drainage projects or enterprises constructed, initiated, or contemplated by States, districts, municipalities, corporations, associations, or individuals, and shall negotiate agreements for coordinating and making more useful works already in existence or proposed through their incorporation into more effective systems.

CORPS OF ENGINEERS, UNITED STATES ARMY.

SEC. 16. That the Chief of Engineers of the United States Army shall present to the board all proposed plans for works proposed to be built under this act which the Waterways Commission shall determine are to be built under his supervision, including plans for levees, dikes, revetments, dams, canals, cut-offs, spillways, controlled outlets, flood-water channels, and wasteways, bank-protective and channel-fixation works, reservoirs or basins for the storage of flood waters for flood prevention and river control, or works for which examinations and surveys have been made by or with the cooperation of States, municipalities, or districts, and which it is sought to have constructed under this act, together with such facts and data as may be required for the construction of such works, or any of them, for the regulation of the flow of rivers. He shall also construct, operate, and maintain such levees, flood-protection, channel-fixation, and bank-protective works as are built in accordance with this act and also such reservoirs as are so built for the storage of water to control and regulate the flow of rivers, and to reinforce such flow in seasons of low water and to prevent floods and protect lands and communities from overflow as may be determined by the Waterways Commission: *Provided, however*, That the provisions of this section shall be so administered as in no way to supersede or conflict with any specific provisions which Congress shall from time to time make by way of appropriations other than such as are made by this act for work and improvements to be performed or maintained by the Corps of Engineers, United States Army, but that all work prescribed under this section shall be supplemental to and coordinated with the work as specifically prescribed by Congress in other acts.

DUTIES OF EXECUTIVE COMMITTEE APPOINTED BY THE PRESIDENT.

SEC. 17. That it shall be the duty of the members of the board of river regulation appointed by the President and constituting the executive committee of the board of river regulation, as hereinbefore provided, under the direction of the chairman of the board to consider, prepare, and present to the board comprehensive plans providing for the best utilization of the water resources of the United States in connection with river regulation, flood prevention and protection, and the increase of the flow of rivers in low-water seasons and the maintenance at all times of a navigable stage of water in the waterways of the United States, and providing also for the coordination of and cooperation between rail and water routes and transportation, and the establishment, maintenance, and protection of terminals and transfer sites and facilities for transshipment between rail and water routes, and to adjust all the plans contemplated for the projects constructed under this act to the ultimate purpose of regulating and standardizing the flow of the rivers and inland waterways of the United States, in aid of interstate commerce as aforesaid; and further to give expert advice to the board in its consideration of details, problems, and projects; and it shall be their special duty to constantly promote and stimulate harmonious and effective cooperation between the different bureaus and services of the National Government and between the Nation and States, municipalities, and other local agencies in working out constructive plans under this act; and it shall further be their duty to examine and study the plans presented to the board for consideration, with the view of promoting the fullest possible measure of efficiency and economy in administration and construction, and avoiding all duplication in the work of the respective bureaus.

EQUITABLE APPORTIONMENT AMONG WATERWAY SYSTEMS.

SEC. 18. That in carrying out the provisions of this act regard must be had, as far as practicable, to the equitable apportionment and contemporaneous execution of the works and projects contemplated under this act among the several waterways systems of the United States.

Not less than \$10,000,000 annually for 10 years shall be apportioned to the Appalachian and Atlantic region, including the territory within the drainage basins of all rivers flowing into the Mississippi River below the Ohio River or into the Gulf of Mexico east of the Mississippi River or into the Atlantic Ocean.

Not less than \$10,000,000 annually for 10 years shall be apportioned to the drainage basin of the Ohio River.

Not less than \$5,000,000 annually for 10 years shall be apportioned to the drainage basin of the Mississippi River above St. Louis and the territory included in the drainage basins of the rivers draining into Canada or into the Great Lakes or into the Mississippi River from the east between East St. Louis and Cairo, Ill.

Not less than \$10,000,000 annually for 10 years shall be apportioned to the Mississippi River from St. Louis to the Gulf of Mexico, and the territory lying between the Atchafalaya River, the Mississippi River, and the Gulf of Mexico, and including the Atchafalaya River as a flood-water outlet for the Mississippi River, and including the controlling works necessary for such use of said Atchafalaya River, and all levees and bank-protective works, cut-offs, and auxiliary flood-water channels necessary to control and prevent all overflows from said Atchafalaya River which shall in this respect be regarded as in the same class with the Mississippi River and entitled to the same recognition in the matter of levee construction and flood protection for adjacent territory as the main Mississippi River.

Not less than \$10,000,000 annually for 10 years shall be apportioned to the territory included in the drainage basins of the Missouri River and other rivers, bayous, and waterways flowing into the Mississippi River from the west below St. Louis or flowing or debouching directly or through connecting waterways into the Gulf of Mexico west of the Atchafalaya River.

Not less than \$5,000,000 annually for 10 years shall be apportioned to the territory including the drainage basin of the Colorado River, and extending on the west to the crest of the watersheds draining into the Pacific Ocean, and on the north to the drainage basin of the Columbia and Snake Rivers; not less than \$5,000,000 annually for 10 years to the drainage basins of the rivers flowing through or into the Sacramento and San Joaquin Valleys or into the Pacific Ocean in California; and not less than \$5,000,000 annually for 10 years to the drainage basins of the Columbia and Snake Rivers and other rivers flowing into the Pacific Ocean in Oregon and Washington.

The drainage basin of every river above mentioned shall be understood to include all the tributaries and source streams of such rivers.

REPLENISHMENT OF RIVER-REGULATION FUND BY BOND ISSUE.

SEC. 19. That the President is authorized, whenever the current revenues are insufficient to provide the \$90,000,000 annually appropriated for the river-regulation fund, to make up the deficiency in such

fund by the issue and sale of United States bonds, bearing interest at a rate not exceeding 3 per cent per annum, payable semiannually, and running for a period not exceeding 30 years.

APPROPRIATIONS AND APPORTIONMENT.

SEC. 20. That the moneys hereby annually appropriated in section 1 of this act shall, subject to all the provisions of this act, be apportioned and expended by the services and bureaus herein named in carrying out the purposes and provisions of this act and under the direction of the heads of the respective departments and in accordance with existing laws and regulations or such modifications thereof as may be made from time to time in accordance with the general system or systems proposed by the board and approved by the Waterways Commission in the following sums annually, which shall be available until expended for the following purposes:

For the Smithsonian Institution, for obtaining information and material relating to the subjects covered by this act in the United States and foreign countries, and publishing and distributing the same to the people of the United States, and for the establishment and maintenance of a museum of water and forest resources, and for any other purposes mentioned or referred to in section 11 of this act, \$1,000,000.

For the Bureau of Plant Industry, for the increase and development of the porosity and absorbent qualities and storage capacity of the soil upon which rain or snow may fall in order that its run-off may be in that way checked and the water absorbed into the earth, and to that end for the establishment and maintenance of garden schools and demonstration garden farms, and instruction in intensive cultivation and the use of water for irrigation therein and in rural industrial communities, and for investigations and instruction with reference to terracing and methods of cultivation adapted to preventing erosion on hillside slopes, and with reference to the use of water as a fertilizer and stimulant to plant growth in all ways, and the adoption of all methods of agriculture that will increase the porosity and absorbent qualities of the soil and check surface wash or erosion or sudden run-off and thereby tend to prevent the formation of floods, and for the acquisition of lands that may be required for such purposes, and for any other purposes mentioned or referred to in section 12 of this act, \$6,000,000.

For the Geological Survey, for topographic surveys and the measurement of streams and other hydrographic and hydrologic works, and for the examination of lands intended to be purchased under this act, and for any other things required by the board to be done in connection with any investigation or construction done under this act, \$3,000,000.

For the Reclamation Service, for the reclamation of lands by either irrigation or drainage, or both, and for the building of irrigation and drainage systems to aid in the regulation or equalization of the flow of rivers and their tributaries and source streams through the conservation, utilization, and ground storage of waters in irrigated or drained lands, and for the acquisition and improvement by irrigation or drainage of specific tracts of land for intensive cultivation and settlement, and for the building of canals and ditches, and carrying to completion any and all methods of utilizing water for irrigation as a means for water conservation or river regulation, and for any other purpose mentioned or referred to in section 13 of this act, \$20,000,000.

For the Forest Service, (a) for the protection from fire and insect infestation of national forests, where such protection is essential to the preservation and maintenance of water supplies, and for the acquisition of lands within or near existing national forests or other lands which are necessary to the adequate protection of water supplies, and for building the necessary roads, trails, fire lines, fire-protection stations, telephone lines, and for any and all other things required for such fire protection, including the fighting of fires and the employment of forest guards and rangers, \$3,000,000.

(b) For the protection from fire of the forested watersheds of all rivers and streams, and for the organization and maintenance of a system of fire protection on any private or State forest lands situated upon the watersheds of such rivers or streams, in cooperation with any State or group of States, in the manner provided for in an act entitled "An act to enable any State to cooperate with any other State or States, or with the United States, for the protection of the watersheds of navigable streams and to appoint a commission for the acquisition of lands for the purpose of conserving the navigability of rivers," known as the Appalachian National Forest Act, and also in direct cooperation with cities, counties, towns, villages, and other owners of woodlands and forested areas on watersheds, and wherever essential to the preservation of water supplies and for the protection of such forested watersheds and areas from insect infestation, \$1,000,000.

(c) For the protection, perpetuation, enlargement, maintenance, regulation, and control of water supplies by the establishment and maintenance of forest nurseries, the planting or replanting of forests, the reforestation of denuded areas, the carrying out of silvicultural improvements in the national forests, and the establishment and maintenance of forest plantations and parks and the acquisition of lands therefor to provide instruction in the planting and care of trees and forests for the purpose of awakening and maintaining a local interest in and knowledge of the relation of forests to the preservation of water supplies and stream flow, \$1,000,000.

(d) For the acquisition of forest lands by and through the National Forest Reservation Commission as and in the manner provided for in the Appalachian National Forest Act above referred to, subject to all the conditions and requirements contained in said act, \$5,000,000.

Provided, That the provisions of the said Appalachian National Forest Act shall, after the expiration thereof by limitation, still continue and be in force with reference to all moneys made available for expenditure thereunder by this act, either for fire protection or for the acquisition of forest lands.

For the Corps of Engineers, United States Army, for building bank protective works to prevent erosion and cutting of the banks and consequent caving, and to control the river and hold it in a permanently fixed and established channel, and for building and maintaining levees, revetments, dikes, walls, embankments, gates, wasteways, by-passes, cut-offs, spillways, controlled outlets, drainage canals, flood-water canals and channels, weir dams, sill dams, restraining dams, impounding basins, and bank protective works for river regulation, and, as a means to that end, the building of works for reclamation, drainage, and flood protection, and for building reservoirs and artificial lakes and basins for the storage of flood waters to prevent and protect against floods and overflows, erosion of river banks, and breaks in levees, and to regulate the flow of source streams, rivers and waterways, and reinforce such flow during drought and low-water periods, and for the operation and maintenance of the same, \$20,000,000.

RAILROADS IN ALASKA.

Mr. CHAMBERLAIN. Mr. President, I ask unanimous consent that the bill (S. 48) to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes, be made the unfinished business for Monday, December 8, 1913, at 2 o'clock p. m.

The PRESIDING OFFICER. Is there objection?

Mr. BURTON. Mr. President, is that the Alaska railroad bill?

Mr. CHAMBERLAIN. It is.

Mr. BURTON. What is the request of the Senator from Oregon?

Mr. CHAMBERLAIN. Simply that the bill be set for a day during the next regular session.

Mr. BURTON. What day?

Mr. CHAMBERLAIN. On Monday, December 8, at 2 o'clock p. m.

Mr. BURTON. And that it be then taken up for consideration?

Mr. CHAMBERLAIN. That it be taken up for consideration. I have talked with a number of Senators about it—

Mr. BURTON. And that it be made the unfinished business for that time?

Mr. CHAMBERLAIN. Yes.

Mr. BURTON. I thought the request was for this session.

Mr. CHAMBERLAIN. No; for the next session.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Oregon? The Chair hears none, and the order is made.

EXECUTIVE SESSION.

Mr. SHEPPARD. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened.

DEATH OF REPRESENTATIVE WILDER, OF MASSACHUSETTS.

A message from the House of Representatives, by J. C. South, its Chief Clerk, communicated to the Senate the intelligence of the death of Hon. WILLIAM HENRY WILDER, late a Representative from the State of Massachusetts, and transmitted resolutions of the House thereon.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions of the House of Representatives, which will be read.

The Secretary read the resolutions, as follows:

IN THE HOUSE OF REPRESENTATIVES,
September 11, 1913.

Resolved, That the House has heard with profound sorrow of the death of Hon. WILLIAM H. WILDER, a Representative from the State of Massachusetts.

Resolved, That a committee of 20 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expense in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Mr. GALLINGER. Mr. President, in the absence of the Senators from Massachusetts, I offer the following resolutions.

The resolutions (S. Res. 180) were read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. WILLIAM HENRY WILDER, late a Representative from the State of Massachusetts.

Resolved, That a committee of six Senators be appointed by the Vice President, to join the committee appointed on the part of the House of Representatives, to attend the funeral of the deceased.

Resolved, That the Secretary communicate a copy of these resolutions to the House of Representatives.

The PRESIDING OFFICER appointed under the second resolution as the committee on the part of the Senate Mr. LODGE, Mr. WEEKS, Mr. MYERS, Mr. WALSH, Mr. McLEAN, and Mr. CATRON.

DEATH OF REPRESENTATIVE SULLIVAN, OF NEW YORK.

A message from the House of Representatives, by J. C. South, its Chief Clerk, communicated to the Senate the intelligence of the death of Hon. TIMOTHY D. SULLIVAN, late a Representative from the State of New York, and transmitted resolutions of the House thereon.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions of the House of Representatives, which will be read.

The Secretary read the resolutions, as follows:

IN THE HOUSE OF REPRESENTATIVES,
September 13, 1913.

Resolved, That the House has heard with profound sorrow of the death of Hon. TIMOTHY D. SULLIVAN, a Representative from the State of New York.

Resolved, That a committee of 20 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expense in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Mr. CHAMBERLAIN. I offer the resolutions which I send to the desk and ask for their present consideration.

The resolutions (S. Res. 181) were read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. TIMOTHY D. SULLIVAN, late a Representative from the State of New York.

Resolved, That a committee of six Senators be appointed by the Vice President, to join the committee appointed on the part of the House of Representatives, to attend the funeral of the deceased.

Resolved, That the Secretary communicate a copy of these resolutions to the House of Representatives.

The PRESIDING OFFICER appointed under the second resolution as the committee on the part of the Senate Mr. O'GORMAN, Mr. ROOT, Mr. SWANSON, Mr. MARTINE of New Jersey, Mr. JAMES, and Mr. BRANDEGEE.

Mr. GALLINGER. Mr. President, as a further mark of respect to the memory of the deceased Representatives, I move that the Senate adjourn.

The motion was unanimously agreed to, and (at 4 o'clock and 35 minutes p. m.) the Senate adjourned until Thursday, September 18, 1913, at 2 o'clock p. m.

NOMINATION.

Executive nomination received by the Senate September 15, 1913.

MINISTER.

William Hayne Leavell, of Mississippi, to be envoy extraordinary and minister plenipotentiary of the United States to Guatemala, vice R. S. Reynolds Hitt, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 15, 1913.

CONSULS.

Walter H. Schulz to be consul at Nantes, France.
Henry P. Starrett to be consul at Cartagena, Colombia.

POSTMASTERS.

ARKANSAS.

John W. Davis, Arkansas City.

MISSOURI.

E. H. Smith, Charleston.

HOUSE OF REPRESENTATIVES.

Monday, September 15, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Thou givest, O God our Father, and Thou takest away. None can stay Thy hand. Thou art almighty and doest all things well. Again this House has been called upon to record the death of another of its Members, one who was born and grew up under the most adverse circumstances of life, and yet made for himself a place in State and Nation—a virile mind and a big heart, a heart that went out to the man down and out, the widow and the orphan, the poor, the hungry, the sick, and the needy in deeds of brotherly love and kindness. May the noble in his character be an inspiration to others and solace to those who knew and loved him. The body perishes, but the soul lives on, we dare to hope, under brighter skies and more favorable environments. So may we live, so may we die, in the faith once delivered to the saints. Amen.

The Journal of the proceedings of Saturday, September 13, 1913, was read and approved.

THE WEATHER BUREAU.

Mr. MANN. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. The gentleman from Illinois asks unanimous consent to address the House for two minutes. Is there objection?

There was no objection.

Mr. MANN. Mr. Speaker, the other day, in the consideration of the urgent deficiency appropriation bill I offered some criticism of the Weather Bureau which the Chief of the Weather Bureau

informs me was based on a misapprehension. I took certain dates according to the newspapers, and if those dates had been correct the criticism that I offered would have been well founded. The Chief of the Weather Bureau informs me that the dates in the newspapers were not correct; hence the criticism is not well founded, and I ask unanimous consent to have read the letter from the Chief of the Weather Bureau, because I do not desire to do any man an injustice.

The SPEAKER. The Clerk will read the letter.

The Clerk read as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
WEATHER BUREAU, OFFICE OF THE CHIEF,
Washington, D. C., September 11, 1913.

HON. JAMES R. MANN,
House of Representatives.

DEAR MR. MANN: Referring to your remarks in the House on the 5th instant in relation to the action of the Weather Bureau in connection with the storm of the 3d instant on the North Carolina coast, as reported on pages 4315 and 4316 of the CONGRESSIONAL RECORD of September 5, 1913, I beg to invite your attention to the fact that the press report last quoted in your remarks bears the wrong date (September 4), as the actual report was dated September 3. The storm mentioned occurred between midnight and daybreak of September 3, not September 4. The bulletin of the Weather Bureau, dated 8 p. m., September 3, stated the conditions correctly, as the storm had then passed inland and the high winds had subsided several hours before. The first warnings regarding the storm were sent out at 9.10 p. m. of September 1, so that at least 36 hours' notice was given.

I am sure that you will be glad to know that "the new management of the Weather Bureau" was not "asleep at the switch" in this instance.

Very respectfully,

C. F. MARVIN, Chief of Bureau.

CALENDAR FOR UNANIMOUS CONSENT.

The SPEAKER. This is the day for consideration of the Calendar for Unanimous Consent. There is no business of that kind, however. The Chair will take this occasion to make a statement in the interest of a good many Members. Several Members have asked the Chair when the five-minute debate on the currency bill will end—that is, they desire to know when the vote will be taken upon the bill. A good many other Members have also asked about the time the conference report upon the tariff bill will be up for consideration. The information of the Chair is that in all human probability the conference report will be in the House by Friday next at the latest.

The way to expedite the debate under the five-minute rule on the currency bill, the Chair will take the privilege of informing Members, is for Members to be here and to keep a quorum present. [Applause.] Every gentleman here desires to get through with these two matters, no difference how he stands as to them, as quickly as possible. Any Member has the right to raise the point of no quorum, and when some people get rubbed the wrong way of the hide they are inclined to raise it.

CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the currency bill.

The SPEAKER. The Clerk will read.

The Clerk read as follows:

FEDERAL RESERVE DISTRICTS.

SEC. 2. That within 90 days after the passage of this act, or as soon thereafter as practicable, the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, acting as "the reserve bank organization committee," shall designate from among the reserve and central reserve cities now authorized by law a number of such cities to be known as Federal reserve cities, and shall divide the continental United States into districts, each district to contain one of such Federal reserve cities: *Provided*, That the districts shall be apportioned with due regard to the convenience and customary course of business of the community and shall not necessarily coincide with the area of such State or States as may be wholly or in part included in any given district. The districts thus created may be readjusted and new districts may from time to time be created by the Federal reserve board hereinafter established, acting upon a joint application made by not less than 10 member banks desiring to be organized into a new district. The districts thus constituted shall be known as Federal reserve districts and shall be designated by number according to the pleasure of the organization committee, and no Federal reserve district shall be abolished nor the location of a Federal reserve bank changed except upon the application of three-fourths of the member banks of such district.

Mr. MANN. Mr. Speaker, I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN. Mr. Speaker, this bill is divided into various sections, and the various sections are subdivided into paragraphs. Should amendments be offered at the end of the sections to any

of the paragraphs in the sections or at the end of each paragraph? I think the usual custom is to offer amendments at the end of the section.

Mr. SISSON. Mr. Chairman, I think the inquiry made by the gentleman from Illinois is very pertinent. This bill is so drawn that frequently if you desire to offer an amendment to a particular paragraph it might change several paragraphs in the section in which the paragraph is to be found. I suggest that it might be better by unanimous consent to consider the bill by sections instead of by paragraphs.

Mr. GLASS. Mr. Chairman, I was about to say that the bill be read by sections and that the amendments be proposed to the sections.

The CHAIRMAN. The Chair's understanding is that it has been the custom heretofore in the consideration of bills to read the entire section before amendments are offered, except in appropriation bills.

Mr. MANN. Well, that is not always the case, but that was the rule the other day, and just so we lose no rights, that is all right.

The CHAIRMAN. I think that would be the rule in the consideration of this bill, and the Clerk will read.

Mr. SISSON. Mr. Chairman, just one moment. If I understand, the Chair holds that amendments offered may be offered to the paragraph within the entire section.

The CHAIRMAN. Oh, yes. After the section is read by the Clerk, then amendments can be offered to any paragraph in the section.

Mr. MURDOCK. Mr. Chairman, the five-minute rule, as applied to individual Members, will go to each individual paragraph and not to the section.

Mr. BORLAND. Each amendment.

The CHAIRMAN. Each amendment will be under the five-minute rule, pro and con.

Mr. MURDOCK. For instance, on the first paragraph of the bill a gentleman moves to strike out the last word in that paragraph, the five-minute rule will apply to the motion on that paragraph.

The CHAIRMAN. The object of striking out the last word is usually for the purpose of making some inquiry of the Chair, and I do not presume the gentleman in charge of the bill will insist too strenuously on the—

Mr. MURDOCK. Then there is just one last word in the first section and not many last words.

The CHAIRMAN. That is all, and the Clerk will read.

The Clerk read as follows:

The organization committee shall, in accordance with regulations to be established by itself, proceed to organize in each of the reserve cities designated as hereinbefore specified a Federal reserve bank. Each such Federal reserve bank shall include in its title the name of the city in which it is situated, as "Federal Reserve Bank of Chicago," etc. The total number of reserve cities designated by the organization committee shall be not less than 12, and the organization committee shall be authorized to employ counsel and expert aid, to take testimony, to send for persons and papers, to administer oaths, and to make such investigations as may be deemed necessary by the said committee for the purpose of determining the reserve cities to be designated and organizing the reserve districts hereinbefore provided.

Every national bank located within a given district shall be required to subscribe to the capital stock of the Federal reserve bank of that district a sum equal to 20 per cent of the capital stock of such national bank fully paid in and unimpaired, one-fourth of such subscription to be paid in cash and one-fourth within 60 days after said subscription is made. The remainder of the subscription or any part thereof shall become a liability of the subscriber, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank under such terms and in accordance with such regulations as the board of directors of said Federal reserve bank may prescribe: *Provided*, That no Federal reserve bank shall be organized with a paid-up and unimpaired capital at the time of beginning business less in amount than \$5,000,000. The organization committee shall have power to appoint such assistants and incur such expenses in carrying out the provisions of this act as it shall deem necessary, and such expenses shall be payable by the Treasurer of the United States upon voucher approved by the Secretary of the Treasury, and the sum of \$100,000, or so much thereof as may be necessary, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, for the payment of such expenses.

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

Amend, page 3, line 19, by striking out the word "subscriber" and inserting the words "member banks."

Amend, page 3, line 24, by striking out the words "be organized" and insert in lieu thereof the words "commence business."

Amend, pages 3 and 4, by striking out, in line 25, the words "at a time," and on page 4, line 1, the words "of beginning business."

The question was taken, and the amendments were agreed to.

Mr. EAGLE. Mr. Chairman—

Mr. MADDEN. Mr. Chairman, I desire to offer an amendment.

Mr. LINDBERGH. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Minnesota, a member of the committee, will be recognized, and the Clerk will report his amendment.

The Clerk read as follows:

Amendments offered by Mr. LINDBERGH to section 2, on page 3:

"In line 13 strike out the word 'twenty' and in lieu thereof insert the word 'ten'; and in line 14, after the word 'stock,' insert 'and surplus'; and in line 15 strike out 'one-fourth' and insert 'one-tenth'; and in line 16 strike out the word 'one-fourth' and insert the word 'one-tenth'; and in line 17 strike out the word 'sixty' and insert 'thirty' and add a comma after the word 'days' and insert 'one-tenth in 60 days, one-tenth in 90 days, and one-tenth in 120 days'; and in line 25 strike out the words 'paid-up and unimpaired' and insert the word 'subscribed.'"

Mr. LINDBERGH. Mr. Chairman, my purpose in offering this amendment is to levy the assessment not only upon the capital but upon the surplus. The surplus of a bank is as much a part of the capital as the capital itself. It serves the same purpose in business, and if this organization is going to be applied to the banks they should pay in the proportion to the advantages they get. If it is a disadvantage to them, they should pay in proportion to the advantages they get. If it is a disadvantage to them, they should be assessed in accordance with the amount of capital and surplus they have. As a matter of fact, the banks in the larger cities, and especially the older cities, have a much larger surplus as compared with the banks in the newer sections of the country and the country banks, and it is no more fair, in fact it is absolutely right, that the assessments which are made should be made upon both the capital and the surplus.

Take, for instance, the city of New York. The capital of the 37 national banks of the city of New York is \$120,200,000. The surplus in those same banks is \$128,255,000. That is, they have more surplus than they have capital. In Boston the surplus of the national banks is about double the amount of their capital. There is every reason why they should pay their assessment upon both the surplus and the capital.

Now, take for instance the first 37 national banks I find listed in the report of the Comptroller of the Currency for the State of Minnesota, and which banks, I think, would be about the average of banks generally in agricultural districts, the capital is \$1,425,000. The surplus of those same banks is only \$458,615. I think that would be about the proportion to the country in general, and this levying of the assessment upon the capital alone gives the advantage to the larger banks, and yet they pay less in proportion to the amount of capital that they have invested—that is, including the surplus—and it ought to be regular, so that every bank would pay in proportion to the capital it has in business.

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. LINDBERGH. Certainly.

Mr. J. M. C. SMITH. I would like to inquire whether or not if this percentage is levied on the surplus it would not encourage the banks to dissipate the surplus, and they would charge it over to profit and loss or put it in some other account, or distribute it to the stockholders?

Mr. LINDBERGH. They can not distribute the surplus that is already put in the surplus account without some action that would be taken notice of by the authorities, of course.

Mr. BUTLER. Could not the board of directors make the distribution?

Mr. ADAIR. Will the gentleman yield?

Mr. LINDBERGH. I will.

Mr. ADAIR. I wanted to suggest that under the national banking law national banks are required to carry so much surplus, but all above that they can dispose of any time they desire to do so by the board of directors declaring a dividend, if they desire.

Mr. LINDBERGH. That is true; but, nevertheless, as long as they keep that in the business, they should pay an assessment upon it in the same way that they do upon the capital. As a matter of fact, whenever they take that surplus out their subscription would be automatically reduced under the provisions of this act. The money would be paid back to them in the proportion subscribed, which would be perfectly just.

Mr. ADAIR. Of course, that is true; but they could increase the surplus by increasing the assessment on the stock.

Mr. LINDBERGH. But that would not do away with the objection. By keeping the assessment of 10 per cent on the capital and surplus would produce about the same amount of capital for the Federal reserve banks.

Now, there is one other amendment that is included in the same proposition I have made, and that is in regard to the time the banks are to begin business. Under the provisions of this act they can not begin business until \$5,000,000 has been paid in. My amendment calls for the payment of these assessments over a longer period of time than is provided in the act itself. As

was stated by the gentleman from Ohio [Mr. BULKLEY], in order to put this organization into operation there would have to be something like \$260,000,000 of rediscounts at the very start; that is, the banks can not start these Federal reserve banks without rediscounting to the extent of \$260,000,000.

The CHAIRMAN. The time of the gentleman from Minnesota [Mr. LINDBERGH] has expired.

Mr. LINDBERGH. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to proceed for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. LINDBERGH. If these assessments are distributed over a longer period, not so much money will be required immediately to start in the business. Less rediscount will then be necessary and there will not be quite so much danger of a stringency.

Mr. STAFFORD. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Minnesota yield to the gentleman from Wisconsin?

Mr. LINDBERGH. I do.

Mr. STAFFORD. Do I understand the gentleman only presses his amendment to reduce 20 per cent to 10 per cent in case of adding the surplus to the capital?

Mr. LINDBERGH. That is the idea.

Mr. STAFFORD. If the surplus is not inserted as a part to be computed, he would then say that 20 per cent should remain?

Mr. LINDBERGH. I do not think that much capital is necessary, but I have not attempted to obtain an amendment upon that. I realize that a caucus has tied up the 20 per cent.

Mr. STAFFORD. The gentleman only proposes the lower per centum in view of taking in the surplus?

Mr. LINDBERGH. Yes; and graduating the time of payment over a longer period of time, in order to enable the banks to adjust themselves to this new condition. That would be the effect of the amendment that I have proposed, if adopted.

Then, in changing the words "paid up and unimpaired" to "subscribe," that would enable the Federal reserve banks to start business on subscriptions properly made, and would not require that the full amount of \$5,000,000 should be paid in before business were begun. As a matter of fact, there is no reason why the banks should not begin business before the full \$5,000,000 has been paid in, provided that the organization is complete in other respects. They can go ahead with their business and transact it, and adjust themselves to these conditions as the organization develops.

Those are the purposes for which I have offered the amendment. The assessment of 20 per cent on the capital stock alone is manifestly unjust to the country banks and the smaller banks in general.

Mr. MURDOCK. Mr. Chairman, I rise for the purpose of supporting the amendment of the gentleman from Minnesota [Mr. LINDBERGH].

National banks have a liability. That liability is upon their capital stock. The greater banks of the country have established the custom of building up an immense surplus and carrying along with the surplus the undivided profits as loanable funds. Now, while the capital, the surplus, and the undivided profits are all loanable funds, the liability of the national bank, the liability of the shareholders of the national bank, is on the capital stock. The great banks of New York City have built up their business to the point where, in the aggregate, their surplus exceeds their capital stock. That is, they have increased their capacity to loan without increasing the liability of the shareholders.

Out among the country banks there is no such condition. The surpluses there are not large, and the liability of the shareholder in a country bank is usually what it was in the beginning considered proportionally to the loanable funds. This bill provides that the assessment on the country bank and on the city bank included in the federal reserve bank shall be the same—20 per cent on the capital stock. I think—and I do not think there is any good argument against it—that the assessment should be on the capital stock and on the surplus.

If you are to treat the great banks of New York City and the little country banks out over the country equitably you must do that thing. And, depend upon it, it will be done eventually. It may be voted down in this committee. It probably will, under the leadership of the reporting committee. But this bill will never pass the American Congress with this provision standing as it is written in this bill now. It is unfair to the country banks. I appeal to this committee not to wait upon the Senate, not to wait until some subsequent date, but to meet this issue here squarely, regardless of partisan feelings or obligation, re-

gardless of some supposed pledge to a secret caucus. Meet this matter squarely. Treat the little country banks as fairly, as equitably as you treat the New York City banks, and base the assessment on both the capital and surplus.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. GLASS. Mr. Chairman, the committee has met this proposition, and there is no unfairness in the provision of the bill as it stands. Not only has the committee met the proposition, but it has thoroughly discussed it in all its aspects. It was considered that the surplus of the bank was so variable a quantity that it was not at all necessary to make the alteration suggested. I do not think it will be done here, and I do not think it will be done elsewhere. We do not desire that it shall be done, and we do not think it will be wise to do it. Therefore, Mr. Chairman, I ask for a vote.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield to me for a question?

Mr. GLASS. Yes.

Mr. MURDOCK. I would like to know why the gentleman does not consider it wise to make this assessment on capital and surplus?

Mr. GLASS. I have just said that the surplus of a bank is subject to variation at all times. The surplus is one thing today and it may be another thing to-morrow, and it may be still another thing the day after that.

Mr. LINDBERGH. Mr. Chairman, will the gentleman from Virginia yield for a question?

The CHAIRMAN. Does the gentleman yield to the gentleman from Minnesota?

Mr. GLASS. Yes.

Mr. LINDBERGH. As a matter of fact, whenever a bank decreases its capital or increases its capital, in either case the capital stock of the Federal reserve bank will be adjusted accordingly?

Mr. GLASS. Yes.

Mr. LINDBERGH. Would not the same rule apply to the surplus if they increased it or decreased it? Would not the stock of the Federal reserve bank be adjusted according to that change?

Mr. GLASS. Except, as I have said, the variation in the capital of a bank is vastly less than the variation in the surplus.

Mr. LINDBERGH. That is true; but if you adopted this rule, the amount of the surplus would not fluctuate so much, would it?

Mr. GLASS. That is conjectural. I ask for a vote, Mr. Speaker.

Mr. GREEN of Iowa and Mr. SISSON rose.

Mr. SISSON. I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] was appealing for recognition when the Chair recognized the gentleman from Virginia [Mr. GLASS]. The Chair recognizes the gentleman from Iowa.

Mr. GREEN of Iowa. I move to strike out the last word.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that the debate on this amendment close in 10 minutes.

Mr. SISSON. Mr. Chairman—

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that the debate on this amendment close in 10 minutes. Is there objection?

Mr. MOORE. I object.

Mr. BARTLETT. Mr. Chairman, I desire to make an inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BARTLETT. There are several substantive propositions in this amendment. Are we to vote on all the propositions in it, or on only one?

Mr. MANN. On all of them, unless somebody demands a division of the amendment.

The CHAIRMAN. No one has demanded a division of the amendment.

Mr. BARTLETT. Only one of them has been discussed.

Mr. GREEN of Iowa. I am going to discuss the other.

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] moves to strike out the last word.

Mr. GREEN of Iowa. Mr. Chairman, I am heartily in favor of this amendment and had intended to offer an amendment in substantially the same language. Only one branch of this amendment has been discussed, and I propose to give my attention to a discussion of the other proposition.

Gentlemen have stated here repeatedly on this floor that the national banks were not willing to come in under this bill. That has been disputed; but whatever may be said, at least it must be conceded that a large number of the national banks are unwilling to comply with its provisions. My colleague [Mr. PROUTY] has stated that they could not lawfully be compelled to go in under this bill. Be that as it may, the bill proposes to force

them to do so; and such being the situation, it becomes important to consider what will be the result of its compelling provisions.

In order to take up this matter I shall have to give the House a few figures, but they will be so few that any Member can carry them in his head for the purpose of considering this question.

The payments to be made in 60 days under this bill as a subscription to the capital stock amount to \$105,000,000. Immediately upon the organization of the reserve banks the national banks are required to carry and have as a reserve in these banks 3 per cent of the total deposits of the national banks, amounting to about \$200,000,000. So the total amount of cash to be put into these banks when they start is about \$300,000,000. Now, the total amount of cash on hand in all the national banks is only about \$950,000,000. I am giving it now in averages and can not tell the exact amount to-day. No one expects and no one claims, as I understand, that the country banks will put up one dollar of this \$300,000,000. I do not think anybody expects that the reserve city banks will put it up. The country banks will, of course, draw their checks or drafts for this amount on the reserve city banks for the amount that they are compelled to subscribe of capital and deposit, and the reserve city banks in turn will draw their checks or drafts on the central reserve banks. The central reserve banks have only about \$450,000,000 in cash.

Mr. J. M. C. SMITH. If I understood the gentleman correctly, he stated that the national banks would refuse to go into this scheme.

Mr. GREEN of Iowa. No; I did not so state. I said that it was certain some of them were unwilling to go into it.

Mr. J. M. C. SMITH. I should like to ask the gentleman if he does not think the prestige it would give the national banks would be an inducement for them to go in?

Mr. GREEN of Iowa. That has nothing to do with my argument. When they put the screws on the national banks under this bill, what I am trying to determine is whether they will squeeze out the necessary amount called for by the bill. That is what I am trying to get at at this time.

Mr. BARTLETT. May I ask the gentleman a question?

Mr. GREEN of Iowa. Yes.

Mr. BARTLETT. What provision of the bill forces them to go in? They can stay out if they want to.

Mr. GREEN of Iowa. I will not discuss that, either.

Mr. BUTLER. They would no longer be national banks.

Mr. GREEN of Iowa. They would no longer be national banks.

Mr. BARTLETT. They took their charters with that understanding.

Mr. GREEN of Iowa. I am not discussing that part, either. I am assuming that they will all come in, and then I am trying to determine whether the amount of cash called for by this bill can be got out of the banks. I say the central reserve bank can not part with \$300,000,000, because they have only \$450,000,000 on hand. I say if the central reserve banks and the reserve-city banks would add their resources to it, which amount altogether to \$650,000,000, that they could not stand the amount required to be withdrawn.

Mr. WINGO. Will the gentleman yield?

Mr. GREEN of Iowa. Certainly.

Mr. WINGO. Does the gentleman think that the adoption of the pending amendment would relieve the situation?

Mr. GREEN of Iowa. It reduces the amount to be subscribed by one-half.

Mr. WINGO. It leaves it on the capital and surplus. Has the gentleman made any figures on it?

Mr. GREEN of Iowa. It would help in another way; it would give time for preparation in the time the banks will have, which is only about 60 days, as far as the capital stock is concerned. They must inevitably make a great contraction in their loans in order to be able to put up this amount.

Mr. WINGO. I fear that the gentleman did not catch my question. I ask him if he has any figures to show that mathematically the adoption of this amendment will not add a greater burden to the banks where he contends there is a burden now?

Mr. GREEN of Iowa. No; I have not made any figures.

Mr. LINDBERGH. If the gentleman will pardon me, I will say that I have, and I will say that it would not add to the burden.

Mr. GREEN of Iowa. I say that the burden of providing \$300,000,000 in the time required by the bill, at the time when the banks start, is more than they can stand. I know some gentlemen will say that they begin with rediscounting. It is a peculiar proposition that they are going to start a banking institution and a part of the capital that is to be subscribed is to be borrowed by the subscribers.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. GREEN of Iowa. Mr. Chairman, I ask for one minute more.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GREEN of Iowa. But, Mr. Chairman, conceding that they are going to begin at the start by rediscounting, what kind of a proposition is this? If this plan is going to start at once by borrowing, is it going to relieve the financial stress of the country?

Mr. KELLEY of Michigan. Will the gentleman yield?

Mr. GREEN of Iowa. Certainly.

Mr. KELLEY of Michigan. Is this provision the same provision that was in the Aldrich bill? If so, whether or not the banks have not approved of that proposition?

Mr. GREEN of Iowa. No; it is not the same provision.

Mr. KELLEY of Michigan. What is the difference?

Mr. GREEN of Iowa. The Aldrich bill did not compel any bank to join, and it was not expected that all would join. The banks have not approved either plan, and this has nothing to do with my argument as to whether the banks can comply with the provision. If the gentleman will show some figures as to how the banks can do it, it will be an answer.

Mr. GLASS. If the gentleman had been here he would have seen the demonstration on the floor as to how it could be done, and it would inform him fully.

[Mr. Sisson addressed the committee. See Appendix.]

Mr. MONDELL. Mr. Chairman, the remarks of the gentleman from Mississippi [Mr. Sisson] are illuminating of the conditions under which we are met this morning. Not in 25 years has a majority in this House had the opportunity presented to the Democratic majority at this moment to prove its faith in representative institutions, its aptitude for leadership, its capacity for wise legislation. The general debate has reflected the desire of the country for legislation along these lines. It has indicated the fact known to us all that the majority of Members are willing to surrender their personal views in all things except those that are fundamental and involve matters of principle. It has developed the fact that there are at least two fundamental errors in this legislation: First, in the great and dangerous power lodged in the Federal board and in the political character of its organization; and, second, in the seed, if not the substance, of greenbackism contained in the provisions with regard to note issues. These are to be enforced by a provision under which the banks must accept these conditions on pain of confiscation. The debate has developed the fact that there is a majority here on both sides that can be trusted to strike from the bill these dangerous and unwise provisions and otherwise perfect it; and I call upon the Democratic leadership to let down the bars of the binding caucus, to unshackle the Members on that side, to absolve you gentlemen from the obligation to the Executive which we understand now exists, and to let it be known that the House of Representatives proposes to vote on these amendments with no obligation upon its membership save the obligation they owe their consciences and their constituency.

I am satisfied that thus we shall have a wise bill, and we on this side, if the debate is fair and free and open and untrammelled, will accept the result as the judgment of the House. If you do not do this the debate will but further mark the decadence of the House of Representatives, but further lower it in the opinion of the American people, and the final vote will but reflect your subservience to the Executive control and to party domination in a matter that is not political. I plead with you in the name of representative government, in the hope of restoring the prestige of the House, in the faith of good legislation to remove the shackles from the minds and the wills and the consciences of Members and give us a fair vote on these amendments.

Mr. GLASS. Mr. Chairman, if the gentleman's time has not yet expired I desire to ask him a question. I would like him to hold up his wrist and see if he has not yet the marks of the shackles still upon his arms? [Applause on the Democratic side.]

Mr. MONDELL. Mr. Chairman, I will answer to my constituents for that proposition.

Mr. GLASS. The last time the gentleman had the opportunity to act on the currency bill he voluntarily assumed the yoke, and put the shackles upon every one of his fellow Members, but there is an old couplet, you know, to the effect that when the devil was sick the devil a monk would be, but when the devil was well the devil a monk was he. [Laughter and applause on the Democratic side.]

Mr. STANLEY. Mr. Chairman, there is nothing so necessary to the dignity of the House as the absolute independence of its Members. There is nothing so obnoxious to the patriot and to the statesman, commissioned by 200,000 people, as to be forced at any time by party expediency to surrender one jot or tittle of his convictions.

While I respect that love of independence as voiced by my friend MURDOCK, it grieves me beyond measure to see it made a mockery and a travesty upon the floor of this House. Better have some crimson courtesan lead modest maidens in paths of purity, better some escaped convict pose as the arbiter and censor for honest men, than to learn of freedom from this the most abject apostle and most subservient slave Joe Cannon ever had. [Applause on the Democratic side.] This gentleman who has just addressed us has attained an unenviable eminence by his prompt obedience to any command, by his silence under any lash, by his quick defense of any kind of a gag, and here, with the marks of his servitude upon him, before the hair has grown enough to cover the mark of the collar upon his neck, before the imprint of the shackles are effaced from his wrists and his ankles, and before the echoes of his voice have died in this Hall, where but lately he defended every Republican outrage, he arises here to lecture Democrats, forsooth, about independence. [Applause on the Democratic side.] There is one difference between Democratic harmony and Republican discipline. We to-day are inspired by the patriotism, by the courage, by the splendid genius of a beloved and trusted leader. You were never led; you were driven by the horrid lash of a brutal boss until in your wrath, like a blind Sampson, you pulled the temple down upon your own devoted heads. [Applause on the Democratic side.] We answered to a call; you obeyed the goad driven into your unwilling and quivering flesh; and yet this boss-driven, yoked, and goaded party, spewed from the mouths of an indignant people because you had betrayed them, because you had surrendered your independence as their representatives, now assumes to bewail our lack of spirit. And now the gentleman from Wyoming—

Wearing a vile mask that a Gorgon would disown,
An eye of parchment, a cheek of stone,

dares to prate about caucus tyranny and the domination of a boss. [Applause on the Democratic side.] If we must be told of caucus rule, if we must be told of party tyranny, for God's sake find among your party some man whose back is not marked by the lash and whose record is not blackened by the defense of the very iniquities he now pretends to condemn. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman has expired.

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having resumed the chair, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed, without amendment, joint resolution of the following title:

H. J. Res. 130. Joint resolution to provide for the relief and transportation of destitute American citizens in Mexico.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title, when the Speaker signed the same:

H. J. Res. 130. Joint resolution to provide for the relief and transportation of destitute American citizens in Mexico.

CURRENCY.

The committee resumed its session.

Mr. MONDELL. Mr. Chairman, the gentleman who has just taken his seat has acquired more notoriety than any other man in this country in the mock chasing of the Money Trust. For the last year he has been before the country and been headlined as the principal baiter of the money devil, and he, more than any other man in this country, has at all times and under all circumstances insisted that his party, the moment the opportunity was presented to it, should do something to prevent the evil of interlocking directorates, should do something to prevent the evil of joint ownership, should do something to prevent the pyramiding of power and influence in matters of money control, and yet he stands here a slave bound with the chain of a party caucus supporting a bill having to do with banking and currency matters which has not written upon it the legislation that he has been demanding, and because, as we are told—and I am not telling you a caucus secret, for it has been proclaimed on this floor from that side—that because the President and the Secretary of State have said that this great question, this overshadowing question, of monetary control and influence in the hands of a few men—because they say that it shall not be

placed in this bill or permitted to be part of it—the gentleman comes in here cringing, bearing the chains of his party caucus, subservient to his President against his own judgment. If he was honest in his opinion when he inveighed against the money devil and the Money Trust, why does he support a bill that has not a line or word in it that will correct the evil against which he has so long proclaimed? The gentleman has said that I have followed my party.

Well, I have very often followed my party leadership, but the gentleman is not correct when he says that I have always followed party leadership. In the day when the late Speaker was at the height of his power and we had a President in the White House who was more popular than any man who ever occupied that seat, I joined more than once in insurgency in this House. Has the gentleman forgotten it? I did it when it was unpopular to be in opposition to the organization, and when to be an insurgent brought down all of the judgments that the powers could command. There was a later hour when it became popular not to agree with your party on anything, when it became popular not to agree with anyone, and when they who so acted received encomiums in the press for so doing. I answer to my constituents for my position in this House, now as in the past. I have never in all my service here been bound, as the gentleman from Kentucky [Mr. STANLEY] is now bound, and compelled to sit with my head bowed in shame, as his ought to be if it is not, in that he is compelled at the behest of an Executive power to support the measure that ought to carry the legislation that he has insisted upon, but that is as silent as the grave on that subject. "Ah," his party says, "do not legislate on this important subject when you have the opportunity to do it. Send it to the Committee on the Judiciary, to be considered next winter." [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. GLASS. Mr. Chairman, I hope that we may be brought back to the consideration of currency legislation.

Mr. HAYES. That is what I want to do.

Mr. GLASS. I would suggest some limit be made in the discussion on this minor amendment to the bill. I ask unanimous consent that the debate on this particular amendment close in 10 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that debate on this particular amendment close in 10 minutes. Is there objection?

Mr. MOORE. I object, Mr. Chairman.

Mr. GLASS. Then, Mr. Chairman, I move that debate on this amendment close at a quarter after 1 o'clock.

Mr. MANN. I hope the gentleman will not make the motion. See if we can not make an agreement.

Mr. MOORE. There has not been a single speech against the amendment.

Mr. MURDOCK. The gentleman from Virginia [Mr. GLASS] spoke against the amendment.

Mr. MOORE. He has not explained anything. He just said that he was against it.

Mr. GLASS. I would like to inquire how many gentlemen would like to talk on this amendment?

Mr. MANN. We would like 13 minutes over here.

Mr. GRAY. I would like to have 5 minutes.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on this amendment close in 15 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that debate on this paragraph close in 15 minutes. Is there objection?

Mr. MOORE. Mr. Chairman, I object.

Mr. GLASS. Mr. Chairman, then I move that all debate on this amendment close in 15 minutes.

The CHAIRMAN. The gentleman from Virginia moves that all debate on this amendment close in 15 minutes.

The motion was agreed to.

The CHAIRMAN. The gentleman from California [Mr. HAYES] is recognized for 5 minutes.

Mr. HAYES. Mr. Chairman, I desire to call the gentlemen back to the consideration of this amendment. The amendment proposed by the gentleman from Minnesota [Mr. LINDBERGH], in my judgment, should not be adopted. The dangers seen by the gentleman from Minnesota [Mr. LINDBERGH] and the gentleman from Iowa [Mr. GREEN], in my opinion, are not real. The payments required by this bill from the subscribing banks will not be all required at once. These payments, should all the banks come in, will be spread over a period of a year, in all probability.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. HAYES. I will.

Mr. GREEN of Iowa. Will the gentleman explain how the first subscription payments to the reserves to be carried the moment the reserve banks are organized are to be paid at once?

Mr. HAYES. I say they are to be paid when they subscribe, but the bank's charter will not be in danger until one year after this bill becomes a law. Therefore there will probably be banks coming in every day during the year. And besides that, Mr. Chairman, the hardships which these gentlemen see will not exist, because the moment that the first payment is made upon the subscriptions to the stock the reserve requirements are reduced 5 per cent in the case of the central reserve city and the reserve city banks and 3 per cent to the country banks, so that there will really be no such shock as would appear from their statement or even from the statement of the gentleman from Ohio [Mr. BULKLEY] during the general debate.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. HAYES. I see no danger in this proposition.

Mr. GREEN of Iowa. That will not increase the total amount of cash in their vaults?

Mr. HAYES. It will not; but it will not interfere with their loans. As I say, the payments will come along so gradually, scattered over a year, that there will not be any such shock as has been depicted.

There is another reason why the amendment of the gentleman from Minnesota [Mr. LINDBERGH] should not be adopted.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Kansas?

Mr. HAYES. I will yield to the gentleman in a moment.

The second part of the amendment of the gentleman from Minnesota [Mr. LINDBERGH] requires the insertion of the word "surplus" after the word "capital," so as to make the surplus liable to this assessment. Now, there are reasons why that should not be adopted. The capital stock of the reserve bank would have to be increased or diminished, as the case may be, every three months, whenever there was any carrying of earnings to surplus by the member banks of the various reserve districts, so that the capital stock of these banks would be constantly varying, increasing and decreasing.

Not only that, but I believe that every man who has ever been interested in a bank will agree with me that every encouragement should be given to the banks to add to their surplus as often and as fast as they can. [Applause.] This would be a discouragement instead of an encouragement toward accumulating a surplus, so that every time a bank added to its surplus it would have to take 20 per cent of the amount and send it to the Federal reserve bank for an increase of its capital stock.

I do not believe that is in the interest of strong and safe banking in this country, and for that reason I am opposed to it. But as I stated before, I do not see the danger that some gentlemen see in this feature.

Mr. STAFFORD. Does the gentleman oppose the distribution of one-half of this subscription over a period of 120 days, as the amendment proposed by the gentleman from Minnesota proposes?

Mr. HAYES. No. If he had offered that separately I would be inclined to favor it.

Mr. STAFFORD. Would not that alleviate the trouble pointed out by the gentleman from Iowa [Mr. GREEN]?

Mr. HAYES. Yes; but I do not see the dangers seen by the gentleman from Iowa. As I said, the payments will be distributed anyhow, under the operation of this bill as now drawn.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. SLOAN. Mr. Chairman, speaking in favor of that part of the amendment proposed by the gentleman from Minnesota [Mr. LINDBERGH] which provides that the assessment for the purpose of establishing these banks shall be based upon the capital and the surplus, rather than the capital alone, as proposed in the bill, I want to say that, as a matter of banking experience, I think this is true, that when we add surplus to our banking basis of business it is very seldom reduced. If it changes at all it is changed into active and actual capital.

Now, then, I think this is true, that as the banks are organized now, it would be a rank injustice to nearly every agricultural community in the United States to have the bill's proposed basis used. I just want to present a few figures that will illustrate my ideas in a concrete way. Assuming that we use the capital and surplus as the basis of banking business, for every \$1,000 that a bank in Philadelphia has—that is to say, the average bank in Philadelphia—there would be withdrawn to the regional bank for its establishment only \$72.50.

From the city of Boston there would be withdrawn only \$100; from the city of New York, \$101; Chicago, \$125. From the city of Omaha—and I mention that city because it is the metropolis of my own State—there would be withdrawn \$115; Lincoln, our State capital, \$150; and from the average bank in

my district, the capitalization of the banks being something over one and two-thirds million dollars, there would be withdrawn for every \$1,000, \$135. I see no justice in the banks of my district, which, I think, is fairly representative of the agricultural districts of the United States, being required to put up \$135 where the banks of the city of Philadelphia are required to put up only \$72.50 [applause]; and more than that, from every country district every dollar that will be taken will be removed on an average from the place where it was earned to from 100 to 500 miles away, and there it will be placed in some large city and invested in the building up of a new bank organization which will contribute to the growth of that metropolis and subtract from the growth of the little town upon the plains or among the mountains. And more than this, that which is taken from the great city of Boston or the great city of Philadelphia is not removed to any considerable distance from where it was earned or where it was gathered or where it existed, but in at least 12 of those cities throughout the United States it will be simply moved across the street, to establish a new organization and add to the improvement and wealth of the metropolis.

I tell you, gentlemen, the country districts of the United States will not stand for any such injustice. [Applause.]

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. PHELAN. Mr. Chairman, I wish to call attention, first, to that part of the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH] which seeks to reduce the subscription by member banks.

That is the same point that is now being asked for by the big bankers of this country and by the American Bankers' Association; and yet those same bankers advocated the Aldrich bill, which had the same provision in it, and in that case they advocated it when there was a single bank, whereas under this bill there are 12 banks. And in that connection I want to point out—

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. PHELAN. I will if I have time when I get through, not now.

The CHAIRMAN. The gentleman declines to yield.

Mr. GREEN of Iowa. Thank you.

Mr. PHELAN. I wish to point out that Mr. Warburg in the hearings before the committee last winter said:

Unless a central reserve be endowed with a large capital of its own and unless we bring about a free return flow of all idle cash into one central reservoir, from where, without the least possible friction, it can be directed to wherever it is legitimately wanted, there can not be created that which is the basis of the entire structure.

And Mr. Reynolds also stated that he thought there ought to be a large capital to inspire confidence; and yet those same bankers are now urging that the capital requirements be divided in two.

Furthermore, in regard to the other point made by the gentleman from Minnesota [Mr. LINDBERGH] on the question of having this apply to surplus as well as to capital, I want to point out that there is a difference between surplus and capital, and that difference is recognized in our national banking law. Surplus is not capital. If you are going to make the amount of the stock subscription depend upon surplus, as the chairman of the committee [Mr. GLASS] pointed out, you are going to have a variable quantity. As fast as the surplus goes up, the bank subscribes to additional stock, and as its surplus goes down it withdraws from the stock in the regional reserve banks.

If you have a large bank, with a large surplus, and a consequently large subscription to the stock of the regional reserve bank, there is nothing to prevent that bank from reducing its surplus and reducing its subscription to an amount equal to the capital plus 20 per cent of its capital, the surplus required under the national banking law, and in that way drawing money out of the regional reserve bank which it has already put into that bank, which will cause trouble in every regional reserve bank in which it is done. Furthermore, if you are going to treat surplus as capital in this bill, then you must consistently treat surplus as capital in our national banking law, and that is not done.

There are several distinctions between capital and surplus in our present laws, of which I will mention one or two. First, there is this distinction at the present time, that a bank can not issue bank notes in excess of its capital. Surplus has nothing to do with it. In the second place, in making loans it can make loans to an individual up to 10 per cent of its capital and surplus combined, but you will notice that in section 5200 of the statute it provides:

Provided, however, That the total of such liabilities shall in no event exceed 30 per cent of the capital stock of the association.

So that there is that limitation put upon the use of the surplus in the national banking act. Further, in section 5202, it provides that:

No association shall at any time be indebted, or in any way liable, to an amount exceeding the amount of its capital stock at such time actually paid in and remaining undiminished by losses or otherwise—

With certain exceptions. So again capital stock is distinguished from surplus.

I wish to point out to the gentleman from Minnesota [Mr. LINDBERGH] this fact, that if there is any evil in the present use of surplus as capital the place to correct that evil is in our national banking law and not in this bill. The way to correct it is by an amendment to the national banking law and not by making the amount of stock subscription of these national banks depend upon capital and surplus; and in view of what I have heard I am surprised that the gentleman from Kansas [Mr. MURDOCK], who has been here so many years, has not found out about the provisions in our statutes with reference to surplus, and that he has not offered some amendment to the national banking laws during the time he has been here which will do away with the abuse, if abuse exists, with reference to the use of surplus.

Mr. MURDOCK. Will the gentleman yield?

Mr. PHELAN. Yes.

Mr. MURDOCK. That is precisely the thing we want to do now. Why delay it? Why put it over to the Senate? Why put it over until next year? Why does not the gentleman want to act now?

Mr. PHELAN. Because if it is worth doing, you must do it in your national banking act, and you can not do it as proposed by the gentleman from Minnesota [Mr. LINDBERGH] by making the amount of the stock subscription to these banks depend upon surplus. It goes a good deal further than that. If you are going to do it, amend your national banking act. One reason why it is not being considered at the present time is because if we are going to amend the national banking act, that thing ought to be done altogether, and I understand it is proposed that that shall be done in the near future.

Mr. MURDOCK. The gentleman lives in one part of the country and I live in another part of the country. When this bill becomes a law, the money which goes out of a bank in Boston to the reserve bank will not go out of the city of Boston; but the money that goes out of my town to St. Louis or Chicago will go out of my town, and it will be withdrawn from the capital of the bank, and not out of capital and surplus together.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired; all time has expired.

Mr. STAFFORD. Mr. Chairman, I demand a division of the amendment.

The CHAIRMAN. The gentleman from Wisconsin demands a division of the amendment, and the Clerk will read the first paragraph of the amendment.

The Clerk read as follows:

Mr. LINDBERGH's amendment to section 2: "On page 3, in line 13, strike out the word 'twenty' and insert in lieu thereof the word 'ten.'"

The CHAIRMAN. The question is on the amendment.

The question was taken; and on a division (demanded by Mr. LINDBERGH) there were 29 ayes and 78 noes.

So the amendment was lost.

The CHAIRMAN. The Clerk will read the next subdivision.

The Clerk read as follows:

Page 3, line 14, after the word "stock," insert the words "and surplus."

The question was taken; and on a division (demanded by Mr. MURDOCK) there were 19 ayes and 91 noes.

So the amendment was lost.

The CHAIRMAN. The Clerk will read the next subdivision. The Clerk read as follows:

Page 3, line 15, strike out "one-quarter" and insert "one-tenth."

Mr. STAFFORD. Mr. Chairman, I ask unanimous consent that all that part of the amendment relating to time be taken in gross.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that all those parts of the amendment relating to time be taken in gross. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Page 3, line 15, strike out "one-quarter" and insert "one-tenth." Line 16, strike out "one-quarter" and insert "one-tenth." Line 17, strike out the word "sixty" and insert the word "thirty." Add a comma after the word "days" and insert "one-tenth in 60 days, one-tenth in 90 days, and one-tenth in 120 days."

The question was taken; and on a division (demanded by Mr. LINDBERGH and Mr. STAFFORD) there were 17 ayes and 83 noes. So the amendment was lost.

The CHAIRMAN. The Clerk will read the other subdivision of the amendment.

The Clerk read as follows:

Page 3, line 25, strike out the words "paid up and unimpaired" and insert the word "subscribe."

The question was taken, and the amendment was lost.

Mr. MOORE. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 3, line 13, after the word "two," strike out the word "twenty" and insert the word "eighteen."

Mr. MOORE. Mr. Chairman, being unable to get in on the argument upon the amendment offered by the gentleman from Minnesota, I offer this additional amendment. To me it has been a matter of some amazement that the Democrats who live in the New England States and along the eastern tier should have voted with such unanimity to sustain the caucus action against the Lindbergh amendment and in support of the bill. If there was ever a bill that tended to make one section ill at ease with another section of the country, this is that kind of a bill. You have taken away from us, or propose to take away from us, in the industrial centers the protection of industries under the tariff system, and now, seeing that certain men have been thrifty and have saved up their resources in certain sections of the country, you propose to take away the proceeds of that thrift and saving and scatter them broadcast. Very well, so long as you let the whole country know what you propose to do. The illustration made by the gentleman from Nebraska in regard to the deposits of banks in Philadelphia and Boston, as compared with those out on the Plains, is a fair sample of the argument that the people have been fooled with—

Mr. SLOAN. Will the gentleman yield?

Mr. MOORE. No; I can not yield.

Mr. SLOAN. I was not talking about deposits of money, but the demands representing capital.

Mr. MOORE. I am very glad to have the gentleman make that correction. The buncombe that has been coming down the pike for the last three years has made a lot of people in this country thoroughly misunderstand their own rights in regard to legislation. They do not understand the approach to legislative robbery that is contemplated in the scheme of equalizing resources as set down in this bill. You tell the people you are attacking Wall Street; you say you are bringing to book the malefactors of great wealth.

How have you dealt with the rights of the workingman, the man who has his savings in the various savings banks of this country? The comptroller's report for 1912 has not been very fully quoted in the report of the majority of the committee with regard to savings-fund deposits, and yet they represent at least one-fourth of all of the bank resources and liabilities reported. Those savings deposits are not the increment of the malefactors of great wealth. They do not belong to the rich men, the Rockefellers and the Carnegies; they belong to the working people, the men who own their little properties, whether they be farms or two-story residences in the cities. What do these savings represent in the aggregate? According to the comptroller's report to June 14, 1912, they represent \$3,400,000,000. Six billion four hundred million dollars in savings alone! Money in the banks that you think to take away and scatter over the country, because you are after the rich men in Wall Street!

Mr. GLASS. Mr. Chairman, may I interrupt the gentleman?

Mr. MOORE. Not at present.

Mr. GLASS. I just want to ask the gentleman if he will indicate how we are to take possession of the savings of any of the banks and scatter them all over the country?

Mr. MOORE. The proposition is plain in this bill—by taking out of all reporting banks at least 20 per cent of their money, whether strong or weak banks, and throwing it into the country for the benefit of everybody. In the comptroller's report the banks in New England are classified in one group, six States in all, and the per capita savings of the people there amount to \$237.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to continue his remarks for five minutes. Is there objection?

Mr. GLASS. Mr. Chairman, I shall not object, if the gentleman shall explain how this bill undertakes to seize the savings of any of the banks.

The CHAIRMAN. Is there objection? The Chair hears none.

Mr. MOORE. By creating 12 regional banks and scattering the money away from those centers where it has been saved by the people.

Mr. GLASS. Whose money is going to be scattered?

Mr. MOORE. The money of the people, either way you take it—individual deposits in the banks and the savings, on the one hand, or the Government deposits on the other.

Mr. GLASS. We simply require a certain percentage of reserve that now belongs to the people of the various sections to be brought back to those various sections.

Mr. MOORE. And you take it out of Massachusetts and Connecticut and put it down in Kansas and Nebraska and Mississippi. That is the point exactly. I am telling you that the savings per capita in New England amount to \$237. The savings in the Eastern States, and there are only 6 of them, including the District of Columbia, amount to \$129.23; in the Pacific States, 8 of them, including Alaska, they amount to \$82.43; in the Middle Western States, 8 of them, they amount to \$46.13; and in the Southern States, 13 of them, represented in the other body by 26 Senators, they amount to \$9.89 per capita; while in the Western States, 9 of them, including Oklahoma, they amount to \$8.36—and I mention Oklahoma because its per capita savings amount to 80 cents, and that is much less than the per capita savings of the people in Porto Rico and Hawaii.

The average per capita savings for the United States is \$67.77—that is, the savings of every man, woman, and child in the United States—and I contrast it with the 80 cents per capita savings in the State of Oklahoma only because we have recently been receiving so much advice on the financial problem from that section of the country.

Mr. PHELAN. Mr. Chairman, will the gentleman yield?

Mr. MOORE. Certainly.

Mr. PHELAN. Will the gentleman tell me how the savings in the savings banks in Massachusetts can possibly be scattered all over this country by any provision in this bill, and point out the provision?

Mr. MOORE. If any one of your savings banks goes into this scheme of regional reserve banks, it will contribute to the common fund, to be scattered over the United States, 20 per cent of its capital.

Mr. PHELAN. There is not a Massachusetts savings bank that can possibly go into it.

Mr. MOORE. Then if they do not, the few of the States that do go into it will get all of the benefit of the Government deposits.

Mr. PHELAN. I am not talking about savings banks.

Mr. MOORE. I am talking about the Government deposits. I think it makes a great deal of difference to those who do come in, because if they do not come in, at least those who do come in down South and in the comptroller's western group, where you have so many banks, will receive all the Government deposits to enjoy at your own sweet will, as you enjoy most of them now.

Mr. MURDOCK. Under the provisions of this bill is it not possible for the national reserve board to suspend the reserves in Massachusetts and not suspend them in Iowa?

Mr. MOORE. Yes; but the national reserve board is appointed by a political President and made up of men of his party, and he may do as he pleases and they will do as they please, and if they agree with the gentleman from Kansas they will take all the money out of the banks of Pennsylvania and New York and put it out in Kansas. [Laughter and applause.]

Mr. MURDOCK. Then it will be a good thing for the country if they do it.

Mr. MOORE. I do not think so. There is nothing the gentleman from Kansas has to sell that is not sold in New York and Pennsylvania, and he is never willing to reciprocate.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LINDBERGH. Mr. Chairman, the point raised by the gentleman from Pennsylvania, who has just spoken, as to the use of \$6,000,000,000 savings deposits—I have no doubt the figures are correct, but those deposits are not secured and used for the borrowers or by the people of the same class who make the deposits. They are borrowed either by the great corporations or speculators, as a rule, and the amount of interest that is paid to the depositaries ranges from 2 to 4 per cent, while the parties who borrow these deposits charge back to these same depositors 6 to 8 to 10 per cent, and sometimes more, in the increased cost on the necessities that they must buy, a system which is an error, and the membership of this House of course will keep that in view when we have these different provisions under consideration. It is stated that the people who make these deposits are rich because they can make such large de-

posits as \$6,000,000,000, but when you distribute this amount among them all you find the average deposit per capita is very small. The majority of them pay back more interest because of the increased costs of their necessities that they are required to pay back. They get a small rate of interest and pay an excessive rate. It is a case of the plain people bringing to the banks their small earnings, which because of the great number become large in the aggregate, and the banks loaning the funds to speculators who use the money to exploit the very people whose money is used for that purpose.

Mr. BARTLETT. Mr. Chairman, it interests me at times to see the solicitude that some gentlemen manifest in reference to the course of the Democrats on this side. Now, so far as I am concerned, I have in this House on former occasions stated my views with reference to currency legislation. I do not believe in the system that provides for the issuing of currency through national banks. I do not believe in the use of them as agencies of the Government to provide for the currency to be furnished the people. If I had my way, I would have the Government, and the Government alone, to issue, control, and distribute the currency. [Applause.] I believe in that kind of Democracy as was advocated by Jefferson and maintained by Jackson; but this system establishing United States or national banks and the issuing of currency by or through such agencies, giving the power and functions of Government, has passed the stage of discussion or action, because the Supreme Court of the United States having decided that such a system was constitutional in the case of McCulloch against Maryland, having reiterated that judgment in the national-bank cases, having upheld the right of Congress to charter banks for that purpose and aiding it in issuing currency, I bow to the decision and must submit to it as the law; and now that we have that system foisted and fastened upon the Government during the necessities of the terrible internecine struggle which has existed since 1864, we must recognize that we must deal with conditions as they are. The present system of national banking has proven inadequate for the uses and demands placed upon it in every emergency and it seems to me to be the duty of the Democratic Party to do that which the Republican Party has failed to do for so many years—to remedy the evils and injustices of that system and substitute in its place some system that will answer the demands of the people and the business of the country. I believe this bill will do that in a great measure, and that it is a better system, more responsive to the demands of the business interests of the country, and will greatly improve present conditions; and because of this belief I shall support it.

I am one of those who did not agree in caucus with my associates in reference to all the details of this bill. I would rather uproot the national banking system, root and branch, and substitute another system by which the Government alone should issue and control the currency of the country. That is an old Democratic doctrine which, while I dare to stand for, I can not see enforced in this day and generation. I do not think that I am merely subservient to the party demand when I yield my judgment upon that question to the opinion and wisdom of a large majority of my political associates and endeavor to carry out the demands and promises of the Democratic platform. I believe that in this question, submitted to my party caucus, in which 154 Democrats voted against 9—and I was one of the 9—their judgment and their knowledge and their wisdom are to be accepted, at least, in preference to the desire and demands of those whose chief purpose is to endeavor to divide and destroy the Democratic Party and again turn it over to the mismanagement and control of the Republican Party.

So far as I am concerned, I have no apologies to make for having submitted my difference of opinion to my party associates and accepting their decision and cheerfully giving my support of this, in my judgment, the best banking and currency bill that has found its way into this House in 50 years; one that gives the issuing and control of the currency, which is the lifeblood of the people, to the Government.

I believe that the destiny and prosperity of this great country of ours are better to be subserved by the success of the Democratic Party than by the restoration to power of the Republican Party. Therefore, as I repeat, without any hesitation, without any compunction, without any feeling that I have been gagged or forced, I cheerfully submit to the will and judgment and superior wisdom of my political colleagues and shall give my adherence and support to this bill, believing that it will bring to the country that which it has not had before the enactment of this law—a freedom from the control of the great banks in New York that have controlled the lifeblood of commerce and regulated it at their will. And I might say that as far as I

am concerned I would rather be a doorkeeper in the House of the Lord than dwell in the tents of wickedness. [Applause on the Democratic side.]

Mr. Chairman, I can not, in the time that I have, undertake to discuss fully the provisions of this bill. There are some amendments which I voted for in the caucus that I would like to have seen adopted, but the leading feature of it is this: It gives to the Government, and not to the bankers, the right to issue the currency; it restores to it that governmental power and function which the banking bill of the old United States Bank took away from it and invested in the bank, and it provides for ample control and supervision of the banks; it permits the State banks to have the opportunity to participate.

Mr. LINDBERGH. I would like to ask the gentleman what difference it is to the bank whether the bank issues and distributes the money or whether the Government issues the money and the bank distributes it?

Mr. BARTLETT. But this is the Government's money. It may not be any different in its value if the Government guarantees it, but there is this difference, that the banks under the present system issue the money as they desire and retire it as they desire. They issue it when they desire to have a greater amount of money, and during flush times they contract it when they desire to create panics and to control the money market.

Mr. LINDBERGH. Will the gentleman yield?

Mr. BARTLETT. Yes.

Mr. LINDBERGH. No one but a bank can go to the Government to get money, and no individual can go anywhere but to the bank to get money.

Mr. BARTLETT. I understand that. That is the vice of all these systems. That is why I object to it. That is why I stick to my old Jacksonian and Jeffersonian Democracy, which finds but few defenders now.

Mr. MURDOCK. That is the modern Progressive doctrine. I applaud the gentleman.

Mr. BARTLETT. I thank you. You have been asleep for a hundred years, and you get up and go to chasing rainbows until you are lost.

Mr. PLATT. I would like to ask the gentleman from Georgia how a bank can issue currency except on a loan?

Mr. BARTLETT. It can not issue currency at all unless it is authorized by the sovereign power, and must do it as the sovereign power says it must issue it.

Mr. PLATT. I ask the gentleman how can it get its notes in circulation?

Mr. BARTLETT. It can do it as they do it now—by paying it out over the counter on checks, paying debts, in due course of business. That is the only way. I thought that there were a good many Members who did not understand the currency question, but I see now that the gentleman does not understand the very simplest principles of it. [Laughter.]

It has been said that this bill is unconstitutional, and the gentleman from Iowa [Mr. PROUTY] made an able argument on that line, to which I listened with pleasure and interest. I have heard it frequently said here that there are but few defenders of the Constitution left. I have a fad, you may call it, as to that subject, if you please. Oftentimes I have had the temerity to think that the Constitution, as I believe Gladstone once asserted, was the greatest instrument ever struck from the mind of man. I have thought the Constitution was built—and I think so yet—upon strong foundations, and that its arches and domes would last until around its summit the lightnings of eternity would play. I think and hope so still. I have always recalled with pleasure and admiration these words of Judge Story in the closing sentence of his great work on the Constitution.

The structure has been erected by architects of consummate skill and fidelity; its foundations are solid; its compartments are beautiful as well as useful; the arrangements are full of wisdom and order; and its defenses are impregnable from without. It has been reared for immortality, if the work of man may justly aspire to such a title. It may, nevertheless, perish in an hour by the folly or corruption or negligence of its only keepers—the people.

And there is no provision of this great instrument which this bill violates or in any way invades.

The Government, as the sovereign, has the sole right to issue and control the currency. If it does not issue it directly, it has the sole power to create and direct the agencies through which the currency is issued; and when for this purpose corporations are created, such corporations become Government agencies, and all the other rights and privileges of such corporations remain subject to the control of Congress—to be altered, amended, or repealed at will. The grant of a charter by the Congress of the United States, even when the right to amend or repeal is not reserved, is not a contract which can not be abrogated or im-

paired. There is no inhibition against the Congress of the United States passing a law impairing the obligation of a contract. The provision of the Constitution only applies to the action of State legislatures; hence Congress can at will repeal any charter granted by it or can alter or amend such charters at pleasure.

It has been the uniform decision of the Supreme Court of the United States that section 10 of Article I of the Constitution is a limitation of the power of the States, and that the United States are not included within this prohibition.

I cite Sinking Fund cases (99 U. S., 718); Mitchell & Clark (110 U. S., 643); The Legal Tender cases (12 Wallace, 529).

Even the States can repeal, alter, or amend the charter which they grant, if, in the charter or by general statute, the right to alter or amend or repeal the charter is granted. And it is stated by the authorities, and seems to be accepted as the true law, that—

no question can arise as to the impairment of the obligation of a contract when a corporation has accepted all of its corporate powers subject to the reserved power of the State to modify its charter and to impose additional burdens upon payment of its franchise.

The State reports and the United States court reports are filled with decisions which uphold this doctrine.

True, the Dartmouth College case decided that a charter was a contract which the State legislature could not impair by subsequent legislation, but since that decision all the States have, either in their constitutions, in their general statutes, or in the charters granted, reserved the right to repeal, amend, or alter these charters.

Fortunately, in the matter of the national banks the Congress has reserved the absolute right to amend, alter, change, or repeal their charters. I will, however, read from the Supreme Court of the United States, in the case of *Greenwood v. Freight Co.* (105 U. S., pp. 19-22):

As early as 1806, in the case of *Wales v. Stetson* (2 Mass., 143), the Supreme Court of that State made the declaration "that the rights legally vested in all corporations can not be controlled or destroyed by any subsequent statute, unless a power for that purpose be reserved to the legislature in the act of incorporation." In *Trustees of Dartmouth College v. Woodward* (4 Wheat., 518), decided in 1819, this court announced principles on the subject of protection that the charters of private corporations were entitled to claim, under the clause of the Federal Constitution against impairing the obligation of contracts, which, though received at the time with some dissatisfaction, have never been overruled in this court. The opinion in that case carried the protection of the constitutional provision somewhat in advance of what had been decided in *Fletcher v. Peck* (6 Cranch, 87) and the preceding cases, and held that it applied not only to contracts between individuals and to grants of property made by the State to individuals or corporations, but that the rights and franchises conferred upon private as distinguished from public corporations by the legislative acts under which their existence was authorized, by the State, were, when accepted by the corporators, contracts which the State could not impair.

It became obvious at once that many acts of incorporation which had been passed as laws of a public character, partaking in no general sense of a bargain between the States and the corporations which they created, but which yet conferred private rights, were no longer subject to amendment, alteration, or repeal, except by the consent of the corporate body, and that the general control which the legislatures creating such bodies had previously supposed they had the right to exercise no longer existed. It was, no doubt, with a view to suggest a method by which the State legislatures could retain in a large measure this important power without violating the provision of the Federal Constitution that Mr. Justice Story, in his concurring opinion in the Dartmouth College case, suggested that when the legislature was enacting a charter for a corporation a provision in the statute reserving to the legislature the right to amend or repeal it must be held to be a part of the contract itself, and the subsequent exercise of the right would be in accordance with the contract and could not, therefore, impair its obligation. And he cites with approval the observations we have already quoted from the case of *Wales v. Stetson*. (2 Mass., 143.)

It would seem that the States were not slow to avail themselves of this suggestion, for while we have not time to examine their legislation for the result we have in one of the cases cited to us as to the effect of a repeal (*McLean v. Pennington*, 1 Paige (N. Y.), 102), in which the Legislature of New Jersey, when chartering a bank with a capital of \$400,000 in 1824, declared by its seventeenth section that it would be lawful for the legislature to at any time alter, amend, and repeal the same. And Kent (2 Com., 307), speaking of what is proper in such a clause, cites as an example a charter by the New York Legislature of date February 25, 1822. How long the Legislature of Massachusetts continued to rely on a special reservation of power in each charter as it was granted it is unnecessary to inquire, for in 1831 it enacted a law of general application that all charters of corporations thereafter granted should be subject to amendment, alteration, or repeal at the pleasure of the legislature, and such has been the law ever since.

The history of the reservation clause in acts of incorporation supports our proposition, that whatever right, franchise, or power in the corporation depends for its existence upon the granting clauses of the charter is lost by its repeal.

This view is sustained by the decisions of this court and other courts on the same question. (No quotation. Here the court cites a number of cases, amongst them the cases known as the Sinking Fund case, in 99 U. S., and also 2 Kent Com.)

It was therefore in the power of the Legislature of Massachusetts to grant to another corporation, as it did, to operate a street railroad through the same streets and over the same ground previously occupied by the Marginal Co. Whether this action was oppressive or unjust in view of the public good or whether the legislature was governed by sufficient reason in thus repealing the charter of one

company and in chartering another at the same time to perform as part of its functions the duties required of the first is not, as we have seen, a judicial question in this case.

IN THE SINKING-FUND CASES (89 U. S.).

The courts say: "The contract of the company in respect to the subsidiary bond is to pay both principal and interest when the principal matures, unless the debt is sooner discharged by the application of one-half of the compensation for transportation and other services rendered for the Government and the 5 per cent of net earnings as specified in the charter. The precise point now to be determined is whether a statute which requires the company in the management of its affairs to set aside a portion of its current income as a sinking fund to meet this and other mortgage debts when they mature deprives the company of its property without due process of law or in any other way improperly interferes with vested rights."

"This corporation is a creature of the United States. It is a private corporation created for public purposes, and its property is to a large extent devoted to public uses. It is therefore subject to legislative control, so far as its business affects the public interests." (Chicago, Burlington & Quincy R. R. v. Iowa, 94 U. S., 155.)

So I think that the gentleman from Iowa [Mr. PROUTY], whom I love very much, has stretched the constitutional objection farther than I have ever known.

Why, it was the sovereign power of this Government that created the national banks. Moreover, when it did that, it also did what was necessary to do, namely, to reserve in the charter granted the right to amend, alter, and repeal that charter, and the very act that incorporated the banks contained a provision to the effect that if they did not come in under the act of 1882 they would have to forfeit their charters and go into liquidation.

I quote from the national banking act:

Sec. 7. Liquidation of banks not accepting provisions of act: That national banking associations whose corporate existence has expired or shall hereafter expire, and which do not avail themselves of the provisions of this act, shall be required to comply with the provisions of sections 5221 and 5222 of the Revised Statutes in the same manner as if the shareholders had voted to go into liquidation, as provided in section 5220 of the Revised Statutes; and the provisions of sections 5224 and 5225 of the Revised Statutes shall also be applicable to such associations, except as modified by this act; and the franchise of such association is hereby extended for the sole purpose of liquidating their affairs until such affairs are finally closed. (22 Stat. L., 164.)

We hear a great deal about the Dartmouth College case, the famous case that Daniel Webster won, which began a career for him that made him immortal almost as a lawyer, and the court before which he argued that case was the Supreme Court of the United States. There is not a recent case in the books that follows the Dartmouth case, because it was following the suggestion of Judge Storey from the bench in that famous case that the States changed their laws and constitutions where necessary, by providing that thereafter no charter should be granted that did not contain the clause that it could be amended, altered, changed, or repealed.

Since that time we have heard a great deal in State courts about the vested rights of State corporations to live a life outside of the life given them by State authority. In the famous case known as the Sinking Fund case the right of the Government of the United States to change the terms and conditions of the original charter or to change or regulate it and determine how it should conduct its business was upheld. I challenge every lawyer or student to investigate the question—and I would elaborate it here if I had the time—to find a single case where it was held that because the sovereign power grants a charter and reserves the right in it to change, alter, amend, or repeal, it can not repeal it when it gets ready and can not establish a new charter and make such requirements as it pleases in order that those who may desire may come in under it.

Some people and some national banks talk about "vested rights." They have none, because they can not live without authority from the United States Government.

This provision in section 8, which authorizes them to be wound up in case they do not accept the duties, the privileges, and the rights granted in this new bill, is but a repetition of what Congress said in 1882. A copy of that act I hold in my hand.

I do not believe there is a word in this bill that takes private property for public use. I do not believe that there is a word in this bill that does injustice to the shareholders of the banks, and I am convinced there is no effort on the part of the framers of this bill to exercise a power not granted by the Constitution. [Applause.]

The CHAIRMAN. The time of the gentleman from Georgia has expired.

The question is on the amendment offered by the gentleman from Pennsylvania [Mr. MOORE].

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer an amendment.

Mr. MURDOCK. Mr. Chairman, I ask unanimous consent that the amendment of the gentleman from Pennsylvania [Mr. MOORE] be reported again.

The CHAIRMAN. The Clerk will again report the amendment offered by the gentleman from Pennsylvania [Mr. MOORE]. The Clerk read as follows:

Amendment offered by Mr. MOORE, page 3, line 13: "After the word 'to,' strike out 'twenty' and insert the word 'eighteen.'"

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

Mr. MORGAN of Oklahoma. I offer an amendment.

The CHAIRMAN. The gentleman from Oklahoma [Mr. MORGAN] offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 3, after the word "Provided," in line 10, amend by inserting a new paragraph as follows:

"Any person residing within a given district may subscribe to the capital stock of the Federal reserve bank of that district at any time under such rules and regulations as shall be prescribed by the Federal reserve board, and said board shall have the power to prescribe the terms and conditions upon which such stock may be surrendered for cancellation and to determine the amount of stock that will be subject to individual subscription."

Mr. MORGAN of Oklahoma. Mr. Chairman, of course I do not profess to be an expert upon banking and currency; but, so far as I can see, there is no reason why an individual should not be allowed, if he desires, to subscribe to this stock. Under the provisions of this bill every national bank is required to subscribe to this stock, and State banks may by the consent of the reserve board subscribe. I notice in the report of the bankers' conference recently held in Chicago that the bankers apparently do not desire to subscribe, at least to the extent required in this bill, because they ask that the bill be amended so that they be required to subscribe only 10 per cent instead of 20 per cent of their unimpaired capital. I think the committee in its report estimates that under the provisions of this bill there will be about \$100,000,000 of capital subscribed. In other words, even the national banks, many of them, may not accept the provisions of this bill and may change to State banks. There is some question, as I understand it, as to whether or not there will be a sufficient number of banks subscribe to get the required capital.

If the Federal reserve bank is a bad thing, I do not believe we ought to compel the national banks to subscribe to the stock. On the other hand, if it is a good thing, I do not believe we should allow the national banks to monopolize the stock in these Federal reserve banks.

We have heard much and very often from the other side of the House about equal opportunities to all and special privileges to none. Under the provisions of this bill, in allowing no one except banks to subscribe to this stock, are you not giving them a special privilege that is granted only to the bankers of the United States?

Mr. Chairman, I believe in most localities there is some prejudice against banking institutions. Banks are to a large extent monopolies. They have special privileges, and they thrive off the people's money. They control the interest rates to a large extent and can make their profits largely what they desire. Now, as I have said, in the minds of many people there is a prejudice against banks. A large part of this grows out of the fact that bankers are so few in number and that they have these special privileges. So I think there would be at least two benefits from this amendment:

First, it would strengthen the system by enlarging the capital; it would give these banks more financial strength, more capital.

Second, I think another benefit would be that it would popularize this system with the great masses of the people. I believe one of the defects in all our great corporations in this country, including the banks, is that there are so few people interested in them.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MORGAN of Oklahoma. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. MORGAN of Oklahoma. Mr. Chairman, I believe it would be a wise policy hereafter, when banks are organized, to compel the organizers to open their books to popular subscription, so that the great masses of the people with small means might be allowed to take stock in the bank and receive some of the profits, instead of allowing one, two, three, four, or five men in a community to organize the bank, receive the deposits of the people, and add to their dividends and their profits until their stock becomes worth two or three times the amount they have invested in it, largely derived from profits on the money of the people. So I say it would popularize banks if you would allow the people to subscribe to this stock.

Mr. MURDOCK. Will the gentleman yield?

Mr. MORGAN of Oklahoma. I will.

Mr. MURDOCK. Has the gentleman looked into this situation enough to know whether the investment would not be, under the provisions of the bill, a very profitable one?

Mr. MORGAN of Oklahoma. Yes; that is what I was coming to. Under this bill the banks are allowed 5 per cent dividend upon the stock subscribed, and in addition to that after the 20 per cent surplus is allowed, the bankers get 40 per cent of the balance, and this stock is exempted from all National, State, and local taxation.

We organized postal savings banks and we allow the poor people 2 per cent interest on their deposits. I think we have \$25,000,000 of their money in the postal saving banks, on which we allow 2 per cent. But under this bill we allow the national banks 5 per cent interest on their stock in the Federal reserve banks, with an additional profit besides, and exempt the stock from taxation. The banks ask that that shall be increased to 6 per cent.

According to the report I have there are \$4,500,000,000 in the savings banks of this country. I presume the depositors do not get on an average over 3 per cent on those savings. Why not allow men who have money in our savings banks—the 10,000,000 persons who have \$4,500,000,000 in the savings banks, on which they are probably receiving not over 3 per cent interest—why not let them subscribe to this stock and get 5 per cent plus instead of 3 per cent? I can see no practicable objection to that—to allowing the common people to come in and have an opportunity to reap any benefits that may accrue under our new banking and currency system.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma.

The question was taken, and the amendment was rejected.

Mr. MADDEN. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amend section 2, page 3, by striking out the words, in line 4, "less than 12" and inserting in lieu thereof "more than 5" and inserting in line 11, page 3, after the word "bank," the words "and State bank and trust company"; and in line 12, page 3, by striking out "shall be required to" and inserting in lieu thereof the word "may"; and in line 13, page 3, by striking out the word "twenty" and inserting in lieu thereof the word "ten"; and in line 15, page 3, by striking out the word "fourth" and inserting the word "half"; and in lines 16, 17, 18, 19, 20, and 21 after the word "one," in the sixteenth line, by striking out the words "fourth within 60 days after said subscription is made. The remainder of the subscription or any part thereof shall become a liability of the subscriber member bank, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank," and substitute in lieu thereof the words "half subject to call upon 60 days' previous notice. The unpaid portion of the subscription or any part thereof shall become a liability of the subscriber subject to call upon 60 days' previous notice."

Mr. MADDEN. Mr. Chairman, this amendment is a very simple one when it is reduced down to where it is naked. It provides for reduction in the number of Federal reserve banks from 12 to 5. It provides that the banks may become members of the Federal reserve bank instead of being compelled to do it. It makes it a voluntary matter. It also provides that State banks or trust companies may become members of the Federal reserve bank association. It provides also that instead of 20 per cent subscription to the capital stock of the Federal reserve banks that all banks who shall wish to become members of the Federal reserve banks may subscribe for 10 per cent of the stock. By the bill they are required to subscribe 20, but only to pay for 10. This amendment simply seeks to make the subscription the amount of the payments. It provides that only one half of the 10 per cent subscription shall be paid at the time of the subscription and the other half after 60 days' notice by the Federal reserve board.

The purpose of that is to prevent the possible contraction of the credits of the country by the payment of all that is required under the bill at one time. It seems to me that the membership in the Federal reserve banks ought not to be compulsory. It ought to be a voluntary proposition, and all State banks and trust companies, as well as national banks, should be eligible to membership in the first instance.

That is all there is to the amendment, and it seems to me that it is a sensible business proposition.

Mr. MOORE. Will the gentleman yield?

Mr. MADDEN. Certainly.

Mr. MOORE. The gentleman's amendment proposes to cut down the number of Federal reserve banks from 12 to 5?

Mr. MADDEN. Yes.

Mr. MOORE. Does the gentleman figure that will result in any saving in the matter of offices and salaries?

Mr. MADDEN. It makes it more certain that you will be able to get all of the money necessary to organize these banks without discounting the paper of the national banks through Federal reserve banks to the extent of \$266,000,000 and redis-

counting these notes when they become due and rediscounting them when they become due again.

Mr. MOORE. Does the gentleman have any doubt about 12 Federal reserve banks being able to raise \$5,000,000 each?

Mr. MADDEN. I have no doubt about their being able to raise that, but I have some doubt about their being able to meet the obligations in the bill.

Mr. MOORE. Does the gentleman think that 5 Federal reserve banks would accommodate the business of the country as well as 12?

Mr. MADDEN. I think that 5 Federal reserve banks would better mobilize the business of the country than 12.

Mr. BULKLEY. How does the gentleman's proposition affect the amount of money that would be mobilized?

Mr. MADDEN. It is easier to control 5 than 12.

Mr. BULKLEY. The gentleman is afraid that the banks would not have enough money to put up the capital stock of 12. Would not they be required to put in the same proportion, the same aggregate amount of money, if they had only 5?

Mr. MADDEN. Certainly not. If you had only five banks, you would require \$5,000,000 for each bank.

Mr. BULKLEY. But does not the gentleman permit all banks that wish to come in to come in upon payment of the subscribed portion?

Mr. MADDEN. Yes.

Mr. BULKLEY. And if they all come in, they will all pay the same as 12?

Mr. MADDEN. I do not think all of the national banks in the United States, if they came in under the provisions of the bill, could keep all of the obligations imposed by the bill.

The CHAIRMAN. The time of the gentleman from Illinois has expired. The question is on the amendment offered by the gentleman from Illinois.

Mr. MONDELL. Mr. Chairman, I desire to offer an amendment to the amendment.

The CHAIRMAN. The Clerk will report the amendment to the amendment offered by the gentleman from Wyoming.

The Clerk read as follows:

Page 3, line 4, strike out the word "less" and insert the word "more."

Mr. MONDELL. Mr. Chairman, I realize that this is all a solemn farce. That fact, I suppose, accounts for the sparse attendance on the majority side. They have, no doubt, the votes at call to vote down any and every amendment that is offered.

Mr. BUTLER. Does not the gentleman think they ought to have them for that purpose? He does not suppose that they would report a bill and not have the votes to pass it? Why do we not be sensible about it? Why do we compel them to hold us while they give us the dose?

Mr. MONDELL. They have bound their people, their wills and consciences, and one gentleman who has not favored us with his presence here for some time appeared this morning and we heard his eloquent tones. He might just as well have stayed back in Kentucky. He is not needed now here any more than he has been for months past, for his party has bound him as it has other majority Members.

Mr. BUTLER. Mr. Chairman, will the gentleman yield again?

Mr. MONDELL. Mr. Chairman, I can not yield further. I want to discuss the proposed amendment.

Mr. BUTLER. It is just a little question. Does not my friend think, in all candor, that we have taught them a little ourselves? [Laughter.]

Mr. MONDELL. Well, my conscience is not troubling in that respect.

Mr. BUTLER. Neither is mine. Mine is perfectly easy.

Mr. MONDELL. One of the numerous propositions contained in the amendment offered by the gentleman from Illinois relates to the number of reserve banks.

It proposes to reduce the number from 12 to 5. My own personal opinion is that 7 is the better number; but I want to suggest this to the gentleman—a thought presented very forcibly by the gentleman from Texas [Mr. CALLAWAY]—that it is altogether possible that when this legislation is written upon the statute books—of course, it will be in a very different form from what it is now—when it is written, if we should provide for 12 regional reserve banks, it may be impossible to put the bill into force or effect, because while gentlemen refuse to grant the banks any sort of representation on the board the gentlemen must realize the banks of the country have enough influence and, as the option is entirely with them to go into these organizations or not, it would be entirely possible for them to prevent the bill going into effect by preventing the organization of 12 regional banks. Therefore I have modified the provision so that the central board could organize with a less number than 12 reserve banks. Under my amendment they may

organize with 5, with 6, with 7, or with any number up to 12; and, in my opinion, taking whatever view of the legislation you may, it is certainly unwise to have a provision in the bill under which, in the judgment of many men who have given the matter careful consideration, including many gentlemen on that side of the House, you leave it within the power of great capitalists of industry and great capitalists to render impossible the organization of your system. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment to the amendment offered by the gentleman from Wyoming.

Mr. STANLEY. Mr. Chairman, I move to strike out the last word. I presume the gentleman from Wyoming [Mr. MONDELL] referred to me in his address.

Mr. MONDELL. Oh, yes.

Mr. STANLEY. Mr. Chairman, I thought when I addressed the House a few moments ago that they had simply shackled the gentleman who has just addressed the committee, but, from the statement of the gentleman just now, they must have had him in a padded cell. In the first place, I have been in constant attendance on this House from the moment this bill was presented until now. I have hardly missed an hour from the caucus, and have not missed a day's attendance or hardly an hour of time since it has been before the House.

Mr. MONDELL. Well, the gentleman returned from his long absence sooner than I thought he had.

Mr. STANLEY. The gentleman's "long absence" is another evidence of the dreams of the man in the padded cell. In the first place, I have been here continually, as every member of the Committee on Ways and Means knows, prior to the time this bill was before the House, and have not been absent from the city of Washington, except for a day or two at a time, in the last three months. That is neither here nor there, however. In addition to that, the gentleman refers to my activities in respect to the Money Trust. I had nothing to do with the Money Trust resolution. I never made a speech on it when it was up here in the House. I was not a member of the Money Trust investigating committee or the Banking and Currency Committee. Such statements as that are not a deliberate perversion of the truth. They are the evidence of a lack of a sane interval. [Laughter.] The gentleman does not state what he knows or believes to be untrue, but states what he has no reason to believe at all. He arouses not my animosity but my sympathy, and had I known of his mental condition at the time I should not have referred to him in any such caustic terms. [Laughter and applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming to the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was rejected.

Mr. MONDELL. Mr. Chairman, I offer an amendment to the second provision.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 3, lines 11 and 12, amend by striking out the words "every national bank located within a given district shall be required to" and insert in lieu of the words stricken out the words "every national and State bank and trust company located within a given district which shall fulfill the requirements hereinafter provided may."

Mr. MONDELL. Mr. Chairman, the only modification of the gentleman's amendment that the amendment now offered makes is in the latter part of the amendment in the words "that have fulfilled the requirements of this act." It seems to me important that we should give all national banks and all trust companies an opportunity to come into the system. But we should not allow them to come in without complying with the provisions of the act and fulfilling all of those provisions.

Now, Mr. Chairman, this bill has been designated as a force bill. It certainly is so far as the provision now referred to is concerned, for it seeks to compel national banks, under pain of confiscation of their charters and the benefits that go with them, to come into the system. Not only do they lose the prestige that the national organization gives them, but in addition to that they would lose by the depreciation on the bonds which they now have in the Treasury in equal amount to their circulation. Just how much this depreciation would amount to I can not, of course, say.

But 2 per cent bonds without the circulating privilege would not certainly be worth over 85 cents at the most. So there would be a loss of 15 to 20 per cent—we do not know just how much—on all the circulation of a bank as well as the loss in prestige and the expense of transferring the business to State charters. If this bill is a measure that will bring a coordination of our banking business, then every bank in the country ought to come into the system. But no bank in the country should be coerced to come into the system. And in my opinion

this provision of coercion has tended and will tend to arouse the opposition of many of the banks, and its effect will be, not to bring the smaller banks into the system, but rather to lead them to resolve to keep out of it. Not a single small bank in my State—and I have heard from many of them—has up to this day expressed the purpose of coming into the system. And yet every one of them would naturally desire to come into a fair system if it shall be established. There would be no necessity for coercion if the legislation is wise and fair. If it is not and workable, this provision will not save it.

Mr. GLASS. Mr. Chairman, I desire to say again, in order that I may not be required from time to time to repeat the statement and therefore consume the time of the committee, that there is not a line or sentence in this bill that confiscates the property of any bank. That is a mere play upon phrase. Moreover, there is not anything of a coercive nature in any provision of this bill that has not been indorsed with absolute unanimity by the national banks and many of the State banks in this country. The same sort of coercion in this bill was contained in the bill suggested by the Monetary Commission, adopted without a dissenting vote by the American Bankers' Association.

Mr. MONDELL. Will the gentleman yield?

The CHAIRMAN. Will the gentleman from Virginia yield to the gentleman from Wyoming?

Mr. GLASS. Yes.

Mr. MONDELL. The gentleman does not mean to have us understand that the Monetary Commission bill compelled the banks to come into the system, does he?

Mr. GLASS. No.

Mr. MONDELL. That is the point that I am making.

Mr. GLASS. No. The point the gentleman made went further than that. But I will modify my response to his inquiry. I will say yes, it compelled them to go in just in the sense that there is not one particle of difference, in effect, in a provision of law that plainly provides that a corporation shall do something and the provision of law that makes it impossible for a corporation to fail to do that very thing. Now, that is the difference between this bill and the proposed Aldrich bill.

Mr. MONDELL. The gentleman will not say that under the Monetary Commission bill the national banks could not have operated outside of the system?

Mr. GLASS. They could have operated outside of the system had they cared to endure the very loss on their bonds to which the gentleman made reference a while ago. If the national banks, under the scheme of the Monetary Commission, had desired to lose the "prestige" to which the gentleman refers or had been willing to lose the 30 per cent of depreciation on their bonds to which the gentleman refers they might have continued to operate under the national banking system. But the gentleman knows very well they would not have done that.

Mr. MONDELL. But the gentleman is not accurate when he says that under the Monetary Commission bill the banks would necessarily have lost on their bonds if they had not gone into that system.

Mr. GLASS. Undoubtedly I was accurate. The banks were given notice, under the express provisions of the Aldrich bill, that unless they would come into the system and impound their bonds within a period of 12 months—the precise period that we have here—they would not have the benefits of the refunding scheme of the system proposed.

Mr. MONDELL. But there were other provisions of that bill in which they would have been protected in the matter of their bonds.

Mr. GLASS. Well, in what way? Will the gentleman point to one?

Mr. MONDELL. There were various ways.

Mr. GLASS. Name one.

Mr. MONDELL. I do not happen to have the bill before me at this moment.

Mr. GLASS. Well, I will loan it to the gentleman. [Laughter on the Democratic side.] I ask for a vote, Mr. Chairman.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Wyoming [Mr. MONDELL] to the amendment of the gentleman from Illinois [Mr. MADDEN].

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MADDEN].

Mr. HAYES. Mr. Chairman, I ask that the amendment be divided.

The CHAIRMAN. A division of the amendment is demanded. Without objection, the Clerk will divide the amendment in reading.

There was no objection.

The Clerk read as follows:

Amendment by Mr. MADDEN:
"Amend section 2, page 3, by striking out the words, in line 4, 'less than twelve' and inserting in lieu thereof, 'more than five.'"

The CHAIRMAN. The question is on agreeing to the first division of the amendment offered by the gentleman from Illinois [Mr. MADDEN].

The question was taken, and the portion of the amendment read was rejected.

The CHAIRMAN. The Clerk will read the next division of the amendment.

The Clerk read as follows:

And inserting, in line 11, page 3, after the word "bank" the words "and State bank and trust company."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the provision reported was rejected.

The CHAIRMAN. The Clerk will read the next provision in the amendment.

The Clerk read as follows:

And, in line 12, page 3, by striking out "shall be required to" and inserting in lieu thereof the word "may."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. BUTLER. Mr. Chairman, I demand a division.

The CHAIRMAN. A division is demanded by the gentleman from Pennsylvania [Mr. BUTLER].

The committee divided; and there were—ayes 27, noes 81.

So the provision as read was rejected.

The CHAIRMAN. The Clerk will report the next division of the amendment.

The Clerk read as follows:

And, in line 13, page 3, by striking out the word "twenty" and inserting in lieu thereof the word "ten."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the provision reported was rejected.

The CHAIRMAN. The Clerk will report the next provision.

The Clerk read as follows:

And, in line 15, page 3, by striking out the word "fourth" and inserting the word "half."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the provision read was rejected.

The CHAIRMAN. The Clerk will report the next provision.

The Clerk read as follows:

And, in lines 16, 17, 18, 19, 20, and 21, after the word "one" on the sixteenth line, by striking out the words "fourth within 60 days after said subscription is made."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the provision reported was rejected.

The CHAIRMAN. The Clerk will report the remainder of the amendment.

The Clerk read as follows:

"The remainder of the subscription or any part thereof shall become a liability of the subscriber member bank, subject to call and payment thereof whenever necessary to meet the obligations of the Federal reserve bank," and substitute in lieu thereof the words: "half subject to call upon 60 days' previous notice."

The CHAIRMAN. The question is on agreeing to the provision just reported.

The question was taken, and the provision reported was rejected.

The CHAIRMAN. The Clerk will read the remainder of the amendment.

The Clerk read as follows:

The unpaid portion of the subscription, or any part thereof, shall become a liability of the subscriber, subject to call upon 60 days' previous notice.

The CHAIRMAN. The question is on agreeing to the remainder of the amendment.

The question was taken, and the provision read was rejected.

The CHAIRMAN. The Clerk will read.

Mr. SCOTT. Mr. Chairman, I offer an amendment which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Kansas [Mr. SCOTT].

The Clerk read as follows:

Amendment offered by Mr. SCOTT:
Page 3, line 21, after the word "bank," insert "in case of the impairment of the capital thereof."

Mr. SCOTT. Mr. Chairman, I offer this amendment for the purpose of directing the attention of the committee to the provision and to some information that I have received, not only from members of the committee but others, in respect to the intention of this clause. I am informed that this is intended to create a secondary liability upon the part of the subscribing stockholders to the Federal reserve banks. In my opinion the clause does not create a secondary liability, neither does it limit the liability of the subscriber to respond, as in cases of the present national banks, and in the case of all banking laws that now exist, when the Federal reserve banks become insolvent, or even in case their capital should become impaired; but the liability exists, constant in all times, subject only to the discretion of the Federal reserve board. In other words, under the bill as it now stands, the Federal reserve board has absolute discretion to call upon the subscribing members for additional payments up to 100 per cent, even though the capital of the Federal reserve bank is absolutely intact. For instance, the Federal reserve bank is compelled by the Federal reserve board to loan money to another Federal reserve bank.

It loans largely and needs ready money. Instead of borrowing or recuperating its resources in any other way, the Federal reserve board, under this clause of the bill, has a right to call for additional payments to capital. That will be likely to result in a want of uniformity in the paid subscriptions to the capital of these various banks, if the power is exercised.

The amendment which I have offered is in the nature not of the ultimate liability of the national stockholders at the present time, but of the intermediate liability, that which requires the stockholders to keep the capital of the bank unimpaired. I believe that in fairness to the subscribing banks that ought to be the limit of their liability, and that an impairment of capital in some degree at least ought to take place before they are required to respond by payment of this extra liability.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The amendment was rejected.

The Clerk read as follows:

Sec. 3. That the capital stock of each Federal reserve bank shall be divided into shares of \$100. The outstanding capital stock shall be increased from time to time as subscribing banks increase their capital or as additional banks become subscribers, and shall be decreased as subscribing banks reduce their capital or cease to be stockholders. Each Federal reserve bank may establish branch offices under regulations of the Federal reserve board at points within the Federal reserve district in which it is located: *Provided*, That the total number of such branches shall not exceed one for each \$500,000 of the capital stock of said Federal reserve bank.

Mr. GLASS. There are several committee amendments to that paragraph, which I ask the Clerk to read.

The Clerk read as follows:

On page 4, line 12, amend by adding, after the figures "\$100," the word "each."

The committee amendment was agreed to.

The Clerk read as follows:

Amend, page 4, line 14, by striking out the word "subscribing" and inserting the word "member."

Mr. TEMPLE. Mr. Chairman, the bill as it stands now differs a good deal from the earlier print, and one important difference is caused by changing the word "subscribing" to the word "member."

In the report of the committee, on page 1, it is said that the word "subscribing" is stricken out and the words "member bank" substituted in order to conform the language to other provisions of the bill, but I think it is very plain that the effect is much greater than that. Member banks and subscribing or stockholder banks are carefully distinguished in sections 8, 9, and 10. National banks might become members at will. Certain State banks might become members by being reorganized as national banks, and other State banks and trust companies might become shareholders; but in no part of section 10, where their privileges are described, are they spoken of as member banks, and in no part of section 10 are they given the rights and privileges of member banks.

Now, the provision in the earlier print for a dividend of 5 per cent on the capital stock of the Federal reserve banks was to be payable to shareholding banks, while the 40 per cent of the excess dividend was to be divided among member banks. Evidently the shareholding banks not members were not to share in that division of the excess earnings.

Now, the pending committee amendment limits the provision for a 5 per cent dividend to the stock held by member banks. If this passes it will mean that the subscribing banks have no rights at all to profits or dividends except under the regulations that may be adopted by the Federal reserve board. I wish the Members would listen attentively to that, because I think it is a matter of exceedingly great importance. When we come to section 10 we will find that the Federal reserve

board has the right to adopt rules and regulations that are to control the rights and privileges of the State banks and trust companies which come into this system and remain State banks and trust companies; that is, come into this system without being reorganized as national banks.

Their rights and privileges are controlled not by the provisions in this act but by the provisions in the rules and regulations to be adopted by the Federal reserve board. That is, this Congress has delegated its right to legislate for these banks to the Federal reserve board. We are legislating for 7,300 banks in the national banking system; we are delegating our right to legislate for the 17,000 banks that are State banks and trust companies. When we change the words "subscribing banks," "share-holding banks," to member banks, we must remember all that it implies in view of the provisions of section 10.

Mr. MURDOCK. Will the gentleman yield? I want to get the gentleman's distinction, and I do not think I do. Does the gentleman contend that a State bank is not a member bank?

Mr. TEMPLE. I can answer that best by quoting the provisions of the bill—that all national banks, whether already organized or hereafter to be organized will be members of the new system, except such existing national banks as may prefer to surrender their charters. Of course, all national banks hereafter organized will be members of the new system. The bill provides that State banks and banking associations may be reorganized as national banks.

Now, there is another section which provides that such State banks and banking associations and trust companies as prefer not to become national banks but to retain their State charters may apply to the Federal reserve board for the privilege of subscribing to the stock, upon which they may become stockholders, and the Federal reserve board shall make such by-laws for their regulation as in its judgment may seem wise.

Mr. TOWNER. I think the gentleman has wisely called our attention to that distinction, but does not the gentleman think that that would hardly be applicable and that the words member bank is proper in this case for this reason? This is a provision for the increase of the capital stock. Now, a bank in order to increase its capital stock must at the time be a member bank, whether it shall have been a national bank or a trust company or a State bank.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MURDOCK. Mr. Chairman, I ask that the gentleman's time be extended five minutes.

The CHAIRMAN. The gentleman from Kansas asks that the time of the gentleman from Pennsylvania be extended five minutes. Is there objection?

There was no objection.

Mr. TOWNER. Therefore, it seems to me that the words "member bank" in this particular connection would be the proper words to use, and not "subscribing banks." Does not that seem to be true?

Mr. TEMPLE. If that were the only provision in the bill I should say yes; but take the other provisions in connection with it, and especially those in section 10, and I think the gentleman's point is not well taken.

Mr. COOPER. Will the gentleman yield?

Mr. TEMPLE. Yes.

Mr. COOPER. Does the gentleman make a distinction between national banks that subscribe for stock and other banks?

Mr. TEMPLE. No; the bill makes the distinction.

Mr. COOPER. Would not a fair construction of the bill be that its manifest intention is to permit State banks and trust companies to become member banks? On page 18, line 2, the language is:

and said Federal reserve bank shall upon notice from the Federal reserve board be required to suspend said banking association or trust company from further privileges of membership.

This is a direct provision for suspending State banks and trust companies from membership. But before they can be suspended from membership they must be members. It strikes me that, taking the whole section together, the manifest intent is that State banks and trust companies shall be permitted to become members.

Mr. TEMPLE. Mr. Chairman, I am afraid that I shall not be able to answer that question in the five minutes' time that is given me, but I shall attempt it. If you will turn not only to the bill but to the report of the committee on the bill, you will see how the committee understands it. On page 42 of the report it says:

It has been plain, however, that inasmuch as State banks are organized under different codes of legislation it would be unfair to permit banks to become stockholders in the reserve banks and to enjoy the advantages open to national banks which are stockholders unless such banks were subject to practically as high a standard of banking requirement as the national banks with which they compete.

After that it continues:

This does not altogether place the State banks upon the same basis as the national, inasmuch as they are not thus subjected to the same regulations with respect to investments and general business.

Now, if you will turn to the provisions of this bill, page 17, you will find that it says "stock ownership," and not "membership."

It shall be the duty of the Federal reserve board to establish by-laws for the general government of its conduct in acting upon applications made by the State banks and banking associations and trust companies heretofore referred to for stock ownership in Federal reserve banks.

Now, nominally, that is a set of by-laws for the guidance of the Federal board, but the next sentence shows it is for the control of State banks applying for stock in the Federal reserve bank. Let me read that sentence:

Such by-laws shall require applying banks not organized under Federal law to comply with the reserve requirements and submit to the inspection and regulation provided for in this and other laws relating to national banks.

If all the requirements of this act are to be applied to the stockholding State banks and trust companies, there would be no need here to specifically enact that the requirements with regard to reserves shall apply to them. They are not to have the rights guaranteed under this act unless the Federal reserve board in its by-laws gives them those rights. As the bill was written at first, they had the right to 5 per cent interest upon the capital stock, and had no right to participate in the division of 40 per cent of excess earnings. As the bill has been changed, they have not even the right to partake of the 5 per cent dividends unless the by-laws adopted by the Federal reserve board so say.

Mr. TALCOTT of New York. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. COOPER. Mr. Chairman, I ask unanimous consent that the gentleman from Pennsylvania have his time extended for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. TEMPLE. Mr. Chairman, I should like to finish my statement before I answer any more questions, and that is this: If I am right, and I think a comparison of section 10 and its provisions with sections 8 and 9, which provides for reorganization of State banks as national banks, will show that I am right, then in addition to the enormous powers conferred on the Federal reserve board we are also conferring upon that board the right to legislate for 17,000 banks, while we are reserving for ourselves only the right to legislate for 7,300 national banks.

Mr. COOPER. Mr. Chairman, will the gentleman yield at this point?

Mr. TEMPLE. Yes.

Mr. COOPER. I desire to call attention to page 42 of the committee report accompanying the bill.

Mr. TEMPLE. That is what I called attention to.

Mr. COOPER. But the gentleman from Pennsylvania did not call attention to the particular words in the report to which I desire to direct his attention at this time. On page 42, after the caption "section 10," the committee goes on to say:

After much examination of the subject it has been deemed best by the committee to permit State banks to become members, that is, stockholders—

Mr. TEMPLE. Yes; a kind of associate members without the full privilege of other members.

Mr. COOPER. One moment. The committee says that it was deemed best to permit State banks "to become members—that is, stockholders"—thus using the words "members" and "stockholders" as synonymous.

Mr. TEMPLE. Oh, no. I understand that the committee when it here calls the State banks "members" immediately qualifies that word by adding the words "that is, stockholders."

Mr. COOPER. No; "to become members—that is, stockholders—in Federal reserve banks," means that the stockholder in the bank is a member of the bank. Is not a man owning stock in a bank a member of that bank?

Mr. TEMPLE. I will have to answer that by reading again the section that I read a moment ago. The report of the committee says a little farther down, in the same paragraph:

This does not altogether place the State banks upon the same basis as the national—

And so forth.

And that is really the interpretation of the committee. We are not enacting the report of the committee into law, but we are enacting the bill into law. I fall back on section 10 as it stands in the bill, and I also maintain that the committee supports my interpretation of the section.

Mr. TALCOTT of New York. Mr. Chairman, will the gentleman refer to page 16 of the bill, line 6?

Mr. TEMPLE. What is the heading given there—State banks as members?

Mr. TALCOTT of New York. That is the heading of section 10.

Mr. TEMPLE. That is the heading, but there is nowhere in that section the guaranty that is found in the section immediately preceding, which declares:

When the comptroller has given to such bank or banking association a certificate that the provisions of this act have been complied with, such bank or banking association and all its stockholders, officers, and employees shall have the same powers and privileges and shall be subject to the same duties, liabilities, and regulations, in all respects, as shall have been prescribed by this act or by the national banking act for associations originally organized as national banking associations.

That provision is from section 9, which applies to State banks reorganized as national banks, and there is no such provision in section 10 which applies to these others.

Mr. TALCOTT of New York. But is not the gentleman drawing a distinction between subscribing banks and member banks? And it seems to me that the title is sufficient to explain the distinction.

Mr. TEMPLE. But the title is not law.

Mr. TALCOTT of New York. The text simply goes on and explains what the title is.

Mr. TEMPLE. But section 10 contains no guaranty that the banks that remain State banks shall have the rights and privileges of national banks.

Mr. TALCOTT of New York. Will the gentleman yield further?

Mr. TEMPLE. Certainly.

Mr. TALCOTT of New York. It does contain a provision that State banks that are so reorganized and become national banks shall have those guaranties.

Mr. TEMPLE. But it makes no such provision for those that remain State banks.

Mr. PHELAN. Is there any portion of the bill that says national banks shall be member banks?

Mr. TEMPLE. Yes.

Mr. PHELAN. Where is it, please?

Mr. TEMPLE. All through it.

Mr. PHELAN. Oh, no. Is there any place in the bill where it says national banks shall be member banks?

Mr. TEMPLE. I can not give the page, but I can give the language nearly. It provides, I think in section 8, that national banks now existing shall have all the rights and privileges of national banks that shall be organized hereafter.

Mr. PHELAN. Yes; but it does not use the words "member banks."

Mr. TEMPLE. Yes; that is all the way through. The gentleman is in error.

Mr. PHELAN. I am not; I am asking about the words "member banks." Is that expression used in connection with national banks?

Mr. TEMPLE. In the provisions controlling the work of the organization committee in organizing the reserve banks the national banks within the district are called member banks.

Mr. MURDOCK. Will the gentleman yield to me?

Mr. TEMPLE. Certainly.

Mr. MURDOCK. In section 10, this is the language of the bill to which I would like to call the attention of the gentleman:

The Federal reserve board, under such rules and regulations as it may prescribe, subject to the provisions of this section, shall permit such applying bank to become a stockholder in the Federal reserve bank in the district in which such applying bank is located.

Now, the gentleman contends that under that language the Federal reserve board could cut out a State bank from participation in this 40 per cent.

Mr. TEMPLE. A State bank has the privilege under the law of becoming a stockholder under such by-laws as the Federal reserve board chooses to make, but there is nothing in the act that defines the rights and privileges of the stockholders.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I was very much interested this morning listening to the discussion on this floor with reference to caucuses. I wish to say, Mr. Chairman, that from inspection of the newspapers of the country and other sources of information there is no complaint with reference to what is denominated a "secret caucus" except from the Republicans and the Progressives and those other statesmen who imagine that this denunciation of the secret caucus may be popular in their districts. I remember, Mr. Chairman, when I first came here

that the Democratic Party upon this floor was divided into a number of factions. The only thing that has ever solidified the Democratic Party in this House was inaugurated by the present Speaker, who, upon being nominated in that year, even when we were in the minority, stated to us that he did not intend to pose as a boss; that he intended to take us into his confidence and that no matter of great importance should ever be acted upon on this floor until after a thorough consultation with the members of the party in this House, and no action taken until every man had an opportunity to fully express himself. He carried out that policy, and to-day instead of a disorganized body of stragglers we present a solid front to the enemies of popular government in this country. [Applause on the Democratic side.] In last November the Democratic Party of this country was charged with the institution of certain reforms by the great masses of the American people. They said to the Republican Party that they had proven false to their promises and they intrusted us with the carrying of these great reforms into execution. Mr. Chairman, because we do not see fit to throw open these doors and these galleries to Republican newspaper reporters and to the enemies of the Democratic Party, these gentlemen are constantly declaiming against what they are pleased to call a "secret caucus." The caucus is held for a conference of Democrats; for an interchange of Democratic views. The people have intrusted us with the duty of carrying these great reforms into execution, and because we do not see fit to invite you into our councils you have no right to complain. [Applause on the Democratic side.]

If the American people had wanted you to confer with us, to advise with us, to help us arrange and put into execution these great reforms, they would have given you the power and they would not have entrusted it to us.

Why, Mr. Chairman, we might as well say, if so unfortunate a thing as war with Mexico should occur, that Gen. Wood should go down to El Paso and, calling his lieutenants about him, should send a message to Huerta inviting him to come over with his lieutenants, that he was going to map out a plan of campaign for the invasion of Mexico and wanted him to be present. We regard you people, and the electorate have declared you to be, the enemies of these reforms. The American people regard you as the enemy of these reforms; they trusted you and you were recreant to that trust; you are not entitled to be present at these conferences; you are unworthy of their confidence; we are charged with carrying them into effect and we intend to do it without your help or without your counsel; we take the responsibility and, so help us God, we will prove true to the American people. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. WINGO. Now, Mr. Chairman, just a word in reference to the amendment which the committee has proposed. It might be well to call the attention of the committee to the fact that you will find this amendment proposed at several places in the bill. In the original print of the bill the words "subscribing banks," "shareholders," and "shareholding banks," and "subscribers" were used interchangeably, and the change in this very amendment was made for the purpose of using the words "member bank" throughout the bill where those different expressions were used, which really meant the same thing. Now, that is all that is meant by this amendment.

The gentleman from Pennsylvania [Mr. TEMPLE] is in error when he undertakes to read from the report of the committee and contend that the committee itself intended to make a distinction between the rights of the shareholders that are State banks and those that are national banks. If he had finished reading the quotation that he made from the report, he would have seen that the committee itself referred to this subscription of the State banks as giving them membership. In other words, taking the very same page from which he read, page 42 of the report, he would find, if he had read on down in the section that he started to read, the subdivision, this language:

As a necessary power in connection with this question of membership section 10 confers upon the Federal reserve board the power to establish by-laws for the general government of its conduct in acting upon applications made by State institutions.

So the gentleman is in error when he contends that that particular part of the report makes a distinction between the rights of State banks and the rights of national banks. As a matter of fact, it is the intention of the bill and the intention of section 10 to give to the State banks membership by complying with certain requirements.

Mr. WILLIS. I would like to ask the gentleman if he contends that these State banking institutions provided for in section 10 will be member banks under the language of the proposed bill, which language is objected to by the gentleman from Penn-

sylvania [Mr. TEMPLE]? Are they member banks or subscribing banks?

Mr. WINGO. Whenever any State bank complies with the provision of section 10 and the requirements therein it becomes a member bank.

Mr. TEMPLE. Will the gentleman yield for a question?

Mr. WINGO. Certainly.

Mr. TEMPLE. I would like to ask this: Whether the committee, which has changed the word "stockholder" to "membership" in many places, would be willing to change the word "stockholder" to "membership" in line 17 of page 16:

The Federal reserve board, under such rules and regulations as it may prescribe subject to the provisions of this section, shall permit such applying bank to become a stockholder—

And so forth. Would the committee be willing to change that word "stockholder" to "membership"?

Mr. GLASS. If I may answer for my colleague, I would say yes, if the committee could think it was at all necessary.

But I call the gentleman's attention to the language of the provision on page 18, where it says that State banks or trust companies, as stockholders of Federal reserve banks, shall, upon notice from the Federal reserve board, be suspended, under certain circumstances, from "further privileges of membership."

Mr. TEMPLE. There is no question but that they have some of the privileges of membership. The question is whether they have all of them.

Mr. WINGO. There is no question but that they have all the privileges. The only prerequisite is that they shall meet the requirements with reference to capital reserves and inspection and general administrative regulations. It simply compels the State banks to comply with the same regulations that the national banks comply with in order to become members. As to the gentleman's reference to the word "stockholder," on page 17, the word "stockholder" is a proper word there, even if you do want to use the word "membership" in place of these other expressions in the bill that I have mentioned.

Whenever a man subscribes to the stock of any corporation he becomes a member of that corporation, and the gentleman's objection to the amendment could be classed as captious. Instead of our amendment being captious, I think the gentleman's objection to it is captious.

Mr. TEMPLE. I will say to the gentleman that it is not meant to be captious. It is in good faith.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Arkansas yield to the gentleman from Kansas?

Mr. WINGO. Yes.

Mr. MURDOCK. I would like to ask this question of the gentleman: Throughout the bill why has the word "stock" been added to the word "capital"?

Mr. WINGO. I am not sure on that point, but my recollection is that it was for the purpose of uniformity. We used the words "capital stock" in some places and in other places used "capital," and I think we made that amendment so as to make it uniform throughout the bill.

Mr. GLASS. There is some question as to whether "capital" comprehends "surplus."

Mr. MURDOCK. And this amendment excludes surplus?

Mr. WINGO. Yes; this amendment excludes surplus. There is no question about that.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. COOPER. Mr. Chairman, I think the gentleman from Arkansas [Mr. Wingo] is correct in his interpretation of the section. In my judgment, there would be no other possible construction to put upon this as a law, if it shall become a law, than that State banks and trust companies may become members of Federal reserve banks.

I take it for granted that nobody will deny that a stockholder in a bank who has the right to vote to help elect its directors is a member of that bank. Now, if gentlemen will turn to page 6 of the bill, they will find a provision that the directors of each Federal reserve bank shall be nine in number, and divided into three classes. Class A shall consist of three directors (line 21) who shall be chosen by the stockholding banks. Observe that language. These three directors are to be elected by banks owning stock in the Federal reserve bank, so that we have section 10 of the bill specifically authorizing private banks to be stockholders in Federal reserve banks, and this provision, on page 6, authorizing such private stockholding banks to vote to help elect directors of Federal reserve banks. Now, if they are not members of the Federal reserve banks I would like some gentleman to tell why. Here is a specific provision that a State bank or a trust company may own stock in a Federal

reserve bank and another provision that such stockholding bank or trust company shall vote to elect one-third of the directors of the Federal reserve bank, and yet gentlemen assert that a bank owning stock and voting to elect directors of another bank is not a member of it. In other words, their contention amounts to a reductio ad absurdum, that somebody entirely outside of a bank is to elect its directors.

The CHAIRMAN (Mr. McKellar). The question is on the adoption of the amendment offered by the gentleman from Virginia [Mr. Glass].

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, page 4, line 14, by striking out the word "subscribing" and inserting the word "member," and by inserting, after the word "capital," the word "stock."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Virginia.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, page 4, line 15, by striking out the word "subscribers" and inserting in lieu thereof the word "members."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, line 16, by striking out the word "subscribing," after the word "as," and inserting the word "member," and inserting, after the word "capital," the word "stock."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, line 17, by striking out the word "stockholders" and inserting the word "members."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 4, line 23, "Federal reserve banks" —

Mr. FOWLER. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois [Mr. Fowler] moves to strike out the last word.

Mr. FOWLER. Mr. Chairman, in line 15 the word "subscribers" is used in place of "members." I would like to know why the committee, in order to have all of these different words which represent "member" and in order that there may be a uniformity so that no mistakes might be made, did not substitute for the word "subscribers" the word "members"?

Mr. GLASS. If the gentleman will offer the amendment, the committee will accept it. The committee overlooked it.

Mr. FOWLER. I move to amend, line 15, page 4, by striking out the word "subscribers" and inserting in lieu thereof the word "members."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 4, line 15, by striking out the word "subscribers" and inserting in lieu thereof the word "members."

Mr. FOWLER. That makes it conform to the rest of the section.

The amendment was agreed to.

The Clerk read as follows:

FEDERAL RESERVE BANKS.

SEC. 4. That a sufficient number of national banks in a Federal reserve district having made and filed with the Comptroller of the Currency a certificate in the form required in sections 5134 and 5135 of the Revised Statutes of the United States, such national banks shall become a body corporate, and as such, and in the name designated in such organization certificate, shall have power to perform all those acts and to enjoy all those privileges and to exercise all those powers described in section 5136, Revised Statutes, save in so far as the same shall be limited by the provisions of this act.

The Federal reserve bank so incorporated shall have succession for a period of 20 years from its organization, unless sooner dissolved by act of Congress.

Every Federal reserve bank shall be conducted under the oversight and control of a board of directors, whose powers shall be the same as those conferred upon the boards of directors of national banking asso-

ciations under existing law, not inconsistent with the provisions of this act. Such board of directors shall be constituted and elected as hereinafter specified and shall consist of nine members, holding office for three years, and divided into three classes, designated as classes A, B, and C.

Class A shall consist of three members, who shall be chosen by and be representative of the stock-holding banks.

Class B shall consist of three members, who shall be representative of the general public interests of the reserve district.

Class C shall consist of three members, who shall be designated by the Federal reserve board.

Directors of class A shall be chosen in the following manner:

It shall be the duty of the chairman of the board of directors of the Federal reserve bank of the district in which each such bank is situated to classify the member banks of the said district into three general groups or divisions. Each such group shall contain as nearly as may be one-third of the aggregate number of said member banks of the said district and shall consist, as nearly as may be, of banks of similar capitalization. The said groups shall be designated by number at the pleasure of the chairman of the board of directors of the Federal reserve bank.

At a regularly called directors' meeting of each member bank in the Federal reserve district aforesaid, the board of directors of such member bank shall elect by ballot one of its own members as a district reserve elector and shall certify his name to the chairman of the board of directors of the Federal reserve bank of the district. The said chairman shall establish lists of the district reserve electors, class A, thus named by banks in each of the aforesaid three groups and shall transmit one list to each such elector in each group. Every elector shall, within 15 days of the receipt of the said list, select and certify to the said chairman from among the names on the list pertaining to his group, transmitted to him by the chairman, one name, not his own, as representing his choice for Federal reserve director, class A. The name receiving the greatest number of votes, not less than a majority, shall be designated by said chairman as Federal reserve director for the group to which he belongs. In case no candidate shall receive a majority of all votes cast in any district, the chairman aforesaid shall establish an eligible list, consisting of the three names receiving the greatest number of votes on the first ballot, and shall transmit said list to the electors in each of the groups of banks established by him. Each elector shall at once select and certify to the said chairman from among the three persons submitted to him his choice for Federal reserve director, class A, and the name receiving the greatest number of such votes shall be declared by the chairman as Federal reserve director, class A.

Directors of class B shall be chosen by the electors of the respective groups at the same time and in the same manner prescribed for directors of class A, except that they must be selected from a list of names furnished, one by each member bank, and such names shall in no case be those of officers or directors of any bank or banking association. They shall not accept office as such during the term of their service as directors of the Federal reserve bank. They shall be fairly representative of the commercial, agricultural, or industrial interests of their respective districts. The Federal reserve board shall have power at its discretion to remove any director of class B in any Federal reserve bank, if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.

Three directors belonging to class C shall be chosen directly by the Federal reserve board, who shall be residents of the district for which they are selected, one of whom shall be designated by said board as chairman of the board of directors of the Federal reserve bank of the district to which he is appointed and shall be designated as "Federal reserve agent." He shall be a person of tested banking experience; and in addition to his duties as chairman of the board of directors of the Federal reserve bank of the district to which he is appointed, he shall be required to maintain under regulations to be established by the Federal reserve board a local office of said board, which shall be situated on the premises of the Federal reserve bank of the district. He shall make regular reports to the Federal reserve board, and shall act as its official representative for the performance of the functions conferred upon it by this act. He shall receive an annual compensation to be fixed by the Federal reserve board and paid monthly by the Federal reserve bank to which he is designated.

Directors of Federal reserve banks shall receive, in addition to any compensation otherwise provided, a reasonable allowance for necessary expenses in attending meetings of their respective boards, which amount shall be paid by the respective Federal reserve banks. Any compensation that may be provided by boards of directors of Federal reserve banks for members of such boards shall be subject to review by the Federal reserve board.

The reserve bank organization committee may, in organizing Federal reserve banks for the first time, call such meetings of bank directors in the several districts as may be necessary to carry out the purposes of this act and may exercise the functions herein conferred upon the chairman of the board of directors of each Federal reserve bank pending the complete organization of such bank.

At the first meeting of the full board of directors of each Federal reserve bank after organization it shall be the duty of the directors of classes A and B and C, respectively, to designate one of the members of each class whose term of office shall expire in one year from the 1st of January nearest to date of such meeting, one whose term of office shall expire at the end of two years from said date, and one whose term of office shall expire at the end of three years from said date. Thereafter every director of a Federal reserve bank chosen as hereinbefore provided shall hold office for a term of three years; but the chairman of the board of directors of each Federal reserve bank designated by the Federal reserve board, as hereinbefore described, shall be removable at the pleasure of the said board without notice, and his successor shall hold office during the unexpired term of the director in whose place he was appointed. Vacancies that may occur in the several classes of directors of Federal reserve banks may be filled in the manner provided for the original selection of such directors, such appointees to hold office for the unexpired terms of their predecessors.

Mr. MADDEN. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will first report the committee amendments.

The Clerk read as follows:

Amend, pages 4 and 5, by striking out that portion of section 4 beginning with the word "that," in line 24, and ending with the word "act," in line 9, page 5, and inserting in lieu thereof the following:

"The national banks in each Federal reserve district uniting to form the Federal reserve bank therein, hereinbefore provided for, shall, under

their seals, make an organization certificate, which shall specifically state the name of such Federal reserve bank so organized, the territorial extent of the district over which the operations of said Federal reserve bank are to be carried on, the city and State in which said bank is to be located, the amount of capital stock and the number of shares into which the same is divided, the names and places of doing business of each of the makers of said certificate and the number of shares held by each of them, and the fact that the certificate is made to enable such banks to avail themselves of the advantages of this act. The said organization certificate shall be acknowledged before a judge of some court of record or notary public, and shall be, together with the acknowledgment thereof, authenticated by the seal of such court or notary, transmitted to the Comptroller of the Currency, who shall file, record, and carefully preserve the same in his office. Upon the filing of such certificate with the Comptroller of the Currency, as aforesaid, the said Federal reserve bank so formed shall become a body corporate, and as such, and in the name designated in such organization certificate, shall have power to perform all those acts and to enjoy all those privileges and to exercise all those powers described in section 5136, Revised Statutes, save in so far as the same shall be limited by the provisions of this act."

The committee amendment was agreed to.

The CHAIRMAN. There is another committee amendment.

The Clerk read as follows:

Amend, page 8, by inserting, after the words "class A," in line 14, the following:

"In case of a vote the balloting shall continue in the manner hereinbefore prescribed until one candidate receives more votes than either of the others."

The committee amendment was agreed to.

Mr. MADDEN. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, section 4, page 6, by striking out the period and inserting a comma after the word "board," at the end of line 26, and adding thereto the words "and who shall be legal residents of the district in which the Federal reserve bank is located." And on page 9 by striking out all after the word "districts," on line 2, up to and including the word "district," on line 7. And on page 9, lines 10, 11, 12, and 13, by striking out after the word "whom," on line 10, and all of line 11, and all of line 12, and the words "appointed and," in line 13, and inserting, after the word "designated," on line 13, the words "by said board"; and by inserting, after the word "shall," in line 14, the words "be a legal resident of the district for which he is elected and"; and by striking out, after the word "experience," in line 14, page 9, the words "and in," and all of lines 15 and 16 and the word "appointed," in line 17; and on page 10, in line 13, after the word "upon," by striking out the words "the chairman of the board of"; and on line 14, by striking out the word "directors"; also, on line 14, by striking out the word "bank" and inserting in lieu thereof the word "agent." On page 11, line 2, after the word "be," by striking out the words "chairman of the board of directors" and inserting in lieu thereof the words "Federal agent."

Mr. MADDEN. Mr. Chairman, I just want to explain that the first part of this amendment simply provides that directors in Federal reserve banks of class C shall be residents of the district for which they are elected; the second part of the amendment takes away from the board the power to remove directors of class B in Federal reserve banks, and the third part of the amendment takes away the power of the Federal reserve board to name the chairman of the board of directors of the Federal reserve banks and only leaves them the power of naming the Federal reserve agent.

It seems to me that this is a very reasonable proposition. There ought not to be any question about its approval, and every person who wants the banks organized under the terms of this bill to be representative of the section in which those banks are located ought to be willing to take away the power of the Federal reserve board to dictate who shall manage the reserve banks in the various sections of the country, and nobody ought to have any doubt whatever about the necessity and the desirability of having the directors in the various Federal reserve banks elected from among the residents of the territory in which the bank does business.

The CHAIRMAN. The question is on the adoption of the amendment.

The question was taken.

Mr. MONDELL. Mr. Chairman, I desire to make a few observations.

The amendment was rejected.

Mr. MADDEN. I ask for a division of the propositions contained in the amendment.

The CHAIRMAN. It has already been voted on and rejected.

Mr. GARNER resumed the chair.

Mr. LINDBERGH. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 6, after the word "banks" in line 22, add the following: "But shall not be directors in any member bank."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH].

Mr. LINDBERGH. Mr. Chairman, my purpose in offering this amendment is to prevent the directors in this case being

directors in any member bank. These persons will obtain information from the fact of their being directors of those banks—that is, member banks in which they are permitted to be a director—and get an advantage which I think they ought not to have, and for that reason I offer the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota.

The question was taken, and the amendment was lost.

Mr. HAYES. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 8, line 6, after the word "any," strike out the word "district" and insert the word "group."

Mr. HAYES. Mr. Chairman, this seems to be a misprint. It is perfectly evident that no director could get a majority of the directors of the district.

Mr. GLASS. The committee will accept that amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California [Mr. HAYES].

The question was taken, and the amendment was agreed to.

Mr. SMITH of Minnesota. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 6, line 24, after the word "district," insert the words "but they shall not be directors of any member bank."

Mr. SMITH of Minnesota. Mr. Chairman, I wish to say by way of explanation that this appears to be an amendment that is quite necessary. We are now considering the directors of the Federal reserve banks, and it is evident that no director of a Federal reserve bank should be a director of a member bank, for the reason that it is unfair to have a member of the Federal reserve bank, acquainted with all the affairs and working of any member bank, given a chance to use that knowledge for the benefit of his own member bank.

Mr. PHELAN. Mr. Chairman, I wish to point out to my colleague on the committee page 8, beginning with line 18—

Directors of class B shall be chosen by the electors of the respective groups at the same time and in the same manner prescribed for directors of class A, except that they must be selected from a list of names furnished, one by each member bank, and such names shall in no case be those of officers or directors of any bank or banking association.

So you could not get a director of a bank association and have him as a director of class B.

Mr. SMITH of Minnesota. Does that apply to class C?

Mr. PHELAN. I do not think it does.

Mr. TEMPLE. Mr. Chairman, the directors of class A must be directors of member banks, not class C.

Mr. PHELAN. I am talking about class B, and the amendment of the gentleman from Minnesota applies to class B.

Mr. TEMPLE. It is in class A that members are necessarily members of the directorates of the member banks.

Mr. PHELAN. We are not talking about class A at all.

Mr. SMITH of Minnesota. The gentleman says that this does not apply to class C?

Mr. PHELAN. I do not think it does.

Mr. SMITH of Minnesota. Mr. Chairman, I withdraw the amendment and offer another amendment.

The CHAIRMAN. The gentleman from Minnesota asks to withdraw his amendment. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will report the further amendment of the gentleman from Minnesota.

The Clerk read as follows:

Page 6, line 26, after the word "board," insert the words "but they shall not be directors of any member bank."

Mr. SMITH of Minnesota. Mr. Chairman, what I have said in reference to class B applies to class C. I do not think it is the intention of the committee to have any director of the Federal reserve board a director of any member bank except as to class B.

Mr. MURDOCK. Will the gentleman yield?

Mr. SMITH of Minnesota. Certainly.

Mr. MURDOCK. Members of class B are appointed by the Federal reserve board?

Mr. SMITH of Minnesota. Yes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota.

The question was taken; and on a division (demanded by Mr. SMITH of Minnesota) there were 34 ayes and 66 noes.

So the amendment was lost.

Mr. PLATT. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 9, line 5, after the word "appear," insert the following: "To the other directors of any Federal reserve bank."

Mr. PLATT. Mr. Chairman, it seems to me that the discretion given to the Federal reserve board on the top of page 9 in this section of the bill is too broad, and the Federal reserve board is not in a position to know whether the directors of class B fairly represent the agricultural, commercial, and industrial interests of the district, while the other directors of the Federal reserve banks are. It seems to me this power of removal is all right, provided you put some limit upon it, provided you put somebody in there who is in a position to judge whether the directors to be removed do or do not fairly represent the commercial, agricultural, and industrial interests of the district; and I have inserted these few words there with the idea that they would relieve that situation.

Mr. GLASS. Mr. Chairman, may I ask unanimous consent to have the amendment again reported?

There was no objection, and the Clerk again reported the amendment.

Mr. GLASS. Mr. Chairman, may I suggest to the gentleman from New York that it may be that the other directors of the Federal reserve bank would not want the directors of class B to fairly represent the commercial, industrial, and agricultural interests of the community?

Mr. PLATT. It seems to me that is hardly possible.

Mr. GLASS. I think it is possible. Moreover, I think the Federal reserve agent will know whether they properly represent the interests indicated.

Mr. PLATT. This includes the three directors appointed by the Federal reserve board as a part of the other directors?

Mr. GLASS. Yes. The directors, as the gentleman knows, are elected by the banks, and what we are trying to guard against is a regional reserve bank directorate that would entirely fail to represent the commercial, industrial, and agricultural community.

Mr. PLATT. But the regional reserve board is a good ways away from the districts?

Mr. GLASS. Yes; but the Federal reserve board will have its agent there at all times.

Mr. MONDELL. Mr. Chairman, I offer an amendment to the amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 9, lines 2 to 7, inclusive, strike out the words "the Federal reserve board shall have power at its discretion to remove any director of class B in any Federal reserve bank if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district."

The CHAIRMAN. Does the gentleman from Wyoming offer this as a substitute?

Mr. MONDELL. Mr. Chairman, I offer that amendment as a substitute, and it is in effect a part of the amendment offered by the gentleman from Illinois. I desired to discuss that amendment at the time, but was not given the opportunity. The Federal reserve board under this bill has too much authority in any event, but whatever may be our opinion with regard to the authority of the board in its general supervision and control, I think no one will agree that the Federal reserve board ought to have complete control of the reserve banks. The provision which my amendment seeks to strike out is one that would give the Federal reserve board complete power and control of each and every Federal reserve bank. First, they appoint three of the directors; second, they have the power to remove three of the directors, and therefore they control six of the nine directors of the Federal reserve bank, and if those provisions do not give the Federal reserve board complete control over the Federal reserve banks, I can not think of any provision that would give them such control, except provisions that would authorize them to go behind all of the boards of directors of those banks.

Mr. Chairman, I have offered this amendment hoping that it would be considered, but hoping against hope. We have not seen in this House for many years such a farce as we are witnessing to-day. Gentlemen offer amendments. I have a number on my desk I would like to offer, and I realize how futile it all is, and still we go through the form of discussion of this bill, everyone knowing that no matter how proper the amendment may be, how wise it may develop to be in the course of debate, it can not and will not be accepted.

Mr. GLASS. My friend will admit that five years ago he helped to save us from a similar farce by absolutely prohibiting this side from offering any amendments to the Vreeland-Aldrich bill?

Mr. MONDELL. Well, if we did err at that time [laughter] I think we were much more honest in our error than the gentlemen on the other side are at this time. As a matter of fact, it seems to me I think it would be better for the good name of the House if the gentleman from Virginia simply closed debate

on every amendment, because we all know that nothing is gained by offering amendments; nothing is gained by what we may say here; and yet we may feel it our duty, because we favor the legislation, to offer amendments and to make statements in support of them.

Mr. GLASS. But the gentleman from Wyoming would not permit us to perform our duty in that respect five years ago.

Mr. MONDELL. The gentleman from Wyoming did not have anything particular to do with it.

Mr. GLASS. Except to vote for the rule which prohibited us from performing our duty.

Mr. MONDELL. Well, as I said a moment ago, if we erred we were much more honest and upright in our error than the gentlemen on that side are now, who are pretending that an opportunity is being given to debate and amend this bill when we all know there is no such opportunity in fact.

Mr. GLASS. I want to call the gentleman's attention to the fact that just a moment ago the committee accepted an amendment offered by the senior Republican member of the Committee on Banking and Currency.

Mr. MONDELL. Which was an immaterial amendment which the gentlemen between themselves had agreed to.

Mr. BUTLER. Why not let us have permission to offer amendments after the bill is passed?

Mr. MONDELL. It would be just as good.

Mr. WEAVER. Mr. Chairman and gentlemen, I have been a member of the Banking and Currency Committee for more than three months, and of this House for more than six months, and I have followed the axiom which I learned in my boyhood that speech is silver, but silence is golden. You know the great thinkers of history never had much to say. They were silent men. There were Napoleon Bonaparte and the great Prince of Orange, called "William the Silent," and in modern times two illustrious Members of this House, namely, the gentleman from Pennsylvania [Mr. MOORE] and the gentleman from Wyoming [Mr. MONDELL]. [Laughter.] On those rare and isolated occasions when our said colleagues have deigned to illuminate subjects under discussion I have listened to them with singular and surpassing interest. Why, the gentleman from Pennsylvania [Mr. MOORE] is a poet, and his unpremeditated observations are orient pearls at random strung, and my distinguished friend the gentleman from Wyoming [Mr. MONDELL] can gild the palpable and the familiar with the golden exhalations of the dawn. [Laughter.]

It is true that CHAMP CLARK, of Missouri, the beloved Speaker of this House, whose stainless flag I followed in the last campaign with a zeal surpassing that of Peter the Hermit [applause]—it is true that CHAMP CLARK said that these two gentlemen delivered 200 speeches apiece on the tariff bill. Mr. Chairman, I think it was a gross exaggeration. [Laughter.]

I believe I have profited by my silence, because I have met here men with whom association is a liberal education. I confess I have heard some of my colleagues utter platitudes with an air of absolute personal proprietary ownership [laughter and applause] as by right of original discovery. Others I am delighted to hear, like the gentleman from Illinois [Mr. MANN], who speaks like Ben Jonson said of Bacon:

No man spake more pressly, more weightily, or suffered less emptiness, less idleness, in what he uttered.

While differing fundamentally in opinion from him on many public questions, I honor the intellect, the integrity, the courage of the distinguished gentleman from Illinois [applause], the leader of the Bourbon party, that in its defeat has never learned anything and never forgot anything.

I profit also when I listen to the distinguished leader of the know-everything party, the gentleman from Kansas [Mr. MURDOCK]—that magnificent State adjoining my own beautiful and glorious Oklahoma, that "wears upon its baby brow the round and top of sovereignty." [Applause.]

Mr. MURDOCK. Well, but the gentleman does not call me a Bourbon?

Mr. WEAVER. No; far from it; but a progressive of the Progressives, who stands like Saul among the Israelites, head and shoulders above the rest, and who speaks the language of epigram with the grace and genius that God Almighty has given him. [Laughter and applause.]

I had intended, Mr. Chairman, to deliver a classic speech, as a member of the committee, upon the subject of banking and currency. I intended Saturday evening to come as a valuable reinforcement to my distinguished friend, the great leader from Virginia [Mr. GLASS], but I was denied the opportunity. As a member of this committee I would be glad to epitomize the virtues of this bill, but I will not have the time, and I will not take the time at this important juncture.

Mr. DYER. How much time does the gentleman need?

Mr. WEAVER. It will take about 15 minutes.

Mr. DYER. Mr. Chairman, I ask unanimous consent that the gentleman may have 15 minutes.

The CHAIRMAN. Is there objection? The Chair hears none.

Mr. WEAVER. After four days of general debate we now consider the currency bill paragraph by paragraph under the five-minute rule.

I heard the great speech of the chairman of the Banking and Currency Committee, the gentleman from Virginia, CARTER GLASS, with whom I had served on the committee for many days, and when he had finished his analytical and powerful argument in favor of the bill there was nothing either new or illuminating to be added. Emerson said of Plato:

Great havoc makes he among our originalities. We have reached the mountain from which all these drift bowlders were detached.

Following the speech of the gentleman from Virginia interesting essays in favor of the bill and against the bill were read and able speeches on both sides delivered to audiences select indeed but, alas, few in number; but the chairman's opening argument remained with the strength and texture of a mountain of granite with the shafts of the feeble, disorganized, discordant opposition falling spent and harmless at its base.

I purpose to discuss certain features of this bill as we reach them. At this time, beginning the debate, let me summarize what I conceive to be ameliorations and benefits of this great constructive measure over the present bad system that will immeasurably contribute to the welfare of the American people of to-day and of the generations yet unborn.

The present currency and banking system of the United States is the worst in the world. It had its origin in military necessity and is a thing of shreds and patches. The national bank note was created to provide a market for national bonds when the country was engulfed in the maelstrom of civil war. It is based on the Nation's debt, and the debt of the Nation, like the debt of an individual, is always a burden, never a blessing. [Applause.]

No such terrible indictment of defects and vices, self-confessed and capital, was ever drawn and presented to a people as the report of the Monetary Commission, of which Nelson W. Aldrich was the chairman, showing the evils of the odious financial scheme fastened upon the American people by 50 years of Republican legislation in the interest of a strangling money-trust and a Wall Street money-monopoly and to the detriment of the great toiling and producing classes.

The Glass currency bill is primarily designed to correct those great abuses. It is radical, not revolutionary, and is designed to gradually and ultimately supplant the present system. I believe its enactment into law will prove a wholesome remedy for organic disease.

There are three great features of this bill that stand out pre-eminent, like the three bright stars on the belt of Orion. They are:

First. A system of elastic currency responding to the needs of trade, expanding without inflation when needed and withdrawn without contraction when the emergency has passed away.

Second. The power of the Government to fix the rate of interest, and thereby save the fruits of labor from usury's Maremma blight and Upas shadow.

Third. Another great principle of the bill is that the currency shall be based on the products of labor and not on debt, on production and not on speculation. Thereby the energy, industry, and thrift of the American people are at once fostered and rewarded as they deserve to be, for they are the sources not only of the prosperity of individuals but also of the wealth of nations.

A system is here offered whereby any person who has a legitimate basis of credit, and who proposes to engage in a productive enterprise of a commercial, industrial, or agricultural character, shall have at his own doors banking facilities offered him so that he can get at low interest all needed funds.

It will be a God's blessing to the farmers and stock raisers of the South and West—a class that has long borne the burden of exorbitant interest, because of the scarcity of money in those sections, drained from them and concentrated in Wall Street's gambling hell.

Let me tell you of some of the great reforms which this bill inaugurates:

First. Government control is substituted for bank control. Creating a currency for a nation is the highest attribute of a sovereign power, deeply affecting all the diversified interests of the social state. To surrender this power to banks or any private interests is destructive to good government and treason to the people.

The Federal reserve board consists of seven public officers appointed by the President of the United States, subject to confirmation by the Senate, and the President himself is a public officer, and if he violates his trust is subject to impeachment and removal.

Second. The bill provides for the mobilization and use of the cash reserves of the banks whenever needed in times of trouble.

Third. It provides as a basis of the currency, in addition to the present currency, that it shall be issued upon gilt-edge commercial paper of an established standard, issued for the agricultural, industrial, and commercial purposes, thereby promoting industrially, agriculturally, and commercially the great producing and distributing agencies of the wealth of the world.

Fourth. The surplus money of all sections of the country which under the present system has been concentrated in New York and loaned on call and on stock-exchange security is withdrawn and distributed over the different parts of the country equitably in proportion to business demands, thereby becoming available to the great masses of our citizens instead of being monopolized by the gamblers and stock speculators in Wall Street.

Fifth. By withdrawing from New York this surplus money, at a single blow the Money Trust is destroyed.

Sixth. Notes or bills issued or drawn for the purpose of carrying or trading in stocks and bonds are denied the privilege of discount at the Federal reserve banks.

Seventh. Credit facilities between different sections of the country, so long unequal, are made uniform by virtue of the power vested in the Federal reserve board to require Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks, thereby taking from a bank that is plethoric in funds its surplus to relieve another bank in a section of the country that is flaccid and drained.

Eighth. Adequate banking facilities for all sections of our country are thereby provided to promptly and on reasonable terms meet the ordinary or unusual demands for credit or currency necessary for moving crops or for other legitimate purposes.

Ninth. An instrument is afforded by this bill, namely, the Federal reserve board, that can deal effectively with the broad questions which, from an international standpoint, affect the credit and status of the United States as one of the great financial powers of the world.

Tenth. The bill provides for American banking institutions and branches of the Federal reserve banks in foreign countries, thereby giving American citizens in foreign countries improved banking facilities, facilitating and expanding American trade with all the countries of the world.

Eleventh. The provision for national banks to establish trust and savings branches will enable that department of the banks to give the public far better accommodations by making loans of longer maturity than commercial banking justifies.

Twelfth. The State banks, banking associations, and trust companies are admitted to membership in the system and thereby accorded all its benefits.

Thirteenth. National banks are given the power to loan money upon real estate, thereby enabling them to serve farmers and other borrowers in rural communities.

Fourteenth. The Independent Treasury system is abolished. The irregular withdrawal of money from circulation in periods of excessive Government revenues is avoided, and the entire revenues of the Government are placed in circulation, becoming thereby available to all the people.

Fifteenth. The gradual retirement of the national-bank currency is provided for, thereby paying off the national debt and carrying out Jefferson's pledge—the honest payment of our debts and sacred preservation of the public faith.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. SLOAN. That we may enjoy in full this oasis of oratory in a five days' dreary desert of full debate, I ask unanimous consent that the eloquent gentleman from Oklahoma be given time to conclude his charming address.

The CHAIRMAN. Is there objection? The Chair hears none.

Mr. WEAVER. If these changes and benefits that I have itemized are real and not imaginary, then the bill soon to be adopted by the House and I trust by the Senate will be the greatest piece of constructive legislation within the memory of living men. To have a part, even a humble part, in writing such a measure is rich compensation for many sacrifices made by those engaged in the public service in this high place. I congratulate the American people that in the enacting of this wise, nonpartisan measure for their benefit, independent and patriotic

Republicans and Progressives have indicated an intention of voting with the Democrats for the bill. For, after all, the far-reaching influences of this measure, permeating the business and commerce of the country, will affect benignantly all classes of our people, reaching into the humblest homes, in all the land. And after all, the sole purpose of government is only this: That no shadow shall fall upon the hearthstone of the home. [Applause.]

And I rejoice to believe and know that the great majority of the Members of both Houses of this Congress, of whatever political party, however they may differ on partisan questions, have fundamentally at heart the welfare of the American people and are inspired by noble conceptions of public duty. [Applause.]

Immanuel Kant exclaimed:

Duty! Wondrous thought, that worketh neither by fond insinuation, flattery, nor by any threat, but merely by holding up thy naked law in the soul, and so extorting for thyself always reverence, if not obedience: before whom all appetites are dumb, however secretly they rebel; whence thy original?

I thank you. [Long applause.]

Mr. LINDBERGH rose.

Mr. GRAY. Mr. Chairman—

The CHAIRMAN. Does the gentleman from Minnesota [Mr. LINDBERGH] desire recognition?

Mr. LINDBERGH. Mr. Chairman, I offer an amendment.

The CHAIRMAN. There is an amendment and substitute now pending.

Mr. GRAY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. Does the gentleman from Minnesota [Mr. LINDBERGH] propose an amendment to the amendment?

Mr. LINDBERGH. No.

Mr. FESS. Mr. Chairman—

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized.

Mr. GRAY. Mr. Chairman, the gentleman from New York [Mr. PLATT] has offered an amendment the effect of which is to allow the directors elected by the banks to tell the Federal reserve board what it should do, whom it can remove, and whom it can not remove. The gentleman has a precedent for his amendment. That precedent is found in the Monetary Commission's report at page 13, sustaining section 10 of the Aldrich bill to create a central bank. While section 10 of that bill assumes to vest in the President the power to appoint the governor of the executive board of the National Reserve Association, it provides that such appointment shall be made from a list of three persons submitted to the President by the board of directors elected by the bank; or, in other words, the President is given this great authority to name the governor, but the bank directors are to tell him whom he can select. But this is not all. After the bank directors have told the President whom he can appoint and the President has acted upon their instructions, it is provided that the bank directors may remove the governor thus appointed on their recommendation; or, in other words, if they found that they had not recommended the right man and one not favorable to them, they could take advantage of their own mistake and remove the appointee and submit to the President another list of three from which to make a selection, and thus ultimately secure a man to their full liking. [Applause.] Thus the gentleman would amend this bill to make it conform to the Aldrich central bank bill. He would most graciously and magnanimously allow the reserve board to remove the directors of class B for failure to represent the commercial, agricultural, or industrial classes, but he would require the assent and approval of the banks who selected them before the Federal reserve board was allowed to act.

The Aldrich central bank under private control as provided for in the bill reported out by the Monetary Commission was to be controlled by 46 directors, 41 of whom were to be selected by the banks and 5 by the President of the United States. One of these 5, the governor of the executive board, was to be appointed by the President from a list of 3 named by the banks. There were to be only 4 members appointed by the President on his own free will and without interference from the bank directors, these 4 being the Secretary of the Treasury, the Secretary of Agriculture, the Secretary of Commerce and Labor, and the Comptroller of the Currency. The great liberality in making the Secretary of Commerce and Labor a member of the central reserve board is understood when it is realized that he would be powerless as one of the 5 members appointed by the President with 41 members appointed by the banks. But it is observed by the report that even this limited representation of the public was very unsatisfactory to the banks, and at page 14 is found the following apology for allowing these 5

members out of the 46 members of the board or any members to represent the public to participate in its proceedings [applause]:

The fear has been expressed that the selection of the governor by the President and the provisions making the Secretary of the Treasury, the Secretary of Agriculture, the Secretary of Commerce and Labor, and the Comptroller of the Currency ex officio members of the board of directors of the reserve association might lead to an attempt to control the organization for political purposes.

Following this is an argument to allay the apprehension and fear that the four members appointed by the free will of the President would exert some influence in the control of the currency, and from which we quote the following:

We believe that the participation of these officials in the management of the institution to the limited extent prescribed is necessary to secure a proper recognition of the vital interest the public has in the management of the association.

There are two currency bills to-day before the country. One is the Glass bill, now under consideration by the House. It is proper at this time to assure the opponents of this bill that the Democratic Party assumes full responsibility for it. The Glass bill was introduced by a Democratic administration. It was reported out by a Democratic Banking and Currency Committee. It has been approved by the Democratic Members of this House, and if it passes Congress and is signed by the President it will be a Democratic law.

The other bill is the Monetary Commission bill, which was introduced by a Republican, reported out by a Republican committee of the House and by a Republican committee of the Senate, passed by a Republican House and a Republican Senate, and approved by a Republican President. The members of the commission were appointed by a Republican Speaker of the House and a Republican Vice President acting as the President of the Senate, and the members originally appointed consisted of 11 Republicans and 7 Democrats, and the members signing the report consisted of 9 Republicans and 5 Democrats, some of whom having very strong Republican tendencies on matters of finance.

Edward B. Vreeland, a Republican member of the commission signing the report, and the Republican chairman of the Committee on Banking and Currency of the House of Representatives during the Sixty-second Congress, when the commission was created, presented the report to the House on February 6, 1912, on behalf of the Republicans and urged the passage of the bill. Nelson W. Aldrich, the chairman of the commission, and the chairman of the Committee on Finance of the Senate, a Republican and the leading spirit of the central-bank movement and from whom the bill takes its name, would have presented the same to the Senate and urged its passage if he had remained in the Senate at that time.

The bill is a Republican measure from every standpoint of paternity, association, and support. If this bill had been a good thing, surely this record and unbroken chain of loyalty and support would have entitled Republicans to have claimed full credit for it. If this bill is a bad thing, this unbroken record will allow no escape for its responsibility and will entitle the Democrats to make the Republicans accept the credit for it.

While we assume responsibility for our bill, we intend to see to it that you take the responsibility for your bill, and we do not propose that a part of the Aldrich bill shall be engrafted into the Glass bill by this amendment. [Applause on the Democratic side.]

Mr. FESS. Mr. Chairman, this amendment opens up a question that marks the distinction between the Government controlling the banking business and the Government operating the banking business. While I do not want to indulge in any fulsome praise of any measure or in any vindictive condemnation of any measure, yet with due regard for the talent displayed in the framing of this bill I think that there is not a sufficient distinction made here between the Government operating the banking business and the Government controlling the banking business.

I for one will vote for a measure that will control the banking business and place that control in the hands of the Government, but I dislike to vote for a measure that puts the operation of the banking business in the hands of the Government. I think that there can be no question but that if you give to the Federal board the power to remove three out of nine directors and the power to elect or to appoint three out of the nine directors you have placed the operation of that directorate in the control of the Federal board. For, in the first place, three of them are appointed by the Federal board and they must be subject to it; and, in the second place, three of them are to be removed by the Federal board, if the board sees fit, and they are subject to the Federal board. For the power to remove is coordinate with the power to elect; and while the power to appoint

is initiative the power to remove is final, and the final power is equal to the initiative power, and therefore if you give to the Federal board the power to remove three out of the nine, in addition to the power to appoint three out of the nine, and the three removed are different from the three appointed, you have given into the hands of this board the ability to control six out of the nine. Therefore if the local directorate is the operating agency of the bank and that is under the control of the Federal board, your Federal board is the operating agent, and the Government thus becomes the operating agent both to administer and to operate the banking business.

The other day the gentleman from Massachusetts [Mr. PHELAN]—and I have the highest respect for his judgment—said, in replying to that question, that when the Federal board removes a member of the directorate—and I do not want to speak so as to indicate that I do not believe the gentleman from Massachusetts to be sincere—the power to remove does not prevent the stockholders from exercising the right to reelect. In other words, when the Federal board removes these three, the same force that originally elected them will reelect them.

I want to recall to the attention of my friend the gentleman from Massachusetts one great fact in history that is a bugbear and a stumbling block in this particular instance. It was in the early thirties when President Andrew Jackson ordered the removal of the Federal deposits from the Bank of the United States to 89 State banks, and afterwards instituted the Independent Treasury system, which you are repealing by this act. Remember that the Secretary of the Treasury was not in favor of exercising this power. It was Secretary McLane, of Delaware, and President Jackson, exercising his prerogative, transferred Secretary McLane from the Treasury Department to the State Department, in order that he might make a vacancy in the Treasury Department, which was his right, and to which he appointed Mr. Duane, of Pennsylvania.

Mr. PHELAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Massachusetts?

Mr. FESS. I am afraid I have not time. Let me finish this sentence first. Mr. Duane, of Pennsylvania, I say, was appointed to take McLane's place. Mr. Duane, a great lawyer, questioned the constitutional right of the President to remove these deposits, and so stated to the President. The President thereupon removed Mr. Duane, as you all know, and appointed in his place Roger B. Taney, of Maryland, who, you know, later became the great Chief Justice of the Supreme Court. Roger B. Taney, exercising the wish of the President, removed these deposits from the United States Bank to the 89 State banks.

Now, I speak to my friend from Massachusetts [Mr. PHELAN], who says that if you remove these men the same power that originally elected them will elect their successors. What assurance have you that the same power that originally removed the three men will not exercise the power to remove the next three if they think that they do not represent this particular interest, which gives the largest possible latitude in the judgment of these men? [Applause on the Republican side.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming.

Mr. HAYES. May we have the amendment and the substitute reported?

The CHAIRMAN. If there be no objection, the amendment and the substitute will be again reported.

The Clerk read as follows:

Substitute offered by Mr. MONDELL:

"Page 9, lines 2 to 7, inclusive, strike out the words 'The Federal reserve board shall have power at its discretion to remove any director of class B in any Federal reserve bank if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.'"

Amendment offered by Mr. PLATT:

"Page 9, line 5, after the word 'appear,' insert the following: 'to the other directors of any Federal reserve bank.'"

The CHAIRMAN. The question is on the substitute of the gentleman from Wyoming [Mr. MONDELL].

The substitute was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. PLATT].

The amendment was rejected.

Mr. FOWLER. I move to strike out the last word. I do this for the purpose of calling the attention of the chairman of the committee in charge of the bill [Mr. GLASS] to the words "stock holding," before the word "bank," on page 6, line 22. I think the words "stock holding" should be stricken out and the word "member" inserted in lieu thereof in order to conform to the idea which the distinguished chairman of the committee [Mr. GLASS] has suggested heretofore. I do not see any more force to the words "stock holding" in this connection than would be conveyed by the word "member," and it would

preserve the continuity and regularity of the use of the word "member" in the bill.

If the chairman thinks as I do about the matter, I shall be glad to offer the amendment to strike out the words "stock holding" and insert in lieu thereof the word "member," which will make the sentence read:

Class A shall consist of three members, who shall be chosen by and be representative of the member banks.

Mr. GLASS. Mr. Chairman, I see no particular objection to the amendment, but I do not see that it will improve the bill in any respect.

Mr. COOPER. Will the gentleman from Virginia permit a question?

Mr. GLASS. Yes.

Mr. COOPER. Does not the use of the word "member" render it much more obscure than it would be to leave the words "stock holding"?

Mr. GLASS. I think so.

Mr. COOPER. "Stock holding" are very simple, easily understood words. The use of the word "member" might require the reading of a dozen sections of the bill.

Mr. GLASS. I quite agree with the gentleman.

Mr. COOPER. I think the words "stock holding" should be left, by all means.

Mr. FOWLER. Mr. Chairman, the word "member" as applied here means a member of a Federal reserve bank. If that word is used throughout this bill whenever the individual bank or member bank is referred to, it will give the reader a complete understanding of what the word "member" means; but if other terms are substituted indiscriminately, the students will be bound to study the bill to see just what is meant by "member" and other words used to convey the same meaning as it does. As in this case, if you say "stock-holding bank," it might indicate to some that "stock holding" and "member" do not mean the same; but if "stock-holding bank" means the same as "member bank," a fact of which there can be no denial, then the word "member" ought to be substituted for the words "stock holding." Consistency is said to be a jewel.

The CHAIRMAN. Does the gentleman offer the amendment?

Mr. FOWLER. Mr. Chairman, I do not desire to be in opposition to the committee, but I offer this amendment as a suggestion. I believe it will improve the bill and make it much more uniform.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 6, line 22, strike out the words "stock holding" and insert in lieu thereof the word "member."

The amendment was rejected.

Mr. LINDBERGH. I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 7, add a new paragraph after the word "bank," in line 12, as follows:

"No officer or director of a national bank, State bank, banking association, or trust company admitted to membership in a regional reserve bank under the provisions of this act shall be an officer or director of any bank or financial corporation or institution admitted hereunder, and no person shall be an officer or director of any bank admitted hereunder who is a private banker or is a member of a firm or partnership of bankers engaged in the business of receiving deposits."

Mr. LINDBERGH. Mr. Chairman, I am not one of those Members who favor a divided responsibility. I recognize this Government as one great Government.

Mr. GLASS. Mr. Chairman, I make the point of order that the gentleman's amendment is not germane.

Mr. LINDBERGH. Mr. Chairman, I think the gentleman's point of order comes too late.

The CHAIRMAN. The Chair thinks the point of order is too late.

Mr. LINDBERGH. Mr. Chairman, I recognize this Government as one great government divided into districts, as far as the House is concerned, each district having a Member to represent it on the floor of the House. I do not believe you can legally divide the Government so as to have one section or one party responsible for all the acts on this floor.

This amendment that I have offered, according to newspaper reports, was also offered in the Democratic caucus which was held here a few weeks since to determine what bill should be presented for the consideration of the House. I believe it to have been a good provision to put in the bill, and it is because of that fact that I offer it. I do not offer it simply because it was offered in the Democratic caucus, but because the principle involved in the provision is a good principle and one which was recommended by the committee consisting of Democrats who had in charge the so-called Money Trust investigation.

Why they did not place that provision in the bill as a part of the policy they claim to stand for I do not understand. But to me and every Member of the House who takes the most serious view of the things that come up here for consideration we do not believe we can be divided in responsibility. We have each taken an oath to perform the duties of our office, and in view of that oath, and in view of my duty, I offer this amendment, knowing, of course, that it is foreclosed by the caucus to start with, but nevertheless I feel the responsibility that rests upon me and shall try to put into the bill as many amendments as I think will improve it.

Therefore I have offered the amendment, and I hope it will receive full and fair consideration, irrespective of caucus action. The people of my district are as much concerned in a proper currency bill as any of the constituents of Members who tie themselves hands and feet, and mouth closed. It is a fact that with the caucus tie-up we are prevented from inserting many provisions that would materially improve the bill.

Mr. MURDOCK. I rise to support the amendment of the gentleman from Minnesota. Mr. Chairman, curiously, the RECORD never precisely shows the public a view of the exact transactions of the House, never exactly gives the people a view of the House itself and of its proceedings. To-morrow morning's RECORD will give no one who reads it, outside of these persons here present, the precise position of the House at this hour. We have been working on the consideration of this great measure now nearly four hours. There are present at this time some fifty Members on the other side of the aisle and probably as many more on this side. There are, roughly estimating, 100 people in the galleries, and there are five members of the press above the Speaker's stand.

Here is one of the most momentous measures that it is possible to bring before the American Congress. Here is the vital moment, when it is supposed to be under construction, when a major amendment is offered. Why out of a membership of 435 have we only 100 here at this time, at that period of the proceedings of the House, under the five-minute rule, when the individual Member is supposed to have some rights, in offering amendments, preserved to him?

Mr. LINDBERGH. Will the gentleman yield?

Mr. MURDOCK. No; I can not yield.

Mr. DONOVAN. Will the gentleman yield?

Mr. MURDOCK. I can not yield. I want all my five minutes. What is the matter? I will tell the gentleman from Connecticut what is the matter. The trouble is the caucus. Every Member of Congress knows that the caucus closed this bill against all possible amendment. Just as in the tariff bill, the gentleman from Alabama sat there, and every time he voted "no" the majority voted "no." So in this great currency bill, when the able gentleman from Virginia votes "no," then the majority votes "no." That is the trouble. The caucus has foreclosed the rights of the people in this bill as well as those of every Member on this floor.

The caucus is getting to be pretty hot for the gentlemen on the majority side. It is getting to be a pretty warm poker to hold. But I take no stock in the accusations against the Democrats that come so fluently from the Republican side. [Applause on the Democratic side.]

My memory goes back to the currency bill of 1908. The Republican leadership of this body brought in a rule which provided that a majority vote could suspend the rules. What did that mean? It meant that the majority could put through this body a measure without anybody having a right to amend the bill. The Vreeland bill was first considered in the House, after it had been taken away from the regular Banking and Currency Committee and placed in the hands of the favorites of the organization. From the House the bill was sent to the Senate, and when it was pending in the Senate there was declaration after declaration from the Republicans of this body that they would never vote for it if it came back with the Aldrich features added to the Vreeland plan. It came back with the Aldrich features added bodily to it. And what happened? Where was your advocacy of representative Government then, my Republican friends?

What were you doing then? Why, you were permitting your leadership to gag you. And they did gag you. They rammed these Aldrich amendments down your throats. Now, it is very pleasant here, in the matter of gag rule, to hear the pot calling the kettle black, but does it get us anywhere? All men when they are not in power talk about what they will do if the people will only put them in power. When the Aldrich bill was before the House and was rammed down the throats of the Republicans over here you Democrats denounced them, and you were right; but when you were put in power, oh, what a difference in the morning! The time has come for you Democrats to clean

up this evil practice of the caucus. The caucus is the device of the devil. It is not a part of representative government. The Constitution has no mention of it. The public welfare is defeated by—

The CHAIRMAN. The time of the gentleman from Kansas has expired. The question is on the amendment offered by the gentleman from Minnesota.

Mr. DONOVAN. Mr. Chairman, I ask unanimous consent that the time of the gentleman from Kansas may be extended for five minutes.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent that the time of the gentleman from Kansas be extended for five minutes. Is there objection?

Mr. COX. I object.

The CHAIRMAN. The gentleman from Indiana objects. The question is on the amendment offered by the gentleman from Minnesota.

Mr. DONOVAN. Mr. Chairman, a parliamentary inquiry. In order to get the floor, may I move to strike out the last word? Is that the rule?

The CHAIRMAN. That is proper.

Mr. DONOVAN. Then I so move. [Laughter.]

The CHAIRMAN. The gentleman from Connecticut moves to strike out the last word.

Mr. DONOVAN. Now, Mr. Chairman, I want to ask the gentleman from Kansas [Mr. MURDOCK] a question; or, in other words, I wish to criticize the gentleman, and to say that when he rose to the floor to express the truth why should he omit some of it and only partially tell the tale? Why did you not tell it as it is?

Mr. MURDOCK. Let the gentleman amend what I said.

Mr. DONOVAN. Wait a moment. I hold you to this position: You are an old Member, and you hardly tell what is the fact here, and it ought to be considered in this term—that it is nearly criminal. You ought to have stated here, and let it go into the RECORD, that the leaders on both sides have abandoned this bill and have put it in the hands of new Members and inexperienced ones.

Mr. MURDOCK. I deny that.

Mr. DONOVAN. Why did you not say that?

Mr. MURDOCK. I deny that.

Mr. DONOVAN. Why did not you say that for weeks and for months there has been barely a quorum here, and that most of the time less than half a quorum has been doing business? Why did not you say that they are drawing their pay regularly, and that it is no way for honest men to do—to abandon the position and draw the pay? Take a great State like the State of New York, with scarcely any of its Members present, and other great States, and there is a very small percentage of them present.

Mr. MURDOCK. Will the gentleman yield?

Mr. DONOVAN. Others were present, but not more than an average of half of them from each State in the Union; and take the great State of Kentucky, one of the original thirteen. Where are the Members from that State?

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. DONOVAN. Certainly.

Mr. LANGLEY. I am here.

Mr. DONOVAN. Oh, I know the gentleman is here. He has been here the past three days, but he has not been here for months before that.

Mr. LANGLEY. The gentleman from Connecticut is not correct in that statement, and he knows he is not correct.

Mr. DONOVAN. I suggest to the gentleman from Kentucky that the parliamentary proceedings require him to first address the Chairman. [Laughter.]

Mr. LANGLEY. When the gentleman makes a statement of that character I take it that I have a right to answer him. And I propose to do it anyhow.

Mr. DONOVAN. Mr. Chairman, I yield to the gentleman from Kansas.

Mr. MURDOCK. Mr. Chairman, my question has got cold by this time. [Laughter.] The gentleman had fired me up. I ask the gentleman this: He mentioned the fact that a lot of men from different States are not here. What under heaven would they be doing here? The caucus has closed all action. What good would it do if this Chamber were filled? What if there were 435 Members present?

Mr. DONOVAN. They could do the same as they do in other places. If they do not earn their money, they should resign or go home.

Mr. MURDOCK. They ought to abolish the caucus. That is what they ought to do.

The CHAIRMAN. The time of the gentleman from Connecticut has expired. The question is on the amendment offered by the gentleman from Minnesota.

Mr. GLASS. Mr. Chairman, I simply want to say a word to the gentleman from Minnesota [Mr. LINDBERGH] and the gentleman from Kansas [Mr. MURDOCK]. If either gentleman does not know why the amendment against interlocking directorates was not included in this bill, it is because he was not here on Saturday night to listen to what I had to say. It was omitted because we did not think a proposition of that sort was pertinent to a bill of this kind; and the better to demonstrate that the gentleman from Minnesota and the gentleman from Kansas agreed with that view, I call attention to the fact that the gentleman from Kansas [Mr. MURDOCK] had the privilege of naming a member of the Banking and Currency Committee, as I understand, and he designated the gentleman from Minnesota [Mr. LINDBERGH]. The gentleman from Minnesota introduced two currency bills, which were referred to the Committee on Banking and Currency, neither one of which contained any provision against interlocking directorates. [Applause on the Democratic side.]

Mr. LINDBERGH. Will the gentleman permit a question?

Mr. GLASS. Certainly.

Mr. LINDBERGH. The bill I introduced, which was my own bill—I introduced one of your bills with additional provisions—but the bill I introduced which was my own bill did not require any such provision, because by the very terms of the act it took care of that, and the reason I did not introduce this amendment in the committee was because the members of the committee stated in the official meeting of that committee that neither provision could be inserted in that bill in committee because the caucus had determined every material issue that could be placed in the bill. [Applause on the Republican side.]

Mr. GLASS. Why, that did not prevent the gentleman from offering other amendments to the bill. [Applause on the Democratic side.] But as a matter of fact, neither one of the bills he presented contained anything about interlocking directorates, and, as a matter of fact, that proposition is not pertinent to currency legislation.

Mr. LINDBERGH. Upon that question the gentleman and I disagree.

Mr. GLASS. We do; and this side is going to beat you on that proposition.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota.

The question was taken, and the Chair announced the yeas seemed to have it.

On a division (demanded by Mr. LINDBERGH and Mr. MURDOCK) there were—yeas 44, yeas 71.

So the amendment was rejected.

Mr. LA FOLLETTE. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

At the end of line 26, page 6, add the following: "And shall be chosen from persons living within the territory served by the Federal reserve banks to whose directorate they are designated."

Mr. LA FOLLETTE. Mr. Chairman, on page 6, beginning with line 21, the directors who are to control the Federal reserve banks are divided into three classes—classes A, B, and C. Class A, of course, are to be chosen by members of the banks themselves, and they will naturally choose people within their own territory and belonging—

Mr. PHELAN. Will the gentleman yield?

Mr. LA FOLLETTE. Yes.

Mr. PHELAN. If the gentleman will notice on page 9, lines 8, 9, and 10, it says:

Three directors belonging to class C shall be chosen directly by the Federal reserve board, who shall be residents of the district for which they are selected.

Mr. LA FOLLETTE. That is correct. Taking this without any explanation here or rather not following it up, I had overlooked it, and I therefore withdraw the amendment.

The CHAIRMAN. The gentleman withdraws his amendment.

Mr. SINNOTT. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, line 22, page 8, by inserting after the word "of" the word "stockholders."

Mr. SINNOTT. Mr. Chairman, the amendment which I have offered relates to the directors under class B. The directors under class B are the directors who shall be the representatives of the general public in said district; that is, I take it the general public in said district as distinguished from the banking interests of the district. Now, on page 8, line 22, the provision provides that the directors of class B shall not be officers or

directors of any banking institution. That, I assume, is inserted for the purpose of getting directors who are not in any way interested or associated with banks and banking as officers or directors. I think that the object in getting directors wholly divorced and disassociated from banks and bankers can be better attained and that object can be better safeguarded if those directors are not only not taken from the directors and officers of banks, but they shall not even be taken from the stockholders of banks.

You may, by the provision on page 8, it is true, eliminate nominal directors and officials of banks and banking associations from membership under class B. You may eliminate dummy directors from class B by the provisions on page 8, but stockholders who may have a greater and deeper interest in the affairs of banks and banking institutions may get on this board unless you absolutely eliminate from class B not only directors of banks but stockholders.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oregon [Mr. SINNOTT].

Mr. PHELAN. Mr. Chairman, the committee considered the matter at great length in the committee room. It is a difficult thing to get the stockholders so that they are going to satisfy everybody, but I wish to point out one thing in reference to the amendment offered by the gentleman, which I think will perhaps change his mind on the proposition without going into it at length.

In a great many towns and small cities it is almost impossible to find men who are representative of the agricultural, industrial, and commercial interests who are not stockholders in banks. I know in my State it is true that many of the men who are prominent in business in one way or another are stockholders in the banks. Now, if you excluded stockholders, and this would apply particularly to the smaller places, by that very exclusion you might prevent the bank from getting just the kind of men whom you want to represent those great interests. In large cities it is not so difficult, but in small cities it is. That and other reasons were the controlling reasons why the committee did not exclude stockholders from banks serving as directors in Federal reserve banks in class B.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oregon [Mr. SINNOTT].

The question was taken, and the amendment was rejected.

Mr. MURDOCK. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Kansas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 9, line 4, after the word "bank," insert the words "after due public hearing."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. Mr. Chairman, I wish to call the attention of the chairman of the committee, the gentleman from Virginia [Mr. GLASS], to just what my amendment does. With it added, the sentence in question in the bill will read as follows:

The Federal reserve board shall have power at its discretion to remove any director of class B in any Federal reserve bank after due public hearing, if it should appear at any time that such director does not fairly represent the commercial, agricultural, or industrial interests of his district.

I want to review briefly the formation and plan of organization of the Federal reserve board and the underlying banks as provided in this measure. First, we provide a Federal reserve board. Beneath it we have 12 Federal reserve banks, and in each Federal reserve bank we have 9 directors; 3 of those directors are to be bankers, class A; 3, of class B, are to be men who represent the agricultural and industrial life of the district, who are not to be bankers; and 3, class C, are to be selected by the Federal reserve board. But the Federal reserve board, which has considerable power—which I do not begrudge, because I believe in a system like this the central board must have power—has the power to remove the directors who represent the agricultural and industrial life of the district, and who are not bankers, without a public hearing. The Federal board can take them out if they so desire. It might be on occasion for some unwarranted cause in this connection. I call the attention of the committee to the fact that in the matter of officials of Federal reserve banks this provision is made further along in the bill:

To suspend the officials of Federal reserve banks and, for cause stated in writing with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

Now, gentlemen, on the one hand is the business man who has been taken into one of these Federal reserve banks as a director. It is possible for the Federal board to discharge him without giving him a chance for public defense, without giving him a

chance for a hearing. On the other hand is the bank official, and in the case of the official there must be a hearing, and the charges against the banker must be stated in writing, and a chance given him for public defense. Why should not a private citizen who is taken into this system enjoy as many rights as the man who is the banker in the system? It seems to me that the amendment that I propose would work only justice, and it could not under any possible circumstances work injustice. Realizing that it probably will not be accepted, I do press it, however, upon the chairman of the committee.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

Mr. GLASS. In answer to the gentleman from Kansas, I desire to suggest that we must consider the reasonableness of propositions involved in the provisions of this bill. The directors of class B are to be removed for only one cause, and that is if they do not "fairly represent the commercial, industrial, or agricultural interests of the community."

The very fact that this provision is here will inevitably cause the regional bank electors always to choose men who do plainly represent either one or all of these interests. In the case of an officer of the bank who is subjected to temptation and who may divert the funds of the bank, or who may pursue an administrative or executive policy that would result in the ruin of the bank, the charge against him might be serious, directly affecting his integrity, and he ought to have a hearing. In the first case the power, as the gentleman from Kansas will see upon reflection, will rarely, if ever, be exercised.

Mr. MURDOCK. I wrote the amendment after I heard the gentleman make a remark about two hours ago. If I understood the gentleman from Virginia aright, he said, in the course of debate, that directors of class B should be taken out from under the power of directors in the reserve banks.

Mr. GLASS. I said they should not be put under their power.

Mr. MURDOCK. He said they should be free. I agree with the gentleman as to that. Having heard him make that remark, it occurred to me it might be a good plan, in view of the possibility that the Federal reserve board might attempt to remove one of these men without warrant, to put a curb on the board. It is not likely to happen, but it might happen, and it does seem to me that the provision as it stands is harmful.

Mr. GLASS. I think the gentleman is simply illustrating his extreme view concerning "publicity" in matters where publicity is not really required.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

The question was taken, and the amendment was rejected.

Mr. DYER. Mr. Chairman, I desire to offer two amendments. The first one is an amendment to line 9, on page 9. I want to call the attention of the gentleman from Virginia to it. It is to strike out the comma after the word "board," on page 9, line 9, and insert the word "and," so that it will read, "Three directors belonging to class C shall be chosen directly by the Federal reserve board, and who shall be residents of the districts for which they are selected."

Mr. GLASS. I will say, Mr. Chairman, that we accept that amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Missouri [Mr. DYER].

The Clerk read as follows:

Page 9, line 9, after the word "board," strike out the comma and insert the word "and."

Mr. GLASS. Mr. Chairman, I suggest that the word "who" be stricken out and that the word "and" be inserted.

Mr. DYER. Very well; I will offer that.

Mr. MANN. Let the amendment be reported again.

The CHAIRMAN. The Clerk will again report the amendment as modified.

The Clerk read as follows:

Page 9, line 9, after the word "board," strike out the comma and the word "who" and insert in lieu thereof the word "and."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. DYER. Mr. Chairman, I offer an additional amendment, which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Missouri [Mr. DYER] offers an additional amendment, which the Clerk will report.

The Clerk read as follows:

Page 9, line 13, after the words "Federal reserve agent," insert the following, to wit, "who shall be a citizen of the district in which such Federal reserve bank to which he is appointed is located."

Mr. GLASS. That is already in the bill.

Mr. DYER. Mr. Chairman, I will say to the chairman of the committee that it appears that that is the intention of the bill, to so have it that the Federal reserve agent shall be a citizen of the district wherein the bank is located, but it does not say that. It says he shall reside there.

Mr. PHELAN. It says that all three "shall be residents," and he is one of the three.

Mr. DYER. I understand; but my amendment provides, I will say to the gentleman from Massachusetts, that he must be a citizen of the district. It is easy to bring somebody into that district and make him a resident, but the amendment which I have presented, which I believe is in accordance with the intention of the framers of this bill, provides that the Federal reserve agent shall be a citizen. That is all that my amendment does.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri [Mr. DYER].

The question was taken, and the amendment was rejected.

Mr. WILLIS. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Ohio [Mr. WILLIS] offers an amendment, which the Clerk will report.

The Clerk read as follows:

In lines 24 and 25, page 9, strike out the words "to be fixed by the Federal reserve board and" and insert in lieu thereof the words "of \$3,000, to be fixed by the Federal reserve board," so that lines 23, 24, and 25, after the period in line 23, shall read as follows: "He shall receive an annual compensation of \$3,000, to be paid monthly by the Federal reserve board."

Mr. MURDOCK. Is that the agent for the Federal reserve board?

Mr. WILLIS. Yes.

Mr. MURDOCK. Three thousand dollars a month?

Mr. LA FOLLETTE. They should not be paid \$3,000 a month. They should be paid proportionately.

Mr. WILLIS. The \$3,000 is the annual compensation. If this amendment shall be adopted, it will read:

He shall receive an annual compensation of \$3,000, to be paid monthly by the Federal reserve bank to which he is designated.

It is perfectly clear. It is the same language in that respect as the language here in the bill.

Mr. Chairman, I have offered this amendment to call attention to what seems to me to be an unwise and undesirable provision of the bill. This Federal reserve agent is to all intents and purposes an officer of the United States; that is to say, he is the official representative of this Federal reserve board, which is a governmental entity, and therefore to all intents and purposes he is an official of the United States, charged with tremendously important duties and responsibilities.

I think it is unwise legislation to provide that an official of that character, charged with such important duties as are devolved upon him by this bill, shall have the amount of his salary determined by any authority other than the body which creates the office. In other words, this is an important office, ranking, I think, in importance with the members of the Federal reserve board, and the salary of the office should be determined now by Congress and not left to possible political influences brought to bear on the Federal reserve board.

Mr. GLASS. May I interrupt the gentleman?

Mr. WILLIS. Certainly.

Mr. GLASS. Does my friend think that the Federal reserve agent of the regional reserve bank in New York ought to be paid the same salary that is paid to the Federal reserve agent of the regional reserve bank in New Orleans, who would perhaps have one-fifth as much work to do?

Mr. WILLIS. Mr. Chairman, in reply to the very proper and pertinent query of the chairman of the committee I want to say that I had thought of that. I think if we could work out some plan that would be otherwise unobjectionable it would be highly desirable to have some scale of salaries; but in further response to the gentleman's inquiry let me say that while it is undoubtedly true that there will be larger sums of money handled, say, in the New York bank than in the New Orleans bank, yet as a matter of fact it is as easy to write \$10,000,000 as it is to write \$1,000,000.

The responsibilities and the duties of the office are practically the same in every one of these banks. As I understand the bill, that is the whole theory of the proposition—that there shall be a dozen entities here, with practically the same duties. Therefore I do not think it would be any serious injustice to provide that these Federal reserve agents shall receive the same salaries everywhere.

I am frank to say that I do not know whether the amount I have suggested in the amendment is proper. I have written it very hastily. Perhaps it ought to be more than \$3,000; perhaps it ought to be less. I do not know about that. But I want to call the attention of the Committee of the Whole to what it is about to do if it does not adopt some amendment of this char-

acter. It is about to provide for the creation of a dozen extremely important offices without undertaking to say what the salaries attached to those offices shall be. It has been brought to the attention of the House a number of times that one of the serious objections to the pending bill, in the minds of those who really want to vote for some sort of a currency bill at this session of Congress, is the fact that the Federal reserve board as constituted under the terms of this bill will certainly have great power, which it could use in a political sense if it so desired. Of course everybody understands that those who framed the bill have not had any such object in view; but it is one of the objections, perhaps a necessary objection, to any kind of currency legislation that there is a chance for the abuse of power vested in the Federal reserve board. I submit that when you put in the hands of the Federal reserve board the authority to say what the salaries of men shall be all over this country you have vastly increased the opportunity for political misdoing. It seems to me that if we were to adopt an amendment that would fix the salaries of these men, who are practically officials of the United States, charged with an immense responsibility, we would, so far as possible, take away from this Federal reserve board the occasion to use their power for political purposes.

Mr. MURDOCK. Mr. Chairman, I rise for the purpose of supporting the amendment of the gentleman from Ohio [Mr. WILLIS]. It appears to me from reading the bill that these Federal reserve banks are going to be money-makers. They will be permitted first to earn 5 per cent cumulative dividends for the member banks, and they are permitted, second, to earn an indefinite additional amount, 60 per cent of which is to go to the Government and 40 per cent of which is to accrue to the profits of the banks.

Now, I would like to see the bill so written that the amount which is to go to the banks and to the Government above the 5 per cent will be as little as possible. I would like to see the expense of the new reserve banks held down. I think, if possible, Congress should write into the law the maximum amount to be paid to the district agents designated by the reserve board.

Mr. MONTAGUE. Will the gentleman yield?

Mr. MURDOCK. Certainly.

Mr. MONTAGUE. Does the amendment of the gentleman from Ohio provide for fixing a maximum sum?

Mr. MURDOCK. No; it does not; that is the fault of the amendment.

Mr. MONTAGUE. Does the gentleman think it would be wise to have the agent paid the same for every district?

Mr. MURDOCK. I think we ought to fix some amount. I realize the difficulty mentioned by the gentleman from Virginia [Mr. GLASS] that a different salary may be necessary in different districts; still we ought to provide for a maximum in some way.

Mr. MONTAGUE. Does not the gentleman think we are running some danger in assuming administrative duties in a legislative body? That is an administrative function.

Mr. MURDOCK. My experience in Congress has led me to believe that we rarely get out of the laws what we write into them when we leave a wide latitude in the matter of regulation to the department. We usually get out of laws we pass through this body results that we did not intend to get, for the reason that we leave so much to administration. I would like to see this body write into this law as many of the details of this plan as it can, and I thought that possibly this would help along that line.

Mr. MADDEN. Mr. Chairman, I would like to suggest an amendment to the amendment, making the compensation of the Federal reserve agents not less than \$5,000 and not to exceed \$7,500.

The CHAIRMAN. The gentleman from Illinois offers an amendment to the amendment, which the Clerk will report.

Mr. MANN. The amendment of my colleague would be necessarily a substitute.

The CHAIRMAN. The Clerk will report the substitute.

The Clerk read as follows:

Page 9, line 27, after the word "compensation," insert "not less than \$5,000 and not more than \$7,500."

The CHAIRMAN. The question is on the substitute offered by the gentleman from Illinois [Mr. MADDEN].

Mr. DYER. Mr. Chairman, does the gentleman think that he can find a competent man to act as a Federal reserve agent for such a reserve bank as would be established in Chicago or St. Louis for \$7,500?

Mr. MADDEN. Well, the gentleman from Missouri is a competent man, and he acts here in the capacity of a Member

of Congress for \$7,500, and is glad to do it, and he has to pay his campaign expenses out of that. [Laughter.]

The CHAIRMAN. The question is on the substitute offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. MURDOCK) there were 22 ayes and 68 noes.

So the substitute was lost.

The CHAIRMAN. The question now is on the original amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was lost.

Mr. MONDELL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 9, amend by striking out all of lines 8 to 16, inclusive, and the word "appointed" in line 17 and insert in lieu thereof the following: "Three directors belonging to class C shall be chosen directly by the Federal reserve board from among the residents of the district for which they are selected; one of the said directors, who shall be a person of tested banking experience, shall be designated by said board as 'Federal reserve agent.'"

Mr. MONDELL. Mr. Chairman, the bill as it is now written makes the Federal reserve agent the chairman of the board of directors of the Federal reserve bank. As Federal reserve agent he is, as the gentleman from Ohio suggests, in effect a Government official. In any event, he is the direct representative of the central governing body. As the chairman of the board of directors he would preside over the deliberations of the Federal reserve banks. I do not think it requires any argument to prove that a man occupying this dual position, having the power and influence that appointment as a Federal reserve agent would give him, if he were a man of force of character, would entirely dominate or largely dominate the Federal reserve banks, and through him the Federal board would dominate and control the Federal reserve banks. I think it important that we should make some provisions with regard to the amount of pay such an official should receive, but it is infinitely more important, it seems to me, if we are to retain any independence at all in the Federal reserve banks, that authority and control of this official shall be curtailed, and that he shall not, as the special representative of the central governing board, with his enormous power, be also in the position of chairman of the board of directors of the bank.

I know that one of the answers that has been made to an argument similar to this is that the chairman of a board of directors oftentimes does not exercise a very great deal of influence over the deliberations of the board, but that can only occur in cases where the chairman is a man lacking in force of character. In the case of these appointments, undoubtedly of men of force and strength of character, they will entirely dominate the Federal reserve banks, and we shall lack that independence that these banks ought to have of the will of the central governing board.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming.

Mr. MORGAN of Oklahoma. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman moves to strike out the last word.

Mr. MORGAN of Oklahoma. Mr. Chairman, the gentleman from Pennsylvania [Mr. MOORE] in his remarks made reference to the savings banks deposits in the State of Oklahoma, stating that the per capita deposits in the State of Oklahoma amounted to only 80 cents, a less amount than in any other State in the Union. I understood him to convey the impression that this was uncomplimentary to the people of the State. I desire to say a few words in answer thereto. I find in examining the report of the Comptroller of the Treasury that it is estimated that Oklahoma on June 4, 1912, had a population of 1,863,000. At that time the State had 913 banks, with loans and discounts amounting to \$82,772,561. Of cash on hand there was \$8,202,596, and the total resources amounted to \$139,265,612. The individual deposits amounted to \$85,827,874.

Mr. Chairman, at that time there were 38 States that had a less number of banks than Oklahoma. Only the great States of Pennsylvania, New York, Texas, Ohio, Illinois, Minnesota, Iowa, Missouri, and Kansas had more banks than Oklahoma, and the banks of 18 States had less loans and discounts, and the banks of 20 States had less total resources than the banks of Oklahoma.

The banks of 25 States, more than half, had less capital stock than did the banks of Oklahoma, and the banks of 17 States had less individual deposits than the banks of Oklahoma. Among the States whose banks had less capital stock than the banks of Oklahoma are Arizona, Nevada, Utah, Idaho, Oregon, New Mexico, South Dakota, North Dakota, Delaware, Mississippi, Alabama, South Carolina, Florida, Rhode Island, Vermont, New Hampshire, and Maine.

Mr. Chairman, I think there is very good reason why the people of Oklahoma have not much money in the savings banks. In the first place, we have only two savings banks proper within the State. Oklahoma has had a remarkable career of growth and development. In less than 25 years we have attained a population of 1,800,000 people, and we have acquired wealth until our property, according to its assessed value, is valued at more than a thousand millions of dollars, and our mines, and forests, and farms, and factories create an annual wealth of over three hundred millions of dollars.

Mr. WEAVER. The gentleman should also say something about the Oklahoma oil wells.

Mr. MORGAN of Oklahoma. We have 24,000 producing oil wells, adding to the wealth of the State every year \$65,000,000. That is more than a million dollars for every week in the year. There are a thousand new wells being drilled to-day. [Applause.] We have the largest supply of natural gas of any State in the Union, and since you have heard my colleague, Mr. WEAVER, speak this afternoon you all know that we have eloquent men there also.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. MORGAN of Oklahoma. Mr. Chairman, I ask unanimous consent to proceed for one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MORGAN of Oklahoma. Here is the point: The opportunity for profitable investment for the man who has small means is greater in Oklahoma than in Pennsylvania or Connecticut or any of the older States. Hence our people put their money in land, in lots, in property that grows in value and gives a much larger return than the interest allowed on savings banks deposits. Instead of a little pittance of 3 per cent per annum our people expect to make 10 or 25 per cent per annum upon investments which are made in Oklahoma, and we invite you all, the gentleman from Pennsylvania [Mr. MOORE] especially, to come down there and invest in some of our properties. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

INCREASE AND DECREASE OF CAPITAL.

SEC. 5. That shares of the capital stock of Federal reserve banks shall not be transferable nor be hypothecated. In case a subscribing bank increases its capital, it shall thereupon subscribe for an additional amount of capital stock of the Federal reserve bank of its district equal to 20 per cent of the bank's own increase of capital, 10 per cent of said subscription to be paid in cash in the manner hereinbefore provided for original subscription, and 10 per cent to become a liability of the subscribing bank according to the terms of the original subscription. A bank applying for stock in a Federal reserve bank at any time after the formation of the latter must subscribe for an amount of the capital of said reserve bank equal to 20 per cent of the capital of said subscribing bank, paying therefor its par value in accordance with the terms prescribed by section 2 of this act. When the capital of any Federal reserve bank has been increased either on account of the increase of capital of the banks holding stock therein or on account of the increase in the number of stockholding banks, the board of directors shall make and execute a certificate to the Comptroller of the Currency showing said increase in capital, the amount paid in, and by whom paid. In case a subscribing bank reduces its capital it shall surrender a proportionate amount of its holdings in the capital of said Federal reserve bank, and in case a bank goes into voluntary liquidation it shall surrender all of its holdings of the capital of said Federal reserve bank. In either case the shares surrendered shall be canceled and the bank shall receive in payment therefor a sum equal to its cash paid subscriptions on the shares surrendered.

Mr. MANN. Mr. Chairman, I was going to ask unanimous consent that the committee amendments be reported and be voted on in gross, unless some Member desires a separate vote.

The CHAIRMAN. Without objection, the committee amendments will be voted on in gross.

There was no objection.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Page 11, line 15, strike out the word "subscribing" and insert "member." Page 11, line 21, strike out the word "subscribing" and insert the word "member." Page 11, line 25, after the word "said," insert the word "Federal." Page 12, line 1, after the word "capital," insert the word "stock." Page 12, line 3, after the word "capital," insert the word "stock." Page 12, line 5, after the word "capital," insert the word "stock"; after the word "of" strike out the words "the banks holding stock therein" and insert the words "member banks." Page 12, line 7, after the word "of," strike out the word "stockholding" and insert the word "member." Page 12, line 10, strike out the word "subscribing" and insert the word "member." Page 12, line 11, after the word "capital," insert the word "stock." Page 12, line 13, after the letter "a," insert the word "member." Page 12, line 16, after the word "and," strike out the word "the" and insert the words "such member." Page 12, line 17, after the word "therefor," insert the words "under regulations to be prescribed by the Federal reserve board."

Mr. FOWLER. Mr. Chairman, the Clerk should have read as a committee amendment the word "stock," in line 14.

The Clerk read as follows:

Page 12, line 14, after the word "capital" insert the word "stock." The question was taken, and the amendments were agreed to. Mr. BULKLEY. Mr. Chairman, I offer two additional committee amendments.

The CHAIRMAN. The Clerk will report the amendments. The Clerk read as follows:

Page 11, lines 18 and 19, after the word "capital," strike out "10 per cent" and insert in lieu thereof the words "one-half."

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Page 11, lines 20 and 21, after the word "and," strike out the words "10 per cent" and insert the words "one-half."

Mr. MANN. Mr. Chairman, I wish the gentleman would explain under what conditions the other half of the capital stock subscribed could ever be called for?

Mr. BULKLEY. It would be subject to call by the Federal reserve bank, and the condition would probably be an impairment of the capital stock of the reserve bank through losses. Does that answer the gentleman's question?

Mr. MANN. It would only be called for probably in the case of the failure of the bank. Is that right?

Mr. BULKLEY. In case of loss. Any loss would have to be repaired, and it would be the duty of the reserve bank to call for the additional subscription in case its capital stock might have been impaired.

Mr. MANN. How could there be a loss of the capital stock? The proposition is to build up a reserve. How could the capital stock ever be lost unless the bank fails?

Mr. BULKLEY. When you once get the surplus built up I think it is very unlikely there will be any impairment of capital, and in fact I think there is very little chance of there being any loss at any time, but this is simply a provision that is put in here out of precaution, and it is analogous to the double liability which stockholders in national banks assume by becoming stockholders.

Mr. MANN. I presume that is the reason it was put in. You have copied most everything else in this bill from the Aldrich bill, and that item may have been copied from the national banking law.

Mr. BULKLEY. This was in the Aldrich bill, too.

Mr. MANN. As a matter of fact, while it has been widely stated that this would take 20 per cent of the capital stock of the banks, there is no way of collecting more than 10 per cent except in an emergency that can not possibly arise.

Mr. BULKLEY. That is exactly true, and we do not think there is any chance in the world that it will ever be called.

The CHAIRMAN. The question is on the adoption of the amendment.

The question was taken, and the amendment was agreed to.

Mr. MURDOCK. Now, Mr. Chairman, I would like to ask the gentleman from Ohio [Mr. BULKLEY], after the reserve bank has been formed and a member bank wants to get into the reserve bank, what is the situation as regards this? The reserve bank will have a surplus of 20 per cent?

Mr. BULKLEY. We are assuming that this occurs after 20 per cent surplus shall have been built up.

Mr. MURDOCK. Yes. So the shares of that bank, if the shares are at par, shall be 120? Now, what does the new member bank pay to get into the reserve bank?

Mr. BULKLEY. It pays par. The gentleman must remember that the reserve built up is at all times the property of the United States Government. It is there as an insurance fund against losses, and it may be used in case the reserve bank incurs any loss. But when a bank goes out of the system it gets par for its stock, and its share of the surplus goes to the United States Government.

Mr. MURDOCK. So, now, the shares of stock in the reserve bank will not be above par if a new member applied for participation?

Mr. BULKLEY. No; the shares would cost par to a new member coming in, and par would be paid to a member going out.

Mr. MURDOCK. And the surplus to the Government is not taken into account in that arrangement?

Mr. BULKLEY. No; it is not taken into account in fixing the price of the stock. It all belongs to the Government.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 6. That if any shareholder of a Federal reserve bank shall become insolvent and a receiver be appointed, the stock held by it in said Federal reserve bank shall be canceled and the balance, after deducting from the amount of its cash-paid subscriptions all debts due by such insolvent bank to said Federal reserve bank, shall be paid to the receiver of the insolvent bank. Whenever the capital stock of a Federal reserve bank is reduced, either on account of a reduction in capital of any

bank or of the liquidation or insolvency of any such bank, the board of directors shall make and execute a certificate to the Comptroller of the Currency showing such reduction of capital stock and the amount repaid to such bank.

The CHAIRMAN. Without objection, the committee amendments will be voted on in gross. [After a pause.] The Chair hears no objection. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 12, line 20, strike out the words "shareholder of a Federal reserve" and insert in lieu thereof the word "member."

Also:

On page 13, line 2, after the word "capital," insert the word "stock," and after the word "any" insert the word "member."

Also:

Line 3, page 13, after the word "such," insert the word "member."

The CHAIRMAN. The question is on the adoption of the committee amendments.

Mr. MURDOCK. Mr. Chairman, I would like to ask the committee what is the significance of the change from shareholder in a reserve bank to a member bank? Why was the change made? What does it do?

Mr. GLASS. It simply does as was indicated when we had that matter under discussion a little while ago. It conforms the language of this provision to the language in the other provisions.

Mr. MURDOCK. The member bank is only a member of this reserve bank. So it is a question of change of language without change of meaning?

Mr. GLASS. That is all.

The CHAIRMAN. The question is on agreeing to the committee amendments.

The committee amendments were agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

DIVISION OF EARNINGS.

SEC. 7. That after the payment of all necessary expenses and taxes of a Federal reserve bank the shareholders shall be entitled to receive an annual dividend of 5 per cent on the paid-in capital, which dividend shall be cumulative. One-half of the net earnings, after the aforesaid dividend claims have been fully met, shall be paid into a surplus fund until such fund shall amount to 20 per cent of the paid-in capital of such bank, and of the remaining one-half 60 per cent shall be paid to the United States and 40 per cent to the member banks in the ratio of their average balances with the Federal reserve bank for the preceding year. Whenever and so long as the surplus fund of a Federal reserve bank amounts to 20 per cent of the paid-in capital and the shareholders shall have received the dividends at the rate of 5 per cent per annum heretofore provided for, 60 per cent of all excess earnings shall be paid to the United States and 40 per cent to the member banks in proportion to their annual average balances with such Federal reserve bank; all earnings derived by the United States from Federal reserve banks shall constitute a sinking fund to be held for the reduction of the outstanding bonded indebtedness of the United States, said reduction to be accomplished under regulations to be prescribed by the Secretary of the Treasury. Should a Federal reserve bank be dissolved or go into liquidation, the surplus fund of said bank, after the payment of all debts and dividend requirements as heretofore provided for, shall be paid to and become the property of the United States.

Every Federal reserve bank incorporated under the terms of this act and the stock therein held by member banks shall be exempt from Federal, State, and local taxation, except in respect to taxes upon real estate.

The CHAIRMAN. Without objection, the committee amendments will be reported in gross. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 13, lines 9 and 10, strike out the word "shareholders" and insert the words "member banks."

In line 11, after the word "capital," insert the word "stock."

In line 15, after the word "capital," insert the word "stock."

In line 22, after the word "capital," insert the word "stock," and strike out the word "shareholders" and insert the words "member banks."

Page 14, line 13, after the word "the," insert the word "capital."

The CHAIRMAN. Without objection, the committee amendments will be agreed to.

There was no objection.

Mr. MANN. Mr. Chairman, I would like to ask the gentleman from Virginia [Mr. GLASS] what is the result of exempting the Federal reserve banks from taxation?

Mr. GLASS. Well, not being a lawyer, I can not perhaps answer the gentleman fully. We were advised that it was permissible under the law and Constitution to except it.

Mr. MANN. The national bank now pays what taxes, or taxes on what? Does it pay a State or local tax?

Mr. GLASS. They pay a local tax only upon real estate.

Mr. MURDOCK. What about the capital stock?

Mr. GLASS. As I said to my friend, I am not familiar with the law involved in that proposition.

Mr. MANN. I can not hear my friend.

Mr. GLASS. I say, as I said to my friend from Illinois, I am not exactly familiar with the law upon that particular feature of the bill. What is it that the gentleman desires to know?

Mr. MANN. I desire to know whether this goes any further than the law in reference to national banks?

Mr. BULKLEY. Mr. Chairman, if I may be permitted to answer, I will say it does.

Mr. MANN. I thought it did.

Mr. BULKLEY. The shares of national banks are taxable in the hands of the holders, and this bill proposes that the shares of stock held by member banks shall not be taxable.

Mr. MANN. Do not national banks now pay any taxes except upon real estate directly?

Mr. MURDOCK. In some States they do on the capital stock.

Mr. BULKLEY. Oh, yes; they pay.

Mr. MANN. Then it is proposed to have the national banks pay, but the Federal reserve bank is not to pay State taxes?

Mr. BULKLEY. No. The Federal reserve bank is not to pay State taxes, according to this bill.

Mr. MANN. Is there any way, either by deposits or sale of securities or things of that sort, that the local national bank will be enabled to escape taxes?

Mr. BULKLEY. I hardly think so. The bill does not propose that credits which the member banks may have with the Federal reserve bank shall not be taxable. It simply provides that their shares of stock shall not be taxable.

Mr. MANN. It provides that the reserve banks can not be taxed?

Mr. BULKLEY. Yes; it provides that the reserve bank can not be taxed, but a credit with the reserve bank could be taxed.

Mr. BALTZ. Mr. Chairman, will the gentleman from Ohio yield?

The CHAIRMAN. Does the gentleman from Ohio yield?

Mr. BULKLEY. Yes.

Mr. BALTZ. Would not that be double taxation?

Mr. BULKLEY. I think it might be if both taxes applied.

Mr. BALTZ. It would be.

The CHAIRMAN. Without objection, the committee amendments will be considered as agreed to. Is there objection?

Mr. TEMPLE. I reserve the right to object, Mr. Chairman. I want to say a word. I wish to be recognized.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. TEMPLE] is recognized.

Mr. TEMPLE. Mr. Chairman, with regard to this paragraph on page 14, at the end of section 7, which provides that—

Every Federal reserve bank incorporated under the terms of this act and the stock therein held by member banks shall be exempt from Federal, State, and local taxation, except in respect to taxes upon real estate—

I wish to say that it is out of harmony with other portions of the bill. On page 22, line 9, the Federal reserve board is given power—

To suspend for a period not exceeding 30 days (and to renew such suspension for periods not to exceed 15 days) any and every reserve requirement specified in this act: *Provided*, That it shall establish a graduated tax upon the amounts by which the reserve requirements of this act may be permitted to fall below the level hereinafter specified, such tax to be uniform in its application to all banks; but said board shall not suspend the reserve requirements with reference to Federal reserve notes.

Now, this provision might be understood to apply only to the national banks—the member banks—and not the Federal reserve banks, if there were not a specific reservation with regard to the Federal reserve notes. I would understand, then, that the Federal reserve board may tax the Federal reserve banks on the amount by which the actual reserve is permitted to fall below the required legal reserve. If that is the case, the provision on page 14, exempting the bank from Federal taxes, simply means that we will arrange in the charter that Congress shall not tax the Federal reserve banks, but the Federal reserve board may tax them. We have delegated our taxing power to the Federal reserve board, just as in the other section to which I called attention some time ago we have delegated our legislative power to the Federal reserve board.

Mr. BARKLEY. Does the gentleman realize that the provision on page 22 is in the nature of a penalty assessed against the bank if it allows its reserve to drop below the required amount?

Mr. TEMPLE. I do; but it is a penalty which is specifically called a tax.

Mr. BARKLEY. And this other has reference to the direct taxes levied either by State or Federal or any other subdivision of government.

Mr. TEMPLE. Direct taxes levied by the Federal Government? It does not say so.

Mr. BARKLEY. Of course, there are no indirect taxes levied upon national banks, but the State taxes are direct.

Mr. TEMPLE. According to one provision, the banks are to be exempt from Federal, State, and local taxes, except in respect to taxes on real estate. In the other provision we provide specifically that the Federal reserve board may tax them. That is not all. On page 19 there is another manner in which the Federal reserve board may tax Federal reserve banks:

The Federal reserve board shall have power to levy semiannually upon the Federal reserve banks, in proportion to capital stock, an assessment sufficient to pay its estimated expenses for the half year succeeding the levying of such assessment, together with any deficit carried forward from the preceding half year.

That provision is found on page 19, in lines 18 to 23. The Federal reserve board is to have certain expenses. I do not know how large those expenses are to be, but I call your attention to a provision on page 16 that puts the Bureau of the Comptroller of the Currency under the control of the Federal reserve board. Now, I should like to know whether all the expenses of the comptroller's office are to be considered part of the expenses of the Federal reserve board, and therefore to be included in those expenses for which the Federal reserve board has a right to levy a second and different kind of tax from that which I referred to a moment ago.

That is not all. There is a third manner in which the Federal reserve board may tax the Federal reserve banks, or in which we provide that the Federal reserve banks shall be taxed. That is, they are to pay what we call interest on the Federal reserve notes. When that payment was required upon national-bank notes we frankly called it a tax on the issue of the notes. Now we call it interest of one-half of 1 per cent a year.

There is one other point I should like to make, as briefly as I have tried to make this.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. I ask unanimous consent that the gentleman be allowed to speak for five minutes more. He is talking very intelligently upon this subject and we ought to know what he has to say.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Pennsylvania [Mr. TEMPLE] be allowed to proceed for five minutes. Is there objection?

There was no objection.

Mr. TEMPLE. After these three forms of taxation are considered, of which I have already spoken, I call attention also to the fourth, which is the largest. After all expenses are paid and 5 per cent dividends on the capital stock have been declared, then the remaining earnings of the Federal reserve banks are to be divided, 40 per cent going to the owners and 60 per cent to the Government of the United States. There is a tax of 60 per cent on the earnings, when we specifically provide that they are to be exempt from Federal tax. Exempt from Federal tax, when we provide four ways by which the Federal reserve board may tax them, one of them requiring the payment of 60 per cent of their excess earnings after the owners have received a dividend of 5 per cent!

I repeat that in the section which gives the Federal reserve board power to make by-laws for the government of State banks and trust companies that may come into the new system without becoming national banks we have delegated the legislative powers of Congress to the Federal reserve board. In the provisions of which I am now speaking we are delegating the taxing powers of Congress. I trust that the powers of the Federal reserve board, which other provisions of the bill have made enormous, may not be so increased.

Mr. MANN. Mr. Chairman, I should like to ask one more question. I assume that one of the purposes of this provision is to exempt the Federal reserve banks and the member banks from a Federal income tax on their profits. Is that correct?

Mr. BULKLEY. I understand this would exempt them from the Federal income tax so far as the income is derived from stock in these Federal reserve banks.

Mr. MANN. Both the Federal reserve bank and the member bank?

Mr. BULKLEY. I understand so.

Mr. MURDOCK. Will the gentleman yield?

Mr. BULKLEY. Yes.

Mr. MURDOCK. I understand that in some States the capital of the bank is taxed, not the shares in the hands of the stockholders. If a bank in Arkansas, for instance, with a capital of \$100,000, should pay \$20,000 to the reserve bank in paying the State tax, will it subtract \$20,000 from \$100,000?

Mr. BULKLEY. It will subtract whatever it paid in subscription to the capital stock of the regional reserve bank.

Mr. MURDOCK. From the taxable capital in the State?

Mr. BULKLEY. Yes; there is no doubt about that.

Mr. BARKLEY. Will the gentleman yield?

Mr. BULKLEY. Yes.

Mr. BARKLEY. Is the gentleman quite sure that he is correct? The capital stock of the local bank will not be decreased to the amount equal to one-fifth subscribed for the Federal bank, and under the State law requiring the taxation of the capital stock at par value would not the whole capital be taxed?

Mr. BULKLEY. If there is any confusion in what I said, it may be due to my not understanding the question of the gentleman from Kansas. What I said was that the shares of the several regional reserve banks in the hands of member banks are not taxable and may be deducted from the total amount of property—may not be returned, so far as that is concerned, in making out the State tax return. That has nothing to do with the tax that may be laid on shares of stock of member banks in the hands of stockholders.

Mr. MADDEN. Does it also exempt the money received as dividend from the regional reserve banks?

Mr. BULKLEY. The dividend paid to member banks would not be taxable.

Mr. MADDEN. Does the gentleman think that is just when a man working for \$4,000 a year as a clerk in the bank would be taxable on \$1,000 of his income?

Mr. BULKLEY. I think the Federal reserve banks are paying quite a good deal to the Government. We are providing that they shall pay 60 per cent of their net earnings to the Government by way of dividends.

Mr. MADDEN. I am not speaking of what the regional reserve banks are paying to the Government; I am speaking of the stockholding members.

Mr. BULKLEY. We have limited them to 5 per cent, and I think they ought to get it.

Mr. MADDEN. They get 5 per cent and 40 per cent.

Mr. BULKLEY. That is not on capital stock. Forty per cent of the earnings is divided in proportion to the balances carried with the regional reserve banks, and that will in part compensate them for loss of interest which they now get from the reserve agents. It will not fully compensate them at that.

Mr. MADDEN. I do not object that they are getting a part of the earnings that are not paid out in dividends, because I think they are entitled to more than 5 per cent. The point I wish to make is that there ought not to be any good reason for exempting income received from that payment of the income tax any more than there is of exemption of the income that I receive from another source.

Mr. BULKLEY. The Government does not limit the gentleman's income, and we are limiting their income; and having limited it to 5 per cent, I want them to get 5 per cent.

Mr. WILLIS. Will the gentleman yield?

Mr. BULKLEY. Certainly.

Mr. WILLIS. I want to be sure that I understand the question of the gentleman from Illinois. Does my colleague state that the portion of the resources of a bank invested in the capital stock of the reserve bank would be exempt from taxation?

Mr. BULKLEY. Yes.

Mr. WILLIS. That property is subject to taxation under various State laws.

Mr. BULKLEY. So far as it may be in the State it is subject to taxation.

Mr. COX. Will the gentleman yield?

Mr. BULKLEY. Certainly.

Mr. COX. I want to know what signification, if any, the word "cumulative" has.

Mr. BULKLEY. It means this: Suppose 5 per cent was not earned this year and the banks were only able to pay 2 per cent. If they earned more than 5 per cent the next year, they could declare more than 5 per cent and keep on declaring a higher dividend until the amount should come to 5 per cent for each year since the beginning of the bank.

Mr. COX. And if they reached the point where it amounted to 5 per cent each year, they would have reached the limit? A deficiency in one year may be made up in a later year.

Mr. McKENZIE. Mr. Chairman, before the gentleman resumes his seat will he yield for a question?

Mr. BULKLEY. Yes.

Mr. McKENZIE. Are not the undivided profits and the surplus of national banks taxable now in the various States?

Mr. BULKLEY. I understand so.

Mr. McKENZIE. By what process of reasoning does the gentleman arrive at the conclusion that the undivided profits and surplus of these regional banks should not be taxed?

Mr. BULKLEY. Mr. Chairman, these regional banks are in a different situation from the national banks. These regional banks are more directly the instrumentalities of the Government, and the Government is taking the greater share of the

profits in them, and we are limiting the amount that the member banks may get out of them, and within the limit which we have set we think the member banks ought to get those dividends without deduction by reason of State taxation.

It must be remembered that if 12 regional banks are established there will be but 1 such bank to 4 States. Yet these banks are established to serve the business of all the States, and each of them which serves a territory greater than a single State must necessarily be owned in part outside the State in which it happens to be located. It would be most unfair to permit a State, simply because a Federal reserve bank is located within its borders, to tax the property of this bank at the expense of banks in other States which, under the terms of this law, may have invested in stock of the Federal reserve bank. States may tax the stock of national banks and require such banks to pay the taxes assessed against their stockholders and later reimburse themselves from their stockholders. Such a provision would be most unfair if it could apply to the Federal reserve banks and their capital stock, since it would result in one-quarter of the States benefiting by a tax upon an instrumentality established for all the people, and it would also further reduce a dividend already limited by law to 5 per cent.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, on page 14, by striking out all in line 2 after the word "bank," and by striking out all of lines 3, 4, 5, and 6 and inserting in lieu thereof the following:

"All earnings derived by the United States from Federal reserve banks are constituted a public-highway fund to be used in constructing and to promote and encourage the improvement of public roads of the various States, under such laws as Congress may hereafter enact."

Mr. GLASS. Mr. Chairman, I make the point of order that the amendment is not germane to the bill.

The CHAIRMAN. There seems to be no question but that the point of order is well taken.

Mr. MORGAN of Oklahoma. Mr. Chairman, may I be heard a moment?

The CHAIRMAN. The Chair will gladly hear the gentleman.

Mr. MORGAN of Oklahoma. Mr. Chairman, I do not understand why my amendment is not germane. This provides how these funds paid to the United States shall be used. It says that it shall be made a sinking fund, to be held for the payment of the bonded indebtedness of the United States. The bill provides that this profit, which comes from interest or other transactions by Federal reserve banks, shall be used to pay the national debt. I can not understand why it would not be germane to provide that the fund shall be used to construct public highways or for any other purpose. I think if the Chairman will consider that that he will revise his ruling.

The CHAIRMAN. Does the gentleman from Virginia desire to be heard on the point of order?

Mr. GLASS. No.

The CHAIRMAN. The Chair is inclined to think that the gentleman from Oklahoma is correct. The Chair was wrong in his first impression, because the provision in the bill which the gentleman undertakes to strike out provides the method by which the money shall be applied, and the amendment undertakes only to provide to change the method by which it shall be used. The point of order is overruled.

Mr. MORGAN of Oklahoma. Mr. Chairman, I would ask the chairman of the Banking and Currency Committee how much profit in the 20 years during the existence of these banks he estimates will come to the Government of the United States?

Mr. GLASS. Mr. Chairman, in answer to that inquiry, of course I would simply be giving the conjecture of the chairman. I would state that the report of the Monetary Commission estimated that the Government's share of the earnings of the proposed banking institutions would be from five and a half to seven millions of dollars.

Mr. MORGAN of Oklahoma. For the 20 years?

Mr. GLASS. Per annum.

Mr. MORGAN of Oklahoma. Five million dollars per annum for 20 years would make \$100,000,000.

Mr. Chairman, I do not think that the bonded indebtedness of the United States is so large as to be any burden upon this great Government. If my memory is correct, the entire national debt amounts to only about two and a half billions of dollars. That is less than the national debt of any other great country in the world.

Mr. MURDOCK. I think that the national debt is less than a billion.

Mr. MORGAN of Oklahoma. I included the entire public debt. The interest-bearing debt is less than a billion dollars. It is very small compared with what other nations owe. It is not a burden; it is a plaything, because under the splendid financial control of Republican rule for the last 25 years [applause] we have so managed the affairs of this country that our national debt is comparatively nothing. Now, it seems to me, in all candor, that this great fund ought to be appropriated to some great national purpose. Where do the profits come from? They all come from the great mass of the people. These banks will make nothing only so far as they get the money through interest and other charges from the great mass of the people. It seems to me that when you shall inaugurate this great measure, designed to give a better currency and a better banking system, that the profits therefrom ought to be rolled back to the people from whom the profits were taken.

There can be no better purpose to which this fund can be devoted than to improving the great highways of this country. When that side of the House in the last Congress had control and passed the public highways bill, appropriating, I think, something like twenty or twenty-five million dollars annually to aid in the construction and improvement of public highways, I voted for it. That was a great measure, and I am sorry it did not become a law. You deserve credit for passing the bill through the House. But now, why not take this money that comes from the great mass of the people, generally from people who are in debt, and use it for some great national purpose—use it to build public highways, encourage the agriculture of the country, to help lighten the burdens of the farmers and make the farm more attractive and profitable?

Mr. LINDBERGH. Will the gentleman yield for a question?

Mr. MORGAN of Oklahoma. I will.

Mr. LINDBERGH. Why collect an unjust tax at all?

Mr. MORGAN of Oklahoma. Well, I am not in favor of collecting an unjust tax, but if the Government is to derive a direct profit—amounting to from five to seven millions of dollars annually—a profit that must come through interest paid by the people, it would seem almost a crime to use this money to pay our national debt. Money to pay the national debt should come through the regular channels of taxation, and I solemnly protest against the National Government using any of the profits derived from the Federal reserve banks to pay the public debt. If the Government proposes to appropriate any of the profits of the Federal reserve banks, let the money be solemnly dedicated to some great national purpose that will contribute to the general welfare of the country.

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment offered by the gentleman from Oklahoma.

The question was taken, and the amendment was rejected.

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 14, by striking out all in line 2 after the word "bank" and by striking out all of lines 3, 4, 5, and 6, and inserting in lieu thereof the following: "All earnings derived by the United States from Federal reserve banks shall constitute a fund to protect the depositors from loss from the failure of any member bank, under such provisions as Congress may hereafter enact."

Mr. MORGAN of Oklahoma. Now, Mr. Chairman, as you do not want to give this money for public highways and other great purposes, I thought perhaps you might use it for another purpose. I find in the Democratic platform of 1908 these words:

We pledge ourselves to legislation under which national banks shall be required to establish a guaranty fund for the prompt payment of the depositors of any insolvent national bank under an equitable system which shall be available to all State banking institutions wishing to use it.

Now, those are the words in the Democratic platform. I do not see the exact words in the last Democratic platform, but I understand that has been affirmed.

Mr. SLOAN. Will the gentleman yield for a question?

Mr. MORGAN of Oklahoma. I yield to the gentleman.

Mr. SLOAN. At the last national convention of the Democratic Party the statute of limitation was plead against it successfully, and it was not included in the Baltimore platform.

Mr. MORGAN of Oklahoma. Well, I will have to leave that to somebody better posted than I am on that subject. In so far as I am individually concerned, long before Oklahoma adopted the system of guaranteeing bank deposits I was in favor of it. I am in favor of it still, and I am going to offer some of the arguments that I made in regard to using this fund for public highways. This fund ought to be devoted to some great purpose needed by the masses of the people.

I believe in the principle of guaranteeing bank deposits. The 15,000,000 depositors in the banks are certainly as much entitled

to protection as a few owners. There have been considerable criticisms of the system of bank guaranty in Oklahoma. I think in the general debate on this bill some gentlemen referred to it. I do not know that we have the best system. I believe that there will be amendments to our law from time to time, but I do know that the people of Oklahoma are thoroughly convinced that banks in some way should guarantee the deposits of the people. I have not the slightest idea that the people of Oklahoma, regardless of politics, will ever recede from that decision. I believe that they will continue to stand for the proposition that bank deposits should be made safe and secure, and in my judgment the time will come before many years shall have passed when the United States Government will adopt some system whereby the deposits of the people in the banks will be protected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma [Mr. MORGAN].

Mr. PLATT. Mr. Chairman, I rise for the purpose of opposing the amendment. It seems to me there is a great deal of misapprehension over the question of bank deposits. A bank deposit is not something that is put into a bank, but it is something taken out of a bank, and you ought not to guarantee them without guaranteeing what is owing to the bank that created them. For instance, I never put a thousand dollars in a bank in my life in currency, but I had \$10,000 in the bank. How did I do it? I went to the bank and borrowed it. You have got to guarantee the men that owe the money to the banks. That is what bank guaranty is.

Mr. MORGAN of Oklahoma. Will the gentleman from New York yield?

The CHAIRMAN. The gentleman from New York [Mr. PLATT] has yielded the floor. The question is on the amendment offered by the gentleman from Oklahoma [Mr. MORGAN].

The question was taken, and the Chair announced that the yeas seemed to have it.

Mr. MURDOCK. I call for a division, Mr. Chairman.

The committee divided; and there were—yeas 10, nays 57.

So the amendment was rejected.

The Clerk read as follows:

SEC. 8. That any national banking association heretofore organized may upon application at any time within one year after the passage of this act, and with the approval of the Comptroller of the Currency, be granted, as herein provided, all the rights, and be subject to all the liabilities, of national banking associations organized subsequent to the passage of this act: *Provided*, That such application on the part of such associations shall be authorized by the consent in writing of stockholders owning not less than a majority of the capital stock of the association. Any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinbefore stated, or which shall fail to comply with any of the provisions of this act applicable thereto, shall be dissolved; but such dissolution shall not take away or impair any remedy against such corporation, its stockholders or officers, for any liability or penalty which shall have previously been incurred.

Mr. PLATT. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 14, line 25, after the word "association," strike out the rest of the paragraph.

Mr. PLATT. Mr. Chairman, I have no desire to take the time of the committee by arguing on the striking out of this provision, but I simply want to emphasize my objection to all the provisions in the bill which can compel national banks to dissolve. I believe it should be done voluntarily. This is a provision which is possibly unconstitutional, and I simply want to move to strike it out.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. PLATT].

The question was taken, and the amendment was rejected.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. BARNHART having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed the following resolutions:

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. TIMOTHY D. SULLIVAN, late a Representative from the State of New York.

Resolved, That a committee of six Senators be appointed by the Vice President, to join the committee appointed on the part of the House of Representatives, to attend the funeral of the deceased.

Resolved, That the Secretary communicate a copy of these resolutions to the House of Representatives.

In compliance with the foregoing the Presiding Officer appointed as said committee Mr. O'GORMAN, Mr. ROOT, Mr. SWANSON, Mr. MARTINE of New Jersey, Mr. JAMES, and Mr. BRANDEE.

Resolved, That the Senate has heard with deep sensibility the announcement of the death of Hon. WILLIAM HENRY WILDER, late a Representative from the State of Massachusetts.

Resolved, That a committee of six Senators be appointed by the Vice President, to join the committee appointed on the part of the House of Representatives, to attend the funeral of the deceased.

Resolved, That the Secretary communicate a copy of these resolutions to the House of Representatives.

In compliance with the foregoing, the Presiding Officer appointed as said committee Mr. LODGE, Mr. WEEKS, Mr. MYERS, Mr. WALSH, Mr. MCLEAN, and Mr. CATRON.

The message also announced that the Senate had passed the following resolution:

Resolved, That as a further mark of respect to the memory of the deceased Representatives the Senate do now adjourn.

ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following joint resolution and bills:

H. J. Res. 130. Joint resolution to provide for the relief and transportation of destitute American citizens in Mexico;

H. R. 4937. An act extending to the port of Dallas, Tex., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement; and

H. R. 7595. An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors.

CURRENCY.

The committee resumed its session.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

STATE BANKS AS MEMBERS.

SEC. 10. That from and after the passage of this act any bank or banking association or trust company incorporated by special law of any State, or organized under the general laws of any State or the United States, may make application to the Federal reserve board hereinafter created for the right to subscribe to the stock of the Federal reserve bank organized or to be organized within the Federal reserve district where the applicant is located. The Federal reserve board, under such rules and regulations as it may prescribe, subject to the provisions of this section, shall permit such applying bank to become a stockholder in the Federal reserve bank of the district in which such applying bank is located. Whenever the Federal reserve board shall permit such an applying bank to become a stockholder in the Federal reserve bank of the district in which the applying bank is located, stock shall be issued and paid for under the rules and regulations in this act provided for national banks which become stockholders in Federal reserve banks.

It shall be the duty of the Federal reserve board to establish by-laws for the general government of its conduct in acting upon applications made by the State banks and banking associations and trust companies hereinbefore referred to for stock ownership in Federal reserve banks. Such by-laws shall require applying banks not organized under Federal law to comply with the reserve requirements and submit to the inspection and regulation provided for in this and other laws relating to national banks. No such applying bank shall be admitted to stock ownership in a Federal reserve bank unless it possesses a paid-up unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated, under the provisions of the national banking act, and conforms to the provisions therein prescribed for national banking associations of similar capitalization and to the regulations of the Federal reserve board.

If at any time it shall appear to the Federal reserve board that a banking association or trust company organized under the laws of any State or of the United States has failed to comply with the provisions of this section or the regulations of the Federal reserve board, it shall be within the power of the said board to require such banking association or trust company to surrender its stock in the Federal reserve bank in which it holds stock upon receiving from such Federal reserve bank the cash-paid subscriptions to the said stock in current funds, and said Federal reserve bank shall upon notice from the Federal reserve board be required to suspend said banking association or trust company from further privileges of membership, and shall within 30 days of such notice cancel and retire its stock and make payment therefor in the manner herein provided.

The CHAIRMAN. Without objection, the committee amendments will be voted on in gross. Is there objection? [After a pause]. The Chair hears none. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 17, in line 22, strike out the word "board" and insert the words "Federal reserve board."

In line 25 strike out the word "shares" and insert in lieu thereof the word "stock."

In line 1, page 18, after the word "such," insert the words "Federal reserve."

In line 2 strike out the word "shares" and insert in lieu thereof the word "stock."

In line 4 strike out the words "the designated" and insert in lieu thereof the word "said."

The CHAIRMAN. The question is on the adoption of the committee amendments.

The question was taken, and the committee amendments were agreed to.

Mr. MANN. Mr. Chairman, I move to strike out the last word. As a very pertinent subject, I would suggest that we have read over 17 pages of the bill out of 50. We have made very good progress, and it is now 6 o'clock. I hope the gentleman from Virginia [Mr. GLASS] will take the gentle hint.

Mr. GLASS. I understand we have adopted section 10.

Mr. MANN. Section 10 is still open to amendment. The committee amendments have been agreed to. We have read all of the section.

Mr. GLASS. I agree with the gentleman from Illinois. I think we had better now adjourn.

Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7837—the currency bill—and had come to no conclusion thereon.

ADJOURNMENT.

Mr. GLASS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock p. m.) the House adjourned until Tuesday, September 16, 1913, at 12 o'clock noon.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 2813) granting an increase of pension to Della A. Cooter, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. ANDERSON: A bill (H. R. 8144) to enlarge, extend, remodel, etc., post-office building at Albert Lea, Minn.; to the Committee on Public Buildings and Grounds.

By Mr. KALANIANAOLE: A bill (H. R. 8145) making an appropriation to aid the people of the Territory of Hawaii in providing and maintaining an exhibit at the Panama-Pacific International Exposition; to the Committee on Appropriations.

By Mr. HOBSON: A bill (H. R. 8146) to promote rural education in the several States; to the Committee on Education.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALEXANDER: A bill (H. R. 8147) granting a pension to Susan Smith; to the Committee on Invalid Pensions.

By Mr. BARCHFELD: A bill (H. R. 8148) granting a pension to Anne L. Holbrook; to the Committee on Pensions.

Also, a bill (H. R. 8149) granting a pension to Joseph P. Link; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8150) granting an increase of pension to John H. Boring; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8151) granting an increase of pension to Robert Barrett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8152) granting an increase of pension to William Henry; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8153) granting an increase of pension to Hezekiah Smith; to the Committee on Invalid Pensions.

By Mr. FRANCIS: A bill (H. R. 8154) granting an increase of pension to John Finch; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8155) granting an increase of pension to John J. Rennard; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8156) granting an increase of pension to James A. Penn; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8157) granting an increase of pension to Edward T. Petty; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8158) granting an increase of pension to Francis M. Jeffery; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8159) granting an increase of pension to George W. Ashton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8160) granting an increase of pension to Joseph W. Brown; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8161) granting an increase of pension to Alexander Rhodes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8162) granting an increase of pension to William Todd; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8163) granting an increase of pension to Milton J. Taggart; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8164) granting an increase of pension to S. Tschappat; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8165) granting an increase of pension to William G. Mitzel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8166) granting an increase of pension to Alfred T. Johnson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8167) granting an increase of pension to Robert Gibson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8168) granting an increase of pension to Mahlon Gurin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8169) granting an increase of pension to Samuel Fulton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8170) granting an increase of pension to B. N. Lindsey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8171) granting a pension to Mina Schoonover; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8172) granting a pension to Effie A. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8173) granting a pension to John Roe; to the Committee on Pensions.

Also, a bill (H. R. 8174) granting a pension to John Creighton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8175) granting a pension to Agnes A. H. Capito; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8176) granting a pension to Laura M. Lash; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8177) granting a pension to Virinda J. Long; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8178) granting a pension to Rachel M. Douds; to the Committee on Invalid Pensions.

By Mr. JACOWAY: A bill (H. R. 8179) for the relief of Patrick O'Kane; to the Committee on War Claims.

By Mr. KENNEDY of Iowa: A bill (H. R. 8180) granting an increase of pension to William Thornburg; to the Committee on Invalid Pensions.

By Mr. KAHN: A bill (H. R. 8181) for the relief of Henry S. Kiersted; to the Committee on Military Affairs.

By Mr. MCGILLICUDDY: A bill (H. R. 8182) granting an increase of pension to William T. Eustis; to the Committee on Invalid Pensions.

By Mr. MOSS of West Virginia: A bill (H. R. 8183) granting an increase of pension to Magdalene White; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8184) granting an increase of pension to James W. Clark; to the Committee on Invalid Pensions.

By Mr. WALKER: A bill (H. R. 8185) granting an increase of pension to John Doerflinger; to the Committee on Pensions.

By Mr. FRANCIS: A bill (H. R. 8186) granting a pension to Peter Gilner; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BARCHFELD: Papers to accompany bill granting a pension to Joseph P. Link, son of the late Charles H. Link, late of Company D, Seventy-fourth Pennsylvania Volunteer Infantry; to the Committee on Invalid Pensions.

By Mr. DALE: Petition of E. Elising & Co., of New York, N. Y., protesting against payment of 25 cents for rectifiers' and wholesale dealers' stamps; to the Committee on Ways and Means.

By Mr. ROBERTS of Nevada: Petition of the Pioche Commercial Club, of Pioche, Nev., favoring the formation of a naval reserve and passage of a bill providing for the construction of four battleships; to the Committee on Naval Affairs.

HOUSE OF REPRESENTATIVES.

TUESDAY, September 16, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We thank Thee, our Father in heaven, for those inherent qualities of soul which inspire admiration for the manly man, the man who demands the same rights for every other man, irrespective of race or creed, that he demands for himself, and in the spirit of the Master says to the world, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done unto me"; for what helps him helps all; what hurts him hurts all. For in these inherent qualities of soul is the evidence of the divine in every man and the promise of the coming of Thy kingdom upon the earth, which we all long for, and which we most earnestly pray for, that it may come, and that right speedily, O God our Father. Amen.

The Journal of the proceedings of yesterday was read and approved.

CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the currency bill, with Mr. GARNER in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. MANN. Mr. Chairman, before we proceed with amendments to section 10 the gentleman from Iowa [Mr. TOWNER] desires to ask unanimous consent to offer an amendment to section 8 and the gentleman from North Dakota [Mr. YOUNG] desires to ask unanimous consent to offer an amendment to section 9.

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] asks unanimous consent to offer an amendment to section 8. Is there objection?

There was no objection.

Mr. TOWNER. Mr. Chairman, I offer an amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] offers an amendment which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. TOWNER: On page 15, line 8, after the word "incurred," insert the following:

"That when any banking association shall have consented, according to the provisions of this section, to become a national banking association under the provisions of this act any shareholder not thus consenting to such transfer may give notice, in writing, to the directors, within 30 days from the date of the certificate of approval, of his desire to withdraw from said association, in which case he shall be entitled to receive from said banking association the value of the shares so held by him, to be ascertained by an appraisal made by a committee of three persons, one to be selected by such shareholder, one by the directors, and the third by the first two; and in case the value so fixed shall not be satisfactory to any such shareholder he may appeal to the Comptroller of the Currency, who shall cause a reappraisal to be made, which shall be final and binding; and if said reappraisal shall exceed the value fixed by said committee the bank shall pay the expenses of said reappraisal, and otherwise the appellant shall pay said expenses; and the value so ascertained and determined shall be deemed to be a debt due and be forthwith paid to said shareholder from said bank; and the shares so surrendered and appraised shall, after due notice, be sold at public sale within 30 days after the final appraisal provided in this section."

Mr. TOWNER. Mr. Chairman, I desire the special attention of the chairman and majority members of the Committee on Banking and Currency to this omission, as I think it must be.

This section 8 provides that upon application upon the part of such associations—that is, national banks—they shall be authorized, by consent in writing of stockholders owning not less than the majority of the capital stock of the association, and if a majority of the holders of the stock of the association shall so determine, they may become members of the new banking association.

Now, there is no provision made by which any dissenting stockholder can be taken care of. Of course it will be readily seen that the members of a national bank who do not desire—

Mr. WINGO. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Arkansas?

Mr. TOWNER. In a moment. There is no provision by which the members of a national bank who do not desire to go into the new banking association may be taken care of, because they can not be forced into the new banking association.

Now I will answer the gentleman's question.

Mr. WINGO. The gentleman uses the language "can be taken care of." What does the gentleman mean? Taken care of under what conditions and under what exigencies?

Mr. TOWNER. Merely in this way: A dissenting stockholder of a national bank who does not desire to go into the new association, or does not desire to continue in the bank after it shall have gone, or by a majority determining to go, into the new association, can not be forced into the new association. A majority rule governs in corporations. Each national bank is a body corporate. They may only exercise those powers that a body corporate can exercise. A majority can take the national bank as an organization into the new national bank, but it can not take the dissenting stockholders who do not desire to go. It occurs to me that that must be plain to anyone.

Mr. LINDBERGH. Mr. Chairman, will the gentleman yield?

Mr. PEPPER. Will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. TOWNER. Yes.

Mr. PEPPER. I would like to inquire what is the difference between the position of a shareholder in a bank who wants to go into this system and the position of a shareholder in a national bank now who wants to go out of business or wants to change the business in any way? What is the distinction or difference under the present law from what it would be under this law?

Mr. TOWNER. Just simply this: The present law provides how a bank may be dissolved. Of course you do not desire the dissolution of these national banks that go into the new organization. Under the present national banking system the charter of a national bank lasts 20 years, as all gentlemen know. When it is desired to extend the charter for another 20 years, upon application of two-thirds of the stockholders of the bank they may secure another 20 years' charter; but the law provides that you can not force a dissenting stockholder to extend into the new 20-year period, and the law also provides that his stock may be appraised, and it must be paid for and disposed of; and the method that I have provided here in this amendment of taking care of the stockholders who may dissent from going into the new organization is verbatim the language that is used in the law with regard to dissenting stockholders who do not desire to continue for another 20-year period, so that there is no change in the modus operandi of treating a dissenting stockholder between going from the present system into the new system and going from one 20-year period into another 20-year period.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. TOWNER. I ask for an extension of five minutes.

The CHAIRMAN. The gentleman from Iowa asks that his time be extended five minutes. Is there objection?

There was no objection.

Mr. LINDBERGH. I want to inquire of the gentleman from Iowa about the legal status. Who would pay the stockholder in case he wishes to withdraw?

Mr. TOWNER. The amendment provides that with regard to the sale of a dissenting stockholder's interest the bank takes the interest of such dissenting stockholder.

Mr. LINDBERGH. Do you mean that the bank can buy the stock?

Mr. TOWNER. Yes; that is the real effect.

Mr. LINDBERGH. Might not that reduce the capital of the bank below its legal requirements?

Mr. TOWNER. No. It does not mean that the bank as a bank can buy the stock, but that the stockholders of the bank shall have the prior right of so doing, the object being, in the case of a continuance in the national banking system, not to cause a dissolution of the corporate organization, which, of course, would mean a complete settlement of all its affairs, an absolute winding up of one corporation and the beginning of another. The object of all these provisions and of this provision was to make it easy to take care of a dissenting stockholder. A stockholder can not be forced into the new organization, and his interest is such with regard to the corporation that he can, by injunction, prevent the new corporation from absorbing his interest without taking care of him.

Mr. LINDBERGH. I think the gentleman's amendment is all right if he can avoid the difficulty that I spoke of.

Mr. TOWNER. I will read the language of the old law with regard to the disposition of a dissenting stockholder's interest, which language I have copied into this amendment. When the 20-year period expires, and any stockholder does not desire to continue for another 20-year period, the law provides for an appraisement.

Mr. WINGO. To what law is the gentleman referring?

Mr. TOWNER. To section 5 of the act of July 12, 1882, found in the national banking act as amended, on page 18. It reads as follows:

And the value so ascertained and determined shall be deemed to be a debt due and be forthwith paid to said shareholder from said bank.

In the first place, the bank takes care of the stockholder's interest—

And the shares so surrendered and appraised shall, after due notice, be sold at public sale within 30 days after the final appraisal provided in this section.

So that it is not carried as a bank obligation; neither does it diminish the capital stock, but it only allows the bank in the first place to take care of it, and then put it into the hands of some individual stockholder.

It occurs to me, Mr. Chairman, that this is an amendment that is absolutely essential to the perfection of the bill, and certainly these gentlemen do not want to leave it in such a condition as to force a dissolution of all these corporations in the courts under the law. Such certainly would be the case if you did not provide some way or manner in which the share of a dissenting stockholder who can not be compelled to go into the new organization can be taken care of under existing law.

Mr. WINGO. Mr. Chairman, I appreciate the force of the gentleman's reasoning, but I gather from his remarks and his amendment that his argument is based on a misconception of the provisions of this bill and of the present law. In order that the committee may understand the purpose of the amendment I will read only a few lines from the amendment offered by the gentleman from Iowa:

That when any banking association shall have consented, according to the provisions of this section, to become a national banking association.

Now, that much of the amendment shows—

Mr. TOWNER. Will the gentleman read the phrase immediately following—

Under the provisions of this act if any national banking association under the old law shall desire to become a banking association under the new law.

Mr. WINGO. In other words, the gentleman's amendment only says if "any banking association consents to become a national banking association" the stockholders who do not want to come into the national system shall have certain rights. I wish to remind the gentleman that if any State bank or trust company becomes a national banking association under the provisions of this act, the rights of the dissenting stockholders are determined by the State laws under which such State bank was organized.

Mr. TOWNER. The gentleman is correct, but this is not an amendment to section 9. It is the entering of the national bank into the new banking system.

Mr. WINGO. The gentleman's statement, as I understand him is so contrary to the language of his amendment that I must take his amendment. It says "when any banking association shall have consented or, according to the provisions of this section"—to become what? To become a national banking association. I think a point of order would lie to the gentleman's amendment because it is not germane, because the section to which he offers his amendment refers to national banks heretofore organized, and his amendment undertakes to govern the question of State banking associations that want to become a national banking association.

I will say to the gentleman that there is not a line in the bill that repeals section 5 of the act of 1882, which governs the right of dissenting stockholders in national banks. I repeat that there is not a line of this bill that is inconsistent with or attempts to repeal section 5 of the act of 1882, which controls the rights of dissenting stockholders. As I understand the gentleman, he is undertaking to embody in this act the provisions of section 5 of the act of 1882. Now, if there is not anything in the act inconsistent with section 5, then that act still stands and that section applies to national banking associations, but can not be made to apply to State banking associations.

Mr. TOWNER. I am quite sure the gentleman desires to get my idea, and if he will read a little bit further he will see that his criticism of my amendment is not well founded. I say when any national banking association shall have consented according to the provisions of this section. What are the provisions of this section? They are limited to national banking associations.

Mr. WINGO. I must decline to yield further, Mr. Chairman; the gentleman must have sent to the desk a different amendment from the one I have in my hand.

Mr. TOWNER. My amendment refers to section 8, which says that "any national bank association," and my amendment says that "when any banking association shall consent according to the provisions of this section."

Mr. WINGO. To become what?

Mr. TOWNER. To become a member of a national banking association.

Mr. WINGO. Mr. Chairman, I decline to yield further. In other words the gentleman is—

Mr. TOWNER. Oh, the gentleman misunderstands me or else he is endeavoring to evade.

Mr. WINGO. Then I must decline to yield further. I think I make myself clear and I think I do not misrepresent the gentleman from Iowa when I say that the section refers to national bank associations, while his amendment refers to State banks that consent to become national banks. In other words, the first

line of the section says that "any national banking association heretofore organized, and so forth," and the first line of the gentleman's amendment is that when "any banking association shall have consented to become a national banking association"—

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. YOUNG of North Dakota. Mr. Chairman, I ask unanimous consent to return to section 9 of the bill, for the purpose of offering an amendment.

The CHAIRMAN. The gentleman from North Dakota asks unanimous consent to return to section 9 of the bill for the purpose of offering an amendment. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 15, line 12, after the words "United States," strike out "and having an unimpaired capital sufficient to entitle it to become a national banking association under the provisions of existing laws."

Mr. YOUNG of North Dakota. Mr. Chairman, I expect to vote for this bill, but I believe that no bank should be forced in and no bank barred out when it is honestly managed. I wish to point to the records of one State to indicate the kind of banks that are barred out. In the State of North Dakota, which I have the honor in part to represent, there are 752 banks, and of these 144 are national banks and 608 State banks. Of the State banks, about 10 per cent have sufficient capital to entitle them to become members of the regional bank, as proposed in this bill. It so happens that these particular banks which do not have sufficient capital to join—that is, have a capital of less than \$25,000—are the very banks which have occasion to use their credit. Those are the banks that borrow money. Those are the banks that go to the reserve centers once or so each year to rediscount or borrow. If it is the design of this bill to enlarge the currency, it seems to me that the natural way is to offer these facilities to the people who want them.

The larger banks in the older communities do not rediscount. Those banks do not borrow, or very rarely do so, and this bill has the appearance of putting something in front of people who do not want it, and denying it to that large group of honestly managed banks who desire to have the facilities which are offered by this bill. I presume the objection that will be heard to permitting these smaller State banks to become members is that they desire to have uniformity, and that they do not want any bank admitted that does not have the same capital as the smallest minimum requirement of the national-bank law. If that is the only objection, it seems to me it is not well taken, because there will be members of regional reserve banks with capital varying in amount from \$25,000 to up in the millions, and it does not seem to me it would make the system very much more cumbersome to start with \$10,000 or \$15,000 than to start with \$25,000. By starting with a bank of \$10,000 you will reach out into those very small villages and rural communities where the deposits are not sufficient to take care of the needs of the farmers who do business at those banks. In those little banks there is usually little or no county or State or municipal money on deposit. They are banks with deposits confined to those living in the community, and they are not able, for instance, in agricultural States, at the time when the crops are being moved and just before that time, to give the accommodation that those in the community really desire to have, and to which they are entitled by reason of their ability to pay and their honesty and integrity. In other words, those who desire to borrow from those little banks have just as much ability to pay proportionately as those captains of industry who do business at the large banks and who borrow large sums. Therefore the character of paper which these small banks would offer to the regional reserve banks at the time of rediscount would be just as good and just as sound and just as safe as the paper offered for rediscount by any larger bank.

I do not feel disposed to go to the extent of some who have claimed that a banking trust is being created by this measure, but do assert that it comes in the special-privilege class, because it gives privileges to banks of certain capital which it denies to certain small banks with officers as honest and loans as safe as can be found in any bank of this country. While most of the farmers who write me are in favor of the passage of this bill, some of them want to know in what respect it will help them, and their inquiry is very pertinent. If any relief is to come to the farmers through the passage of this bill I feel certain that the surest avenue would be through giving liberal rediscounting or borrowing privileges to these little banks located mostly in farming communities, so that they in turn can extend better lines of credit to the farmers and upon more favorable terms. [Applause.]

The proposed method for assembling the capital of the regional reserve banks also discriminates against the country banks. The amount which each bank is to contribute toward the capital of the regional reserve banks is determined by figuring 10 per cent in cash and 10 per cent in subscriptions upon the paid-up capital stock of each bank, losing sight of the fact that the real capital of each bank consists of the paid-up capital stock plus surplus. In the country districts, and particularly in the newer States, where many of the banks have only been operating for a few years and have not had opportunities to lay by anything to speak of in the way of a surplus, it means that the real capital of such banks amounts to little more than the paid-up capital stock. This is true to such an extent that I find some banks in the annual report of the Comptroller of the Currency for 1912 that will, according to the provisions of this bill, pay or contribute to the capital of the regional reserve bank only about 2 per cent of their actual capital. I believe it would be much fairer to fix the amount which each bank should contribute in cash towards the capital of the regional banks at about 5 per cent of its capital and surplus, which would raise about the same amount of capital for the regional reserve banks and would distribute the burden of it equally upon all banks, big and small.

The Hanover National Bank, with a capital of three millions and a surplus of thirteen millions, can become a member of the regional reserve bank by payment of less than 2 per cent of its real capital. Of the 49 national banks in my district only 1 has a surplus larger than its capital—the First National Bank of Ellendale, with a capital of \$25,000 and surplus of \$40,000—and only 2 of these banks have a surplus fund equal to the capital, namely, the First National Bank of Carrington, capital \$25,000, surplus \$25,000, and the First National Bank of Rolla, with capital of \$25,000 and surplus, \$25,000. Taking into account the surplus of all the national banks in my district. I find that the proportion to the capital amounts to about one-third, which means that, on an average, the banks of my district will be obliged to pay 7½ per cent upon their real capital, namely, their paid-up capital stock and surplus. It will take wrongfully a lot of money out of our State, which will tend to make money more scarce. The discrimination against these banks and in favor of the big banks is very plain, and I hope that the committee will consent before the conclusion of this debate to an amendment which will do justice to all banks, both small and big, which become members of the regional reserve banks. I do not make this protest from the standpoint of a banker, because I am not fortunate enough to own a single dollar's worth of bank stock.

The first session of the Sixty-third Congress will be notable for the passage of two bills dealing with big subjects. The tariff bill in the main places the products of the farm on the free list, and there is still ample protection in the Underwood bill for nearly all the manufacturers. The farmers must sell in the markets of the world and buy largely in a protected market—in a market protected for the benefit of the manufacturers—and what do you propose to do by this currency bill? Through the national banks and the larger State banks you will furnish the manufacturers with easier money, and you will deny the same privileges to the farmers by putting up the bars against the small State banks. There is nothing in this bill which promises cheaper money or money in greater quantities for farm credits. The little village bank planted in a rural community, with stock owned largely by farmers, finds no place in your scheme for elastic currency. Gentlemen, I can not help feeling that you are making a colossal mistake. The larger banks do not need help, because experience shows that they do not borrow. The small banks do borrow at certain seasons of the year, and they do need help, and they are worthy of it, and can furnish as good security as can be found anywhere. Do you propose to deliver the money to those who have no real need for it and deny it to those who need it and who will use it to develop agriculture, the backbone industry of our country?

I hope you gentlemen who have the votes to amend this bill will do justly by the farmers. They have been led to believe that there was some relief for them in this bill, but I fear they will find little in it for their betterment. It is true the banks are given power to loan money on real estate security for what is known as short-time loans, but that kind will not help the farmers, and there is no relief in that direction. I hope that the leaders in charge of this bill will have it amended in this House or in the Senate so that the facilities for credit offered in this bill can be brought closer to those living in rural districts by allowing membership in the regional reserve banks to the small banks in rural communities. In some cases they come more closely to the idea of the rural credit associations of

Europe than anything else we have in this country, because in some cases the capital of these little banks is furnished by farmers. And this reminds me that the farmers of my district are immensely more interested in the establishment of some feasible system of rural credits than in the passage of this banking and currency bill, which I venture to say will not reduce the rates of interest upon real estate loans which the farmers are now paying.

Mr. Chairman, I hope the next problem to be wrestled with by the Banking and Currency Committee will be this very problem of the financing of farm loans. In a very interesting article in the American Economic Review for September Prof. Meyer Jacobstein, of the University of North Dakota, makes the claim, after considerable investigation, that the average rate of interest paid upon farm loans in North Dakota is 7.88 per cent, almost 8 per cent. A pretty high rate, gentlemen, for the great wheat State.

To my mind this problem of rural credits transcends in importance the pending measure for the revision of the banking and currency laws. The history of all nations throughout all time has been that agriculture is the basis of national prosperity and well-being, and the greatest and most fundamental problem before the American people to-day is the insurance of agricultural progress and development. One of the big obstacles to overcome is the matter of interest rates on farm loans. I hope the Banking and Currency Committee will tackle that great problem with the same enthusiasm as has been displayed in connection with the pending bill. [Applause.]

Mr. Chairman, I hope the amendment which I have offered will prevail.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. WINGO. Mr. Chairman, I ask for a vote on the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The question was taken; and on a division (demanded by Mr. TOWNER) there were—ayes 57, noes 78.

So the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Dakota.

The question was taken; and on a division (demanded by Mr. MURDOCK) there were—ayes 48, noes 81.

So the amendment was rejected.

Mr. MONDELL. Mr. Chairman, I ask unanimous consent that I may offer an amendment to section 8.

The CHAIRMAN. The gentleman from Wyoming asks unanimous consent to return to section 8 for the purpose of offering an amendment.

Mr. GLASS. Mr. Chairman, reserving the right to object, I consented to the previous requests to return to this section, but if we are to return to all these sections at the option of anybody who desires to offer amendments, this proceeding will be interminable.

Mr. MONDELL. Mr. Chairman, I desire to say to the gentleman in charge of the bill that the amendment I now offer is in line with the amendment I offered yesterday, and I desire to make some observations with regard to a matter relative to which the gentleman and myself did not agree.

Mr. WILSON of Florida. Mr. Chairman, I object.

Mr. MANN. I hope gentlemen will reserve their objections until the amendment can be reported for information.

Mr. WILSON of Florida. I did not hear what the gentleman was saying.

Mr. GLASS. Will the gentleman proceed with his statement?

Mr. MANN. I hope that gentlemen will reserve their objections until the amendment can be read for information.

Mr. WILSON of Florida. I will do that.

Mr. BURNETT. I will do that.

The CHAIRMAN. Without objection, the amendment will be reported for information.

The Clerk read as follows:

Amend, page 15, line 1, by striking out the words "within one year." Page 14, line 26, and page 15, lines 1 to 5, amend by striking out the following: "Any national banking association now organized which shall not within one year after the passage of this act become a national banking association under the provisions hereinbefore stated, or which failed to comply with any of the provisions of this act applicable thereto, shall be dissolved."

The CHAIRMAN. Is there objection to returning to section 8 for the purpose of offering this amendment?

Mr. GLASS. Mr. Chairman, reserving the right to object, I call my friend's attention to the fact that we have voted twice upon that proposition or upon the proposition involved in this amendment.

Mr. MONDELL. I said to the gentleman a moment ago that I offered an amendment yesterday along the lines of this amend-

ment, and in the discussion the gentleman from Virginia made some observations with regard to the provisions of the Monetary Commission bill on that subject. I did not have a copy of the Monetary Commission bill then, and therefore I was at a disadvantage. I now have a copy of the Monetary Commission bill and I desire to read a line or two from that bill to show I was correct in the position I took yesterday.

Mr. GLASS. I shall not interpose an objection.

Mr. BURNETT. I do. If a Member has to be informed and educated—

SEVERAL MEMBERS. Oh, no.

Mr. BURNETT. Yes; I object.

The CHAIRMAN. Objection is heard, and the Clerk will read.

Mr. MURDOCK. Mr. Chairman, we have already read section 10, and I now offer an amendment to section 10.

The CHAIRMAN. Section 10 has been read and is open to amendment.

Mr. MURDOCK. Mr. Chairman, the amendment I now offer is very long—I would like the attention of the gentleman from Virginia—the amendment which I offer now is very long, and in lieu of the Clerk reading it I would like to explain it in order to save time.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent that the amendment may be considered as read. Is there objection?

Mr. MANN. I do not think that that is very proper—

Mr. MURDOCK. But it is very long.

Mr. MANN. Longer than the section?

Mr. MURDOCK. A good deal longer.

Mr. MANN. Very well; I shall not object.

The CHAIRMAN. The Chair hears no objection.

The amendment is as follows:

Page 17, line 17, after the word "board," insert the following:

"Provided, That no national bank, State bank, or trust company holding stock in a Federal reserve bank may be, become, or remain a member of, or otherwise affiliated or connected with, any voluntary or unincorporated organization performing any of the functions of a clearing house or clearing-house association; nor shall such bank be, become, or remain a member of or otherwise affiliated or connected with any incorporated clearing-house association or with any agency or organization performing similar functions except under the following conditions:

"First. Such association must have been created a body corporate by the State or Territory in which such national bank is located and doing business or by an adjoining State or Territory.

"Second. The membership of such association must be limited to incorporated banks and trust companies by the charter or articles of incorporation of such association or the law under which it exists, which must further provide that any solvent bank or trust company doing business within the prescribed territorial boundaries of the association, whether organized under Federal or State law, having a capital stock not less than that required of a national bank in the same locality, upon payment or tender of the fees fixed by the association and upon compliance with any other conditions prescribed by the association and which must be reasonably necessary to the performance of the legitimate functions of membership in such association as hereinafter stated, shall be entitled to become and remain a member and freely to enjoy its facilities and may enforce such right by summary process in any court of competent jurisdiction; that no member shall be suspended or expelled or deprived of the enjoyment of the equal facilities of such association without the approval in writing first obtained by the association from the superintendent of banks or like official of the State or Territory in which the member so affected is incorporated, if there be such official, or of the Comptroller of the Currency if the member in question is a national bank: *Provided*, That the association shall by its charter prescribe its territorial boundaries and may thereafter upon application for membership determine in the first instance whether the applicant is solvent, which determination shall, however, be subject to review and revision by the Comptroller of the Currency if the applicant is a national bank or of the corresponding State official if the applicant is a State bank or trust company: *And provided further*, That such determinations shall thereafter be subject to further review and revision by any court of competent jurisdiction by summary process at the instance of such association or of such applicant.

"Third. The charter or articles of incorporation of such association, or the law under which it exists, may authorize the association, in its discretion or that of its constituted authority, to issue certificates on the security of members' assets to the extent that it shall determine that it and its members are adequately secured against loss, for use solely amongst members and which shall not be otherwise transferable, to pay debit balances owing by members to each other at the clearing house of such association on condition that such certificates shall be the joint and several obligations of the several members of the association and that the same shall not be required to be redeemed by any member to whom issued except after due notice and upon the approval of the Comptroller of the Currency, if the member shall be a national bank, or of the superintendent of banks or corresponding official of the State or Territory in which the member shall have been incorporated, if such member be a State bank or trust company: *Provided*, That the members to which or for the account of which such certificates are issued shall be primarily liable to the holders thereof and to the association for the payment thereof, and that as between the several members of said association, other than the member to which such certificates are issued, each member shall be liable and shall be required to contribute to the discharge of such defaulted obligations as shall remain unpaid by the members to which such certificates are issued, only in the proportion that its capital, surplus, and undivided profits, as shown by its official report next preceding such default, bears to the aggregate capital, surplus, and undivided profits of all the remaining members.

"Fourth. The charter or articles of incorporation of such association or the law under which it exists must further expressly provide for the voluntary resignation or withdrawal of any member subject to the discharge of its obligations to the association and the members thereof,

and that all the acts of said association shall be subject to judicial review at the suit of any member or applicant for membership.

"Fifth. The said charter or articles of association or the law under which said association is organized must prohibit it and its officers and managers from exercising or attempting to exercise, directly or indirectly, any control or influence over its members or over the conduct of their business except as expressly authorized by its charter and from making or attempting to make or enforce any rule, regulation, arrangement, or understanding in respect of any of the following prescribed subjects:

"(a) The restriction or regulation of competition between the members of the association or any of them in any matter or thing connected with the business conducted by such members or authorized to be done by them under their respective charters;

"(b) The fees, commissions, or other compensation chargeable by or payable to or to be charged by or paid to any member by its customers or otherwise for the collection by or through such member or its agent or correspondent of checks, drafts, notes, or bills of exchange drawn upon banks, bankers, trust companies, or others that are not members of such association or that are outside its boundaries;

"(c) The rates of interest or discount chargeable or to be charged by or payable or to be paid to members on loans or discounts to or for customers or others;

"(d) The rates of interest to be allowed by members on deposits; and

"(e) The rates of exchange.

"Sixth. No such clearing-house association shall make, undertake, or attempt any examination of the books of account, business, or transactions of any national bank except through the Comptroller of the Currency as herein provided and the official examiners authorized to be employed by him under this act. Any such association may, however, by requisition upon the Comptroller of the Currency, procure the appointment by said comptroller of such number of examiners to be nominated by the association and approved by the comptroller in addition to his usual staff of examiners as in the judgment of the association will be necessary or proper to secure the thorough performance of the work of the examination of the national banks members of such association at such stated intervals as the association may require in addition to the examinations prescribed by existing law: *Provided*, That there shall be paid monthly by said association to the comptroller the entire cost, charges, and expenses incurred by the comptroller in such further examinations.

"Such examiners may be employed by the comptroller either for specified and successive terms not exceeding one year each or under such other arrangement as may be made with the association. All particulars gathered by the comptroller through such examiners or otherwise in the course of such examination or otherwise with respect to the names of borrowers, the amounts owing by them, respectively, and the collateral, if any, for such loans shall be retained in the custody of the comptroller and shall not be divulged to the association or to any of the members thereof other than to the member directly affected thereby, except that the comptroller may, in his discretion, impart such particulars to the association or to any authorized committee thereof whenever and only when in his judgment it shall be necessary to assure such association against the impending insolvency of any such member, and then only to the officials of the association entrusted with the power to receive such particulars. All data other than that concerning the names of borrowers, the amounts owing by them, and the collateral for such loans shall be at all times available to the association and to all members thereof and to every stockholder and depositor in such national bank, and to all others who, in the judgment of the comptroller, shall request the same for proper purposes.

"No national bank, State bank, or trust company holding stock in a Federal reserve bank shall be or become a party to any agreement, understanding, or arrangement, or shall be or become a member of or otherwise associated or connected with any corporation, association, exchange, agency, or other body, whether incorporated or unincorporated, having for its purpose or which shall engage in any of the prohibited acts specified in the foregoing: *Provided*, That nothing herein contained shall be construed to prohibit any national bank from establishing jointly with other banks or trust companies, or both, doing business in the same city, town, or village or within a radius of 50 miles, an agency for the collection of checks, drafts, notes, and bills of exchange drawn only upon banks outside the locality in which such agency is conducted: *Provided further*, That the sole purpose of such agency be to save collection expense to the members in making such collections and that neither such agency nor any of the members thereof shall engage in any of the prohibited acts specified in this or in the next preceding paragraphs.

"No national bank shall act as clearing agent for any other national bank or for any other bank or for any trust company that is eligible to membership in said association in the same city, town, or other place in which such national bank is located in the collection of checks, drafts, notes, or bills of exchange drawn on any other bank or on any trust company in such city, town, or place, and no national bank shall clear through or collect through any other bank or any trust company in the same city, town, or other place in which such national bank is located any checks, drafts, notes, or bills of exchange drawn on any other bank or on any trust company in such city, town, or place.

"No national bank, State bank, or trust company holding stock in a Federal reserve bank shall make or enter into any agreement, arrangement, or understanding with any other bank or with any trust company having the purpose or effect of regulating its charges for collecting checks, drafts, notes, or bills of exchange for its customers or of fixing or regulating rates of interest or discount on such loans to customers or to others, or the rates of interest allowed by it to such customers on deposits or rates of exchange.

"That no national bank, State bank, or trust company holding stock in a Federal reserve bank shall knowingly enter into any agreement or arrangement with or lend money or credit to or on account of any person or corporation for use in connection with or to aid in participating in any combination, conspiracy, trust, agreement, contract, or understanding intended to or which shall have the effect to control, regulate, or affect the price or supply of any commodity or article of commerce in, or that is to be imported into, any part of the United States or subject territory; nor shall any such bank knowingly lend or advance any money or credit upon any securities issued pursuant to such combination, conspiracy, trust, agreement, contract, or understanding or in furtherance thereof or in connection therewith.

"Section 5144 of the Revised Statutes is hereby amended so as to read as follows:

"SEC. 5144. Election of directors; cumulative voting: At all elections of shareholders for directors each shareholder shall be entitled to as many votes as are equal to the number of his shares of stock multiplied by the number of directors to be elected. He may cast all of such

votes for a single director or may distribute them among the number to be voted for, or among any two or more of them, as he may see fit. In deciding all other questions at a meeting of shareholders, each shareholder shall be entitled to one vote on each share of stock held by him. Shareholders may vote by proxy, but no officer, clerk, teller, or book-keeper of such association shall act as proxy and no shareholder whose liability is past due and unpaid shall be allowed to vote. Every shareholder of a national bank heretofore formed shall hereafter exercise his right of voting according to the provisions of this act. No national bank shall accept or hold as security or collateral for any loan, discount, or advance made or negotiated by or with it or otherwise shares of stock or voting trust or other certificates representing any beneficial interest in any corporation unless there shall have been secured and reserved to the stockholders of such corporation the right of representation by cumulative voting as hereby defined.

"There shall be added to the national banking act, immediately following section 5144 of the Revised Statutes, as hereby amended, a section to be known as section 5144a, which shall read as follows:

"SEC. 5144a. Every person voting at any meeting of shareholders for the election of directors, previous to casting his vote, whether such vote be cast in person or by proxy, shall file with the inspectors of election a statement in the following form (the blanks being properly filled in):

"I reside in _____. I am the owner of record upon the books of _____ Bank of _____ shares of the stock of said bank, and have been the registered and beneficial owner in my own name and right for upward of 90 days next preceding the date hereof of the aforesaid number of shares of stock, for which I desire to cast my vote at the election for directors to be held on _____, or on any adjourned day of said meeting. I do not hold said stock in trust for or for the benefit of any person other than as appears on the face of the certificate of stock held by me and as registered on the books of the association, and no person or corporation other than as appears upon the face of said certificate and upon said books has any beneficial interest in any of said shares or in the proceeds thereof. I have not been paid or promised any money, compensation, inducement, or reward for my vote or proxy or as an inducement to me to cast such vote or give such proxy.

"Section 5145 of the Revised Statutes is hereby amended so as to read as follows:

"SEC. 5145. The affairs of each association shall be managed by not less than 5 nor more than 13 directors, who shall be elected by the shareholders at a meeting to be held at any time before the association is authorized by the Comptroller of the Currency to commence the business of banking, and afterwards at meetings to be held at such time in January of each year as is specified therein in the articles of association. The directors shall hold office for one year and until their successors are elected and have qualified.

"Section 5146 of the Revised Statutes is hereby amended so as to read as follows:

"SEC. 5146. Every director must during his whole term of service be a citizen of the United States, and at least three-fourths of the directors must have resided in the State, Territory, or District in which the association is located for at least one year immediately preceding their election, and must be residents therein during their continuance in office; and for not less than three months next preceding the date of his election each director must be and he must remain during his entire term of office the registered and sole beneficial owner and holder, in his own name and right, and free from debt or claim, of at least 1 per cent of the then outstanding capital stock of the association of which he is a director: *Provided, however*, That if the capital of the bank shall not exceed \$100,000 he must own in his own beneficial right and interest not less than 10 shares of such capital stock. The directors may be voted and paid such fees, salaries, or compensation for their services as shall from time to time be prescribed by the stockholders.

"No officer or director of a national bank, State bank, or trust company holding stock in a Federal reserve bank shall receive or be beneficiary, either directly or indirectly, of any fee, brokerage, commission, gratuity, or other consideration or inducement other than the salary or other compensation that shall have been voted him by the stockholders, for or on account of any loan, purchase, sale, payment, exchange, or transaction made by or on behalf of a national bank of which he is such officer or director.

"No officer or director of a national bank, State bank, or trust company holding stock in a Federal reserve bank shall be an officer or director of any other bank or of any trust company or other financial or other corporation or institution, whether organized under State or Federal law, that is authorized to receive moneys on deposit or that is engaged in the business of loaning money on collateral or in buying and selling securities except as in this section provided; and no person shall be an officer or director of any national bank who is a private banker or a member of a firm or partnership of bankers that is engaged in the business of receiving deposits: *Provided*, That such bank, trust company, financial institution, banker, or firm of bankers is located at or engaged in business at or in the same city, town, or village as that in which such national bank is located or engaged in business: *Provided further*, That a director of a national bank or a partner of such director may be an officer or director of not more than one trust company organized by the laws of the State in which such national bank is engaged in business and doing business at the same place.

"No national bank, State bank, or trust company holding stock in a Federal reserve bank shall lend or advance money or credit or purchase or discount any promissory note, draft, bill of exchange, or other evidence of debt bearing the signature or indorsement of any of its officers or of any partnership of which such officer is a member, directly or indirectly, or of any corporation in which such officer owns or has a beneficial interest of upward of 10 per cent of the capital stock, or lend or advance money or credit to, for or on behalf of any such officer or of any such partnership or corporation, or purchase any security from any such officer or of or from any partnership or corporation of which such officer is a member or in which he is financially interested as herein specified or of any corporation of which any of its officers is an officer at the time of such transaction.

"No national bank, State bank, or trust company holding stock in a Federal reserve bank shall lend or advance money or credit or purchase or discount any promissory note, draft, bill of exchange, or other evidence of debt bearing the signature or indorsement of any director or for his benefit, or purchase any bond, note, debenture, or other security or obligation, or make or enter into any contract or agreement involving a profit or the payment of money or other valuable consideration to any director or to any firm of which such director is a partner or in which he is interested or of any corporation of which such director owns or controls, directly or indirectly, upward of 10 per cent of the share capital, unless and until previous written notice of such

intended transaction shall have been given to all the directors, nor unless action thereon shall first have been taken at a meeting of the board of directors duly called for the purpose and all the facts and details of the transaction have been first recorded on the minutes of such meeting.

"No officer or director of any national bank, State bank, or trust company holding stock in a Federal reserve bank, and no firm or partnership of which any such officer or director is a member, shall be directly or indirectly beneficially interested or concerned in any guaranty, underwriting, syndicate, or other agreement or arrangement or understanding involving the purchase or sale of any securities which shall be purchased, sold, or dealt in by such bank and no such bank and no officer or director thereof shall knowingly purchase or sell or assent to the purchase or sale of any such securities.

"No national bank, State bank, or trust company holding stock in a Federal reserve bank shall engage in or be or become directly or indirectly interested in or connected with any promotion, guaranty, or underwriting involving the purchase, sale, or disposition of the securities of any corporation, or make any agreement with respect thereto, or shall either alone or jointly with others offer any securities for sale by public advertisement or otherwise, or make or cause to be made or issued any statement or representation with respect to any such security: *Provided, however*, That nothing herein contained shall be construed to interfere with the disposition by such bank at public or private sale of securities or interests therein that may have been acquired by it as security for loans of money made by such bank or to which it may have derived title in the current conduct of its business of loaning money on collateral.

"No shares of stock of any national bank, State bank, or trust company holding stock in a Federal reserve bank shall be held by any other bank or by any trust company or other financial institution or corporation or in trust for any such bank, trust company, or other financial institution or corporation that is authorized to receive deposits of money or to engage in the general business of banking or to buy and sell securities.

"It shall be unlawful for any officer or director of a national bank, State bank, or trust company holding stock in a Federal reserve bank to be an officer or director of any other bank or other financial corporation that has a substantially identical management, officers, or directors as such bank or other financial corporation or of any corporation the shares of which can be bought or sold only in conjunction with the shares of such national bank or that is so related to the bank or its officers by identity or similarity of interest or management as to amount in effect to a control by either of such corporations or of the operations or management thereof by the other or by the interests that control, operate, or manage the other.

"That any national bank, State bank, or trust company holding stock in a Federal reserve bank and any officer or director or other person violating any of the provisions of this act and any officer or director thereof assenting to such violation, shall be guilty of a misdemeanor, and upon conviction shall be fined not exceeding \$5,000; and any such officer, director, or other person may also be imprisoned not exceeding two years."

Mr. MURDOCK. Mr. Chairman, the amendment which I offer applies specifically to this bill—the banking-reform recommendations made by the Democratic members of the Pujo Money Trust investigation.

The recommendations which were made by the Pujo committee have been altered by me so that they apply and conform to this section of the bill. Chief among those recommendations, first, is a prohibition against the consolidation of banks unless the consolidation has been approved by the comptroller as in the public interest.

Second, and of equal importance with that, is a prohibition specifically preventing interlocking stock holdings among banks. Third, a provision in the amendment which I have submitted prohibits the creation of voting trusts. A voting trust is a device whereby the stock of banks is transferred to a trustee wholly for voting purposes. A fourth provision in the amendment which I have offered seeks protection for minority stockholders by permitting the minority stockholders in electing directors to cast all their votes for one director; that is, by the plan of allowing each shareholder to cast as many votes for one director as he has shares multiplied by the number of directors.

Still another, a fifth, proposition is a specific prohibition against banks promoting and underwriting corporation securities; and, finally, there is included in the long list of prohibitions which are recommended as a part of the urgent banking-reform program of the Pujo committee one prohibiting interlocking directorates. This, in the opinion of the Democrats of that committee, was the paramount reform. In the report the Democrats said of this latter prohibition, with all emphasis:

No person should be permitted to be a director in more than one national bank serving the same community or locality, nor should any person who is a director of any State bank or trust company, or is a partner or associate of any private banker or banking firm, be eligible as a director of any national bank serving the same community or locality, except that a director in a national bank may have one partner who is a director in a trust company.

Now, this amendment which I have put before the House gives specifically and in terms a remedy for the great national trouble, which is concentration of credit in the hands of a few men down in New York. These amendments put a hand on the sore spot. It is the work of all the Democratic members of the Pujo Money Trust investigation. They wrote the amendments which I have placed before the committee. They were designed to bring actual remedy and relief against the Money Trust.

The Glass bill will give elasticity to the currency. I think there is no question about that. That is its design. There will follow upon its enactment possibly an embarrassing contraction in the currency, and later possibly an equally embarrassing expansion. However, the bill will in the long run bring elasticity, but it will not cure the thing we are trying to remedy in this country. It will not reach the vicious banking practices in New York City which the Pujo committee identified and gave specific remedy for. This amendment does it specifically and in terms. The firms of Kuhn, Loeb & Co.; Kidder, Peabody & Co.; Lee Higginson & Co.; the City National Bank; and the First National Bank; and the banking house of Morgan & Co., in New York, are not concerned with your currency bill. They are not afraid of it, but they are afraid of the amendment which I have submitted. Your bill does not reach their game; my amendment does. That amendment carries specifically prohibitions against the practices of these concerns. If it is enacted as a part of this law, it will go to the evil directly and to the relief of business and to the welfare of the people. It is of the utmost importance that it be adopted and adopted now.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

Mr. GLASS. Mr. Chairman, in lieu of any answer of my own I might make to the gentleman from Kansas, I want to call attention to the fact again that the gentleman who had most to do with inspiring the Money Trust investigation, so called, and the gentleman who apparently had most to do with the prosecution of the Money Trust inquiry, was Mr. Samuel Untermyer, who was the employed attorney of the Pujo committee. Mr. Untermyer, on this subject, says:

I am most anxious to see currency legislation enacted at the present session, and have repeatedly so expressed myself when approached on the subject by Members of Congress. I do not believe that it should be complicated or made the subject of controversy by linking with it the proposed bills recommended by the Pujo committee. They can well await the regular session, where they can secure the study and discussion to which their importance entitles them. They embody essential reforms in our archaic banking laws and financial system, and I have no doubt of their eventual passage, but they have no necessary relation to currency.

Prompt action on the currency is of paramount importance at the moment to offset the temporary disturbances that will necessarily accompany the enactment of the tariff bill. Nothing will do so much to stimulate business confidence. Nobody but a vicious marplot would deliberately seek to delay or complicate that result under the existing tense and delicate conditions, which demand immediate relief.

That is all I have to say.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

Mr. HELM. Mr. Chairman, as one of those Democrats in the caucus who was in favor of the amendment proposed, preventing the interlocking directorates, it is not inappropriate for me on this occasion to express my views on that subject. I heartily agree that there are many abuses and vices interlinked with the banking business of this country that need remedial legislation. But I am one of those who, after taking sober second thought, have come to the conclusion that it would be unwise to hit the country with the tremendous jar that would be inflicted upon it if all the legislation that is required to be enacted to put an end to this evil were put into this bill. I am not one of those who believe in putting too much talcum powder, so to speak, upon this bill in order to give it a delightful odor or an enticing appearance to the bankers. But, as was said with respect to the tariff bill, conditions had advanced to the point where a sudden reduction of every rate in every schedule of the tariff would have had an unwholesome effect upon the business conditions of the country, so in the enactment of this bill, if you go to the limit that ought to be gone to, a similar result would take place. So it seems to me that it is unwise, and I feel that I have a right, as a Democrat who has supported, in the caucus, the amendment in part that is now offered on the floor and to make these observations to the House.

I want to congratulate the chairman of this committee [Mr. GLASS] upon this great piece of legislation that he has presented to the country. To my mind it is virtually an insurance policy against the panics that have been lowering over this country; and if no other result can be accomplished than that panics shall be made a tradition of the past, this bill will merit the commendation of the people and the praise that is due to the chairman for this great piece of constructive legislation.

There are few calamities worse than panics, war, pestilence, and famine, and if legislation can be enacted that will forever put behind us these panics that occur with almost periodical certainty then the Democratic Party will have done for the country a service that can not be estimated in value. The panic of 1907 came ahead of schedule time, and, mark you, when the

big bankers and financiers of New York had a free hand and were unhampered by control, not even by the law of the land, they violated every statute relating to banking. Every panic that has afflicted the country came when the bankers were in control. With this scandal fresh in the minds of the people, before the shock has scarcely dissipated, they are still insisting on retaining this unbridled power and are vehemently protesting against the provisions in this bill, which is but an effort to arrest just what happened in 1907.

No one who analyzes the 1907 panic will insist that "the keys of credit" were then in the proper hands. Every element and condition that usually superinduce panic were notably absent; crops had been superabundant, factories were running overtime, the volume of freight was greater than railroads could handle. The captains of industry became involved through different groups of banks in a titanic struggle for "the keys of credit," throwing safe and sane business to the winds, each striving to grasp and control more than the other when the crash came.

In the light of that unhappy and unfortunate event, I am forced to the conclusion that the Democratic Party would be unfaithful to the people and derelict in its duty to them to permit "the keys of credit" to remain where they are at present.

I admit that at first blush I entertain serious misgivings at the powers conferred on the Federal board of control, and it was quite difficult to keep Jackson out of my mind; but after closer study and examination, as well as by facts unfolded in the arguments of those presenting the bill, my apprehension and fears have been allayed. Most of the powers conferred on the board have been exercised for half a century by the Secretary of the Treasury and Comptroller of the Currency, as stated by the distinguished chairman of the Banking and Currency Committee. With me the conclusion is irresistible that it would be well-nigh impossible to obtain worse results than present practices and methods yield. In fact the bulk of the criticism is directed at those in whose hands the control is placed, while it appears to be generally conceded that the Government should have a voice in a function indissolubly linked with the welfare and prosperity of all the people.

The system may not be ideal; it can and doubtless will be improved when put to actual test and into operation. Even the inventor does not claim precision for his initial model. The time has arrived for the passage of such a measure as the one under consideration. The present system does not meet the requirements of modern business and times—it is behind the times. The hands of the clock must from time to time be moved up in order to keep pace with the increasing volume of business. With the Government exercising wholesome supervision and control, with provision made for the issue of notes amply secured, as acceptable by the people as the present bank note, the business of the country will be given an impetus of confidence and security that will dispel the dire forebodings that have been so often heralded to the country by the Republican calamity howlers. Already a better tone is noticeable in many business features.

The necessity of increasing under existing law the bonded indebtedness of the Government and the ever-increasing interest charge on the people in order to enlarge the issue of bank notes, either for the purpose of meeting the increasing volume of commercial activity or to meet an emergency in the times of stress, is a practice distinctively American. It was devised during the Civil War to give value and stability to the Government bonds, the better and easier to finance that war. Whatever merit may be claimed for the bond-secured currency, it is generally agreed that it should be retired and a less rigid basis adopted that will permit banks both to issue and contract their note issue freely and promptly, thereby making the banking system responsive to the needs of business. The 1907 panic among other things demonstrated and brought to the surface the inavailability of the bond-secured currency in times of emergency. The banks, who are the principal holders of the Government bonds with the privilege of circulation issue, are apprehensive of any further issue of this type of bond commensurate with the anticipated increase of commercial expansion, because such an issue will tend to depreciate the value of the outstanding bonds.

The transition from the bond-secured note to the Federal-secured note appears to be abundantly safeguarded, and the change will be effected without shock or jar when the system and machinery for so doing has been unfolded to and understood by the bankers and the people generally. Their soundness is established by the fact that they are made the obligation of the Government. They are based on the cream of the commercial paper acquired by the member banks, indorsed by said banks to the Federal reserve banks, and reinforced by a first lien on all the assets of the Federal reserve banks issuing them. Before the Federal reserve bank can issue these notes it must

segregate in the vaults of its bank 33½ per cent of its lawful money. They are redeemable in gold or lawful money at any Federal reserve bank or the Treasury of the United States. These notes being issued on short-time prime commercial paper, rediscounted, will flow back to the Federal bank that issued them at the maturity of the paper, thus causing either a shrinkage of the notes themselves or an equal amount of lawful money. Thus there will be a continual ebb and flow, regulated by the board, meeting the demands and need of trade.

The 12 Federal reserve banks will be like so many reservoirs, from which aid can be secured, especially in time of danger or trouble—virtually an insurance policy against panics, as I have before stated. They will be a great improvement over the present awkward and unwieldy system recently adopted by the Secretary of the Treasury for disbursing funds during crop-moving periods. They will relieve the inland banker from the necessity of paying the Wall Street banks unjust and unreasonable bonuses for their own money on deposit with them. The present system, if it has not been conducive of has at least failed in every period of distress.

Convinced that the control by the Government provided for in the bill will be exercised in a patriotic and wholesome manner, that the overshadowing fear of panics will disappear as mist before the rising sun, I shall unhesitatingly support the bill.

These are history-making days. They are glorious days for the Democratic Party. The work of this branch of Congress will soon come to a close. Perhaps by the close of this week a tariff bill will have been signed that will bring joy and gladness to countless millions of the consumers in the United States—

Mr. MANN. In Europe. [Laughter on the Republican side.]

Mr. HELM. The Republicans are routed. They have but one last squawk to give, and that is their caucus howl. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. HELM. Mr. Chairman, I would like to have two minutes more.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent that he may proceed for two minutes more. Is there objection?

There was no objection.

Mr. HELM. The country is interested in the result of this legislation. You can not expect that the people will listen to your wail or squawk when you say that a tariff bill that has in it sufficient merit to win the support of the very file leaders and spearheads of the Progressive Party, Senators LA FOLLETTE and POINDEXTER, was written in a Democratic caucus. The teamwork that the Democrats have presented to you has filled you with dismay and consternation. This currency bill, although written in a Democratic caucus, will, if my predictions for it prove to be true, make panics a thing of the past. Your last parting wail will cut no ice with the American people. They will commend the action of the Democratic Party in presenting to the country legislation that will bring gladness to the hearts of countless millions of American people when this session of Congress closes. [Applause on the Democratic side.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

Mr. DYER. Mr. Chairman, I desire to submit a portion of a letter, to be read by the Clerk, written by one of the leading bankers of my district, a distinguished Democrat, upon what he thinks of a portion of this bill, in answer to some of the eloquent arguments of the gentleman from Kentucky [Mr. HELM].

The CHAIRMAN. Without objection, the Clerk will read.

The Clerk read as follows:

The bill, in my judgment, contains three or four fundamental and serious objections, which unless rectified will have a decidedly detrimental effect upon the commerce of the country:

First. Federal control is un-American and contains all the evidence of a force bill.

Second. Compulsory purchase of stock by banks is arbitrarily taking from the stockholders of the various national banks part of their funds without proper compensation.

Third. Issuance of the notes by the Government is fundamentally wrong and dangerous.

Fourth. The reserve features will bring about a contraction of credit which I think will be injurious to the commercial community.

I happened to be a member of the resolutions committee of 16 at the Chicago conference, which drew up the report setting forth what we considered good suggestions, and this report and my comments were made entirely in a friendly spirit and with no idea of trying to antagonize the "powers that be," but merely setting forth what we thought were the fundamental objections to the bill and corrections to be made.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas.

Mr. ALEXANDER. Mr. Chairman, I move to strike out the last word. In connection with the letter read by my colleague from Missouri [Mr. DYER], I wish to have read a letter received by me from a distinguished Republican in my district, who rep-

resented the old tenth district in Missouri in this House more than 30 years ago. He is a distinguished lawyer and has been a successful banker for many years. I ask to have the Clerk read the letter.

The CHAIRMAN. If there be no objection, the Clerk will read.

The Clerk read as follows:

HON. J. W. ALEXANDER,
Washington, D. C.
PRINCETON, Mo., September 1, 1913.

DEAR SIR: I am pleased to acknowledge your courtesy in sending me a copy of the administration currency bill, with a request for my opinion of it. While I do not flatter myself that my opinion would be of value to anyone, I have no objection to stating it. I have long felt that legislation on this subject was badly needed.

We have been doing business under a system enacted during the Civil War, well designed for that crisis when the Government had to borrow money and sell bonds, but not suitable to any period since the end of the Civil War.

I have read this administration bill with some care and have also read much criticism of it by bankers and others.

However, I have never changed the opinion I at first formed, that it is an excellent bill and, if enacted, will be of great benefit to all legitimate business. I sincerely hope it will become a law.

That experience under its operation will develop some defects that can be amended by further legislation is not improbable. The subject is too vast and complicated to foresee everything.

While there is considerable difference of opinion as to the merits of the bill, I do not believe it possible to devise one that will satisfy more people than this one does.

With best wishes and highest regard, I am,

Truly, yours,

IRA B. HYDE.

Mr. PEPPER, Mr. THOMPSON of Oklahoma, and Mr. GLASS rose.

The CHAIRMAN. Does the gentleman from Oklahoma desire to oppose the amendment?

Mr. THOMPSON of Oklahoma. I will move to strike out the last 4 words, or the last 10 words, if it is necessary, in order to get time here.

The CHAIRMAN. The gentleman from Oklahoma is recognized.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I do not care to get in right now, if somebody else wants to discuss the matter. I want to have the amendment reported. I do not know whether I want to talk now or not.

The CHAIRMAN. Without unanimous consent the amendment can not be reported at this time, because the gentleman from Kansas [Mr. MURDOCK] obtained unanimous consent that it be not read.

Mr. THOMPSON of Oklahoma. Then I will withdraw for the present.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on this proposed amendment be concluded at 1 o'clock.

Mr. CLARK of Missouri. Mr. Chairman, I should like to have about one or two minutes.

Mr. GLASS. I withdraw the proposition.

Mr. CLARK of Missouri. I do not object to the limitation, as I do not want more than two minutes.

Mr. THOMPSON of Oklahoma. I shall object, unless I get time to make my talk.

Mr. GLASS. I withdraw the request.

Mr. PEPPER. Mr. Chairman, in order not to have before me the fear of the gavel, I ask unanimous consent that I may proceed for 10 minutes, or so much thereof as I may desire to use.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that he may proceed for 10 minutes. Is there objection?

Mr. MANN. On his amendment?

Mr. PEPPER. On the amendment to strike out the last two words.

Mr. MANN. I do not think that is important enough to take 10 minutes upon. If that is what the gentleman wants to talk about I shall object.

Mr. PEPPER. I can not tell you all that I am going to talk about until I get through. I may make some changes in the course of my remarks.

Mr. MANN. Then the gentleman had better take five minutes first.

Mr. PEPPER. If the gentleman from Illinois wants to object, all right.

The CHAIRMAN. The gentleman from Illinois objects. The gentleman from Iowa is recognized for five minutes.

Mr. PEPPER. Mr. Chairman, I have taken this opportunity, in the first place, to call attention to an editorial which appeared in one of the leading Progressive-Republican papers in my State—the Register and Leader, of Des Moines, Iowa. The subject of the editorial is so pertinent to the character of the criticisms that have been urged against the banking and currency bill that I ask the Clerk to read this editorial from the desk as indicative of the sentiment of the Progressive-Republicans of the State of Iowa and of the Middle West. I ask that it be read in my time.

The CHAIRMAN. If there be no objection, the Clerk will read.

The Clerk read as follows:

CONGRESSMAN ANDERSON'S TROUBLES.

It will be hard for the people at large to take Mr. ANDERSON and his retirement from the Ways and Means Committee of the House quite so seriously as Mr. ANDERSON very evidently takes it.

Even the most partisan adherent of the Minnesota Congressman, as he reads his bitter protest, "I have had no part in the framing of the tariff bill which passed the House and the Senate. I shall have none. I am overwhelmed, discouraged, disheartened by the uselessness and fruitlessness of it all," will not fail to ask himself just what part Democratic Congressmen on the same committee had in framing tariff bills under Speakers Reed or Henderson or Cannon?

But Mr. ANDERSON, in a way that he does not appreciate, has rendered a service by calling attention to the fiction under which Congress is organized and pretends to work, a fiction that has been responsible for a lot of wrong thinking about Congress and national legislation.

There is no reason why Mr. ANDERSON, as a Republican, should have any part in framing the tariff bill of a Democratic administration, or should expect to have a part, and the pretense to the contrary not only has misled him, but is misleading many other people.

The tariff bill under a Democratic administration should be framed by Democrats, and the committee having the work in hand should act much as an English cabinet acts. The bill, when it is presented to the legislative body, should be a distinctly administration measure, to be criticized and picked to pieces if possible by the opposition, but not to be framed by the opposition.

This is the strong feature of President Wilson's leadership thus far, that he has seen plainly that an administration must have leadership, and that that leadership must be the leadership the people have decreed. The President and his friends promised to give the country a Democratic tariff. That is exactly what they have done.

It may be a bad tariff, but it marks a distinct triumph for popular government.

[Applause on the Democratic side.]

Mr. MURDOCK. From what paper is that?

Mr. PEPPER. The Register and Leader, of Des Moines, Iowa.

Mr. MANN. Who is the editor?

Mr. MURDOCK. Who is the editor?

Mr. PEPPER. Mr. Harvey Ingham is the editor, and the paper is owned by Mr. Gardner Cowles, as I understand.

Mr. MURDOCK. What is its politics?

Mr. PEPPER. In the last campaign it supported Theodore Roosevelt. [Applause and laughter on the Democratic side.]

Mr. MOORE. What purpose did the gentleman have in causing this to be read?

Mr. PEPPER. If the gentleman will permit me, I expect to call attention to the significance of this editorial as bearing on the debate here on the currency bill.

Mr. MOORE. The gentleman intended to comment upon it?

Mr. PEPPER. I hope to; yes.

Mr. MOORE. All right, go ahead.

Mr. PEPPER. I want to say that the significant thing about this debate on the banking and currency bill, to my mind, is the fact that there have not been any real, genuine objections to the bill as a whole.

Some of you have said that it ought to be amended in certain particulars, but no one I have heard has said that it is essentially a bad bill. The criticism of the bill that has come from the other side is because this bill is presented by the Democrats as a party.

I do not propose to make any apologies for the caucus. Like a great many other devices of man, the evil incident to it, if any, consists in the abuse of it rather than in the use of it.

I simply want at this time to call attention to the fact that those who are now criticizing the caucus are, in part at least, responsible for it. Of course the Republican Party has become merely a party of negation. Their legislative function at this time, and perhaps for years to come, is merely to criticize and condemn. They can now "view with alarm" while we "point with pride" for a while. Ours is a Government by political parties. Our people for a hundred years have been taught to hold responsible that political party which is in a majority in the legislative body. This responsibility is a strictly party responsibility, and in the present instance I see abundant evidence of the disposition on the part of our Republican and Progressive friends to hold us Democrats to strict account as a party.

In every case where there is responsibility there must be an equal amount of power.

The Democratic Party, to be held justly responsible for legislation, must have power as a party to perfect and execute its legislative duties. In order to have that necessary power it must not only have adequate numbers, but it must have cohesion and solidarity. In order to have cohesion and solidarity it must meet and confer, it must thrash out its differences, and be able to act as a party in fact as well as in name. Hence the necessity and the advisability of a caucus.

There is a lot of insincerity and demagoguery in this attack on the Democratic caucus. I have no doubt some men are sincere in their vehement criticisms, but I venture the prediction that if either the Progressive or the Republican Party were suddenly placed in power in this House and charged with the

responsibility of legislation, the first thing they would do would be to call a caucus of their members. It would be the natural and the sensible thing to do. It would be the only way they could accomplish results. And, after all, the people are principally interested in results. It is results that the Democratic Party is interested in.

We have been commissioned by the people to relieve them from the burden of exorbitant and unjust tariff taxation; to reform and perfect the currency system; to eradicate the oppression of trusts and illegal combinations; to solve the intricate and complex problems involved in transportation; and as to all of these and other questions we have accepted in good faith, as a party, our full measure of responsibility.

If we fail in all or any one of them, we expect to be held, as a party, responsible for our failure; and in such case, if I am any judge of men and measures, the very men who now criticize our party solidarity would be the first to claim and argue that the Democratic Party should be held responsible.

Why, it was but a few years ago that the argument was frequently made by Republican editors and orators that the Democrats should not be placed in power because we were a disorganized and discordant party, not in sufficient agreement upon public questions to safely run the affairs of the Government. And now, when we are demonstrating our unity of action and our splendid capabilities, they complain that we are adhering too close to party lines. All of which goes to show that it is impossible to please or satisfy some people.

So I say, in spite of all that may be said against a party caucus, secret or otherwise, the old saying remains as true as ever, "By their fruits ye shall know them."

The fruit of a Democratic caucus thus far has been a tariff bill which will lift from the backs of the American people an enormous and heavy load of taxation, a bill so good that it received in the House the support of a number of progressive Republicans and in the Senate received the vote of the entire Progressive Party in that body, together with the vote of a distinguished and recent Republican candidate for President, Senator LA FOLLETTE.

In addition to our splendid tariff bill, the caucus has brought forth a banking and currency bill that is admittedly the best bill upon the subject ever written; a bill that has thus far received more general and widespread support than any similar measure ever before Congress.

It has stood the severe test of public debate and critical examination, and bids fair soon to become a law. It is a bill written in the interest of all the people. It extends no special privileges to anyone, and hence is unjust to no one. It is a solution of the most difficult and perplexing problem that has ever been presented to the American Congress.

And so I say to our Republican and Progressive critics, judged by the standard of results our legislative procedure here is abundantly justified.

We are engaged in the laudable and praiseworthy enterprise of carrying out the people's will. We expect to continue in the good work. In the years to come we will appeal with confident assurance to the deliberate judgment of the American people as to our stewardship.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. PEPPER. Mr. Chairman, I would like five minutes more.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that his time be extended five minutes.

Mr. MANN. Mr. Chairman, reserving the right to object, the gentleman in charge of the bill, Mr. GLASS, as I understand, desires to finish the consideration of the currency bill before the conference report on the tariff bill comes to the House, so that all Members may be convened as far as possible. The speech of the gentleman from Iowa so far is out of order. It is perfectly patent that if we take up the subject of caucus rule we can discuss it for two or three days and not touch the currency bill. Unless we can be assured that debate will continue long enough for us to present the amendments we desire, I shall object to extraneous matter being inserted to cut off the real consideration of the bill.

Mr. PEPPER. Mr. Chairman, as far as I am concerned, I do not believe that I have delayed the consideration of this bill very much.

Mr. MANN. The gentleman has interjected a question here which, unless he is stopped, will start a discussion that will last all the afternoon without reading a further line of the bill. I am perfectly willing to do that if we can be assured that the debate will last long enough for us to present our amendments, but I am not willing that gentlemen shall be shut out from offering amendments in order that men may talk politics.

Mr. CLARK of Missouri. Mr. Chairman, I do not want to make a speech, but I desire to make a statement in three or four

sentences in answer to the letter or interview that my colleague, Mr. DYER, had read. That was from Festus J. Wade, a Democrat, of St. Louis.

Mr. DYER. Will the gentleman yield?

Mr. CLARK of Missouri. Certainly.

Mr. DYER. I will say to the gentleman that it was not from Festus J. Wade.

Mr. CLARK of Missouri. Whoever wrote that borrowed bodily what Mr. Wade said, because I read it in the newspaper. Now, Mr. Wade is an eminent banker and citizen of St. Louis. I had a letter from John C. Roberts, and I quote the letter because he also had an editorial in the St. Louis Star, of which he is the owner. He is the biggest shoe manufacturer on the face of the earth. He is a business man of high standing. He wrote me a letter in which he inclosed a copy of the letter that he had written to the President of the United States. He also sent the letter and the editorial from his paper. He said that these men from St. Louis, along with the rest of the bankers at Chicago, that objected to this bill did not represent the bankers of St. Louis or the business men; that as far as he could ascertain the overwhelming sentiment among both the bankers and the business men of St. Louis was to pass this bill, or one very much like it, and do it as quickly as they could.

That is my position about it. There are some features of the bill that I would have written entirely different if I had been writing it, but these gentlemen have worked on this bill a long time; the caucus devoted three weeks to its discussion, and we have discussed it here for nearly two weeks and the result is the present bill. I do not believe there is a man on the floor of this House that does not believe that a majority of the people of the United States believe that this bill is an improvement on the patchwork law that we have now on the statute book. [Applause.]

I merely state this to set right the public opinion as to St. Louis.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I ask unanimous consent that the amendment be again reported.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent that the amendment be again reported. Is there objection?

Mr. MANN. I object.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas.

Mr. THOMPSON of Oklahoma. Mr. Chairman, how many words is it necessary for me to strike out in order to obtain the floor?

The CHAIRMAN. Three.

Mr. THOMPSON of Oklahoma. Mr. Chairman, then I move to strike out three words. I regret that objection has been made so that this amendment could not be again reported, because I do not know whether this is exactly the place in the bill that I want to talk about or not. I do know that there are certain things in the bill that I do not favor, and there are certain things that are left out of the bill that I would like to see placed in the bill. My understanding is—I came in the Chamber after the amendment was offered—that it refers to interlocking directorates.

Mr. MURDOCK. That is correct.

Mr. THOMPSON of Oklahoma. Mr. Chairman, if that is correct, I want to talk right here. I agree with everything that has been said by the great Speaker of this House, Mr. CLARK, who has just taken his seat, when he said:

There are some features of the bill that I would have written entirely different if I had been writing it, but these gentlemen have worked on this bill a long time. The caucus devoted three weeks to its discussion, and we have discussed it here for nearly two weeks, and the result is the present bill. I do not believe there is a man on the floor of this House that does not think that a majority of the people of the United States believe that this bill is an improvement on the patchwork law we have now on the statute books.

I am not one of those, Mr. Chairman, who supported his candidacy for the Presidency last year. He is here in the House, and he can hear what I say. I have nothing to say behind a man's back that I will not say in front of his face, but since I have come into this House I have learned to love him and to regard him as one of the great statesmen of this Republic. [Applause.]

It does not make any difference to me whether others may approve or criticize what I say when I think I am right; for, regardless of praise or disapproval, I am going to stand by what I think is right [applause], and in the interest of the people of this Republic, and in the interest of the people that I represent in Oklahoma, regardless of what any man or set of men may say. [Renewed applause.]

Mr. Chairman, I was one of those who supported in the primary in Oklahoma the candidacy of Woodrow Wilson for the Presidency. I thought I was right when I did so, and since he has been inaugurated, and since I have come to know him

better, I do not regret the humble part I bore in giving him one-half of Oklahoma's delegation to the national convention at Baltimore. The better I have become acquainted with him the more I have learned to trust and believe that his every impulse is for the betterment of the condition of the common people, the working people, the laborers and farmers, who make up the greater part of the population of this great Republic. [Applause.]

While this is true, the President also believes in protecting all the people in all their lawful rights. I also believe in this. I do not believe this bill takes care of all the different classes of our people to the same extent. For this reason, while I shall vote for the passage of the bill, I think it should have contained other provisions.

Mr. Chairman, within the limited time which I have at my disposal I can not say all that I desired to say on this banking and currency bill, but I have jotted down a few subjects here that I want to talk about, and I want to talk about them during the time I have at my disposal, and I hope that no one will interrupt me. I am going to vote for the passage of this bill, but I reserved the right in the Democratic caucus to vote for certain amendments if they were proposed upon the floor, and I shall do so. I shall vote for a provision against interlocking directorates. I shall vote for a provision prohibiting rediscounting of commercial paper, the proceeds of which are to be used on the stock exchange for purchasing futures on staple farm products and for gambling on the board of trade. I shall vote to extend the time provided in section 14 of the bill from 90 days to 6 months for the maturity of commercial paper secured by staple farm products, so that our farmers' and stockmen's paper will be the subject of rediscount and placed on an equal footing with the paper of Wall Street speculators.

Mr. Chairman, I am a Democrat because I believe in the cardinal principles of my party. I am not a Democrat merely for the purpose of holding office and drawing a salary. If I did not think that I could be of service to the splendid citizenship of the new and growing Commonwealth of Oklahoma I would not be here. I told the people of my State, when I asked them to send me to Congress, that I would at all times and on all occasions stand for certain principles, and I trust it may never be charged against me that the promises I made before the election were broken after I had been sworn into office.

A SECRET CAUCUS.

Before I proceed to a discussion of the bill, however, I desire to say a few things relative to the criticisms that have been made here on the secret caucus.

A caucus is proper and desirable in its place. It has a place, and that place is for the purpose of determining a party policy; but when we come to legislate in caucus it is not right, but, on the contrary, it is against the genius of republican institutions to attempt to do so away from the light of publicity. Publicity never injured a righteous cause, and an unjust cause should and will receive the condemnation of our countrymen if we do not by secret caucus hide it from their view. This is the teaching of the Prince of Peace, for He said:

And this is the condemnation, that light is come into the world, and men loved darkness rather than light, because their deeds were evil.

If the Democratic Party is driven from power at the next election by the American electorate, it will not be because of the enactment of the Underwood tariff bill nor the Glass-Owen currency bill, but it will be because the Democratic Party, like the dead, buried, and forgotten late President of the United States, William H. Taft, convinces the American people by the secret caucus that it doubts the capacity of the people of the United States to rule themselves—doubts their honesty, their patriotism, their intelligence.

It is yet fresh in the minds of the American people how we Democrats denounced Czar Reed and his rules which made of the House of Representatives not the great deliberative and lawmaking body it was intended to be by the makers of our Constitution, but a machine to carry out the wishes of the then Speaker and those in authority with him. The people at the first opportunity resented this un-American plan and spewed from power the Republican Party. When it had again been intrusted with power it forgot the lessons its former defeat ought to have impressed upon it, that the people would not permit the House of Representatives to pass from their control and become the play tool of special privilege and selfish interests. "Joe Cannonism" and "standpatism" became the battle cry we used against the Republican Party in a new fight to restore the House of Representatives to the control of the people.

We declared in our national platform in 1908:

The House of Representatives was designed by the fathers of the Constitution to be the popular branch of our Government, responsive of the public will.

The House of Representatives as controlled in recent years by the Republican Party has ceased to be a deliberative and legislative body, responsive to the will of the majority of its Members, but has come under the absolute domination of the Speaker, who has entire control of its deliberations and powers of legislation.

We have observed with amazement the popular branch of our Federal Government helpless to obtain either the consideration or enactment of measures desired by a majority of its Members.

Legislative control becomes a failure when one Member, in the person of the Speaker, is more powerful than the entire body.

We demand that the House of Representatives shall again become a deliberative body, controlled by a majority of the people's representatives and not by the Speaker; and we pledge ourselves to adopt such rules and regulations to govern the House of Representatives as will enable a majority of its Members to direct its deliberations and control legislation.

We reaffirmed this declaration in our Baltimore platform when we said:

We direct attention to the fact that the Democratic Party's demand for a return to the rule of the people expressed in the national platform four years ago has now become the accepted doctrine of a large majority of the electors. We again remind the country that only by a larger exercise of the reserved power of the people can they protect themselves from the misuse of delegated power and the usurpation of governmental instrumentality by special interests. For this reason the national convention insisted on the overthrow of Cannonism and the inauguration of a system by which the United States Senators could be elected by direct vote. The Democratic Party offers itself to the country as an agency through which the complete overthrow and extirpation of corruption, fraud, and machine rule in American politics can be effected.

The battle cry will soon be heard again in this land, but this time it will arise to plague us if we do not live up to our platform professions. "Legislation by King Caucus" will make a mighty campaign slogan against our party, which has declared in favor of the people's rule.

During the debate on this bill we have heard the rumblings of what in a short time will grow into a mighty protest. Speaker after speaker has complained about the fact that though a banking and currency bill is not a partisan matter—and this we all agree is correct—Mr. GLASS, the very able chairman of the Banking and Currency Committee, in nearly the closing words of his splendid address opening the debate on this bill, used the following language:

We have not desired to approach or consider the question from the standpoint of party politics. It is too universal a problem for that. It is not a matter for party advantage.

I will briefly quote from a few of the membership of this House who, in discussing the bill, have referred to the fact that the bill was prepared in a secret caucus, without a hearing, and away from the gaze of the American people.

Hon. VICTOR MURDOCK, of Kansas, the able leader of the Progressive Party in the House, said:

This measure is the product of the Democratic caucus. It was framed in secret, formed behind closed doors. The element which is most potent and most necessary in this Republic, pitiless publicity, was excluded from its making. Under constitutional guarantees the consideration of the measure should be here in the House of Representatives. But its consideration was not here and will not be here. Behind the closed door of the Democratic caucus, with the people and their vigilance shut out and the representatives of the people shut in, the votes which made this measure what it was were cast. There the measure may have had or it may not have had real consideration. The public, which has a right to know and which can not know unless it knows first hand, will never know. But whatever its consideration in the caucus, its consideration here will be empty and perfunctory. Men will be bound by the caucus and the measure the caucus hands to the House will be the measure, line upon line, precept upon precept, the House will hand to the Senate. It will not be changed. In that stage of the bill's history the public was excluded. In this stage the public is admitted. In the hour when, in the bill's formative period, public opinion might have had its effect the doors were shut in the face of the people. Now, when the formative period has passed and the majority Members are gagged and bound head, hand, and foot by caucus rule, the doors are thrown open to the people. But this bill should be considered here and not in secret caucus. The very essence of the Democracy is light. The greatest enemy the Democracy has is special privilege, and the readiest refuge special privilege has is secrecy.

This is a representative government. The very essence of representation is individual accountability. The representative is responsive and responsible to his people or he is not representative at all. He can not be servant to any other force save his people and remain, in his ability to serve his people, his own master.

The spirit of the Democracy, the genius of the Republic, on this score, must, to survive, be a jealous spirit.

No man can serve two masters. No man can serve his people and the caucus. He will serve either the one or the other. He can not serve both. The secret caucus has no place in this Government. It is most intolerable when it is thrust between the people and their House of Representatives. It is utterly wrong. It is not good practice; it is not good legislation; it is not good government; and the day is coming when, before a storm of indignant public opinion, it is not going to be good politics. [Applause on the Republican side.]

I realize that there is a considerable group of men in the Democratic Party who are fighting to open up the Democratic caucus to the public. They have my heartiest commendation for their efforts. I congratulate them. The vote they cast in the Democratic caucus on April 8, 1913, is one of the most important votes of the present session. Fortunately, and unlike most of the votes in the caucus, it was a recorded vote and, under the rules of the caucus, is available to the public. The proceeding in the caucus was as follows when the question of open caucus came up April 8, 1913. The following resolution in caucus was offered by Mr. SHACKLEFORD:

"Resolved, That this caucus shall be open to the press, to the President, to the Senators, and to the Cabinet officers, and that the Presi-

dent, the Senators, and the Cabinet officers may occupy seats upon the floor."

The following substitute resolution was offered by Mr. CARLIN:
"Resolved, That hereafter all Democratic caucuses or conferences, when called either by the membership or by the chairman of the caucus, shall be open to the public."

Mr. HAY moved that both resolution and substitute be referred to a committee of three, to be appointed by the Chair, this committee to report later.

Mr. THOMAS moved that both resolution and substitute be tabled, which motion carried by a vote of 167 to 84.

Those who voted "nay"—that is, those who voted for the open caucus—were:

Abercrombie, Allen, Aswell, Bailey, Bathrick, Borchers, Bowdle, Brockson, Broussard, Brown of New York, Brumbaugh, Buchanan of Illinois, Bulkley, Candier of Mississippi, Carlin, Casey, Collier, Connolly of Iowa, Cox, Crosser, Cullop, Deitrick, Dershem, Dickinson, Donohoe, Doolittle, Dupré, Elder, FitzHenry, Floyd of Arkansas, Foster, Garrett of Texas, Gordon, Hammond, Hardy, Harrison of Mississippi, Harrison of New York, Hayden, Helvering, Henry, Hobson, Hoxworth, Keating, Kinkel, Kinkadee of New Jersey, Lazaro, Lee of Pennsylvania, L'Engle, Linthicum, Maguire of Nebraska, Morgan of Louisiana, Murray of Massachusetts, Murray of Oklahoma, Oldfield, Palmer, Pepper, Phelan, Quin, Rainey, Raker, Reilly of Connecticut, Roddenberry, Rubey, Rucker, Scully, Seldomridge, Shackelford, Sharp, Sims, Sisson, Smith of New York, Smith of Texas, Stephens of Mississippi, Stone, Stout, Stringer, Talcott of New York, Tavenner, Taylor of Arkansas, Taylor of Colorado, Thompson of Oklahoma, Walsh, White, and Wingo."

If the attendance were larger to-day, Mr. Chairman, I would ask unanimous consent to print without reading the names of the 167 Democrats who voted to table the resolution.

Hon. SYDNEY ANDERSON, of Minnesota, a distinguished Member of this House, said:

A Member may debate, offer amendments, and vote, but the verdict has already been rendered by a packed jury.

No one would claim that a man's right to a trial by jury was preserved if the jury impaneled were already bound to return a verdict against him. Yet this is the exact situation in the House.

The caucus not only destroys the representation of the minority but of a minority of the majority, for it binds the votes of both majority and minority of the caucus as a unit in the House against all suggestion, amendment, and debate.

It may be claimed that no action of a caucus can bind the vote of a Member on the floor of the House. Doubtless this is theoretically true, but every man who has felt the sting of the party lash and the prick of the organization spur knows that actually it is not true. It is not true.

There is yet another essential to good legislation. It is that the acts of Representatives should be always open to the scrutiny of the public. The Constitution recognizes this, for it provides:

"Each House shall keep a Journal of its proceedings and from time to time publish the same . . . and the yeas and nays of the Members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal."

The caucus destroys the force of this provision. The caucus is the real legislative body and its proceedings are essentially secret. The yeas and nays and the proceedings of the House are valuable records to the public only when they record the real transactions of the House and the real attitude of its membership. The real attitude of the majority party, under which the caucus system is in complete control of legislation, is disclosed only in the caucus, and hence the record provided by the Constitution is a false or at least inaccurate and useless one.

Again, the use of the caucus system may be justified by some on the ground of its good purpose and of its occasional good results. I will not deny that some good things have been done even under the caucus system. The bills passed by that unofficial body have contained things for which I would be glad to vote. Yet the same reasoning which now attempts to justify a caucus would justify a despotism. I can not believe in a despotism because I know that despots have done some good in the world. Nor does the right of representation seem less precious because it is denied by this benevolent beast, the caucus.

The caucus holds the same place in legislation that the holding company does in finance.

The holding company enables a few men to control the policy of great corporations by the investment of a small amount of capital.

The caucus enables a few men to control the policy of legislation by the exercise of a limited amount of power.

A financier who wishes to control a great corporation organizes a second corporation or holding company to hold the controlling interest in the stock of the first. He then controls a majority of the stock in the holding company. Thus he reduces the amount of capital necessary to control the policy of the corporation from one-half of the aggregate capital of the corporation to one-fourth—or less if the stock is widely distributed. Under this benevolent scheme the minority stockholder has no real voice in determining the policy of the corporation. The real control is not vested in a majority of the capital of the corporation, but in a minority owned by those who control a majority of the stock of the holding company.

It is all very simple and very effective.

The few men who desire to control the policy of legislation in the House organize the members of the majority party into a holding company—the caucus. Under a rule, written or unwritten, a majority vote of the holding company, the caucus, binds the whole membership of the caucus to vote as a unit in the House. Thus a minority of the membership of the House controls the legislative policy of the whole House in the actual making of legislation and renders ineffective the service, industry, and ability of the minority.

Hon. GEORGE A. NEELEY, of Kansas, one of the leading progressive Democrats, in his address, said:

I believe this bill would have been a better one had it been framed in the clear light of the open day, where the public could have the privilege of criticizing, commending, or suggesting anything of value to the subject itself. [Applause.] Because of this belief, I voted to throw open the doors of the committee, and after a majority of my brethren had declined to incorporate certain propositions that to me seemed fundamental, and it became necessary that the bill go to the caucus. I there made a motion to open the doors of that caucus so that the white light of publicity would not only be turned on the bill itself, but might beat down directly upon the membership of that caucus and the public see and understand the motives that actuated every man who participated in the deliberations therein. [Applause.]

Mr. Chairman, there may have been a time when secret caucuses were justified in this country. There doubtless are conditions at this time when it might be both desirable and eminently proper for a political party to frame legislation protected by an obligation of secrecy, but this was not one of the times nor this bill one of the subjects. I can see no good reason why in this day of enlightened public opinion it should be necessary for any body of men engaged in legislating for the whole people to thus act, and if the Democratic Party is to maintain its position of supremacy and justify the faith of our people in the honesty of its purpose it is necessary that it take those same people into its confidence when framing legislation of vital interest to them. Some may attempt to justify the secret caucus by saying that the Republican Party was enabled to perpetuate itself in power by the machine constructed in its secret caucus, but you know that very machine was one of the most potent agencies in the disruption of that party and that we are in power to-day because of the faith of the people in our promises of above-board legislation.

Hon. SILAS R. BARTON, of Nebraska, in discussing this subject, used this language:

Mr. Speaker, certain reforms are demanded by the people of to-day, and they are measuring men as well as parties. Caucus rule, we supposed, with the passing of Czar Reed and Uncle Joe, was only an incident of the past and would never be vitalized in American politics.

If the Members who are holding their seats to-day had told their constituents that when they took their oath of office and their seats in the Halls of Congress that they would enter into and be bound by a secret caucus, surrendering their rights as individuals and their opinions as men to the dictation of a few political bosses, I believe there would have been in many cases men elected in their stead who would act independently and free.

The only excuse for the secret caucus that I have heard from the men on the other side of the Chamber is "that Republicans did it." You do not seem to be following other Republican policies; why do you follow this one? Because Republicans held secret caucuses, does that in your judgment make it right? Republicans of to-day are not doing so, and I venture the assertion that no matter what strength they may have in the future they will never do so again.

The people have condemned this policy and they will condemn it again. We have a measure pending before us to-day that should not in any sense be made a partisan measure. The people of all parties demand a change in our monetary system, and we are here at the expense of the Government to do the things that they demand. We are not permitted to fulfill the purposes for which we were elected. Caucus rule governs and forbids individuality.

Hon. WALTER ELDER, one of the leading young Democrats of this House, said:

Mr. Speaker, if I judge the times and signs aright, the day of the party caucus, except on strictly party questions, is about to end. The game as now played by some party leaders is fast and loose. If they see that they have a majority on a particular question or amendment, it is taken into the caucus and those opposed to it are bound and gagged, delivered body and soul. If they have not such a majority and it is an amendment that would suit the Republican Members, such as that proposed by Mr. Fess, known as the gold-standard amendment, they take what committee following they have amongst the majority and with the help of the Republican minority fasten the useless "gold-bug" amendment on the bill. On the other hand, fearing the result in the whole House on the interlocking directorate feature, where it developed that there were practically 100 votes outside the caucus for this provision, they take the subject into the caucus and attempt to bind and gag the majority Members. Such procedure, in my humble opinion, is certain eventually to destroy the caucus action. Men of intelligence will not continually allow themselves to be handled in such a fast and loose manner by a small, selfish party machine, a wheel within a wheel, unexcelled even in the palmy days of Cannonism. As a loyal Democrat I have never and never will bolt a caucus action.

Heretofore I have kept my expressions of such procedure within the confines of the secret caucus. Hereafter, I wish to say here and now, that while I will abide the majority, expressed in the caucus action, yet I reserve the right to express my views, at least of any unfair procedure directed against good legislative government, in any public place. I opposed this currency bill in the caucus, for the reason that I believed that it was not good nor safe legislation. At one time I was bound by the caucus action. However, as the committee saw fit to make substantive changes in several respects, and thereby unwittingly released Members of contrary views, I have exercised the opinion that I expressed in the caucus and have voted against the bill.

I regard the declaration of the Democratic platform and my campaign pledges as sacred covenants entered into with the people and not merely as the platform of a railway train, to be used for the purpose of stepping into office and then discarded.

I am opposed to a secret caucus, and I voiced this sentiment in no uncertain terms within 24 hours after my arrival at Washington as a Member of this Congress.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I ask unanimous consent to proceed 30 minutes more.

The CHAIRMAN. Is there objection?

Mr. MANN. Mr. Chairman, I object.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I do not intend to insert my speech in the RECORD on this bill, but I will take five minutes on every proposition in this bill until this speech is finished if I am not permitted to finish now. [Applause.]

Mr. Chairman, so far as I am concerned this shall not be a mimic warfare. I do not intend to say one thing to the people of Oklahoma and another thing when I reach Washington and speak on the floor of this House. I shall vote for the passage of this bill, though it contains certain provisions I would eliminate, and it fails to carry others which I would have it contain if the power were mine to alter or amend it. Without the pro-

visions that I would insert and with the provisions I would eliminate, however, I consider it a better banking law, if we are to have only a banking act, than the present one. It provides a system that will mobilize the bank reserves and make them subject to the call of business and commerce, and for that reason, in my judgment, it is a better banking law than the one we now have. It likewise provides for a Government issue of currency, and that provision I commend. It contains other good provisions which commend it to me, and which I think will prove satisfactory and promote the interests of all the people, but I will not consume the time necessary for a full discussion of the provisions of the bill. To do so would require too much of the time at the disposal of the committee. I shall content myself with a brief discussion and explanation of the provisions of the bill which I think ought to be eliminated and of the amendments which I think ought in the interest of the American people to be incorporated in the bill.

Mr. Chairman, the provisions of this bill which I think ought to be eliminated are, first, section 7, which is as follows:

That after the payment of all necessary expenses and taxes of a Federal reserve bank the member banks shall be entitled to receive an annual dividend of 5 per cent on the paid-in capital stock, which dividend shall be cumulative. One-half of the net earnings, after the aforesaid dividend claims have been fully met, shall be paid into a surplus fund until such fund shall amount to 20 per cent of the paid-in capital stock of such bank, and of the remaining one-half 60 per cent shall be paid to the United States and 40 per cent to the member banks, in the ratio of their average balances with the Federal reserve bank for the preceding year. Whenever and so long as the surplus fund of a Federal reserve bank amounts to 20 per cent of the paid-in capital stock and the member banks shall have received the dividends at the rate of 5 per cent per annum hereinafter provided for, 60 per cent of all excess earnings shall be paid to the United States and 40 per cent to the member banks in proportion to their annual average balances with such Federal reserve bank; all earnings derived by the United States from Federal reserve banks shall constitute a sinking fund to be held for the reduction of the outstanding bonded indebtedness of the United States, said reduction to be accomplished under regulations to be prescribed by the Secretary of the Treasury. Should a Federal reserve bank be dissolved or go into liquidation, the surplus fund of said bank, after the payment of all debts and dividend requirements as hereinbefore provided for, shall be paid to and become the property of the United States.

This section not only puts the Government in the banking business but it puts the banks in the Government business. In other words, it creates a partnership between the Government and the banks. In my judgment the Government of the United States ought not to be in partnership with any private business. I think the Government ought to own outright and entirely the 12 central reserve banks provided by this bill, or it ought to permit the banks themselves to own these 12 institutions. Under the provisions of this bill the banks are required to subscribe to the capital stock of the 12 regional reserve banks 20 per cent of their capital, and after 5 per cent dividend has been earned on this capital stock 60 per cent of all excess earnings will be paid to the United States and 40 per cent to the member banks in proportion to their annual average balance with such Federal reserve bank.

If the central reserve bank is a good thing, I submit that the capital stock of the bank should be subscribed entirely by the Government, and all the profits should go to the benefit of all the people of the United States. No private citizen should be permitted, much less required, as is done under the provisions of this act, to subscribe to the capital stock of this institution. I am opposed, Mr. Chairman, to the Government going into the banking business or the banks going into the Government business, and for that reason I am opposed to a partnership between the banks and the Government, as is provided in this bill. If I had my way about this matter I would, if I were going to put the Government into this central reserve bank business, provide a central reserve bank with a branch in each one of the States, so that currency could be easily obtained at any time and without any danger by reason of delay.

The capital stock of the central reserve bank and of all its branches in each of the States of this Union would be owned entirely by the Government of the United States, and every dollar earned by the central reserve bank and by all of its branches I would convert into the Treasury of the United States, in order that the people of the United States might be relieved in so far as possible of the burdens of taxation which now rest so heavily upon them.

Mind you, I do not say I would favor this plan. I merely say if this plan were adopted, it would relieve two of the evils which are apparent from the plan proposed. First, it would leave in circulation the 20 per cent which by the provisions of this bill will be taken from the arteries of trade and commerce and converted into the capital stock of the reserve bank and its branches. For instance, at my town—Pauls Valley—we have three national banks and one State bank. The three national banks have a capital of \$125,000 and the State bank has a capital of \$25,000. Twenty per cent of this \$150,000 will

amount to \$30,000. These banks can now loan that \$30,000 to the farmers and citizens and borrowers of my county. Under the provisions of this bill this \$30,000 will be taken away from that county and paid in as a part of the capital stock of a central reserve bank located not less than 500 miles from Pauls Valley, and perhaps 750 miles from my town. Thirty thousand dollars is no small amount when the farmers of my county, during the spring season, apply to the banks for loans. The average loan to the ordinary farmer is less than \$100. This amount of capital, therefore, deducted from the amount of loanable assets of the banks in my home town would supply more than 300 farmers \$100 each, or more than the ordinary amount loaned to a farmer in the course of an ordinary year.

Section 13 of the bill provides as follows:

There is hereby created a Federal advisory council, which shall consist of as many members as there are Federal reserve districts. Each Federal reserve bank by its board of directors shall annually select from its own Federal reserve district one member of said council, who shall receive no compensation for his services, but may be reimbursed for actual necessary expenses. The meetings of said advisory council shall be held in Washington, D. C., at least four times each year, and oftener if called by the Federal reserve board. The council may select its own officers and adopt its own methods of procedure, and a majority of its members shall constitute a quorum for the transaction of business. Vacancies in the council shall be filled by the respective reserve banks, and members selected to fill vacancies shall serve for the unexpired term.

The Federal advisory council shall have power (1) to meet and confer directly with the Federal reserve board on general business conditions; (2) to make oral or written representations concerning matters within the jurisdiction of said board; (3) to call for complete information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities by reserve banks, open-market operations by said banks, and the general affairs of the reserve banking system.

This is a clear, distinct, and positive recognition of the banking interests of the country in writing the provisions of this bill. This is supposed to be a great constructive act—a great banking and currency act—the first attempt by the American Congress since the days of the Civil War. Why does not the bill carry a provision permitting the farmers of the country to have an advisory board? Why does it not carry a provision permitting the laborers of the country to have an advisory board? Why not carry a provision permitting the merchants of the country to have an advisory board? Why not a provision permitting every class of our people engaged in every industry to have an advisory board? I will answer by saying that none of the great classes of industry into which our country is divided should have an advantage over any other class as is given by this provision. The bankers were given this preference because they were required to subscribe the capital stock and are to secure a part of the profits, and are, therefore, interested more than any other class in these banks. Looking at the matter from this standpoint, it can not be said to be an unjust provision, but it strikingly illustrates the danger of the partnership.

FARMERS' PAPER.

The bill as reported to the Democratic caucus by the Banking and Currency Committee, lines 13 to 23, inclusive, section 14, page 23, provided as follows:

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount within the meaning of this act; but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other securities. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 60 days.

After a hard struggle to take care of the interests of the great producing classes of our country this section was finally amended in the caucus by striking out the following words, "Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 60 days," and inserting after the word "securities" the following:

Nor shall anything herein contained be construed to prohibit such notes and bills of exchange secured by staple agricultural products or other goods, wares, or merchandise from being eligible for such discount. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 90 days.

This amendment was secured after a hard struggle in favor of incorporating it in the bill, led by the distinguished Members, Mr. HENRY of Texas, Mr. RAGSDALE of South Carolina, Mr. NEELEY of Kansas, Mr. HARDWICK of Georgia, my colleague from Oklahoma, Mr. MURRAY, joined by numerous other Democrats, of which number I was one. Thus, a distinct recognition of commercial paper secured by staple agricultural products was made the subject of discount, and the time period was extended from 60 to 90 days, which is of great moment to the pro-

ducing classes. The farmers, laborers, and producers of other products, unlike the other citizenship of our country engaged in other great industries, are unable to turn their capital more than once during a 12 months' period. For this reason they are compelled to borrow what money they of necessity must use for a period of 8 or 9 months. They can not afford to borrow for 60 days, because from the time they plant until the time of the maturity of their products a much longer period than that is required. The recognition of staple farm products as a basis of security of notes and commercial paper made the subject of discount was a distinct triumph in favor of this great class of our citizenship. Without it our banks could not have afforded to make loans on this class of security. I regret that the time limit of notes of this class was not extended from 90 days to 6 months. People in the agricultural parts of our country usually borrow their money early in the year, or about planting time, and are unable to repay it until the crops are harvested, and unless the paper is subject to rediscount the banks of necessity will be limited in the amount of loans to this large class of our citizenship.

The bankers of my State were very earnestly in favor of a provision of this kind in the bill, because in the country towns nine-tenths of the business of the banks is made up of this class of paper. During the consideration of this bill by the Democratic caucus I received from Mr. T. P. Martin, jr., president of the Oklahoma Stock Yards National Bank, with a capital, surplus, and profits of \$350,000, a letter calling my attention to this particular provision of the bill. He said:

We fear that this bill will hardly cover the ground so far as the little banker of Oklahoma and other agricultural States are concerned. We have no commercial paper down here, and unless some kind of arrangement can be made by which well-secured cattle paper or loans of farmers secured by the usual collateral may be placed somewhere to obtain funds it is going to be hard to explain to the little bankers wherein they will be able to get money quickly in time of panic.

And the sentiment so clearly expressed by Mr. Martin was generally concurred in by the bankers of Oklahoma.

RURAL CREDIT SYSTEM.

The Democratic platform adopted at Baltimore last year, and on which we won our great victory by the ballots of the American people, declared:

Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security. We recognize the value of vocational education, and urge Federal appropriations for such training and extension teaching in agriculture in cooperation with the several States.

There are more than 6,000,000 farms in the United States, and the farm products add more than \$9,000,000,000 to the wealth of the Nation during each year. More than 12,000,000 of our 90,000,000 of population are actively engaged in farm work, and the farm population of the United States is estimated at about 35,000,000 people, or about 40 per cent of the entire population of our country. More than one-third, or more than 2,000,000, of the farms of the United States are mortgaged. On these mortgages secured by real estate alone an annual interest charge of about \$150,000,000 is paid. In addition to this stupendous interest paid yearly on commercial paper secured by real estate, multiplied millions of dollars are borrowed on notes secured by chattel mortgages on livestock, growing crops, personal notes, and various other classes of security. The annual interest rate, according to statistics, paid by the farmers of the United States is more than 8½ per cent. As against this rate, the farmers of France, Germany, England, and other European countries that have established a farm credit system averages from 3½ to 4½ per cent. In the State of Oklahoma the average rate of interest charged is much higher than 8½ per cent. The rate of interest paid by the farmers of our country is double the rate paid by the railroads, other industrial corporations, and our municipalities. The Democrats in the Baltimore platform recognized the injustice of this condition and declared that, if intrusted with power, the evil would be remedied and this great class of our citizenship should be protected from the enormous exactions and tributes levied upon them that do not apply to other classes engaged in other industries.

This enormous excess rate of interest paid by the farmers and producers of the country for the use of money is not because the class of security offered by any other industry of our country is safer than the security which they offer, but it is because under our banking and currency laws the class of security which they can offer for a loan is not recognized as a liquid asset. In other words, their business and their occupation would not permit them to borrow money for short time or on call.

The banking and currency bill, which we are now considering, is not a banking and currency act for the great producing masses of this country. It is a banking and currency act for those classes of our citizenship engaged in commercial occupations. I believe, as declared in the Democratic platform, that the banking and currency act should take care of the interests of every class of our citizenship—those engaged in the farming industry as well as in commercial and other industrial occupations. I desire to quote from an address delivered by the Hon. Charles Hall Davis, of Petersburg, Va., at Lake Toxaway, N. C., on July 12, 1913, before the South Carolina Bankers' Association, on the subject of rural banking and currency reform, and which has been printed by the Government of the United States as Senate Document No. 140. On page 4 of that address Mr. Davis said:

Moreover, in considering this question of rural banking and currency reform, it is perhaps just to both of the great political parties to say that, in my judgment, the Aldrich bill, representing the Republican plan, and the Federal reserve act, representing the Democratic plan, are equally subject to criticism in this connection, in that neither of them makes any adequate provisions for the farmers' banking requirements, and in that the authors of neither of these bills seem to have recognized that no adequate reform along the lines proposed can be accomplished by any bill which fails to provide for our agricultural needs.

To me it is astounding that, in preparing and presenting such a legislative act, its patrons, as well as the public, should have apparently overlooked the vital fact that the banking necessities of one-third of our population have been disregarded, and that no provision has been made in either of these bills for the peculiar class of banking needed by the agricultural classes.

And further on in the same address he said:

I think it will be admitted that our present national banking system is a system of commercial banking; that it was organized and has been built up more especially to meet the needs of merchants and manufacturers, and to fulfill the requirements of commercial banking. It was not intended as a method of meeting the financial requirements of the farmers. One of the fundamental principles of the whole system has been the inhibition against real estate loans. As the farmer's principal asset is real estate, and as national banks are by law prohibited from lending on the security of real estate, it can hardly be successfully contended that our present national banking system was ever designed as a means of meeting the banking requirements of the farmer.

In examining into the question as to how the farmer's needs are provided for in the pending Federal reserve act, I will now endeavor to explain the scope of that act and to demonstrate that it is an act for general banking reform, and not simply for currency reform, and that it absolutely fails to provide for the financial requirements of the farming class.

With this end in view it might be wise to examine the title of the act. Senate bill No. 2639, being the bill introduced by Senator OWEN on June 26, 1913, which is usually referred to as the "currency bill," and which is designated in its first section as the "Federal reserve act," has the following heading:

"A bill to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes."

Does a bill to provide for the establishment of Federal reserve banks meet the financial requirements of the farmer? By an examination of the bill and an investigation of just what is meant by a Federal reserve bank it will be seen that a Federal reserve bank is a banker's bank, intended to operate as a clearing house for the constituent national banks, and expressly prohibited from lending money to anybody except to a national banking institution or on its credit.

Does a bill for furnishing elastic currency offer any means of relief to the farmer? To ask the question is to answer it. The portions of the bill dealing with the currency have no relation to the farmer, except in so far as all of us are interested in the establishment of a sound and elastic currency system to meet the business needs of the country as a whole.

Does a bill affording means of rediscounting commercial paper offer any method of relief to the farmer? If there is one thing on earth that a farmer never has, I should say that it is commercial paper. In the ordinary acceptance of the meaning of that term. The rediscounting of commercial paper will obviously never afford any relief to the farmer.

Does a bill to establish more effective supervision of banking in the United States provide for the needs of the farmer? The title would indicate that perhaps it might; but when the bill is investigated it is found that the banking which is to be supervised is commercial banking as now exercised by our national banks; that no provision for rural banking is made; and that no adequate provision is made for the use of the national banks to meet the rural requirements.

So much for the title. By an examination of the bill itself it will be seen that it is a bill reforming our whole method of national banking. It provides for the creation of new banks, to be known as Federal reserve banks, and to be capitalized by the sale of the stocks of such new banks to existing National and State banks. It provides for a central reserve board to direct and control the entire banking system. It changes the existing regulations as to the amounts and place of deposit of banking reserves. It formulates new regulations for rediscounting, for bank examinations, and bank management. It practically covers the entire field of national banking and provides for reforming and altering that system in the most vital particulars. Of its 29 sections not over 4 deal with the currency in any way. The other sections constitute the regulations for general banking reform and practically for a new banking system.

Now, let us see just what the bill provides and just how far it goes in meeting the requirements of the farmer.

Absolutely the only provision in this bill in reference to rural banking or farm loans is contained in section 27, which reads as follows:

LOANS ON FARM LANDS.

"SEC. 27. That any national banking association not situated in a reserve city or central reserve city may make loans secured by improved and unencumbered farm land, and so much of section 5137 of the Revised Statutes as prohibits the making of such loans by banks so

situated shall be, and the same is hereby, repealed; but no such loan shall be made for a longer time than nine months nor for an amount exceeding 50 per cent of the actual value of the property offered as security, and such property shall be situated within the Federal reserve district in which the bank is located. Any such bank may make such loans in an aggregate sum equal to 25 per cent of its capital and surplus or 50 per cent of its time deposits.

"The Federal reserve board shall have power from time to time to add to the list of cities in which national banks shall not be permitted to make loans secured upon real estate in the manner described in this section."

Now, I propose to show you that if the national banks loaned to farmers every dollar that they are authorized to loan under this provision they would be providing only an amount of money equal to about one-fourteenth, or 7 per cent, of what is now being actually borrowed on farm mortgages.

In the year 1910 the value of all farm property in the United States, including land, buildings, implements, machinery, and live stock, was \$40,991,449,000. In that year there were mortgages against 1,327,439 farms. There were 2,361,283 farms not mortgaged. The mortgaged farms represented 33.6 per cent of all the farms in the United States.

From the best information I can get the average rate of interest on farm mortgages in this country is about 8 per cent, as against an average rate of less than 5 per cent in countries where facilities for rural banking have been provided. In 1910 one-third of our farms were mortgaged. Exact figures are not available, but let us assume that this one-third of the farms represented one-third of the value. We have seen what the total value is, and we find that one-third of this value is approximately \$14,000,000,000. If these farms were mortgaged at 25 per cent of such value, approximately three and one-half billion dollars would be required. This amount would be sufficient simply to take over at a reasonable rate of interest the assumed existing mortgages.

Now let us see what the Federal reserve act provides to meet these requirements. And let us remember that the farmers, in order to meet their capital requirements, need a great deal more money than this present mortgage debt would indicate, and that any suggested method of providing their capital needs must contemplate the provision of an amount largely in excess of the figures above stated.

Senator OWEN, who presented the Federal reserve act in the Senate, has published Senate Document No. 117, which was referred to the Committee on Banking and Currency on June 27, 1913. In this document he has given a statement in regard to the bill referred to. In commenting on section 27 of the bill he says:

"Section 27 provides for somewhat greater liberty in making loans on farm lands by national banks, not exceeding, however, 25 per cent of their capital and surplus or 50 per cent of their time deposits. This would make a possible release for such purposes of \$250,000,000."

So that the Federal reserve act makes no provision for farm loans, except that it would be possible for the national banks to loan on the security of real estate the sum of \$250,000,000 if every bank loaned every dollar that it was authorized by law to loan. And this \$250,000,000 is absolutely the only money available under this act for meeting the farmers' capital requirements.

Moreover, if the bill itself be read carefully it will be observed that when such farm loans are taken by the banks they become, to a large extent, a dead asset under the terms of the bill. The national banks are allowed to rediscount with the Federal reserve banks in order to meet their requirements, but the class of paper which may be so rediscounted is described as—I quote from the bill—

"Notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount within the meaning of this act; but such distinction shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, except notes or bills having a maturity of not exceeding four months and secured by United States bonds, or bonds issued by any State, county, or municipality of the United States. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 45 days."

If the national banks can not rediscount notes or bills issued or drawn for the purpose of carrying or trading in farm bonds, and if all notes and bills admitted to discount must have a maturity of not more than 45 days, I think it may be pretty safely predicted that loans on farm lands will not be generally available to be used for rediscounts. And if the banks recognize that farm loans will not be rediscounted by the Federal reserve banks in time of stress, they will be indisposed to accept farm loans even to the limited extent to which they are authorized to go under the terms of the bill as above set out.

Moreover, the loan of money to a farmer for nine months, to meet his capital requirements, is on its face an absurdity.

The farmer might possibly meet his annual requirements with loans for not exceeding nine months; but such annual requirements or temporary needs, as heretofore explained, ought not to be provided by mortgages on the land. These mortgages should be used to produce his capital requirements, not to meet annually recurring banking needs. It is perfectly obvious that a nine months' loan would not meet his capital requirements, could not possibly be paid when it fell due, and would in no sense serve to furnish the capital which must be furnished before the question of banking accommodation for annual requirements need be seriously considered.

My contention is that the Federal reserve act is a bill for the establishment of a banking system for this country. It is true that under its title it is designated as a bill for the establishment of Federal reserve banks and for the supervision of existing national banks. It is equally true that it is a bill for the establishment and reform of commercial banking as well as a bill for furnishing elastic currency. But I respectfully submit that the farmers have a right to be considered when a question of establishing a banking system is being passed upon by Congress and that the bill is faulty in that it does not provide for the kind of banks that the farmers need to meet their banking requirements, though it provides for the commercial banks needed by merchants and manufacturers.

Mr. Chairman, I do not think there is any subject of more importance, or upon which the time of the American Congress could be better spent, than in devising a banking and currency system for the 40 per cent of the people of the United States engaged in the great farming industry.

I will close what I have to say on this particular subject by quoting from the preliminary report on land and agricultural credit in Europe, which will be found in Senate Document 967, pages 10 and 11, as follows:

Personal credit in agricultural Europe is obtained usually by means of the cooperative credit associations. They are also used by artisans and small tradespeople in the towns and cities. These associations are in fact the only banks which the farmers will patronize for short-time loans in the nations where they abound in the greatest numbers. With their aid poverty and usury have been banished, sterile fields have been made fertile, production has been increased, and agriculture and agricultural science raised to the highest point. Their educational influence is no less marked. They have taught the farmers the uses of credit as well as of cash, given them a commercial instinct and business knowledge, and stimulated them to associated action. They have encouraged thrift and saving, created a feeling of independence and self-reliance, and even elevated their moral tone.

The picture can hardly be overdrawn. Every traveler who visits the places where these little associations exist speaks in glowing phrases of the prosperity and contentment that prevail. They are organized on such simple lines that their management requires only ordinary intelligence. Failures have rarely occurred. In France and other countries they hold a record of having never lost a cent. The working capital and number of members of individual associations are so small as to be insignificant, yet they do one-third of the banking business of Italy, while the combined amount of their operations in Germany equal that of the commercial banks. But the mutual banks, both in town and country, are looked upon with favor in the financial world because they keep millions of dollars of petty sums in circulation which except for them would be idle and hoarded. They are, in fact, feeders for the commercial banking system.

In 1909 in Belgium 458 banks, with a membership of 25,762, had outstanding (roughly calculated) \$4,000,000 of loans; in France 96 regional banks did upward of \$25,000,000 of business on a capital of \$2,983,646, while the 2,983 local banks, with a membership of 133,382 farmers, had \$2,622,241 of capital and a record of over \$20,500,000 of operations. There were nearly 6,000 banks in Austria. The membership was over 725,666, and the loans ran over \$86,500,000. In Italy 690 banks that furnished reports had a working capital of over \$170,091,946. In Germany there is one bank for every 1,600 of the population, and the total business done was over \$4,888,000,000. In one Province there is a bank for every 3,000 acres of land; and so on for all other nations that have cooperative credit institutions. The rate of interest charged was one or two points lower than in commercial circles, yet these banks, with a few exceptions, made a fair profit on the turnover of their capital. In some instances it ran as high as 5 per cent and 7 per cent.

INTERLOCKING DIRECTORATES.

Another evil of our banking and currency system which, in my judgment, ought to have been remedied and removed bodily, root and branch, from our financial system is the interlocking of directorates among the great financial and corporate interests of the country. It was so apparent that this was one of the evils of our banking and currency system that the Democratic convention at Baltimore last year declared:

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directors, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

And I shall support an amendment placing such a provision in this bill. I supported such a provision in the Democratic caucus, and inasmuch as I had in my campaign for Congress in Oklahoma promised the people of the State, if I were elected, to vote on every occasion to destroy this evil, I shall vote for the amendment offered by the gentleman from Kansas [Mr. MURDOCK], which has that purpose in view.

The Pujo committee investigating the Money Trust last year reported to Congress that 118 directorships in 34 banks and trust companies having total resources of \$2,679,000,000, total deposits of \$1,983,000,000, and 30 directorships in 10 insurance companies having total assets of \$2,293,000,000, and 105 directorships in 32 transportation systems having a total capitalization of \$11,784,000,000, and a total mileage, excluding express companies and steamship lines, of 150,200 miles, and 63 directorships in 24 producing and trading corporations having a total capitalization of \$3,339,000,000, and 25 directorships in 12 public utility corporations with a total capitalization of \$2,150,000,000—in all 841 directorships in 112 corporations, having aggregated resources or capitalization of \$22,245,000,000—were taken from the firm members or directors of four New York City institutions, namely, Morgan & Co., First National Bank, National City Bank, and Bankers & Guaranty Trust Co., which latter two were absolutely controlled by Morgan & Co. through voting trusts.

GAMBLING ON FARM PRODUCTS.

The Democratic Party in 1908, at Denver, when it nominated for the third successive time the great tribune of the people, Hon. William J. Bryan, declared:

The Republican Party has so linked the country to Wall Street that the sins of the speculators are visited upon the whole people. While refusing to rescue the wealth producers from spoliation at the hands of stock gamblers and speculators in farm products, it has deposited Treasury funds without interest in favorite banks.

It is provided in section 14 of the bill under consideration that notes and bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities should not be the subject of discount. This is one of the splendid provisions of the bill.

The panic of 1907 came about and was produced almost entirely by reason of stock gambling and stock juggling on Wall Street.

Every Member of this House can remember when the news was flashed over the wires conveying to the small banks and to the people of the United States that the Knickerbocker Trust Co. had closed its doors, and the money panic was on. It was on October 27, 1907. My State never produced a more abundant crop of every product of the Temperate Zone than during that year.

The farmers were in the midst of the gathering season; the merchants were in the midst of the busy sale of their merchandise; the banks were bursting with money, the proceeds of the products of our farms. They had, in fact, too much money, because it is shown by the figures that the national banks of the city of New York held nearly a quarter of a billion of dollars of the reserves of other banks at the time of the money panic. The Knickerbocker Trust Co. was among the largest financial institutions of the city, and was forced to suspend by reason of having loaned too heavily on stocks and bonds purchased not for the purpose of real delivery, but on a margin and for speculative and gambling purposes. When these reserves were called for and the company could not realize on its security, the panic followed, and all of the banks of the country refused to pay out the money in their vaults, depressing the price of farm products, bringing to a standstill the business of the merchants, and paralyzing every department of industrial business of our country.

Therefore one of the great provisions of this bill is that clause which prohibits the rediscount of notes and bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities. If this condition, or the great panic of 1907, with its business failures, its loss of multiplied millions to the people of our country, was caused directly by stock gambling and stock juggling, would it not have been wise and just to the great agricultural classes of our people to have placed in this bill the amendment offered by the gentleman from Arkansas [Mr. Wingo], and which is as follows:

Provided, No bills or notes shall, for the purpose of dealing in futures or trading on margin in staple agricultural products, be eligible to discount under the provisions of this paragraph.

The price of staple farm products has largely ceased to be controlled by the law of supply and demand, but it has become the football to be either raised or lowered as the interests of the speculator on these products may be best served.

Mr. Chairman, in conclusion I desire to say that no Member of this House is a better Democrat than I nor a better party man. I was born during the dark days of reconstruction following the unfortunate war between the States, of parentage who for four long and devastating years followed the fortunes of the Stars and Bars, and who, because of their southern devotion, were forced to seek refuge in the Commonwealth of Texas, where I was born. I was reared on a farm, and was taught from my infancy that Jefferson and Jackson were the patron saints of all things that represented pure and undefiled popular government. From those good days to this I have found nothing to change the belief impressed on me in childhood. Since I became of age I have always voted the ticket of my party straight from constable to President, and its platform mandates have been the law of my political actions. I served my party from 1896 to 1906 as a member of its State executive committee, and from 1906 to 1910 as chairman of its State committee. I have attended every Democratic convention—precinct, city, county, and State—held by the Democratic Party in my home State and supported its every candidate and party policy. I was a delegate to two of the national Democratic conventions at which the great commoner, William J. Bryan, was nominated for President, and I supported his candidacy in 1896, when it was not so popular to be a Bryan Democrat as it is to-day. I have entire confidence in the high ideals and disinterested patriotism of the President, and I am firmly convinced that each of them will use every power which their high stations and great abilities will enable them to exert toward writing into law the things which I have here indicated ought to be contained in this bill.

I shall stand shoulder to shoulder with them to enact such statutes at the earliest moment, so that every man of every class and station in life may keep what he honestly earns, and that no man's hand may take from the pocket of another man a dollar that does not in right belong to him.

Mr. RAGSDALE. Mr. Chairman, I move to strike out the last four words.

The CHAIRMAN. The gentleman from South Carolina is recognized.

Mr. RAGSDALE. Mr. Chairman, I yield three minutes to the gentleman from Oklahoma [Mr. THOMPSON].

The CHAIRMAN. The gentleman can not do that.

Mr. MANN. The gentleman is not smart enough. I make the point of order that the gentleman can not do that.

The CHAIRMAN. The point of order is well taken. He can not yield under the five-minute rule.

Mr. MURDOCK. Mr. Chairman, will the gentleman from South Carolina yield?

Mr. RAGSDALE. Certainly.

Mr. MURDOCK. Mr. Chairman, I wish the gentleman would consume his own time in making a speech in advocacy of my amendment against interlocking directorates.

Mr. RAGSDALE. I understand the gentleman from Kansas, and if I felt free to do so it would afford me great pleasure to do it.

Mr. BUTLER. Wherein does the gentleman lack freedom?

Mr. RAGSDALE. I am simply in this position: I will say to the gentleman that down in my part of the country our people have no Republican Party. We have no opposition there. You gentlemen on that side of the House by your fondness for the colored brother have made it absolutely impossible for us there, except by having white supremacy. That is to us the paramount question which outweighs every other question, because of the black cloud that is hanging over us at all times and is a menace to us. For that reason we have to go in a caucus, so we have to bind ourselves there to abide the result of the caucus here and to redeem our pledge and preserve party harmony we are bound.

Mr. BARKLEY. Will the gentleman yield?

Mr. RAGSDALE. Certainly.

Mr. BARKLEY. Does the gentleman mean to intimate that if there was a Republican Party in South Carolina the gentleman would join it?

Mr. MANN. Mr. Chairman, I make the point of order the gentleman is out of order. He is not discussing the amendment before the House.

The CHAIRMAN. The point of order is well taken.

Mr. GLASS. Mr. Chairman—

Mr. RAGSDALE. Mr. Chairman, I was speaking directly in response to the question of the gentleman from Kansas [Mr. MURDOCK]—to his amendment. I want to explain to the gentleman why I can not support his amendment. It seems to me my remarks as a reason why I can not do so are in order.

The CHAIRMAN. The gentleman can not speak out of order even at the request of a dozen gentlemen in the House.

Mr. RAGSDALE. But I am speaking with regard to this particular amendment, Mr. Chairman.

The CHAIRMAN. The gentleman moves to strike out the last four words of this amendment and the last four words are under discussion. The gentleman will proceed in order.

Mr. RAGSDALE. Mr. Chairman, I want to say to the gentleman from Kentucky who asked the question that there are more reasons than the fact that we have no Republican Party that make me a Democrat. All of the traditions of my people, all of the interests of our section, the real welfare of the Nation make me a Democrat. We do not have to explain why we are Democrats when we come from South Carolina. The Republican Party has so treated us in the past, by the invasion of our rights and failure to recognize the local interests, by the placing of negroes in office, and by using the patronage of the Federal Government to reward those who helped nominate Republican Presidents without regard to their power to elect or their unfitness and unpopularity at home, make it impossible for self-respecting white men in my district to be other than Democrats. We believe in Democracy and repudiate Republicanism because—

Mr. MANN. Mr. Chairman, I again make the point of order the gentleman is out of order. He is not discussing the amendment before the House.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. MOORE. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE. Do the rules permit anyone to offer an amendment in the fourth degree?

The CHAIRMAN. They do not; but the point of order has not been made against the amendment offered by the gentleman from South Carolina.

Mr. BUTLER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BUTLER. Can the gentleman move to strike out the last three words and still be in order?

Mr. MANN. He can move to strike out 40 or 400 words.

The CHAIRMAN. The Chair understands the rule to be, generally speaking, you can offer an amendment to an amendment and a substitute for an amendment and an amendment to the substitute, and then you have exhausted the parliamentary status in reference to amendments.

Mr. BARTLETT. But, Mr. Chairman, a suggestion. A gentleman may move to strike out the last word, and if the pro forma amendment is withdrawn then other amendments of that character are in order.

The CHAIRMAN. Certainly, if the amendment is withdrawn. If amendments are withdrawn other amendments can be offered—an amendment to an amendment, a substitute for the amendment, and an amendment to the substitute. The Chair is simply stating the parliamentary status.

Mr. BUTLER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BUTLER. After an amendment is debated and a gentleman moves to strike out the last four words, he is entitled to the floor. I have heard whole paragraphs used for that purpose—one word, two words, three words, four words, five words, and six words—giving the gentleman making the motion the right to the floor.

The CHAIRMAN. That is true after the pro forma amendments are withdrawn, but none of these pro forma amendments have been withdrawn. It is the custom, however, to consider them as having been withdrawn. The gentleman from South Carolina.

Mr. GLASS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GLASS. Would it be in order for me to move to close debate on this amendment?

The CHAIRMAN. Not while the gentleman from South Carolina has the floor. The gentleman from South Carolina.

Mr. RAGSDALE. Mr. Chairman, the gentleman from Kentucky [Mr. BARKLEY] has asked me—

Mr. THOMPSON of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. RAGSDALE. Certainly.

Mr. THOMPSON of Oklahoma. I would like to ask the gentleman a question; it will take me some time to ask it—

Mr. RAGSDALE. I have not the time to give the gentleman; I have only five minutes altogether.

Mr. THOMPSON of Oklahoma. All right; it will take me, perhaps, three minutes.

Mr. RAGSDALE. Well, I could not answer the gentleman then.

Mr. THOMPSON of Oklahoma. That is all right. I want to ask the question now to get this in the RECORD. Will the gentleman yield?

Mr. RAGSDALE. In five minutes.

Mr. THOMPSON of Oklahoma. It will take me about three minutes.

Mr. RAGSDALE. I have not that much time left.

Mr. THOMPSON of Oklahoma. All right. I will move to strike out the last few words.

Mr. RAGSDALE. The gentleman from Kentucky [Mr. BARKLEY] asked me if I would be a Republican if there was a Republican Party down there.

Mr. MANN. Mr. Chairman, I make the point of order that the gentleman is not discussing the Murdock amendment.

The CHAIRMAN. The point of order is well taken. The gentleman will proceed in order.

Mr. RAGSDALE. I merely wanted to answer that, Mr. Chairman. I certainly would not, as the gentleman from Kentucky knows. It is really a loss of time to say that anybody over in my part of the country who respects himself can be a Republican.

Mr. MANN. I make the point of order and ask that under the rules the gentleman be required to take his seat.

Mr. GLASS. Mr. Chairman, I move that debate on this amendment be now closed.

Mr. BUCHANAN of Illinois. Mr. Chairman, I would like about three minutes.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate be closed in three minutes.

Mr. THOMPSON of Oklahoma. I object, Mr. Chairman.

Mr. GLASS. Then I move that debate be closed in three minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] moves that debate on the pending paragraph be closed in three minutes.

The motion was agreed to.

Mr. BUCHANAN of Illinois. Mr. Chairman, I also voted for some amendments to this bill in the caucus. In fact, I believe I voted for a sufficient number to get the name of being an

insurgent. I also voted for an open caucus. I want to say, however, that I have a high regard for the President of the United States and for the Secretaries of State and the Treasury. I recognize their broad intellectual abilities and sincerity of purpose to protect the rights of the people. I also recognize the great service that the chairman and members of the Banking and Currency Committee have rendered to this House and to the country in framing this bill, but I beg leave to differ with them on the question of the amendment prohibiting interlocking directorates.

There has been much said here by the Republicans—in my judgment, for political purposes, as I doubt their sincerity—in regard to the Democratic caucus. I am not subject to the so-called lash of the Democratic caucus, neither am I subject to the dictation of any political boss or party organization, only so far as their acts are in accordance with the principles of Democracy. The Democratic caucus of this House has endeavored to secure the most perfect bills possible for the protection of the masses of the people. It is not a secret caucus, because the action of the caucus is given to the press. The bills approved by the Democratic caucus have been sufficiently perfect and reasonably just that Progressive Republicans and insurgents voted for them. It is the pressing necessity that these bills become laws that caused the united support of the Democrats more than the so-called lash of the caucus.

One of the things upon which I reserved a right under rule 7 of the Democratic caucus was to vote for the amendment prohibiting interlocking directorates if offered in the House. The Democratic caucus rules are very liberal, because no Member is bound unless action is taken by two-thirds of the full Democratic membership of the House; and even then he is not bound if the action is contrary to the party platform or campaign pledges. In view of the fact that the Democratic platform of 1912 declared in favor of a law prohibiting interlocking directorates, I feel that I am within the rule by voting for this amendment.

I believe that the system of interlocking directorates has been one of the most destructive influences in the financial, commercial, and industrial world of this country. I believe this system has had more to do with centralizing our finances into the hands of a comparatively few men than all other influences put together. This pernicious custom prevails in practically every enterprise in the country, but is particularly evident in the banking business, and it is in the banking business that such directorates are particularly dangerous. The distinction between the control of an industrial company and that of a bank or trust company is fundamental. In the former case the power of control covers only the assets of the corporation, but in the latter the control is over other people's money, and the interests of the public are at stake.

Official investigations have disclosed that a great share of the abuses prevailing in the financial world of this country are due to this system of interlocking directorates. It makes genuine competition impossible and gives a director an unfair advantage of knowing the affairs of borrowers in various banks, and thus affords endless opportunities for oppression. It has been shown upon examination that through the control of the leading New York institutions and their commanding position as the depositaries of the reserves of the country, and by reason of the fact that the New York Stock Exchange is the only public money market in the United States, that the money rates and the market for securities as affected by the money rates can be controlled. It is in their power, primarily by cooperation, to fix the call rate from day to day and to determine what constitutes satisfactory collateral. This does not necessarily mean that all loans made are controlled by them, nor that other banks would not effect loans on collateral that would not be accepted by these leading banks; however, this is not necessary in order to have control, no more than it is necessary for one corporation to own all of a given commodity in order to be able to control the price. By means of their power of control it is possible for this system to wreck a legitimate industry by refusing to grant a loan, no matter how solvent the enterprise may be nor how good its collateral and securities.

We all have vivid recollections of the panic of 1907, when just this thing occurred. In that year nature responded with a most bountiful harvest; manufacturing plants were running full time and their output more than normal; the channels of commerce and trade were choked by an overflow of products from farm and factory; our gold supply was exceeding all previous years; and there was a greater volume of money in circulation than ever before. When every natural condition favored the greatest prosperity, we were precipitated into a panic, a money panic, which was brought about by these few men who had gradually gotten control of our finances and with-

held them from the people. This is too vast and perilous a power to be intrusted to the hands of any man or set of men. Whenever the incentive is at hand the machinery is ready, and we have no right to assume that they will never again use it to their own advantage or to the detriment of the public welfare.

It has been argued by those opposing this amendment that there will be a bill follow later prohibiting interlocking directorates, but I am of the opinion that such a bill will not be passed in the near future applying to banks, because there will be strong opposition against its application to the banking business. Of course it is not at all surprising that these few men, having this unlimited control, should oppose surrendering to the United States in any degree the vast power which they have heretofore exercised; but why force this much-needed legislation over the same old rocky road that seems to have been made for measures that tend to relieve the working people, when we now have an opportunity to attach it to this bill? Now is the time to pass this measure, especially as it applies to the banking business.

Due to the many newspaper articles, testimony in the committee, and speeches made in the House threatening that the banks would not cooperate with the Government in the execution of this act, I also thought it necessary that we make some provision for the distribution of funds through some Government agency in the event that such a condition should arise. It was argued that Congress would be in session and could legislate in regard to such matters later, if they occurred, but this, however, does not appear to be good grounds for not taking the necessary precautions at this time.

I make these few remarks, Mr. Chairman, merely to explain my position in regard to the bill. Although it is not a perfect bill, I believe it is a good start in the right direction and incomparably better than our present system. The bill contains many wise and interesting features, which will help to make it a success; and while I desired the adoption of certain amendments, nevertheless I am willing to agree with the Speaker of the House in that this bill is a great improvement over our present very bad currency law and will be a great boon to the commercial interests of this country, if enacted, and therefore I will support it.

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. MURDOCK. Mr. Chairman, how much time is left?

The CHAIRMAN. One minute.

Mr. MURDOCK. I want to use about 15 seconds of that. I will say to the gentleman from Virginia [Mr. GLASS], before this amendment is voted on, that this is the one chance of the House of Representatives to vote upon the matter of interlocking directorates and other important and specific banking reforms. This is the only opportunity. If the House does not adopt this amendment now, good-by Pujo Money-Trust investigation and complete banking reform.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kansas [Mr. MURDOCK].

The question was taken, and the Chairman announced that the yeas seemed to have it.

Mr. MURDOCK. Division, Mr. Chairman.

The committee divided; and there were—ayes 43, yeas 61.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. LINDBERGH. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota [Mr. LINDBERGH] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 17, in line 10, by striking out all in said line after the word "banks" and striking out lines 11 to 17, inclusive.

Mr. LINDBERGH. Mr. Chairman, the part that I move to strike out here reads as follows:

No such applying bank shall be admitted to stock ownership in a Federal reserve bank unless it possesses a paid-up unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated, under the provisions of the national banking act, and conforms to the provisions herein prescribed for national banking associations of similar capitalization and to the regulations of the Federal reserve board.

My purpose in offering to strike out this language is simply in order to admit the country banks of small capital to membership in the Federal reserve banks; that is, the banks of capitalization less than \$25,000. The banks in these smaller communities do not require as much as \$25,000 capital, and yet under the present system, which will be changed in administration only by the Glass bill, they are as essential to the prosperity of the communities in which they exist as the larger banks are to the prosperity of the communities in which the larger banks exist, and it is doing an injustice to discriminate in favor of the larger towns and against the smaller towns. I offer this

amendment for the purpose of correcting that error and that discrimination in the bill.

The gentleman from North Dakota [Mr. YOUNG] offered the same sort of an amendment to a different section of this bill, but that section involved the incorporation of State banks so as to become national banks. This section simply applies to those cases where the State banks can apply as State banks to become members of the association. If the Federal reserve associations are to serve any purpose worth while to the people, all banks otherwise properly entitled to admission should not be excluded because of the amount of their capitalization. My amendment would accomplish the admission of all banks, irrespective of their capitalization, provided that in all other respects they are qualified for admission to the proposed association.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Minnesota yield to the gentleman from Pennsylvania?

Mr. LINDBERGH. Yes; certainly.

Mr. MOORE. Will the effect of the gentleman's amendment be to encourage the State banks to come into the Federal system or will it be to encourage the national banks to go out?

Mr. LINDBERGH. I do not know what the encouragement will be, excepting that under the bill as it now stands all these banks that have a capitalization of less than \$25,000 can not be members of those associations. There are many towns in which it would not pay to establish a national bank, or any bank, with a capitalization of \$25,000, so that the smaller villages and smaller towns would not naturally have banks of sufficient capitalization to become members of the Federal reserve banks.

Mr. MOORE. Mr. Chairman, there is an impression prevailing in many of the large cities that the effect of this entire measure will be to drive many of the national banks out of the Federal system, and that it will not encourage the State banks to come into the Federal system under the new law.

One of the correspondents of a Philadelphia bank, a country correspondent, has indicated just what this fear is in a letter which I send to the Clerk's desk and ask to have read in my time. This is from a Florida country bank, correspondent of a Philadelphia bank.

The CHAIRMAN. Without objection, the Clerk will read.

The Clerk read as follows:

I don't see how any banker with good sense could think the proposed currency bill fine. I don't know what it will do to you central bankers, but it will put the country national bank out of business.

Take us as an illustration, and we are larger than a majority of the country national banks, without \$150,000 capital and \$1,000,000 of deposits. To carry on our business we have to have in our vaults about \$75,000, about \$25,000 and \$50,000 in Philadelphia or New York. The regional bank will not enable us to cut down these amounts one penny. We have to have about 20 per cent in cash and balances in order to collect our out-of-town checks and be able to pay the checks on this bank as presented and care for our customers.

In our territory we are the only national bank, and yet there are 21 State banks, trust companies, and 2 savings banks. If the national bank act offers so little now, what will it offer under the new law?

First. We will have to buy \$30,000 (20 per cent of our \$150,000 capital stock) in regional bank stock, limited to 5 per cent dividends. We can loan this money here or almost anywhere in the South at 7 and 8 per cent. In loaning it locally you know we can get some good accounts, by reason of the accommodations extended customers.

Second. We will have to carry a deposit of \$50,000 (5 per cent of our \$1,000,000 deposits) with this regional bank, and that without receiving any interest for it. The central banks to-day pay 2 per cent and most of the southern centers pay 3 per cent.

Third. We can not reduce one penny the amount of cash balances we have to carry at certain points to pay checks drawn on us and collect checks deposited by our customers.

In other words, this \$80,000 which we have to tie up in the regional bank is really that much out of our capital stock. Instead of having \$150,000 capital we will only have \$70,000.

As this \$80,000 is worth 8 per cent to us, or \$6,400, we will have to pass up that amount if we stay in the national banking system.

Fourth. We are to remit for all clearing checks at par. This means another loss of \$6,000 to \$7,000. It actually costs us, clerk hire, stationery, shipments of currency, etc., about \$4,500. Then instead of being out \$6,400, we will be out between \$12,000 and \$13,000, or 8 per cent on our capital stock, just to be able to hang a sign out "national" bank.

What is all of this for? Just to be able to borrow a little money. I have been in banking 15 years, and have always been able to borrow such money as we needed from New York, good times and bad. In 1907, in the height of the panic, we experienced no trouble borrowing \$50,000 from the National City Bank of New York, who charged us interest at the rate of 6 per cent per annum.

Now, let us see about borrowing money from this regional bank. They will take certain commercial paper and high-grade bonds, I believe.

Let me tell you something: The average country bank's loans are to farmers and small traders—perfectly good but not of the high ratings that would be required. The country bank has little or none in commercial paper and the same of high-grade bonds—so what can they expect from the regional bank?

Since we have been a national bank we have actually lost nearly \$8,000 in premiums on Government bonds purchased and deposited to secure circulation. This is a lot of money for a country bank to lose and is three times the amount of money we have lost since organization in 1902 in loans and investments.

Recently we were designated a regular depository and allotted \$10,000, but the Secretary required \$7,000 in bonds of Hawaii, the Philippines, Porto Rico, and Panama, but we felt sure these bonds were selling on an artificial market, much like Government twos, and having

lost so much in Government twos we declined to buy \$7,000 of the bonds named and thus secure the \$10,000 deposit. We offered to deposit municipal bonds that were acceptable to the postal savings trustees, but they would not accept them. Evidently the Secretary of the Treasury's idea was to stimulate the market for a certain class of bonds, and that at the expense of the banks.

We have written our Senators about the proposed currency measure. The politicians know how to run the country, or think they do, and what bankers say don't go.

There is some consolation in the fact that our State legislature has just adjourned and will not meet for two years; the hysteria of Bryan's guaranty of bank deposit has exploded. A State bank charter only costs \$30, and if this proposed currency measure goes through we will write out the "First National Bank" and write in the "First State Bank," and continue at the same old stand. We will have lots of company in changing charter—no doubt of that in my mind.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. MOORE] has expired.

Mr. GLASS. I ask unanimous consent that all debate on this section and amendments thereto close in 10 minutes.

Mr. LINDBERGH. Mr. Chairman, I want permission to ask the gentleman several questions.

Mr. MANN. There are several amendments offered on this side.

Mr. GLASS. How much time is wanted on this section?

Mr. MANN. There are three amendments offered over here. I suggest to the gentleman to ask unanimous consent to close debate on the pending amendment, and then go ahead with the next amendment.

Mr. GLASS. Mr. Chairman, I ask that debate on this amendment conclude in five minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that all debate on the pending amendment be closed in five minutes. Is there objection?

Mr. THOMPSON of Oklahoma. I reserve the right to object, Mr. Chairman.

Mr. MANN. Give the gentleman three of them.

Mr. THOMPSON of Oklahoma. How is that?

Mr. MANN. I suggest to the gentleman from Virginia that he yield to the gentleman from Oklahoma three minutes. Is that what the gentleman wants?

Mr. THOMPSON of Oklahoma. I think that will enable me to conclude my remarks. I want to conclude them at this time without making motions hereafter and without the necessity of butting into this debate from time to time. I want to say what I have to say, even if it takes all winter.

Mr. GLASS. I will assure the gentleman that there is nobody here who desires to prevent him from saying what he wants to say.

Mr. THOMPSON of Oklahoma. There may be no question about that, but it does not make any difference even if there is anybody who desires to prevent me.

Mr. LINDBERGH. I would like to ask the chairman of the Banking and Currency Committee [Mr. GLASS] one or two questions. There is a provision in the last part of the section that we have just been reading in regard to banks being excluded from the association if they violate any rules of the Federal reserve board. I want to ask what, in the chairman's opinion, would be the effect after a bank once ceased to be a member if it is expelled and the stock in the reserve association is paid and canceled? Would such bank, in the opinion of the chairman, be entitled to continue as a national bank, irrespective of the provision requiring national banks that do not become members to dissolve?

Mr. GLASS. No.

Mr. LINDBERGH. Would it be entitled to go ahead as a national bank?

Mr. GLASS. I should think not.

Mr. MURDOCK. Mr. Chairman, I would like to ask the gentleman a question. Does the gentleman mean to say that there is nothing in the bill that provides that a national bank having become a member of the reserve bank and withdrawing ceases to be a national bank?

Mr. LINDBERGH. No provision whatever.

Mr. GLASS. As a matter of fact, no national bank could do anything that would incur expulsion unless it was something for which under the national banking law the Comptroller of the Currency would put it out of business.

Mr. MURDOCK. Would close it up entirely?

Mr. GLASS. Yes.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken; and on a division (demanded by Mr. Wingo) there were 26 ayes and 61 noes.

So the amendment was lost.

Mr. WINGO. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amend, page 17, line 11, after the word "to," by striking out the words "stock ownership" and inserting the word "membership."

Mr. WINGO. Mr. Chairman, I will not take any time on this amendment; it is simply to make uniform the language with the other amendments.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas.

The question was taken, and the amendment was agreed to.

Mr. MONDELL. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amend, page 16, by striking out, in lines 14 to 19, inclusive, the following:

"The Federal reserve board, under such rules and regulations as it may prescribe, subject to the provisions of this section, shall permit such applying bank to become a stockholder in the Federal reserve bank of the district in which such applying bank is located."

And insert the following in lieu thereof:

"Any such bank which shall fulfill the requirements of this act shall become a stockholder in the Federal reserve bank of the district in which such applying bank is located."

Mr. MONDELL. Mr. Chairman, when the Republican Party placed on the statute books the national-bank act in the sixties, it established for the first time in this country the principle of free banking. The committee in preparing this bill is building on the national-bank act, and certainly it could not be the desire of the committee to do away with the principle of free banking. As this bill was introduced the Federal reserve board had the power to refuse to allow a State bank to come into a Federal reserve bank. The language which I propose to strike out is an amendment adopted in the caucus, I think, with the intent to meet criticism that the board should not have the power at its will and pleasure to exclude State banks. But the language, in my opinion, is not happy.

Any State bank desiring to come into this system should be allowed to do so on complying with certain statutory provisions. There should be no discretion anywhere. The principle of free banking is that all who will comply with certain conditions, who are prepared to perform the service required, shall be allowed to come into the banking system of the country.

Any departure from that rule is fatal to the principle of free banking. There ought to be no discretion whatever left in the hands of the central board, and therefore I have provided that every banking association that shall comply with the provisions of the act may be allowed to come into the system.

Yesterday I offered an amendment, which I hope to discuss in just a moment, which was intended to take away the coercive feature of this bill, the feature that seeks to compel national banks to come into the system. I now offer this amendment in order that there may be no discretion left to exclude any bank which complies with the conditions laid down and prescribed in the law.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming [Mr. MONDELL].

The amendment was rejected.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. The amendment I offered a moment ago was intended to restore the principle of free banking by removing the discretion now lodged in the hands of the reserve board to exclude State banks. On yesterday I offered an amendment the effect of which would be to remove the coercion now contained in the bill compelling national banks, on the pain of forfeiture of their charters and loss on their circulation, to come into the system. In reply to my criticism the gentleman in charge of the bill seemed to consider it sufficient to say that the Monetary Commission bill contained a provision quite or nearly as coercive as the provision contained in this bill. I said to the gentleman that I thought he was in error in that matter. He insisted that he was not, and he called attention to that provision in the Monetary Commission bill which limited to one year the period within which the reserve board agreed to take responsibility for the bonds held by banks as the basis of their currency issue.

The gentleman attempts to convey the impression that that provision stood alone in the bill and therefore constituted a coercion on the national banks. I said to the gentleman I thought there were other provisions in the bill which would modify that. The gentleman asked me to point out the provision. I said that I did not happen to have a copy of the Monetary Commission bill; that I had not been able to find one. As the gentleman immediately called for a vote I did not have time to get a copy. I could not understand why it was so difficult to find a copy of that bill until it occurred to me that a great many copies must have been used for clipping and pasting purposes in the preparation of the Glass bill, and that

probably accounts for the dearth of those bills. I have, however, now found one, and I call the attention of the gentleman to section 48 of the Monetary Commission bill, line 3, page 66:

National banks may maintain their present note issues—

That is the provision of the Monetary Commission bill.

Mr. GLASS. Do not stop there. Read all of it.

Mr. MONDELL. I will read it all if the gentleman wants me to, although the remainder is not material—

but whenever a bank retires the whole or any part of its existing issue, its right to reissue the notes so retired shall thereupon cease.

That portion of the paragraph has nothing to do with the case at all. I have not said that a bank that saw fit to retire its notes could reissue them. What the gentleman attempted to prove was that there was a provision in the Monetary Commission bill equally coercive upon the national banks as the provision in his bill in effect.

Mr. GLASS. And it is.

Mr. MONDELL. And particularly in regard to currency issues and the value of the 2 per cent bonds. Now, the fact is that under the Monetary Commission bill if a national bank did not see fit to go into the system, it still continued to operate or could continue to operate as a national bank, could still retain its note issue, and therefore there would be no loss upon its 2 per cent bonds, because it would still have the benefit of the bonds as the basis of its note issue.

Mr. SHERLEY. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. SHERLEY. Does the gentleman believe in a uniform national banking system?

Mr. MONDELL. I do.

Mr. SHERLEY. If you are going to have a uniform national banking system, how can you have it unless you make its terms apply to all national banks?

Mr. MONDELL. I will say to my friend from Kentucky that I agree with the idea that lies at the base of his question.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. I ask unanimous consent that I may have five minutes more.

The CHAIRMAN. The gentleman from Wyoming asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. MONDELL. I am not defending this provision of the Monetary Commission bill. I did not think it was a wise provision. There were a lot of things in the Monetary Commission bill that I did not think were wise; but the gentleman from Virginia [Mr. GLASS] on yesterday, when I complained of the provision in this bill which attempted to coerce the national banks on the pain of the loss of prestige and the loss of charter and cost of reorganization—

Mr. SHERLEY. Right there.

Mr. MONDELL. Just a moment, because I am coming right to the point—and attempted to coerce them through the prospective loss on their 2 per cent bonds, the gentleman from Virginia said:

But there was a provision in the Currency Commission bill of the same sort.

That is not true, and it is for the purpose of illustrating that fact that I now rise.

Mr. SHERLEY. What I am interested in is not a dead bill, which belongs to the realm of the past, but I want the gentleman to answer this: How can you have a uniform banking system unless you make it coercive? When the national banking system was created every bank that came in came in under its terms; and not only that, but the State banks were penalized by a tax upon their circulation. I ask the gentleman in all candor if he proposes to amend the national banking laws at all, and is in favor of uniformity, how he can accomplish it unless he makes all the banks subject to the law?

Mr. MONDELL. I do not think coercion and confiscation in legislation are wise.

Mr. SHERLEY. Neither do I; but the gentleman uses the word "coercion," trying to give it a sinister meaning, because an amendment to an existing banking law is made compulsory upon those existing under the law, at the same time admitting that he favors a uniform law and admitting that you can only have a uniform law by making the banks obey the law.

Mr. MONDELL. I differ from my friend from Iowa [Mr. PROUTY] upon the proposition of Congress having the power to do this. I should not object to Congress compelling the national banks to come in, provided the Congress did not fix pains and penalties that would entail very heavy loss on the national banks if they did not come in. Let us enact legislation that is wise and the banks will come in anyway.

Mr. SHERLEY. What pain and penalty are inflicted, except denial of the right to do business, which is a privilege from the Federal Government that is granted upon their agreeing to the Federal Government's law?

Mr. MONDELL. The particular pain and penalty that I was discussing with the gentleman from Virginia is the loss upon bonds held as the basis of circulation.

Mr. SHERLEY. Is not the bald fact this, that the provision is simply that banks now exercising certain privileges by grant of the Federal Government shall continue to hold such privileges, subject to the terms of the law that may be made by the Federal Government, and would not that be true as to any amendment to the banking law?

Mr. MONDELL. I do not quite catch the gentleman's point, and the gentleman is taking up a lot of my time.

Mr. SHERLEY. Oh, I do not want to take up the gentleman's time.

Mr. MONDELL. Oh, go ahead.

Mr. SHERLEY. To-day these banks do business under the terms of a Federal grant, and when you amend the law which created that grant and have uniformity you must make those banks submit to the new amendment; and to say that is coercion is simply to say that the creature of the Government must do business under the terms of its creator.

Mr. MONDELL. Mr. Chairman, the gentleman does not understand my position. I believe that Congress has the power to do what is done in this act in this particular, but I do not think it is fair; I do not think it is just; I do not believe it is necessary; and I believe that the banks will come into the system more speedily and more generally if this coercive provision is taken from the bill. The very fact that you are trying to coerce the banks to come into the system on the pain of loss of charter and loss on their bonds will have a tendency to keep many of them out.

Mr. SHERLEY. Is not this the real position the criticism ought to take, as to whether the provisions of the new bill are wise and not as to their being coercive?

Mr. MONDELL. Taking that position, looking at it from that viewpoint, if the provisions are wise the banks will come in, and there is no necessity for any coercive provision.

Mr. SHERLEY. That does not follow.

Mr. MONDELL. It does follow, as night follows day.

Mr. SHERLEY. That certainly means darkness.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MONDELL. Mr. Chairman, I ask unanimous consent to proceed for three minutes more.

The CHAIRMAN. Is there objection?

Mr. BALTZ. I object.

Mr. GLASS. I do not know that I care to consume the time of the committee upon this point, but in order to have the Record straight I think I shall consume two or three minutes.

I said on yesterday that the proposed Aldrich bill contained a provision which in its coercive effect was analogous to a provision contained in this bill with respect to Government 2 per cent bonds, and I repeat that proposition. I said that the scheme of the Monetary Commission contemplated that the national banks of the country should either come into the system and surrender their bonds within one year, or that their bonds thereafter must be subject to the necessary depreciation that would inevitably follow failure to come into the system.

Mr. MONDELL. But my friend has overlooked—

Mr. GLASS. I am not overlooking anything, if the gentleman will only wait.

Mr. MONDELL. That it is not necessary for them to surrender their bonds because they could continue to keep their circulation out. Why should they want to surrender their bonds when they could keep their circulation out?

Mr. GLASS. Why did the Aldrich bill give them just one year in which to surrender their bonds?

Mr. MONDELL. That was an entirely different proposition.

Mr. GLASS. Section 49 of the proposed Aldrich bill says:

The national reserve association shall, for a period of one year from the date of its organization, offer to purchase at a price not less than par and accrued interest the 2 per cent bonds held by the national banks.

In other words, at the expiration of one year from the date of the organization of the national reserve association, that institution was under no obligation to purchase any 2 per cent bonds upon which the circulation of national banks is based. Now, what did that mean? It meant an inevitable depreciation of from 25 to 30 per cent in the value of all bonds not taken over. When the tentative draft of the bill now pending provided, as is provided in section 48 of the Aldrich bill, that there should be no further issue of circulating notes by national

banks beyond the amount now outstanding, and when it further provided that whenever a bank should retire the whole or any part of its notes it should not avail itself of that right further, the 2 per cent bonds on the New York Stock Exchange immediately went from above par to 95, and Mr. Vanderlip and other great New York bankers expressly stated that this very provision was responsible for that depreciation of the 2 per cent bonds.

Mr. MONDELL. But the gentleman still ignores the provision contained in the Monetary Commission bill, under which banks that do not come into the association could still continue to keep their circulation out.

Mr. GLASS. But the gentleman loses sight of the fact that section 49 of the Aldrich bill required that no national bank should increase its circulation above the point at which it existed at the time of the organization of the Federal reserve association, and that once it surrenders any part of its circulation it could not renew it.

The CHAIRMAN. The time of the gentleman has expired. Without objection, the pro forma amendment will be considered as withdrawn.

Mr. FOWLER. Mr. Chairman, on page 16, in line 20, after the word "such," appears the word "an," which undoubtedly is a typographical error, and, Mr. Chairman, for that reason I move to strike out the word "an."

The CHAIRMAN. The gentleman from Illinois offers an amendment which the Clerk will report.

The Clerk read as follows:

Amend, page 16, line 20, by striking out the word "an."

Mr. GLASS. The committee has no objection to that amendment.

The question was taken, and the amendment was agreed to.

Mr. MONDELL. Mr. Chairman, I move to strike out the last two words.

When I was interrupted a few moments ago, I was attempting to explain to my friend from Virginia [Mr. GLASS] that he was in error when he attempted to take advantage of me because I did not have a copy of the Monetary Commission bill before me—that he was in error when he said that the national monetary bill was as coercive as the provision in this bill compelling national banks to come into the system on pain of loss of charter. But that is not the feature of the gentleman's argument to which I desire to address myself. The Republican Party has never indorsed the Aldrich bill as a whole, nor has any considerable section of the Republican Party done so. I never have believed in all of its provisions or indorsed them.

Mr. GLASS. I will say to the gentleman, if he will permit an interruption, that I am not talking about what party has indorsed it or what party has denounced it. I am talking about what the national banks have done.

Mr. MONDELL. But I am not a national banker, and I have no connection with a national bank, and I never had any except as a man who frequently tried to renew his note.

Mr. GLASS. The point the gentleman undertook to make was that we were proposing to "confiscate" the property of the national banks, and my retort was that these very banks approved a similar section of the so-called Aldrich bill.

Mr. MONDELL. I said nothing of the sort. I did not say anything about what the national banks thought about it. I am not arguing this matter from anybody's standpoint but my own. It is a matter of coercion and confiscation, and I do not have to have anyone tell me that. No intelligent man needs to be told that if he has read the bill.

But I want to refer to this extraordinary situation. We have not indorsed the Aldrich bill. We have never stood for the Aldrich bill. There are many provisions in it that I do not, that most on this side do not, approve of. One trouble with the gentleman's bill is that he has used the paste pot and scissors too much in using the Aldrich bill in drafting his own bill; he took some provisions from it that he should not have taken. His party condemned the Aldrich bill on the claim that it created a central bank, and in his report he condemned the action of his party by saying that the Aldrich bill did not create a central bank in the proper sense of the word. And yet, his party having condemned the Aldrich bill, when a gentleman arises to oppose a provision in his bill, the chairman attempts to defend that provision in his bill by saying there is something just like it in the Aldrich bill. That is what I object to. If it were true that there was confiscation in the Aldrich bill, and the gentleman from Virginia knows it is not true—

Mr. GLASS. "The gentleman from Virginia" knows nothing of the kind, or he would not have asserted that it is true.

Mr. MONDELL. I will read that provision again.

Mr. GLASS. The gentleman is perfectly at liberty to give his interpretation of the bill, but he is not at liberty to give my interpretation of it.

Mr. MONDELL. I will put in the Record again:

National banks may continue their present note issue.

Mr. PHELAN. Will the gentleman tell me what market there would be under the Aldrich bill for national banks that held bonds and did not come into the Aldrich system after one year had expired?

Mr. MONDELL. They may continue to keep their present circulation, and as long as they do they lose nothing on their bonds. It is immaterial whether there is a market for bonds they have use for as a basis of currency. And I will say to the gentleman from Massachusetts [Mr. PHELAN], as I said to the gentleman from Virginia, if this iniquity were in the Aldrich bill it ought not to be in this one. It is certainly no defense of a provision in this bill to say something like it is in the Aldrich bill.

Mr. GLASS. Mr. Chairman, I move that all debate on this section and amendments thereto now close.

The CHAIRMAN. The gentleman from Virginia moves that all debate on this section and amendments thereto be now closed.

The question was taken, and the motion was agreed to.

The CHAIRMAN. The Clerk will read.

Mr. GRAY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] will have to wait until the next section is read.

The Clerk read as follows:

FEDERAL RESERVE BOARD.

SEC. 11. That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President of the United States, by and with the advice and consent of the Senate. In selecting the four appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of different geographical divisions of the country. The four members of the Federal reserve board chosen by the President and confirmed as aforesaid shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of \$10,000, together with an allowance for actual necessary traveling expenses, and the Comptroller of the Currency, as ex officio member of said Federal reserve board, shall, in addition to the salary now paid him as comptroller, receive the sum of \$5,000 annually for his services as a member of said board. Of the members thus appointed by the President not more than two shall be of the same political party, and at least one shall be a person experienced in banking. One shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years unless sooner removed for cause by the President. Of the four persons thus appointed, one shall be designated by the President as manager and one as vice manager of the Federal reserve board. The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board.

The Federal reserve board shall have power to levy semiannually upon the Federal reserve banks, in proportion to capital stock, an assessment sufficient to pay its estimated expenses for the half year succeeding the levying of such assessment, together with any deficit carried forward from the preceding half year.

The first meeting of the Federal reserve board shall be held in Washington, D. C., as soon as may be after the passage of this act, at a date to be fixed by the reserve bank organization committee. The Secretary of the Treasury shall be ex officio chairman of the Federal reserve board. No member of the Federal reserve board shall be an officer or director of any bank or banking institution or Federal reserve bank nor hold stock in any bank or banking institution; and before entering upon his duties as a member of the Federal reserve board he shall certify under oath to the Secretary of the Treasury that he has complied with this requirement. Whenever a vacancy shall occur, other than by expiration of term, among the four members of the Federal reserve board chosen by the President, as above provided, a successor shall be appointed by the President, with the advice and consent of the Senate, to fill such vacancy, and when chosen shall hold office for the unexpired term of the member whose place he is selected to fill.

The Federal reserve board shall annually make a report of its fiscal operations to the Speaker of the House of Representatives, who shall cause the same to be printed for the information of the Congress.

Section 324 of the Revised Statutes of the United States shall be amended so as to read as follows: "There shall be in the Department of the Treasury a bureau charged, except as in this act otherwise provided, with the execution of all laws passed by Congress relating to the issue and regulation of currency issued by or through banking associations, the chief officer of which bureau shall be called the Comptroller of the Currency, and shall perform his duties under the general direction of the Secretary of the Treasury, acting as the chairman of the Federal reserve board: *Provided, however,* That nothing herein contained shall be construed to affect any power now vested by law in the Comptroller of the Currency or the Secretary of the Treasury."

Mr. MANN. Mr. Chairman, there are two committee amendments.

The CHAIRMAN. Without objection, the committee amendments will be considered in gross.

Mr. MANN. Let them be reported.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Page 19, amend line 15 by striking out the word "board" and inserting the words "Federal reserve board."

The CHAIRMAN. Without objection, the committee amendment will be agreed to.

There was no objection.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 19, line 20, after the word "capital," insert the word "stock."

The CHAIRMAN. Without objection, the amendment will be agreed to.

There was no objection.

Mr. LINDBERGH. Mr. Chairman, I offer an amendment which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH].

The Clerk read as follows:

In line 24, on page 18, strike out the word "of," and in line 25, on said page, strike out "\$10,000" and insert in lieu thereof "to be fixed by Congress from year to year in the appropriations"; on page 19, in line 3, strike out "sum of \$5,000"; and after the word "board," in line 4, insert "same to be fixed by Congress from year to year in the appropriations."

Mr. LINDBERGH. Mr. Chairman, there is nothing particular that I care to discuss in this amendment, except that I believe the salaries of these officers can be better fixed by Congress from time to time than be fixed in this act.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH].

The question was taken, and the amendment was rejected.

Mr. MANAHAN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota [Mr. MANAHAN] offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 18, beginning in line 12, strike out the words "the Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio" and insert in lieu thereof the words "who shall be member ex officio."

On page 18, in line 14, strike out the word "four" and insert in lieu thereof the word "six."

On page 18, in line 16, strike out the word "four" and insert in lieu thereof the word "six."

On page 18, in line 21, strike out the word "four" and insert in lieu thereof the word "six."

On page 18, beginning in line 26, strike out the words "and the Comptroller of the Currency" and the remainder of the sentence.

On page 19, strike out the sentence beginning in line 7 and insert in lieu thereof the following: "Two shall be designated by the President to serve for three, two for six, and two for nine years, respectively, and thereafter each member so appointed shall serve for a term of nine years unless sooner removed for cause by the President."

On page 19, line 11, strike out the word "four" and insert in lieu thereof the word "six."

Mr. MANAHAN. Mr. Chairman, the purpose of this amendment, as can be readily seen, is to change this section so as to remove the partisanship feature. The general section I favor. It redeems the whole measure. It covers a multitude of sins.

The objection offered by some gentlemen that it gives too much power to the Federal reserve board is without weight, in my opinion. True, the great power of banking and currency, probably the mightiest tool of the people, an instrument designed to carry on the business of trade and commerce, is secured to the Government by this section; but this is merit and not demerit.

It is a great power, a tremendous power, as some gentlemen on this side have said; but it is a power that must reside somewhere. It must rest either with the banks or with the Government. I can not understand how men at all familiar with the principles of government can hesitate in deciding to place it with the Government and not with the banks, because the power over the expansion and contraction of currency and credit is so great and so absolutely controls all business that as a power it must be abused if it is permitted to be exploited by selfish men or still more selfish corporations. And when abused under the form of law this power becomes tyranny and oppression.

So I am heartily in favor of this whole bill because of the redeeming character of this supreme section in it. I intend to vote for this bill, even if it can not be amended, although I am frank to say that there are provisions in it which ought to be amended in justice to the banks and in order to make it a better bill. I am confident that these amendments will be made either by this House or by the Senate before final enactment into law. The reserve provisions which we have considered will doubtless require country banks and many banks in reserve cities to discount short-time commercial paper in order to keep the required credit and balance in reserve banks, and will prove very burdensome if not intolerable. There is justification for the fear that many banks may consider these reserve provisions

so unfair, on account of their being required to borrow and pay interest on an amount approximating one-half of their capital stock in order to comply with the law, that they will not go into the system at all. The central reserve banks, including the Wall Street giants, will doubtless have money enough to meet the reserve requirements without borrowing, but few of our western banks will be able to do so. These reserve provisions should be modified by the committee so as to give the small banks a chance to enjoy the advantages and protection of this law without being obliged to consume the profits of their stockholders in paying interest on idle money.

The surplus of each bank should also be considered in determining the subscription to the stock of the Federal reserve banks. As the bill stands the old banks of the eastern cities with large surplus have a decided advantage over the newer banks of the West which do not carry so much surplus as active capital. There should also be a provision against interlocking directorates.

I hope these and similar amendments will be made here or at the other end of the Capitol. But the part of this section which is particularly open to objection is the part to which this amendment now under consideration is directed—the part which gives partisan control of the Federal reserve board. A powerful board like this ought to be a Government board—not a Democratic board nor a Republican board. If this bill passes in its present form, this board will for four years be a Democratic board and for the next four years probably a Republican board—the one as bad as the other because partisan—and to the extent that it provides for a partisan board this provision is reprehensible. There is nothing more vicious in Government than blind, unreasoning partisanship. The blight of partisanship has been manifest already in this Congress. Consider the caucus and its legislation under lock and key. A while ago the gentleman from South Carolina [Mr. RAGSDALE] got up and said, as an excuse:

White supremacy is to us the paramount question, which outweighs every other question because of the black cloud that is hanging over us at all times and is a menace to us. For that reason we have to go in a caucus; we have to bind ourselves to abide by the result of the caucus.

Such reasoning may satisfy the South, but I submit that it shows an utter lack of statesmanship. When applied to general legislation the secret party caucus is wrong and vicious in principle no matter how lofty the motives of the leaders may be. And what defense do you northern Democrats offer? You dare not attempt to defend it on principle as a Democratic proposition. To do so would raise the ghost of Thomas Jefferson. You dare not attempt to make any defense of lawmaking by secret caucus, because any argument you could offer would invite your own retirement at the polls. But you can call names. From the beginning of this discussion in answer to our charge of the sins of the secret caucus you retort: "Caumon was guilty; Tawney did it; Dalzell did it." These lame ducks suggest your lame defense. You fail to realize that such a defense is a confession of guilt, a plea of insanity, and a threat of suicide all at once. [Applause on the Republican side.]

Mr. BARKLEY. My answer is that we have given you a bill you are going to vote for, and most of the fellows on your side.

Mr. MANAHAN. And my answer to that is this: I shall vote for it because it has underlying it a great and correct fundamental principle contained in this section which I desire to amend so that it may be perpetuated and not endangered in the future by the wrong kind of an appointive board. I wish to insure for all time to the people the control of their money matters. I wish to strike down for good, if it is possible, the hand of greed that has been choking the toilers of this Nation and taking usury year after year under the loose law which this act repeals. I will vote for this bill because it is a step in the right direction. It takes the use of credit away from chance and speculation and gives it to honest trade and commerce. In short, this bill removes our sovereignty from money to men, our capital from Wall Street to Washington. [Applause.]

I have no patience with the pretense that bankers are a superior sort to be protected from interference by politicians. Banking is essentially a public business, and the determination of what is currency and the control of its expansion and contraction must be and must always remain a purely governmental function. If you say the officials of the National Government—Congress and the Executive—are politicians, it follows that politicians must control banking and currency or surrender that control, which is a sovereign power, to the banks themselves who would exercise it for profit and without obligation to render an accounting to the people.

Few people seem to realize how much the public welfare depends on the way in which the two great public tools of

money and transportation are used. Each is a public tool designed to do the work of exchanging from man to man the products of toil, the work of trade and commerce. Money can not do the work of trade without railroads, and railroads can not without money. These two are the mightiest tools of civilization, useful when used as tools but oppressive when used as weapons of exploitation in taking an unfair part of the goods and property which they handle in business.

I take the broad position that the entire and absolute control of the great tools of money and transportation should each rest under the firm hand of the National Government, and I can not support the amendment of my colleague from Illinois [Mr. MADDEN] proposing to give the appointment of three members of the Federal reserve board to the bankers any more than I could support an amendment to the interstate-commerce act proposing to give the appointment of three members of the Interstate Commerce Commission to the railroads of the United States.

I do not hesitate in saying that banking and currency occupy exactly the same relation to the general public as transportation and, therefore, there should be no difference in principle, either in method of organization or status, between the Federal reserve board and the Interstate Commerce Commission. Each represents the full power of the Government over an essentially sovereign power.

In making this statement I am not unmindful of the fact that it conflicts with the judgment of the leader of this side of the Chamber, who, in support of his point of view, states quite fully the part he took in writing the interstate-commerce law without showing where there is a distinction in principle between the powers conferred under that law and those conferred under the act we are considering. So far as I can understand, it is the same in principle, because the power of the commission is the power over the rates of the railroads, and the power to control rates of transportation is the mastery of transportation. Any incidental power or management is insignificant in comparison with the control of rates, which is the lifeblood of the business. Now the power to control rates means the power to control the tool of transportation. I repeat that the other great tool of civilization is money, each of these tools being designed for no other purpose than to bring about the exchange of commodities from man to man. The railroads effect the exchange of actual physical property; money effects the trade and the title of physical property. In principle, money and transportation stand upon exactly the same basis, and both are tools of the people. If you control the rates of the railroad, you control that tool; if you control the rate of interest, you control the tool of currency and money.

The essential power of this Federal reserve board is the power to expand and contract the currency, and the power to expand and contract the currency is the only power that will control the rate of interest and exchange which the people must pay. And this board is designed to have power and will have power over the expansion and contraction of currency, and therefore power over the tool of money, designed to serve the people like the tool of transportation. In principle no man can show any clear distinction as a matter of governmental policy between the control and regulation of currency and money on the one hand by this Federal reserve board and the control of transportation and the railroads by the Interstate Commerce Commission on the other hand; and there is just as much sense in arguing that a railroad president as such should have a place on the Interstate Commerce Commission, as there is in arguing that a banker should have a place upon the Federal reserve board. There is no distinction in principle.

The gentleman from Ohio [Mr. FESS] expresses a fear of the Aldrich bill because of the control of the bankers, and yet he would give the bankers representation on the board. Why is the gentleman afraid of the bankers?

Mr. FESS. May I answer that?

Mr. MANAHAN. Yes; but let me answer first and then you may answer. The gentleman is afraid of the control of the bankers because the control of the bankers would enable bankers to exploit the public, and there can be no other sane reason for being afraid of the control of the bankers. Then, if complete control of this board by the bankers is a bad thing—a partial control, an insidious, back-door control, or any other kind of control, advisory or otherwise—is to that degree also in principle a bad thing. [Applause.]

The importance, however, of having the Government in firm control of the whole business of banking and currency only emphasizes the evils that might follow if that control should be exercised in a partisan way for partisan purposes. Such great power as this board carries should not be made the prize of a political campaign. One member only of the Cabinet, ex

officio, and the other members appointed for longer terms, as set forth in my amendment, will enable the present Executive to appoint a board of strong men who can not be replaced four years from now by an incoming administration. One member of the board appointed should, of course, represent the great industry of agriculture, which has never had the protection and help it deserves in the matter of banking facilities. Instead of being represented by one man, half of whose time is devoted to Cabinet duties and the other half to banking duties, agriculture is entitled as the most important industry of the country to the best service of two of its strongest representatives, one to devote his entire time as a Cabinet official and adviser of the President and the other as a member of the Federal reserve board to devote his entire time to the great subject of banking and currency as it affects the agricultural interests of the Nation.

In this connection, Mr. Chairman, I desire to further extend my remarks to say that our laws on this subject should go beyond the provisions of this bill in its present form to meet the special needs of the farmers of the country. If this bill can not be amended so as to include a workable cooperative scheme of rural credit and banking which will protect agriculture from excessive interest charges, there should be no delay at the regular session in December in making this matter of rural credit the subject of immediate legislation. It is impossible to overstate the importance of this to the whole country. The money lenders of this Nation are eating the heart out of agriculture. The Government statistical reports of 1910 show a farm-land mortgage indebtedness in the United States amounting to \$3,460,172,851.

The interest, including commissions and expenses incident to the loan, which the farmers must pay makes a total annual rate on this indebtedness of fully 8 per cent, in the aggregate about \$277,000,000 annually. Every unfair burden placed upon farm land works a double evil—it adds an excessive charge to the cost of production, which ultimately the consumers of food must in large part pay, and it handicaps production and prevents improvements which would make it easier to raise more bountiful crops, besides driving the best and most ambitious men out of the farming business because of its hardships. This has a bad effect on the entire public. It congests the cities, making them more and more unwholesome. It depopulates the farms, making them less and less productive. It creates an unhealthy and abnormal civilization generally. That men living upon their own land should be compelled to pay from 6 to 8 per cent and higher interest annually for borrowing money necessary to improve and properly operate that land, and secured by a mortgage upon it for half or less of its actual value, shows most intolerable stupidity on the part of a Government that can borrow all the money it needs on its bonds at 3 per cent and could just as well carry this entire farm-mortgage indebtedness for its farmers at a rate not exceeding 4 per cent, thus making a stupendous annual profit to the Government, which could be used for public purposes and which would save to the agricultural interests of the Nation hundreds of millions annually.

It is time, I think, that the divine wrath of the people should scourge the money changers from the temple. It will not be an easy matter to secure legislation freeing the farmers of the land from the many different kinds of burdens and exactions which are placed upon them under existing laws by the men who own and control money and credit. This control of money and credit by powerful men and interests and the lack of workable capital on the part of the farmers is what enables the commerce of the Nation in staple commodities like wheat and cotton to be exploited by selfish middlemen, to the common injury of producer and consumer. Take, for illustration, the vital commodity of wheat, in the production and handling of which the great State which I represent has such an important part. Our great markets in Minnesota handle annually in the neighborhood of 200,000,000 bushels of wheat, nearly all of which is raised in Minnesota and our neighboring States, the Dakotas. Minneapolis is one of the most important wheat markets in the world on account of its great mills and its accessibility to the wheat fields. For many years, by means of a close corporation operating as a chamber of commerce in Minneapolis, the big dealers in wheat, with large control of money and credit under existing banking laws, have been able to so manipulate the market, prices, and movement of grain as to rob the farmers who raised that grain of a large part of its actual value as measured by the prices which consumers paid for bread. Although the farmers were during all these years actually living upon and tilling as owners the best wheat-producing soil in the world, with basis for credit in land and character inherently as good as the Government's, money was not available except

at ruinous rates, so that it was not possible for them to provide storage for themselves nor to hold their grain for an honest market, nor to protect themselves from exploitation at the hands of transportation companies, terminal elevators, and chamber-controlled commission men.

Year after year they have been subjected to fictitious and illegal switching and setback charges, to unfair dockage, to manipulation of grades under cover of mixing processes, to misleading price lists, and gamblers' quotations from the wheat pit; and all the while the control of the situation by the men who exploited them has been maintained by virtue of banking and railroad connections and resources, bank influence and bank credit, reaching not only the dealers concerned, but men and officials of public influence as well. The chamber of commerce was the machine in control of distribution all the time, but the key to the situation has been and is now the control of money and credit by the exploiters and the lack of money and credit by the farmers. The Chamber of Commerce of Minneapolis conducts a private market place under rules, customs, and prices that are kept secret, with exclusive membership so connected with the big banking institutions as to dominate and control the wheat-moving credit of the Northwest. Prior to the organization of the farmers' cooperative elevators this influence and control extended through the line elevators to practically every wheat-buying station in the Northwest, and until very recently, when an independent selling agency was established, the Minneapolis Chamber of Commerce had and exercised absolute control at that terminal and even now the control of this great market place and the monopoly that dominates it as a chamber of commerce rests largely in certain strong concerns. The Van Dusen-Harrington Co. owns and controls 21 memberships, the Washburn-Crosby Co. 21, the Big Diamond Milling Co. 10, and so forth. Ten of these large milling and elevator firms control at least 125 memberships. But the significant feature of this great market place is the fact that the banks of the Twin Cities hold eight memberships for purposes of credit supervision and control.

When the farmers of the Northwest, handicapped as they are by lack of credit and by usurious interests charges, attempted by cooperative organization to protect themselves from annually recurring robbery at the hands of wheat buyer and money lender alike, they were subjected to every conceivable form of treachery and oppression. The railroads discriminated against them in favor of the terminal dealers, with whom the railroads were and are allied in the general scheme of bank credit and control. These cooperative concerns were discriminated against on the chamber of commerce and were seduced to ruin when possible by temptations to gamble in the pit. Day after day the price of cash grain in Minneapolis was moved up and down in response to bidding in the pit of gamblers in futures. Dealers with no other asset than nerve have on money borrowed in large sums from the city banks bought and sold in the pit millions of bushels of wheat which they never saw or expected to see, and thereby manipulated the price of wheat for their own profit, while the farmers at the same time were disposing of real wheat which they had raised, but were compelled to ship and sell at gamblers' prices because our banking facilities are such that they could not borrow at an agricultural rate money to carry them over to a better market.

The farmers are well organized now to protect themselves and the common good, if the Government would provide proper banking facilities for agricultural business, which is inherently different from commercial business, requiring longer loans upon a lower rate of interest. There are now in our northwestern wheat belt more than a thousand of these cooperative farmers' elevators, and these concerns handle in the country over 50 per cent of the grain. The imperative need of the farmers of the Northwest at this time is to have fair terminal facilities in the matter of selling agencies operating on a cooperative basis, and it is scarcely possible for them to maintain and support such terminal facilities unless the Government lifts the burden of usury which has kept our farmers poor as a class in spite of the splendid soil on which they have labored. It will not do for gentlemen to say that our farmers are enjoying exceptional prosperity under our laws. It is not true. Already 800,000 of the sturdiest and best of our younger citizens have drifted across the border into Canada. In 1880, 25.6 per cent of our farms were worked by tenants; in 1890, 28.4 per cent; in 1900, 35.3 per cent; and in 1910, 37.1 per cent. To-day less than one-tenth of 1 per cent of our population own over 25 per cent of all the land actually cultivated in this country. These figures are incontestable and are tragic in their significance.

I can not see any way to stop this steady drift toward universal tenantry, and consequent degradation, in this country save by firm laws that will break the grip of the interest-col-

lecting money class. The ultimate greatness and power of this Nation must rest upon the strength of the men who own the land they work upon and prosper through the fruit produced by their toil. Our Government has been far from wise in the matter of rural credit. About 20 years ago New Zealand enacted a law empowering the Government to borrow money to lend to its farmers. Under this law it has loaned over \$50,000,000 on farm mortgages, the incumbrance approximating 60 per cent of the value of the farms mortgaged. These loans run from 17 to 36½ years, the interest and a small payment on the principal to be made semiannually. The usual rate is 5 per cent, with a provision making it 4½ per cent if the borrower pays promptly. Postmasters and other Government officials are, of course, utilized as agents of the Government in its loan department. When this law was passed in New Zealand the rate of interest there was over 8 per cent, but immediately thereafter the interest rate fell rapidly to 4 and 4½ per cent, and money lenders were glad to loan their money at that rate. The law proved beneficial to local banking business on account of the general increase in agricultural prosperity and the consequent larger volume of commercial business, which stimulated short-time loans and local banking.

But New Zealand is not the only object lesson we have to consider. Practically every enterprising and progressive nation in the world has advanced beyond us in the matter of rural credit and wise solicitude for farmers. We have had in this country altogether too much of what we call "business legislation," meaning the management of moneyed men. The great source of our wealth and prosperity is the farmer, and not the moneyed man, and the sooner our laws respond to this truth the better it will be for this Nation. Congested cities are a menace, while prosperous farmers are ever a source of strength to a people. Our tariff, transportation, and banking laws should all be directed to fostering agriculture. Real men and women would be happier, stronger, and better out where it is easier to live near to nature and God, if only the living conditions demanded in our age were made possible to them by the wealth that rightfully belongs to the soil and to those who till it. Food producers deserve firm protection. Their markets should be free. Their currency should conserve their crops. Banking and bread in statecraft are inseparable.

This great banking law which we are about to pass will not, as it stands, adequately serve agriculture. I favor it, nevertheless, because it is a broad foundation and places the control of money firmly in the hands of the Government. On this foundation it should be possible to build a financial system strong and comprehensive enough to meet every demand of business and broad enough by proper amendment to include the special needs of agriculture.

Mr. GLASS. Mr. Chairman, if it is not desired to prolong the discussion on this amendment, I would like to ask unanimous consent that it be concluded in 10 minutes.

Mr. GRAY. I ask that I may have 5 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that debate on this amendment be concluded in 10 minutes. Is there objection?

Mr. MANN. Why not close debate on the section?

Mr. POWERS. Reserving the right to object, I have a little amendment which I would like to offer.

Mr. MURRAY of Oklahoma. Mr. Chairman, I shall not attempt to discuss banking legislation in general nor to explain completely the provisions of this bill, for the reason that it is impossible to do so under the limited time allowed me. I intend to vote for this bill because bound by the Democratic caucus, reserving the right to vote for certain amendments that will better the bill if offered on the floor. I shall have time enough only to explain in but a sentence the machinery of this bill, and then to explain my vote upon the various amendments submitted in the caucus.

The bill is much better, particularly for the South and West and for the agricultural class, now than when first presented to the caucus, by reason of the adoption in the caucus of certain amendments. All amendments were strongly resisted by Chairman GLASS and all the members of the committee except NELLEY, of Kansas; RAGSDALE, of South Carolina; EAGLE, of Texas; and WINGO, of Arkansas; but many of these amendments, particularly those in the interest of the West and agriculture generally, were supported by these four members of the committee, and greatly aided by other gentlemen who were not members of the committee. Among these were HENRY, CALLAWAY, VAUGHAN, SUMNERS, RAYBURN, and STEPHENS, of Texas; THOMPSON, of Oklahoma; RUBEY, of Missouri; Sisson, QUIN, and COLLIER, of Mississippi; nearly all the Arkansas, Kansas, and Georgia Members; GRAY, of Indiana; BOWDLE and CROSSER, of Ohio, and some 15 or 20 others whose names I can not recall, and some

of these amendments were supported by Speaker CLARK, DECKER, and HENSLEY, of Missouri; FERRIS and CARTER, of Oklahoma; GORDON, of Ohio; KINDEL, of Colorado, and some 30 or 40 others.

The machinery of this bill, in brief, is that all the national banks of the country shall be organized into 12 districts known as regional reserve districts, each bank becoming a member of the regional reserve bank of that district by a forced subscription of 20 per cent of its stock as capital stock of the regional reserve bank, thereby giving them rediscount privileges with the regional reserve bank; that is, the privilege of having the paper of the local bank put up with the regional reserve bank as collateral for funds to make additional loans by the local bank. Each of these 12 regional reserve banks are controlled by a board, a majority of which are elected by the banks of the district, and all the regional reserve banks, together with the discount, rediscount, and other privileges of the local bank, to be under the control of a supreme board of seven, this board to consist of the Secretary of the Treasury, the Comptroller of the Currency, and the Secretary of Agriculture, together with four other members, all of whom are appointed by the President, with terms ranging in such a way that every President coming into office will have immediately the appointment of four out of the seven, so as to give the President, whoever he may be, absolute control over all the banks in the United States, because the bill provides that not only the 7,500 national banks shall join the system, but all the 17,500 private banks, State banks, and trust companies may join; in effect giving the President the direct control over the entire 25,000 banks of the United States; and therein lies, to my thinking, the greatest evil in this bill. If the banks do not become interested in the Government business, it will be because they are so public spirited and patriotic as to overlook their own interests. I do not believe that any class forget their own selfish interests, and that these 25,000 banks, together with their officers and many thousand directors and stockholders, will be directly interested in the nomination and election of every President. They are going to want to know who will be the President to appoint this board of seven. The Secretary of Agriculture will not be appointed because of his knowledge of that subject, but because of his position on banking questions; and therein lies another evil, because we have few, anyway, who had either knowledge of agriculture or sympathy for farming. This board has control of the question of rates of interest, of discount, and many other questions too numerous in the time I have to mention. Their powers are as tremendous as the powers granted the corporation commission of Oklahoma, with this difference, that in the case of the corporation commission their orders are subject to supreme court review.

I have not as much faith as Mr. GLASS and the other defenders of the Glass bill in politicians. My experience teaches me that these banks, having a knowledge of politicians for self-preservation, will ask and procure private pledges of every possible candidate for President, and knowing that many men would sell their souls to be President of the United States or even governor of one of them; willing to make any kind of a pledge and carry it out for the honor and name of holding the office—politicians who will stoop to tricks that will dam up forever the source of honor, and in order to bring renown or promotion, usher in infamy to their own souls, and woe to the people. This evil will show its most baneful effects not against the party out of power, as it will be against the general interests of the public and against any man within the President's own party whom he can not control. Independence will be discouraged. Members of Congress will come to the conclusion that they must throw to the wind platform principles and personal pledges to their constituents and obey the behest of the President in order to prevent being "butted off the track" by all the power of a national administration.

Another provision of this bill provides that, after certain dividends are paid, 60 per cent of the profits of the regional reserve banks shall go to the United States Government, thereby putting the Government in partnership with the banks of the country. I believe in the fundamental principle that the Government should stay out of the banking business and that bankers should stay out of the governing business; at least, if the Government enters upon the system of banking and engages in the system as a system, that it should form no partnership with individuals, but the Government should own, control, and completely operate the banks. If this Government should ever enter upon Government ownership of railroads, I would be opposed to a joint ownership of the Government with railroad magnates, but I would want the Government absolutely to own and operate the road. I do not mean when I say the Government should stay out of the banking business that the Govern-

ment should not examine, regulate, and control the banks, under the law, just as we fix passenger and freight tariffs and regulate the railroads as we do under the Interstate Commerce Commission. There should be the most rigid examination and regulation of banks, under law, but what I inveigh against is this partnership of the Government with the banks of the country.

Students of history will recall the contest between Andrew Jackson and Nicholas Biddle, head of the United States Bank, then with only \$35,000,000 of capital. Biddle stated to Jackson:

You do not know what power we have. We can make and unmake Congressmen, elect or defeat Senators and Presidents, bring prosperity or panics to the country, weal or woe to the people.

To this Jackson replied:

If that is true, you have too damn much power, and, by the Eternals, I am going to destroy it.

And he did destroy it. It is regretted that he did not inaugurate a new system. They failed to agree upon one. When new banking legislation was under discussion the very principle entered upon in this bill was proposed at that time, and that is that the banks should be under the control of the Executive. Mr. Thomas H. Benton, of Missouri, the greatest advocate of sound banking and currency this country has ever known, who taught Jackson the lessons of wholesome banking legislation, opposed this principle, and Andrew Jackson himself, in discussing this proposition, made this statement:

In ridding the country of an irresponsible power which has attempted to control the Government, care must be taken not to unite this same power with the executive branch. To give a President the control over the currency and the power over individuals now possessed by the Bank of the United States, even with the material difference that he is responsible to the people, would be as objectionable and as dangerous as to leave it as it is.

We had in our own State the same trouble with a like governing board. I was speaker of the first legislative body which in late years passed a guaranty bank law. We all agreed upon a central board to be controlled by certain State officers—not appointed, but elected by the people and directly responsible to them. I remember that many objections were made to our bill, and we wisely made changes and modifications to meet these objections, but no one raised the question of this control; but it proved so disastrous, by reason of the organization of this same board of the Columbia Trust Co. and the use otherwise by deposit of the guaranty fund and other funds of the State, that we remember with sadness the baneful effects of that principle of our guaranty law of Oklahoma, so that the last legislature wisely changed the board.

It is admitted by Mr. GLASS and the proponents of this bill that it will all depend on this board of seven, and I tell you that they must not only be honest and competent, but they must represent every section of this country. This board, if selected east of Washington, would know little and care less about the agricultural and other interests in the Western and Southern States. Our commercial paper is entirely different. In Oklahoma about the only prime commercial paper is that based upon cattle and agricultural products, particularly cotton. Therefore I introduced an amendment in the caucus providing that not more than one of these four appointed by the President shall be selected from the same regional reserve district. That amendment was adopted. I also sought to raise the number to nine and have their terms so arranged that no President could, immediately upon being elected, when he was surrounded by the halo of victory, get complete control of the board until after two years of his administration had passed by, so as to remove the incentive the banks would have to dictate the nomination and election of the President; and I yet have hope of seeing the President convinced on this point and having the change made when the bill reaches the Senate.

I wish to say that I do not care whether this is a Government currency or an asset currency, and in truth it is both. What I want to know about currency is that it is an emergency currency, and that above all it is sound and will be equal with the legal tender of the country. I could give my views on the question of "sound currency," an "emergency currency," "elastic or liquid currency," and a sound banking system. All these things are clear in my mind as to what laws should be enacted for their creation, but I have not time.

There is one section of this bill which, in my opinion, is of tremendous importance and one that I heartily approve, and that is the one that provides that hereafter no national bank shall be required to buy bonds as a precedent to its organization. Under our present law, enacted in 1863, purely as a war measure and to give market for Government bonds, not a single national bank could be organized if the country was entirely out of debt, and as banking grows, population increases, commerce expands, there grows a greater necessity under our present law for more bonds or more public debt, so that there has

been a direct league between the policy of a heavy public debt and the bankers of the country, and it was this law that compelled Cleveland to issue more bonds in order to organize more banks. If that had not been the law, then the Cleveland bond deal would not have been necessary. It is fair for me to say that this provision meets my heartiest approval, and herein alone lies the merit of this bill over the present law. All the rest is but the balance between good and evil. Many amendments to better this bill were offered in the caucus and supported by some of us, but were fought by Mr. GLASS and his committee.

Mr. HENRY, of Texas, offered an amendment making agricultural products prime commercial paper. This was opposed by Mr. GLASS and every member of the committee, except EAGLE, of Texas, NEELEY, of Kansas, RAGSDALE, of South Carolina, and WINGO, of Arkansas, but after a week's pounding in a secret caucus we won some concessions. And in this I wish to say that I am opposed to secret caucuses for legislating, and I have voted every time against it. We never had them in making the constitution of Oklahoma. We never had a secret caucus, except for four days, and that after the conclusion of the work. If the caucus had been open so that the discussion and the reasons could have been published in the newspapers, I am sure this bill would have been changed in many other provisions in the interest of the people and the interest of sound, wholesome banking. Why is it our banking laws must always be written in secret? Some one asked Mr. GLASS in the caucus this question:

You have provided that a farmer may make a note to a merchant, mortgaging his crop before it is made, and that merchant may, under this bill, have that note discounted at his home bank, and in turn his home bank secure rediscount in the regional reserve bank. You call that prime commercial paper, but when the crop is made and the farmer desires to hold his cotton for a better price, so that he will not have to sell upon a low market, you, by express terms in this bill, prohibit the local bank from getting money from the regional reserve bank by rediscounting, even though the local bank should make the farmer a loan to hold his crop?

Mr. GLASS's reply was:

No; we do not provide for him to speculate by holding his crop, nor do we intend to do it.

And yet the bill provided that a man buying cotton after it passes the farmer's hands, and securing a bill of lading to sell it in Liverpool or in any foreign market, may have a six-months' loan with rediscount privileges at the regional reserve bank. The law itself would prohibit the local bank, even if it desired, from assisting the farmer who wanted to hold his crop, under the plea of eastern influence that the farmer was trying to "speculate" upon his crop, and at the same time give the real speculator—the third man—six months' credit. We were enabled, however, to force a modified claim in this line for three months' credit for the farmer. We were not trying then, nor do we seek now, to put into this bill a farmers' credit system. We did want a farmers' commercial banking system, and then we want, in a separate law, a farmers' credit system not founded on principle of banking nor having any connection with the banking system, because to do so would mean a higher rate of interest.

A farmers' credit system must be founded upon an association of borrowers, and the rate of interest must never be higher than 6 per cent. It could be, and ordinarily will be, made 4 per cent for him, and I offered a motion in the Democratic caucus, as stated in his speech on last Friday by Mr. NEELEY, of Kansas, directing the committee to bring a bill in upon rural credits when Congress begins in December. That instruction prevailed in the caucus, but now I fear we are going to have the same eastern banking influence which will attempt to found the farmers' credit system upon a commercial banking system, and thereby destroy that relief. The farmer can not enter into commercial banking except as a temporary expedient. Commercial banking primarily means a loan of money upon short time based upon personal security. The ordinary farmer can not do business that way. The farmer must have a system of credits for one year to a term of years—such a system as will enable him to buy a piece of land and pay it out at the end of 10, 25, or even 50 years if he desires—such a system as would make his annual payments upon his farm less than the rent he would have to pay. When we get to this system we will have less tenants in this country. The land will be better preserved; the farmer will be more prosperous, and the country will have no proneness for Socialism. We can hardly blame our farmers for turning toward Socialism, which is but a violent protest to the conditions given them when you offer such intolerable legislation.

Democratic members of the caucus will recall also that the committee has provided in the bill for the loan of money on

real estate for nine months, and that amendments were offered and a motion made to refer that to the committee, including the section, and that was supported by Mr. GLASS and every member of the committee who opposed any kind of agricultural credits. Later Mr. CRISP, of Georgia, moved to reconsider, and a motion was made to lay it upon the table, and that was carried, and at the conclusion I moved to take it from the table, that money might be loaned on real estate, and a point of order was made by the proponents of the bill, and the chairman of the caucus ruled with them, but I convinced them that my motion was in accordance with general parliamentary law, and three other distinct motions were made to prevent it from going into this bill, although it is a clear, explicit declaration of the Baltimore platform, and when the vote was called there were some 40 voted for my motion and more than 100 against it. I then demanded a roll call—and the roll call is the only part of the secret caucus that is supposed to be made public, although I am telling tales out of school now—and 31 joined me in the demand, which gave us enough among those who had voted against the measure, who did not dare go upon record that could be published against it, and my motion carried by a vote of 119 to 66. Nothing was said of this, however, in the press because of the secret caucus. Oh, how different many other provisions would have been if we had not been in secret caucus.

Many other amendments were offered.

Mr. RUBEY, of Missouri, offered an amendment substituting 12 per cent in lieu of 20 per cent as the required stock of a member bank in the regional reserve bank. I voted for that.

I offered an amendment for the guaranty of deposits, because the bill guarantees the banker, the Government, and even the Government guarantees the paper money to be issued, based upon the commercial paper of the bank. Everybody is guaranteed under this bill except the depositor. Why not guarantee him? You call it a national bank, and the Government is a partner and has control over it, and you hand out a libel to the people to inveigle them to put their money into it and then refuse to guarantee their deposits, which you use to make profits on—profits divisible between the bank and the Government.

Mr. RUBEY, of Missouri, introduced another amendment, authorizing State banks and trust companies in the organization to assist in the organization, so that they will not be compelled to get in after the national banks have completed the organization. I voted for this amendment.

Mr. NEELEY, of Kansas, introduced a provision prohibiting the interlocking of directors between banks that compete with one another. This provision, as every man knows, and as shown by the Pujo report, would prevent the control of credits and at the same time would have a tendency to lower the rate of interest. I voted for this amendment, but it was defeated.

All of these amendments, while acknowledged to be sound, were opposed by the President and his able, patriotic Secretary of State. We were told in the caucus that the principles were sound, and therefore we ought not to stop to discuss the details—the argument of all impractical men. Details are the concrete form of all legislation. Details give it form and being. Principle without detail is but a dream. Moreover, the best principles in the world may be destroyed and made vicious by details, and, on the other hand, the wrong principle of government may be made wholesome by details. Monarchy is wrong, but with a wise, patriotic, and honest king it is the best government in the world. So, you see, even in government it is a question of details. Why, my friends, hell itself would be a good country if it were not for the details of fire, brimstone, and lack of water. That is an absurd plea of the theorist—the man who says many things, but performs nothing successfully.

In this connection I wish to say that I greatly regret the necessity of differing with the President upon any question, and, as a matter of truth, I would vote with him on every question upon which I had any doubt; but if I am to vote with the President on every question there is no necessity for my thinking at all nor for the people of my State to send me here. All they need to do is to write a letter to the President that they are with him, and then I become like a soldier in war, a "machine to obey the President's orders." I conceive it my duty to represent the people of my State, and the very purpose of representative government is that men among the people may be elected who will study the conditions, so far as they affect them, and who will solve for the people their problems, keeping in mind their best interests. If this were not true, there would be no need of Representatives and no need of Congress; and even after you created the Congress there would be no need for any Member thinking for himself, and the most ignorant

man in the community, if he would but bow to the behest of the President in all things, would be as good a Representative as could be elected. I know there are those who will be disposed to criticize because I hold to this independent position, even in the caucus, which ultimately binds us all. I do not know what effect such an independent attitude will have upon my future political welfare. I do know that I shall be at peace with my mind and conscience and have the satisfaction of having performed my duty. I prefer to follow my own conscience, to follow the best interests of the western people, rather than supinely bow to this eastern power. I prefer to follow Jefferson, Jackson, and Tom Benton. I would do this, Mr. Chairman, though—

I feel like one
Who treads alone
Some banquet hall deserted,
Whose lights are fled,
Whose garlands dead,
And all but he departed.

Mr. GLASS. Is the gentleman willing to close debate on this section in 20 minutes?

Mr. MANN. We will want more than that on the section. There are four or five amendments to be offered over here.

Mr. GLASS. I ask unanimous consent to close debate on the pending amendment in five minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent to close debate on the pending amendment in five minutes. Is there objection?

There was no objection.

Mr. GRAY. Mr. Chairman, I have heard the gentleman from Montana [Mr. MONDELL] tell of his wandering through the corridors of the Capitol in search of a copy of the Aldrich bill; how, after sending out his clerks and couriers in all directions, he was able to find one copy. I confess that the most damaging charge that could be brought against the Glass bill would be to make it compare favorably with the Aldrich bill. The gentleman says that Republicans have never indorsed that bill. I can show him where Republicans introduced the bill to create the monetary commission which reported that bill. I can show him where the Republican Party reported that bill out of committee to the House. I can show him where the Republican Party reported it out of committee to the Senate. I can show him where the Republican Party passed it in the House, and where it was passed by a Republican Senate. I can show him where a Republican President approved it. I can show him where a Republican Speaker appointed the House members of the commission. I can show him where a Republican Vice President appointed the Senate members of the commission. I can show him where the Republican Speaker of the House and the Republican Vice President as president of the Senate appointed a majority of Republicans on it. [Applause on the Democratic side.]

Mr. MONDELL. Will the gentleman yield?

Mr. GRAY. Sure.

Mr. MONDELL. I can show the gentleman where most of the Aldrich bill is written into the Glass bill now before this committee.

Mr. GRAY. I will talk to the gentleman about that. I challenge you to show me one word or one line where your party have disapproved it even unto this day. [Applause on the Republican side.] In 1912 the Democratic platform condemned it, the Progressive platform condemned it, the grange platform condemned it, the Populist platform condemned it, but you are afraid to condemn your own offspring.

Mr. MURDOCK. I was going to suggest to the gentleman from Indiana that the gentleman to whom he refers [Mr. MONDELL] is from Wyoming and not from Montana.

Mr. MONDELL. But originally from Missouri.

Mr. GRAY. I do not care where he is from. Somebody ought to show him. [Laughter.]

There was only one thing that prevented the Aldrich bill from becoming a law, and that was the election of 1910 which gave us a Democratic House. Your bill was prepared in 1910, the report was prepared in 1910, and your program was to report it to Congress in December, 1910, immediately after the election, if you had held the House.

Mr. KINKEAD of New Jersey. Louder, we can not hear the gentleman.

Mr. GRAY. I suggest that the gentleman from New Jersey bring his ear trumpet and come down on a front seat. [Laughter.]

Mr. KINKEAD of New Jersey. Will the gentleman permit an interruption?

Mr. GRAY. If the gentleman will come down where he can hear my answer, I will. There is some similarity in the distri-

bution of powers and the territorial subdivisions into districts, but the power you vested in the central reserve bank and in its directors in the Aldrich bill has been vested in the people's sworn and chosen representatives in the Glass bill.

Now, I call your attention to the Aldrich bill and the fact that it vests the power to issue money and to control its volume and distribution in 46 directors, 41 of whom were appointed by the banks and only 4 by the President, and 1 of these the bankers reserved the right to tell the President whom to appoint.

In the Glass bill the control is vested in seven directors, and every one of them is appointed by the President to stand as representatives of the people. In the Aldrich bill the banks issued the money and performed the constitutional functions of the Government, but in the Glass bill the Government issues the money and exercises its constitutional powers. [Applause.]

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. GRAY. Mr. Chairman, I ask for five minutes more.

Mr. BORLAND. Mr. Chairman, I ask that the time of the gentleman from Indiana be extended five minutes.

Mr. MANN. I object.

The CHAIRMAN. All debate on the amendment is exhausted, and the question is on the amendment offered by the gentleman from Minnesota [Mr. MANAHAN].

The question was taken, and the amendment was lost.

Mr. FRENCH. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amend, pages 18 and 19, by striking out the first paragraph of section 11 and inserting in lieu thereof the following:

"Sec. 11. That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury and the Secretary of Agriculture, who shall be members ex officio, and five members chosen by the President of the United States, by and with the advice and consent of the Senate, one of whom shall be designated by the President as ex officio Comptroller of the Currency. In selecting the five appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of different geographical divisions of the country. The four members of the Federal reserve board chosen by the President and confirmed as aforesaid, except the member designated as Comptroller of the Currency, shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of \$10,000, together with an allowance for actual necessary traveling expenses; and the member of the said Federal reserve board designated as ex officio Comptroller of the Currency shall receive an annual salary of \$11,000, together with an allowance for actual necessary traveling expenses. Of the members thus appointed by the President at least one shall be a person experienced in banking. Two shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years unless sooner removed for cause by the President. Of the five persons thus appointed one shall be designated by the President as manager and one as vice manager of the Federal reserve board. The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board."

Mr. FRENCH. Mr. Chairman, I am exceedingly anxious to support a bill to meet the situation that I think the financial and banking conditions of this country demand. There is in the pending bill a great deal that is good, but I prefer to let the responsibility for passing it rest upon the majority party, which denies opportunity of perfecting the same by adopting important amendments. I shall vote for the measure if certain amendments can be adopted by the House that will bring it into better shape and which will more satisfactorily meet conditions. I have supported certain amendments that have been proposed looking to the improvement of the bill. I supported the amendment in reference to interlocking members of boards of directors. The amendment was voted down. I supported the amendment that has just been voted down looking to an improvement in organization of the Federal reserve board, and I like that amendment better than the one that I have proposed.

I have limited my amendment purposely in the greatest possible degree to the language in the pending bill, and if you have followed the wording closely you have observed that it does one thing. It takes away from the incoming administration the power, upon entering office, of appointing at once a majority of the members of the Federal reserve board. It retains as members of this board the Secretary of the Treasury and the Secretary of Agriculture. It provides that there shall be appointed five other members, of whom one shall be designated ex officio Comptroller of the Currency.

Mr. MURDOCK. Will the gentleman yield?

Mr. FRENCH. Certainly.

Mr. MURDOCK. The gentleman leaves out the Comptroller of the Currency, does he?

Mr. FRENCH. I make him ex officio Comptroller of the Currency. I provide that five members shall be appointed, and one

shall be designated by the President as Comptroller of the Currency. By the adoption of this amendment you retain practically the same machinery for the Federal reserve board that you have in the pending bill, only you reserve the manner of appointment. You place a majority control of that board in the men who have been appointed by the President of at least one preceding administration instead of by the administration that has just been inducted into office.

My amendment provides that the President shall designate one of the five members of the Federal reserve board to act ex officio as Comptroller of the Currency. Under this plan it will be readily seen that the incoming President from administration to administration, at the beginning of his term, will have the opportunity of appointing but three members of the Federal reserve board, vacancies occurring normally, namely, the Secretary of the Treasury, the Secretary of Agriculture, and one additional member, but the majority of the board will continue to be members of a board appointed during one or more previous administrations.

I have repeatedly indicated my great personal admiration for the present Chief Executive, President Wilson. I am quite content to clothe him with the responsibility of naming the first Federal reserve board. I may not have confidence and accept his judgment in all the political convictions of President Wilson, but I do have confidence in him as a man. I do have respect for him as our Chief Executive. I do support and believe in his high sense of public duty and patriotism.

President Wilson, however, has been elected to serve as President for only four years. We do not know who his successor may be, and if we could foresee that we do not know who the successors will be, that we hope will be infinite in number, who will occupy the position of Chief Executive of our Nation.

I do not believe in placing in the hands of any one man, no matter whether he be the President elected by the party to which I belong or another political organization, the power, upon assuming responsibility, of naming at once a majority of the members of an institution that will be clothed with such tremendous responsibility as the Federal reserve board.

For my part, I believe in the principle of a Federal reserve board selected by the Government rather than a Federal reserve board selected either in whole or in part by any agency distinct from the Government.

I have consistently opposed the policy of turning over the selection of any Federal reserve board or any part thereof to any such agencies. I am glad that our Democratic friends have recognized this principle in the pending bill, but I believe they have made a most serious mistake by going to the other extreme and making it possible for this board to be one of partisan political character.

I believe in a Supreme Court, but I would not believe in a Supreme Court to be appointed upon the one hand by the parties litigant or upon the other hand by the Chief Executive in such a way that upon his induction into office he would at once appoint a majority of such court.

I believe in the Interstate Commerce Commission, and the service that the members of that commission have rendered to the country is such as to command not only the respect of the great transportation companies and other business concerns coming within the purview of the power of such commission, but has commanded the confidence and respect of the people generally throughout the land.

This commission is not appointed by the transportation companies upon the one hand, and I would oppose such a proposition. On the other hand, the newly elected Chief Executive does not have the power of naming outright a majority of this commission. I would oppose such a proposition. Either would tend to the degradation of the Interstate Commerce Commission and the placing of it upon a plane that would later deprive it of the respect of the business organizations engaged in interstate commerce and of the people who are dependent upon these great agencies.

I believe that the fundamental reason why the Supreme Court and the Interstate Commerce Commission have come to occupy such a position in our political system as they do occupy is because the members of the court and of the commission are appointed in a manner to remove the great opportunity for political favoritism which prevails with respect to almost all the other great agencies of our Government.

I believe that it is likewise essential that the Federal reserve board to be created in this bill shall be one of nonpartisan character.

One of the reasons that I have come to the conclusion that a Federal reserve board should be appointed by the Government

instead of by other agencies, as is advocated by many, is because the Government can more effectively in that way supervise the financial interests of the country, and because of that insure the greatest confidence in our banking and commercial system upon the part of the people generally.

There are institutions of Government that can well perform their service without particular respect to public confidence. The Panama Canal might be constructed in just as satisfactory a manner without public confidence in the administration in the performance of that work as though the administration were sustained by that public confidence.

Public buildings may be erected, rivers and harbors may be developed, arid lands may be reclaimed, forest reserves may be administered, publications of a multitudinous character may be issued, and all of these things may be done by an administration without the administration necessarily being sustained by the public confidence of the Nation.

Our courts, however, could not long survive without public confidence. The Interstate Commerce Commission could not long perform its services without public confidence. Nor can the management of the great commercial and banking interests of the country be attained in a manner that will reflect any degree of credit upon our Nation unless the agency through which this administration may be accomplished shall be supported and sustained by public opinion, by public confidence. For that reason I oppose turning over the control of the great central board that will direct our large financial affairs to the banks themselves or to any representatives elected by the banks, and for the same reason I oppose the turning over of the control of this great agency to any one administration in such a way as to permit that control to take on partisan character. I believe that the language of the bill as it has been reported to this House makes that very condition possible and I believe that the amendment that I have introduced effectively corrects it.

Mr. GLASS rose.

Mr. GRAY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Virginia has the floor.

Mr. GLASS. Mr. Chairman, on account of the fact that this proposed amendment is so similar to the one that we have already voted upon, I ask unanimous consent that we close debate upon it now.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate be closed upon this amendment. Is there objection?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Idaho.

The question was taken, and the amendment was rejected.

Mr. GRAY. Mr. Chairman, I move to strike out the last word.

Mr. MADDEN. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The CHAIRMAN. The gentleman from Illinois offers an amendment which the Clerk will report.

Mr. GRAY. Is the gentleman on the committee?

The CHAIRMAN. The gentleman from Illinois has an amendment to offer to the bill. May the Chair be indulged to say that he feels it his duty to recognize gentlemen who propose amendments to the bill before he recognizes gentlemen who move to strike out the last word?

Mr. GRAY. While I have no amendment, I have something just as important.

Mr. MANN. Mr. Chairman, how long does the gentleman want?

Mr. GRAY. I do not think it will take very long to say what I have in mind. I think five minutes, but I may not consume so much, and I will yield the gentleman the balance of the time if not all used.

Mr. MANN. Will five minutes do?

Mr. GRAY. I think it will be sufficient.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the gentleman from Indiana may proceed for five minutes at this time.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Indiana may proceed at this time for five minutes. Is there objection?

There was no objection.

Mr. GRAY. Mr. Chairman, I wish now to yield to the gentleman from Wyoming, who has been wandering around through the Capitol in search of the Aldrich bill. I yield to him for a question.

Mr. MONDELL. My inquiry is this: Does not the gentleman believe, in view of the frightful indictment that he has drawn against the Aldrich currency bill, that the gentleman from Virginia [Mr. GLASS] ought to cease defending his bill upon the ground of its being similar to the Aldrich bill in its provisions?

Mr. GLASS. Mr. Chairman, may I intervene just to say once for all that the gentleman from Wyoming [Mr. MONDELL] ought to know, if he does not know, that whatever is reproduced in the so-called Glass bill from the so-called Aldrich bill is mere banking technique, which the so-called Aldrich bill cribbed from the Fowle bill, and as far back as the bill presented by the Monetary Commission of 1898 at Indianapolis [applause], and that the gentleman is simply quibbling when he talks this sort of nonsense?

Mr. MONDELL rose.

Mr. GRAY. Mr. Chairman, I can not yield further to the gentleman from Wyoming. I agree with him that Mr. GLASS should cease defending the pending bill. It speaks for itself and needs no defense. The gentleman says that his bill is the same as the Aldrich bill. I want to call his attention to page 67 of the Aldrich Monetary Commission report, where its bill provides:

The national reserve association shall issue, on the terms herein provided, its own notes, as the outstanding notes secured by such bonds so held shall be presented for redemption and may issue further notes from time to time to meet business requirements.

All notes issues of the national reserve association shall at all times be covered by legal reserves to the extent required by section 41 of this act and by notes or bills of exchange arising out of commercial transactions as hereinbefore defined or obligations of the United States.

The circulating notes of the national reserve association shall constitute a first lien upon all its assets and shall be redeemable in lawful money on presentation at the head office of said association or any of its branches.

The great money-making functions of this Government were thus to be transferred to the banks, which were to issue the money of the country and to control the volume and the distribution of the same among the people. [Applause.] I want now to call attention to the provision of the Glass bill on page 29 for comparison:

The said notes shall be obligations of the United States and shall be receivable for all taxes, customs, and other public dues. They shall be redeemed in gold or lawful money on demand at the Treasury Department of the United States, in the city of Washington, D. C., or at any Federal reserve bank.

This is the distinction, and if you can not see it, you are so blind you can not recognize what is open and apparent to all. Mr. Chairman, is there no difference between the issue of money by a private corporation and the issue of money by the people through the instrumentality of government under the Constitution? Not only this. In the Aldrich bill money is made to rest upon general assets, upon perishable property, upon notes and chattels and miscellaneous securities.

But in the Glass bill the issue of money is based upon all of the property of all of the people available under the great taxing power of the Government. But, as some man has said, "the Glass bill provides for an asset currency also. You condemn the Aldrich bill for an asset-currency basis, and you approve of asset currency in the Glass bill." I will talk to you about asset currency. The Glass bill provides that the notes issued shall be obligations of the United States. If they are obligations of the United States, how can they be made more than obligations of the United States? What stronger term could have been used than "obligations"? They bind the whole country, all the property of all the people. The Glass bill further provides they shall be redeemable in gold and at the Public Treasury in Washington. But they tell us the securities rediscounted are the basis of this money. I deny the charge. You can burn all the securities rediscounted; you can cast them into the sea; every one of the indorsers of the securities can become insolvent, and yet this money issued by the Government will be redeemed in gold at the Public Treasury, without regard to the assets or the solvency of the indorsers of the securities rediscounted. [Applause.] If this money is based upon assets, why then, when you destroy the securities rediscounted you do not affect the issue of the money, its stability, or soundness. There are two separate transactions here respecting money—one is the issue of money and one is the loan of money. The issue is based on public obligation supported by all the property of all the people and the loan on the assets of the bank, the securities rediscounted. If the assets fail the soundness or stability of the money is in no way affected, but the loan of the individual money exchanged for the rediscounted securities is lost. This is the test of the basis of the money under the Glass bill, and it repels the charge that the Glass bill provides for asset money the same as the Aldrich bill.

The CHAIRMAN. The time of the gentleman has expired. The Clerk will report the amendment offered by the gentleman from Illinois [Mr. MADDEN].

The Clerk read as follows:

Amend, section 11, pages 18 and 19, by striking out lines 10 to 26 on page 18 and lines 1 to 17, inclusive, on page 19 and inserting in lieu thereof the following:

"That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, who shall be a member ex officio, and three members chosen by the President of the United States, by and with the advice and consent of the Senate, and three members elected by the directors of the Federal reserve banks. In selecting three appointive members of the Federal reserve board the President shall have due regard to a fair representation of the different geographical divisions of the country. The three members of the Federal reserve board chosen by the President and confirmed by the Senate and the three elected by the directors of the Federal reserve banks shall devote their entire time to the business of the Federal reserve board, and, except as to the governor and vice governor hereinafter provided for, shall each receive an annual salary of \$10,000, together with an allowance for actual necessary traveling expenses. Of the members thus appointed by the President and elected by the directors of the Federal reserve banks two shall serve for three years, two for six years, and two for nine years, respectively, and thereafter each member so appointed shall serve for a term of nine years unless sooner removed for cause by the President. Of the six persons thus appointed one shall be designated by the President as governor and one as vice governor of the Federal reserve board. The governor of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and board, shall be an active executive officer of the Federal reserve board.

"The salary of the governor and vice governor of the Federal reserve board shall be fixed by the board of directors thereof."

And also amend, section 11, page 20, line 11, by striking out the word "four" and inserting the word "three," and after the word "fill," on the sixteenth line, insert the following: "Whenever a vacancy shall occur other than by expiration of term among the three members of the Federal reserve board elected by the directors of the Federal reserve banks as above provided, a successor shall be elected by the said directors to fill such vacancy, and when elected shall hold office for the unexpired term of the member whose place he is selected to fill."

Mr. MADDEN. Mr. Chairman, this amendment proposes to modify the provision in the bill reported by the committee to the extent of taking away from the President the power to appoint the Comptroller of the Currency and the Secretary of Agriculture, and further modifies it so as to permit the selection of three members of the Federal reserve board by the directors of the Federal reserve banks. If it is thought wise to take away the political features of the Federal reserve board, the best way to do that is to adopt this amendment, because if the board is selected as it is provided for in my amendment the board could not under any circumstances be controlled by politics. It is only fair that the men who furnish the money to organize the Federal reserve banks should be represented upon the board who have jurisdiction over the banks. The President, under this proposed amendment, would have the power to select three men, aside from the Secretary of the Treasury. That would give the administration, whatever it might be, a majority of the board, but the selection of three members of the Federal reserve board by the directors of the Federal reserve banks would bring to the service of the board men who are trained in the management of the great financial institutions of the Nation. It seems to me that one of the most important things in connection with the successful operation of the Federal reserve banks is to have men who are trained in banking charged with some responsibility in connection with the management of these banks, and while the Federal reserve banks, through their directors, would have the right and the power, if this amendment should be adopted, to select three members of the Federal reserve board, nobody could charge that they would be in control of the board; but, on the other hand, it would be at once realized that the intelligence and the experience and the integrity of the men selected from among the financiers of the Nation would add not only to the efficiency of the board itself but to the confidence of the American people in the management of the Federal reserve banks. Politics would once for all be eliminated. Business experience would guide the board in its deliberations and insure not only the nonpartisan character of the board but the reasonable assurance of the success of the Federal reserve banks.

Mr. COX. Will the gentleman yield for a question there?

Mr. MADDEN. Certainly.

Mr. COX. Under the gentleman's amendment what mode of procedure would be adopted by the regional reserve banks?

Mr. MADDEN. All the directors of the regional banks would get together and select the three members of the reserve board.

Mr. COX. Is that proposition involved in the gentleman's amendment?

Mr. MADDEN. Yes.

Mr. COX. I did not hear it.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. HAUGEN. Under the amendment proposed by the gentleman you transfer the control of the regional banks from the Government to the member banks.

Mr. MADDEN. Not at all.

Mr. HAUGEN. But to a certain degree.

Mr. MADDEN. Not at all. The President of the United States has the power to select four men out of the seven, and the selection of these three additional men from among the bankers of the Nation simply adds experience to the men selected by the President and insures the success of the enterprise.

Mr. HAUGEN. We are not discussing the experience. The question asked was if it was the intention to transfer the control from the Government to the banks.

Mr. MADDEN. Oh, not at all.

Mr. HAUGEN. Or the directors?

Mr. MADDEN. Not at all.

Mr. HAUGEN. The directors of these original banks are supplied by the banks. You propose that these directors are now to be permitted to select—

Mr. MADDEN. The gentleman does not think that three can control four?

Mr. HAUGEN. It is minority representation now. That is what has been demanded here. That is what they have been pleading for at the other end of the Capitol. Now it is minority representation and next it will be majority.

Mr. MADDEN. There ought to be minority representation on this board, and the men who furnish the money to organize the Federal reserve banks proposed to be organized under the terms of this bill ought to have a voice in their management.

Mr. GLASS. Will the gentleman permit a question?

Mr. MADDEN. Certainly.

Mr. GLASS. Was it found necessary to put railroad presidents or railroad managers on the Interstate Commerce Commission in order that the Government might efficiently supervise and control the railroads?

Mr. MADDEN. That is quite a different proposition. In the case of the Interstate Commerce Commission we give them only regulatory power. In the case of the reserve bank board they are given absolute jurisdiction to manage and control every item of business that may be created or conducted by the Federal reserve banks.

Mr. GLASS. Mr. Chairman, I shall put into the RECORD right at this point a statement of the powers of the Interstate Commerce Commission, showing that they are infinitely greater than the powers granted to the Federal reserve board.

Mr. MANN. The gentleman is not familiar with the interstate-commerce law, evidently.

Mr. MADDEN. Mr. Chairman, may I ask unanimous consent for one minute more, in order that I may reply to the gentleman from Virginia [Mr. GLASS]?

Mr. GLASS. I will say to the gentleman from Illinois [Mr. MANN] that I may not be as familiar with the technical terms of law as he, but I have read the powers conferred upon the Interstate Commerce Commission, and, in my conception of the term, they are infinitely greater than the powers conferred on this reserve board.

The CHAIRMAN. The gentleman from Illinois [Mr. MADDEN] asks unanimous consent that he may proceed for one minute. Is there objection? [After a pause.] The Chair hears none.

Mr. MADDEN. Mr. Chairman, I simply want to say in reply to my friend from Virginia [Mr. GLASS], the chairman of the committee, in charge of the bill, as I understand the power of the Interstate Commerce Commission it is that it has the power to regulate the rates to be charged by the railroad companies, but no power whatever to manage the railroads of the Nation.

Mr. DYER. Will the gentleman yield right there?

Mr. MADDEN. Just a moment now, until I answer this question. On the other hand, I understand the power of the Federal reserve board to be not only to direct but to control and regulate every phase of the management of the Federal reserve banks, down to the smallest item.

Mr. DYER. Will the gentleman yield right there? I will ask the gentleman if the railroads under the Interstate Commerce Commission have any authority to divert assets from one railroad to another to help out in financial distress?

Mr. MADDEN. They have nothing whatever to do with the finances of the railroads, and they can only say to the railroad companies that the rate proposed to be charged is unjust and that they must modify the rate to meet what the Interstate Commerce Commission believes to be a just one.

Mr. GLASS. Mr. Chairman, I will not consume the time of the committee right now in reading in detail the powers of the

Interstate Commerce Commission, but will ask to insert in the RECORD this recital of them:

EXHIBIT B.

PRINCIPAL DUTIES OF THE INTERSTATE COMMERCE COMMISSION.

(Revised to February, 1906, by H. T. Newcomb.)

SECTION 1A. To order the construction, maintenance, and operation upon reasonable terms of switch constructions between any railway and any lateral branch line of railroad or private sidetrack where safe, reasonably practicable, and there is sufficient business.

SEC. 6A.¹ To modify the requirements of the law as to length of notice of changes in rates or as to publishing, posting, and filing rate schedules or tariffs.

SEC. 6B.² To execute and enforce the law.

SEC. 6C.² To apply to district attorneys of the United States to institute and prosecute proceedings for the enforcement of the law.

SEC. 6D.³ To issue subpoenas and subpoenas duces tecum.

SEC. 6E.³ To order testimony taken by deposition for use before itself.

SEC. 6F.³ To appoint persons to take depositions in foreign countries for use before itself.

SEC. 13A.³ To receive complaints and investigate matters made the subject of complaint.

SEC. 13B. To institute inquiries "on its own motion" and "to the same effect as though complaint had been made."

SEC. 14A.^{1,2} To make written reports of its investigations.

SEC. 14B.³ To include in its reports of investigations its "decision, order, or requirement in the premises," and, if it awards damages, its "findings of fact."

SEC. 15A.³ "To determine and prescribe," after "full hearing," "what will be the just and reasonable rate or rates, charge or charges, to be thereafter observed as the maximum to be charged, and what regulation or practice in respect to such transportation is just, fair, and reasonable to be thereafter followed; and to make an order that the carrier shall cease and desist from such violation, to the extent to which the commission find the same to exist, and shall not thereafter publish, demand, or collect any rate or charge for such transportation in excess of the maximum rate or charge as prescribed, and shall conform to the regulation or practice as prescribed."

SEC. 15B.³ To prescribe, within certain limits, when its orders shall take effect and how long they shall remain in force.

SEC. 15C.³ To prescribe divisions of joint rates.

SEC. 15D.³ To establish through routes and fix joint maximum rates and divisions of rates on such routes.

SEC. 15E.³ To prescribe maximum allowances for services connected with transportation performed by owners of the goods transported.

SECS. 16A² and 16a. To make orders directing the payment of money damages.

SEC. 16B.³ To suspend, reverse, or modify its own orders.

SEC. 16C.² To employ counsel "in any proceeding" under the law.

SEC. 16D.² To apply to the Federal courts to compel obedience to its orders.

SEC. 16E.² To defend suits brought "to enjoin, set aside, annul, or suspend" any of its orders.

SEC. 17A.³ To make and alter its own rules of practice.

SEC. 19A. To prosecute anywhere, by one or any number of its members "any inquiry necessary to its duties."

SEC. 20A.¹ To require annual reports from carriers subject to the law.

SEC. 20B.¹ To prescribe the form of such reports and to require specific answers in them to "all questions" on which it "may need information."

SEC. 20C.¹ To fix a date after which all carriers subject to the law must have "as near as may be" a uniform system of accounts and the manner in which such accounts shall be kept.

SEC. 20D.¹ To require special monthly reports of earnings and expenses.

SEC. 20E.¹ To prescribe the forms of all accounts, records, and memoranda of traffic movement and receipts and expenditures of money permitted to be kept by the carriers.

SEC. 20F.¹ To have constant access to and to inspect the accounts of carriers.

SEC. 21A.^{1,2} To report annually to Congress and to make "recommendations as to additional legislation."

The following powers were added by the Mann-Elkins Act, 1910:

Responsibilities added:

Interstate telegraph, telephone, and cable companies.

Long and short haul put absolutely in hands of Interstate Commerce Commission.

Power to suspend proposed changes in rates pending hearing and decision.

SEC. 6. Amended so as to require written quotation of particular rate on written request.

Power to order, after hearing, "through routes" and to prescribe joint rates, even when one of the connecting carriers is a water line. The only limitations are—

(1) That no through route shall be formed with a street railway not engaged in passenger business.

(2) That no route may be established when the transportation is wholly by water, as this will be beyond the jurisdiction of the commission.

(3) That no railroad shall be required to embrace in the through route substantially less than the entire length of its road, or any intermediate road under its control, which lies between the termini of the proposed route.

Shipper may designate in writing the route he prefers through traffic to take, subject to exceptions made by the commission.

Passes clause modified.

Classification of property for transportation ordered.

SEC. 13. Amended so as to give same powers to inquiries on "its own motion" to those on "complaint" in the matter of ordering rates.

SEC. 15. Amended to give the commission jurisdiction over all regulations and practices of carriers and the power to prescribe reasonable regulations to be hereafter followed.

Every carrier to provide reasonable facilities for through routes.

By certain supplementary acts the commission is also given extensive powers for the enforcement of the safety-appliance and hours-of-service laws and the collection of data covering accidents.

¹ Accounting and reporting sections.

² Prosecuting sections. No. 30 possibly in this class.

³ All these powers and duties relate to the receipt and adjudication of complaints, to the procurement of testimony necessary therefor, or to redress wrongs complained against and shown by testimony to exist.

(Extract from an article in the Quarterly Journal of Economics, 1910, by F. H. Dixon.)

NOTE.—By the acts of 1906 and 1910 they (the people) have created an administrative agency clothed with powers more extraordinary than have ever before been entrusted to any similar body in the history of this country. The Interstate Commerce Commission has jurisdiction over all important carriers of interstate commerce in the United States, except those operating solely by water. Their rates, classifications, regulations, and practices are subject to the commission's authority either with or without complaint. Prospective rate changes may be suspended by it for 10 months beyond their effective date, and if the commission wills it may never become effective. Its permission must be secured before a less rate can be charged for a longer than a shorter distance. At its discretion it may establish through routes and joint rates. Its orders are in force when made unless the courts set them aside, and this the courts can not do without a hearing after notice. Finally, if present rulings are not overthrown, the courts will enforce all the commission's orders, unless they are unconstitutional or beyond its authority. Surely the people of the United States have placed upon this commission a grave responsibility. Upon its wisdom and justice the people rely for a successful regulation of the interstate commerce of this country. (Other interstate commerce legislation enacted under separate measures at the last session of Congress include an act granting authority to the commission to investigate railroad accidents; a supplement to the safety-appliance acts requiring that cars after July 1, 1911, be equipped with sill steps, hand brakes, ladders, and running boards; and an amendment to the employers' liability act defining the procedure and right of action.)

Mr. MADDEN. Will the gentleman yield for a question?

Mr. GLASS. Yes.

Mr. MADDEN. I wonder if the gentleman would contend that the Interstate Commerce Commission can demand the assets of one railroad company to help out another if the other is in distress?

Mr. GLASS. As I read the powers of the Interstate Commerce Commission, it can initiate a joint rate which in its effect would be doing that very thing.

Mr. MADDEN. Well, the gentleman has not answered my question. The Federal reserve board will have the power to direct one Federal reserve bank to rediscount the paper of another Federal reserve bank under certain conditions.

Mr. GLASS. Yes; and it will inure to the benefit of the discounting bank.

Mr. MADDEN. Well, has the Interstate Commerce Commission the power under any conditions to divert the assets of one railroad to another in order to help it out?

Mr. GLASS. I answered the gentleman that it has, in that it has the power to initiate a joint rate which might have that effect.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. GLASS. I do.

Mr. BORLAND. I wanted to suggest to the gentleman from Virginia [Mr. GLASS] that the Interstate Commerce Commission does have power to compel a common carrier to accept a certain class of business, whether the common carrier wishes to do so or not.

Mr. MANAHAN. Mr. Chairman, let me suggest to the chairman of the committee that the Interstate Commerce Commission has the power to compel the interchange of freight cars, the actual equipment of one railroad with another railroad, by orders to that effect; and undoubtedly it is expressly provided that the assets of one railroad in its equipment can be compelled to be hauled clear across the continent and be used by other railroads for the public good.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. MANN. Mr. Chairman, I do not propose to detain the committee with a discussion of the powers of the Interstate Commerce Commission. The law of 1910 I principally wrote. The law of 1902 I largely wrote. I think I am quite familiar with the powers conferred upon the Interstate Commerce Commission. They are about as broad as could be conferred upon any commission regulatory of railroads. They would be broader still if the Democratic Party had not stricken out of the bill provisions in reference to the issuance of stocks and bonds with the threat that the bill could not pass the Senate of the United States unless those provisions went out in conference.

But the powers conferred on the Interstate Commerce Commission are entirely different from the powers proposed to be conferred upon the Federal reserve board under this bill; and any gentleman who claims that there is any similarity between them only advertises the fact that he is familiar neither with the theory, the principles, nor the facts relating to the law governing the Interstate Commerce Commission. [Applause on the Republican side.]

Mr. GLASS. Mr. Chairman, I ask that we conclude debate on this section at 3 o'clock.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that debate on this section be concluded at 3 o'clock.

Mr. MONDELL. Mr. Chairman, I trust that the gentleman will not insist upon that.

The CHAIRMAN. Is there objection?

Mr. GLASS. Well, let it be 10 minutes before 3.

Mr. HAUGEN. Mr. Chairman, let me suggest to the gentleman from Virginia that I believe this is as important an amendment as has been offered. We ought to have time to discuss it. It is of vital importance.

Mr. GLASS. I want the committee to discuss it, but we have gotten off into the discussion of other things.

Mr. MURDOCK. There will be more discussion of this paragraph than any other portion of the bill.

Mr. GRAY. Mr. Chairman, I would like to have time to discuss this section.

Mr. MONDELL. I would like to have time.

Mr. GLASS. How much time does the gentleman want?

Mr. MONDELL. I would like to have 10 minutes.

Mr. GLASS. I have no doubt the gentleman from Wyoming would like to have 10 hours.

Mr. MANN. Why not make it 50 minutes?

Mr. HAUGEN. Why fix any time at all? After we get along we can determine on that later.

Mr. MANN. Well, we have made no progress on the bill to-day, and if the gentleman wishes to sit at night, very well. I will make no objection to that.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that the debate on this section of the bill and all amendments thereto be closed in 40 minutes.

Mr. MANN. Make it 50 minutes.

Mr. GLASS. Well, I will make it 50 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that all debate on this section and amendments thereto be closed in 50 minutes. Is there objection?

Mr. DYER. Reserving the right to object, Mr. Chairman, will the gentleman indicate who will have that time? I would like to have some time.

Mr. GLASS. It will be divided, half on that side and half on this.

Mr. MONDELL. Mr. Chairman, there will be a number of amendments offered, and it occurs to me that it would not be possible to dispose of them in 50 minutes.

Mr. GLASS. Mr. Chairman, I want to proceed with this bill. We have been in session three hours to-day without having made any progress, and I move that all debate on this section and all amendments thereto be concluded in 50 minutes, one-half the time to be used on that side and one-half on this.

The CHAIRMAN. The gentleman from Virginia moves that debate on this section and pending amendments be closed in 50 minutes.

The motion was agreed to.

Mr. MURDOCK. Inasmuch as the gentleman from Virginia [Mr. GLASS] has limited debate on this section to 50 minutes, I suggest to him that he grant no extensions beyond 5 minutes. There are more than 10 men who want to talk, and 5 minutes ought to suffice to each man.

The CHAIRMAN. The gentleman from Iowa [Mr. HAUGEN] is recognized.

Mr. HAUGEN. Mr. Chairman, the proposed bill provides for, among many things, 12 central banks. It does not matter by what name you call them, they are central banks with branches. These banks are given a monopoly of the note issue, under Government control. The amendment offered by the gentleman from Illinois [Mr. MADDEN] provides:

That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, who shall be a member ex officio, and three members chosen by the President of the United States, by and with the advice and consent of the Senate, and three members elected by the directors of the Federal reserve banks.

It proposes that the banks shall have a minority representation. Next it will be a majority representation. It has been proposed that they should have the ownership of stock. Next it will be the ownership of stock, and then it will be the control and operation of the 12 banks and branches, and we will have a central bank with branches, exactly as has been contended for by the banking syndicate. We will have a system similar to Canada's. In Canada there are 29 central banks, with 2,000 branches. The 29 managers of these central banks meet frequently and fix rates of interest on discounts and rates of interest to be allowed on deposits. We will have a bank monopoly here as they have in Canada. What does it mean? It means the substitution of 25,000 branches for the 25,000 independent banks which we have to-day. If there is any

advantage in that, then we should transfer the control and operation from the Government to the banks, and the bank syndicate scheme will be complete. It will be exactly as was desired and anticipated by them.

That there is an urgent and well-founded demand for currency legislation before the expiration of the so-called Vreeland Act no one will deny. That we need a more elastic currency no one will dispute. But just what legislation? As to that, there is a widespread difference of opinion. Certain interests of this country, a syndicate which for many years prior to 1908 or up to the enactment of the so-called Vreeland emergency currency bill having the power to create and undo panics at will and pleasure, are evidently now anxious to have that power restored through the establishment of a central bank with branches, and are now most persistently insisting that they be given control of the proposed 12 regional banks with branches. On the other hand, the proponents of the bill contend for Government control. Others say reenact the Vreeland bill, while others say let well enough alone, which means that we go back at the expiration of the Vreeland Act, May 20, 1914, to where we were prior to its enactment. Judging from past experience, I confess that I have fear as to probable results of legislation giving either the Government or a bank syndicate control, and being skeptical as to its results, I have contended that if currency is provided for in time of emergency, or if the Vreeland Act be given a new lease of life, there would be no immediate necessity for the proposed legislation. The Vreeland Act simply provides that during six years following its enactment, May 20, 1908, not less than 10 national banks with aggregate unimpaired capital and surplus of at least \$5,000,000 may form a national currency association. It grants power to the association to issue \$500,000,000 circulating notes under certain regulations and against certain approved securities, said circulating notes to be taxed 5 per cent the first month with 1 per cent in addition each month up to 10 per cent; hence expansion and contraction or an elastic currency is never provided for. Under it banks with security and those complying with its requirements can be supplied with currency independent of banks in time of stress. It also provides for a graduating tax to force its retirement whenever it becomes redundant. Under it we have had no panics to enable syndicates to hammer down prices, to buy stock at their own price, and to take advantage of others not in the deal. Why? If certain speculators and gamblers, having it in their power to force reserve banks to suspend, or if a bank syndicate suspends payment and ceases to accommodate country banks or customers, the country banks or banks outside can be supplied by Uncle Sam. Undoubtedly the Vreeland Act can be improved upon. That holds good as to many of our laws. Undoubtedly it should be made less cumbersome, less expensive, and more responsive to the public need. Possibly the rate of interest on circulating currency should be changed; that the Government should provide for the necessary machinery, eliminating the expense and responsibility of the banks to organize the association which, in a degree, makes the issue of currency uncertain, as its issue is dependent on banks organizing. All these things were considered, and after much contention the law was enacted. It was the best that could be had at the time, and under the existing conditions I doubt if any law can be enacted that will be an improvement over it. We had the same interests to contend with then that we have now; like tariff and other legislation affecting varied and various interests, the legislation resulted in a compromise measure. In my opinion, that is exactly what will happen now if any new law is enacted. We simply took what we could get, and I believe that by limiting its life and operation to six years and providing for the National Monetary Commission—a subterfuge so often resorted to in defeating legislation—concessions were undoubtedly made by interests in opposition to the measure in the hope that the money panic of 1907, which brought much ruin and disaster to so many people and lined the pockets of the chosen few, might be forgotten and that no legislation might be enacted to take its place at the expiration of the six years, or that the proposed National Monetary Commission and Congress might be influenced to adopt their plans and pet scheme—a central bank, with branches, and a note-issue monopoly under their control. In either case the power—to make and undo panics—temporarily yielded by them would be restored, preferring, of course, ownership, control, and operation of such central banks with a note-issue monopoly. It hardly seems necessary to point out the danger and disastrous result of such legislation. I believe it enough to say that if a Steel Trust, Oil Trust, Harvester Trust, or Tobacco Trust is bad, certainly a Banking and Money Trust is undesirable. Neither does it seem necessary to point out that giving a banking syndicate control of the central bank

or banks with branches and note-issuing monopoly would ultimately destroy our independent banking system. That is what happened in Canada and other countries. That is what would happen to our 25,000 independent banks. They would simply have to go out of business, and when out of business the Banking Trust would have no opposition, the central-bank syndicate would have a monopoly and would be able to fix rates of discount, interest allowed on deposits, to make loans in one locality and refuse others. As a result we would have a Bank and Money Trust controlled by the same syndicate controlling the Steel Trust, the railroads, and numerous other trusts, and it is fair to assume that its motive in securing control of a banking and money trust is the same as that back of the organization of the Steel Trust and its various other trusts; if so, our experience has been that when a trust is once organized and in full control, the prices go up, the trust flourishes, and the people pay the bill. If so, it is also fair to assume that a syndicate given an absolute monopoly and control over banking and currency would do exactly what other trusts have done.

Scotland and Canada have central banks with branches and a note-issue monopoly owned, controlled, and operated by a bank syndicate. Scotland has 8 central banks with 1,200 branches. Canada has 29 banks with about 2,000 branches, all practically controlled by the Bankers' Association, a legalized institution. Nineteen out of the 29 banks are located in Toronto or Montreal. The whole system is controlled by the managers of the 29 head banks. By reading the printed interviews on "the banking and currency questions of other countries" we find that it is the practice of the managers of the 29 banks to meet frequently and fix rates—not for the 29 banks only, but for the 2,000 bank branches as well—they having a banking and currency issue monopoly and no competition. I take it that the rates are fixed high and to suit them. Besides, they take money from one locality and loan it to another, the same as is proposed in this bill. Thus they have the power to boom one locality and down another. If they have more interest in one locality than they have in another, they supply that locality with loans while the other must go without. If it be to their interest to stop loaning in one locality and not in another or in all the banks and branches, they do so at will. When in Canada last summer I was told by a number of bankers that practically no loans were or could be made in Canada. Bankers here have told me that borrowers in Canada are offering as high as 25 per cent on loans. Here, with 25,000 independent banks, the situation is quite different. If money is close in one locality and plentiful in another, one borrows from the place where it is plentiful, and all are supplied. If money is close all over the country, we have 25,000 banks competing with one another, so if it can not be obtained from one bank it can be from another. Even in the panics of 1893 and 1907 banks were loaning money to a considerable extent. New York City banks increased their loans sixty-three million during the panic of 1907. In Canada under the central-bank system or bank monopoly, where banks are controlled by one association, suspension of loans are frequently made, and, mind you, not by one or a few banks, but banks covering the whole country. We are told that banks with a big capital offer greater security to depositors, and therefore we should have central banks, and that it is essential that banks have a large capital, thus insuring greater credit. Credit is not based on capital altogether, but upon confidence, first, in a monetary system; second, in the integrity and efficiency of men in charge of the financial institution as well as in its capacity or ability to redeem its obligations. As a general thing, a bank does not fail on account of its small capital, but on account of bad and corrupt management, theft, and speculation. Why, it is as easy for a banker to steal \$1,000,000 in a large bank as \$1,000 in a small bank. The losses in proportion to capital are larger to the depositors in large banks than they are in banks with a small capital. I refer you to Henry C. McLeod's interview on banking, on page 13, Senate Document 584, published by the National Monetary Commission. McLeod is the general manager and at the head of one of the 29 central banks in Canada, a banker in the combine, a student, who is well informed on the subject. McLeod says:

We have had a good many failures.

He says:

I wrote a short letter on the subject some three years ago comparing the resulting failures of our system with yours of the United States. The failures in the United States were 5 per cent. Taking Canada from the year 1880 up to the date of my letter the failures were 25 per cent. Up to the present, from the same date, the percentage is 30 per cent.

Mr. HUBBARD. That is the number of head offices, is it not?

A. Number of banks.

Q. You do not include the branches?

A. No; we do not include the branches. * * * (Page 14.) Since then we have had three more failures.

He gives the names. The largest of the three was the Sovereign, which was organized in May, 1902, with a capital of \$1,300,000. On page 19 he gives the number of banks that have failed of each kind. The number of chartered banks is reported to be 16 since 1880, with a loss to depositors of three million. How much the loss was to the chartered banks' association in excess of that I do not know, but I take it from McLeod's interview that it was considerable. He says, where the chartered banks' association takes over a bank and liquidates it and sustains a loss, information is not given out as to what the loss is. On page 50 Mr. Coulson, in response to a question:

Q. Is it your opinion that confidence is created by supporting and standing by each other, and by liquidating banks and paying off the depositors?

Mr. COULSON. That all helps, and we have a large paid-up capital and paid-up reserve, and upon that the Government returns are issued from month to month and the people can use them.

Mr. McLEOD. I do not regard them as worth the paper they are written on.

So it is not capital; it is not upon Government returns confidence is based, it is upon belief in the integrity, efficiency, and good judgment of the management as well as upon the capacity and ability to redeem obligations. One suggestion is that there is a tendency toward centralization, therefore let the 25,000 independent bankers go; that they are capable of taking care of themselves. Yes, any man capable of running a bank is also capable of running some other business. If he is not capable of running a bank the bank will cease to run; therefore the only bank and banker sought to destroy is the successful one. As a general thing a capable country banker can make as much money, if not more, at some other business than strictly banking. If he can make and declare 10 per cent dividend on bank stock, he can do as well on a farm or in a store; but banks as a general thing are not and should not be run for profit alone, but for the convenience of the community by furnishing a safe place to deposit funds not in use. Bank investments should not be for speculation or big profit, but for safe investment of capital, to furnish proper and needed banking facilities, to furnish a safe place to store surplus money and to make it available for the use of others that may have use for it. Who own and operate our independent banks? Generally a subscription list for stock is circulated, and when the required amount is subscribed and paid in the stockholders elect and put in charge of the institution trustworthy men familiar with the needs of the people of the community, men with experience, judgment, good common sense, competent to pass on paper. To be a successful banker, one must maintain a high standing. He is called upon and expected to give advice and aid every worthy and legitimate enterprise and to encourage everything good. He is expected to furnish and encourage new and worthy enterprises, to aid in building up the town, the county, State, and Nation. His interest naturally is in that particular community. His family, his home, is there. His investment and holdings are there. His pride is in the community's development and prosperity. He is there to serve the people, not only the stockholders of his bank but his customers, his neighbors, and friends, above all those in that particular community. Uppermost in his mind is the thought of making the bank absolutely safe and worthy of confidence, to protect the stockholders, to serve customers of the bank, to earn a reasonable profit to the stockholders, and to build up the business and standing that can only be done by exercising good judgment, integrity, industry, and generous treatment. What becomes of him and the independent bank when the central bank with its branches is established? Judging from what has happened in other countries, the country or independent banker will disappear; or, in other words, he will go out of business. It hardly seems necessary to say how and why. As a general thing a trust serves notice on its competitor to get out of business or it will put him out. The country banker will be told politely that he has built up a nice business and if he will dispose of it the trust will be glad to consider any proposition he may have to make. If satisfactory arrangements are made, the building and business are turned over to the trust and the capital of the bank withdrawn. If not, the trust will open a bank next door, and for awhile rates of interest on discount will be low, rates of interest allowed on deposits will be high, and exchange will be free. The result will be that the independent banker will be forced to close his door. The process of elimination will go on until practically all of the 25,000 banks will either close or be turned over and managed by the trust, with headquarters at New York or some other city. That is exactly what happened in Canada, and undoubtedly that is what would happen here. Under a central-bank system with branches controlled by a syndicate, after the independent banks have been eliminated, the managers of the central banks will

get together, as they do in Canada, to fix the rates of discounts, rates to be allowed on deposits and exchange, to make rules and regulations, and determine to whom and how loans shall be made. That is a practice of the managers of the head banks of Canada, and undoubtedly would be the practice here. If so, would the interest of the people in general be better conserved by a banking syndicate with headquarters, capital, and special interests in New York or elsewhere than they are by independent banks with local capital and bankers with special local interests? If not, whose will? The answer is, the Bank Trust's. Hence I believe the farmers, the merchants, the customers, the depositors, who have been accustomed to dealing with men, their neighbors, who have a sympathetic appreciation of their wants, are against the displacement of 25,000 independent banks by branch banks operated by agents, by managers, and owners of the central bank, who naturally have little, if any, interest in the development of the local community. I believe it fair to assume that they and the independent banks are for legislation that will establish confidence and stimulate industrial, commercial, and agricultural enterprises in all localities, rather than a bank and money trust. How is the syndicate scheme to be accomplished under the proposed bill? One suggestion is to open the book of subscription to the public or to banks desiring the capital stock. If so, who will subscribe? I take it that the same people who subscribed for bonds heretofore issued will be practically the only ones to subscribe, as was the case when bonds were issued during Cleveland's administration, the Spanish-American War, as well as the Panama Canal bonds. Many of those bonds were offered to the public and opened to public or popular subscription; yet in the end one syndicate got and owned practically all—at least a large majority. If so, in this case the syndicate already in control of our railroads, insurance, oil, and steel industries and various other industries, controlling stock and bonds aggregating more than \$20,000,000,000, would subscribe and own at least a large majority of the capital stock in the proposed 12 regional banks.

Another suggestion is that owners of stock be given representation and control. Now it is argued that they should be given a minority representation. Next it will be for majority representation, which means control and operation of the proposed 12 central banks and branches. The argument that it is unjust to deprive the investors of representation will be made with as much force and eloquence for majority representation as is now being made for a minority representation; if the argument holds good for minority representation it certainly will hold good for majority representation; if granted, the syndicate will have, under the proposed bill, not only ownership and absolute control of the 12 regional banks, but a monopoly on a note issue guaranteed by the Government. Not having been able to find anybody outside of those in control benefited by any of the trusts controlled by the syndicate back of the central-bank scheme—to the contrary, many contend that much harm has come from their organization—and the fact that Uncle Sam has spent millions of dollars in dissolving and destroying trusts, that the Democrats—in fact, all parties—have proclaimed against them, that thousands of dollars have been spent in investigating the Sugar Trust, the Steel Trust, Railroad Trust, the Money Trust, and other trusts, and not a single committee has reported favorably on any of the trusts investigated. With this in view, I fear central banks, or banks with branches and note issue, controlled and operated by a banking trust; and rather than to take chances on it I will risk Government officials or Government control, as is provided in this bill. In so doing I am not unmindful of the danger that may be encountered by turning over the banking business and note-issue monopoly to politicians or Government officials, as is provided in the bill. I am aware of the red tape, the cumbersome, expensive, and unbusinesslike manner in which Uncle Sam conducts its business. I realize that under the proposed bill banking and note issue can be turned into a political asset, for if patronage can be used to pass important bills such as this and the tariff bill, if it is true, as reported in the press, that patronage can and is being made use of to influence legislation, if it is true, as reported, that the appointment of a single postmaster silenced the opposition of one or more legislators to the proposed bill, certainly the appointment of 60,000 postmasters and thousands of other Government officials, coupled with the control of 25,000 banks with a three and one-half billion dollar capital and surplus, with power to raise and lower rates, to issue currency at will, to make or refuse loans, to take money belonging to one community and loan in another, thus enabling it to boom the one locality and stifle the growth of the other—in short, with power to do good or bad, if taken advantage of—can build up a political organization that would make the Tammany organization hide its face. But I can not believe that it ever will be

taken advantage of to that extent. Even then there is a hope as long as 92,000,000 people sit as judges, while with a central bank and branches controlled by a trust we have no hope, as experience teaches us that when a trust is once in control its power is absolute and can not be disturbed; hence if I have to choose between a banking and currency trust controlled by a syndicate or by the Government, I shall chance Uncle Sam.

But why not reenact the Vreeland bill or simply provide for a currency to be loaned on proper security in case of emergency? That can be done either by the Government or by a banking association guaranteed by it, besides providing for a redemption fund, same as was done in Canada. Not a dollar has been drawn on the 5 per cent redemption fund provided for in Canada, and in all probability never would be in this country. Besides, the circulating notes can be made a first lien on assets of the banks and issued only upon banks pledging proper collateral security, as is provided in the proposed bill.

If necessary the reservoirs, or 12 regional banks and branches, can be provided for without calling on anybody for subscription in stock or giving anybody control. Let the Government receive money on deposit from banks the same as it does from individuals in its postal savings banks. Let it pay banks interest on deposits and loan to other banks at a proper rate of interest. No capital is employed in postal savings banks. No capital stock was necessary when they were founded; no subscription for capital is necessary now. No subscription is necessary to build the reservoirs or to provide the Government with necessary machinery to conduct the business. No paid-up capital is necessary to establish its credit. The proposed \$105,000,000 paid-up capital will add nothing to Uncle Sam's credit. The proposed 33½ per cent gold reserve can and should be reserved, but no capital is needed for that. The bank reserve deposited with Uncle Sam will take care of that; if not, the banks can be made to provide for it. If so, the proposed banks and branches can and always will be owned and remain under Government control, as without private ownership there will be no just demand for syndicate or private control. If necessary to extend or restrict privileges or powers of banks, as, for instance, to reduce the country banks' reserve from 15 to 12 per cent; the reserve banks from 25 to 18, as is proposed in this bill; if necessary to provide for the savings department in national banks; if it is deemed advisable to allow national banks to loan money on improved real estate, which by all means should be done, all these things should and can be done simply by amending the present law.

In this connection I want to say a word about allowing national banks to loan on certain real estate. Not one out of a hundred real estate loans is made for as short a time as 12 months in localities that will take advantage of this privilege. Farm loans are made on long time, generally for 5 years. Now, if its purpose is to help the farmer, as is claimed, why limit the time to 12 months? Why not accept such loans as are usually made, inasmuch as practically all over this country, especially in the Northwest, long-time mortgages are the best and most liquid paper carried by banks? They can always be converted into cash, especially in time of stress. In this bill you authorize the purchase of the United States, State, and municipal bonds without limit as to time. Why limit time on real estate mortgages to 12 months? Why limit real estate mortgage loans to 25 per cent of paid-up capital and surplus, when real estate paper is the best and most liquid paper carried by banks? Why this gold brick?

Personally I know of no good reason why the Government should be made to redeem the circulating notes and why banks should not be made to redeem their own notes. Denmark went into the business of issuing circulating notes. It proved a heavy burden and finally bankrupted Denmark in 1812 and 1813. Why should Uncle Sam undertake it in 1914? Denmark in taking over its national bank, a joint-stock institution owned by private shareholders, chartered October 29, 1736, with a capital of 500,000 rigsdalers—current, \$430,000—and a note-issue monopoly, in March, 1773, increased the issue. Its circulation grew from 6,000,000 rigsdalers in 1773 to 15,500,000 in 1783, 27,000,000 in 1807, and 142,000,000 at the end of 1812. Its notes depreciated in value by leaps and bounds, until the notes were worth little more in coin than 7 cents on the dollar, a situation which resulted in a declared bankruptcy.

Again, on January 5, 1813, Denmark created a new State bank, the Rigsbank, and a new basis of valuation of 2 to 1 was established. The total issue of the new bank was to be 27,000,000 dalers for redemption of outstanding notes of various kinds, 4,000,000 dalers to provide a working capital, and 15,000,000 dalers to provide funds for the treasury, which ceased to have the power to issue notes; all told, 46,000,000 bank dalers. Its notes went down and down, until at the end of the war of

1814 the proportion between the specie daler and the daler bank note was 5½ or 6 to 1.

Denmark gave up the note issue, and after the establishment of the gold standard in 1873 gave the central bank of Denmark a note-issue monopoly. The regulations as to the issue were that—

The bank may issue notes to any required amount, provided that it has in its possession cash equal to the excess of the issue over and above 27,000,000 kroner and not less than three-eighths of the entire outstanding circulation. The part of the issue not covered by cash shall be secured by good safe assets in the proportion of 150 kroner in value to each 100 kroner of notes so secured. * * * The bank is required to redeem its notes in gold at face value on presentation at its head office.

The fiduciary issue was increased from 27,000,000 kroner to 30,000,000 kroner by an ordinance of November 30, 1877, and again by an ordinance of December 27, 1897, to 33,000,000 kroner, on condition that the bank should issue notes of 5-kroner denomination.

If note issue proved disastrous to Denmark, and if Denmark abandoned it, why should Uncle Sam now undertake it?

Norway, after separating from Denmark, replaced the branch of the Danish bank by an independent bank whose notes were to be used in redeeming Norway's share of those put in circulation by the Danish bank, but excessive issue quickly brought depreciation, and by January, 1816, the notes were worth but 19 per cent of their face value. On June 14, 1816, Norway established the Bank of Norway, providing funds for its 2,000,000 daler capital by a property tax which was followed by an additional tax of 2,000,000 dalers for the retirement of part of the excessive issue. The new Bank of Norway (Norge's Bank) received the grant of monopoly of note issue, the issue being limited in 1818 to double the amount of silver held by the bank, and in 1842 to the amount of cash held. An increase of the note issue by 2,500,000 kroner (\$670,000) was made in 1863 on terms which included the issue to the State of a share certificate for this amount, thus bringing the capital to 12,500,000 kroner. The law of 1892, which determined the present organization of the bank, fixed the fiduciary issue—that is to say, its issue of notes against security other than bullion—at 24,000,000 kroner, and at the end of June, 1908, the total outstanding issue was 81,174,000 kroner.

As in Denmark, so also in Norway, banking legislation has been limited to the regulation of the bank possessing the monopoly of note issue. Other branches of banking are free to all.

The Bank of England is regulated under the Peel Act of 1844, which restricts its fiduciary issue to £14,000,000 and provides that the bank shall hold for every note issued above that point metal in its vaults; that the note-issue privilege given the country banks shall lapse, and also that the Bank of England shall have power to increase its fiduciary issue to the extent of two-thirds of the lapse issue, thus increasing the fiduciary issue to £18,450,000. The act of 1844 provides for two separate departments, one of which is called the issue department and the other the banking department. As a general thing, emergency currency is provided for through the banking department, as, whenever money or credit is needed, banks, brokers, and others deposit with the bank department of the Bank of England security and obtain credit, which is regarded for English banking purposes as equivalent to so much money. The Bank of England statement, under date March 11, 1909, printed on page 71, Senate Document 492, reports the note issue to be \$55,952,170; credit Government debt, £11,015,100; other securities, £7,434,900; gold coin and bullion, £37,502,170; total, \$55,952,170. Capital, £14,553,000; surplus, £3,691,483; deposits, £57,143,934.

The Bank of France issues franc notes without any restriction except as to amount, but the notes are practically coin certificates. For 10 years France held in specie an average of 83½ per cent of its outstanding note issue, and against an uncovered issue of \$100,000,000. It held 140,000,000 of bankable bills.

The Reichsbank of Germany is authorized to issue untaxed notes, first, to the amount of specie and Government notes and notes of other banks held, besides \$130,000,000 worth known as contingent, and at the end of the quarter, on settlement days, as high as \$178,500,000, or at most \$3 per capita. Any notes issued in excess are taxed by the Government at the rate of 5 per cent. All notes issued, taxed or untaxed, must be covered by one-third of the amount of specie or Government notes and two-thirds in bills of exchange.

In Sweden the Riksbank has sole right to issue legal tender bank notes, redeemable in gold, to the amount covered by gold coin or bullion, the amount of its funds in current account with foreign establishments or merchant houses, and an amount in addition not to exceed 100,000,000 kroner, covered by certain assets.

The Imperial Bank of Russia, with a capital of 25,000,000 rubles and a surplus of 3,000,000, has a right to issue covered and uncovered notes. In 1908 the amount of outstanding circulating notes was 1,155,100,000 rubles, backed by 994,400,000 in gold in the vaults of the bank.

The Bank of Netherlands had an absolute monopoly on note issue up to 1863 and practically a monopoly since. No limit is now placed on the issue of notes which require a metallic reserve. Such reserve is fixed by royal decree; the balance of the circulation is covered by bills and collateral. Notes in circulation 1906-7 amounted to 270,000,000 florins, and the metallic reserve was 155,000,000.

The Bank of Belgium may issue notes. The amount in circulation shall be backed by security which can be easily converted into cash, the method and amount to be determined by the Government.

The Scotch system of 8 banks with 1,200 branches is given a note-issue privilege of uncovered notes up to £2,700,000, or \$2.76 per capita; beyond this limit it is required that the issue be covered by specie.

In Canada banks are allowed to issue circulating notes, each bank making its own provision under the supervision of the Banking Association for printing of notes which are first lien upon the assets of the bank, no reserve against notes required except 5 per cent redemption fund deposited with the Government, and notes are free from taxation.

Central banks, with few exceptions, have and always have had a monopoly of note issue.

That is what is proposed in the pending bill. It provides:

That Federal reserve notes, to be issued at the discretion of the Federal reserve board for the purpose of making advances to Federal reserve banks as hereinafter set forth and for no other purpose, are hereby authorized. The said notes shall be obligations of the United States and shall be receivable for all taxes, customs, and other public dues. They shall be redeemed in gold or lawful money on demand at the Treasury Department of the United States, in the city of Washington, D. C., or at any Federal reserve bank.

Any Federal reserve bank may, upon vote of its directors, make application to the local Federal reserve agent for such amount of the Treasury notes hereinbefore provided for as it may deem best. Such application shall be accompanied with a tender to the local Federal reserve agent of collateral security to protect the notes for which application is made equal in amount to the sum of the notes thus applied for. The collateral security thus offered shall be notes and bills accepted for rediscount under the provisions.

Federal reserve banks shall carry a special reserve in gold or lawful money equal in amount to 33½ per cent of the reserve notes paid out by it, such reserve to be used for the redemption of said notes as presented.

The Federal reserve board shall have power, in its discretion, to require Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of such amount of Federal reserve notes as may be issued to them; but such 5 per cent shall be counted and included as part of the 33½ per cent reserve. The said board shall also have the right to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes; but to the extent and in the amount that such application may be granted the Federal reserve board shall, through its local Federal reserve agent, deposit Federal reserve notes with the bank so applying, and such bank shall be charged with the amount of such notes and shall pay such rate of interest on said amount as may be established by the Federal reserve board, which rate shall not be less than one-half of 1 per cent per annum, and the amount of such Federal reserve notes so issued to any such bank shall, upon delivery, become a first and paramount lien on all the assets of such bank.

Any Federal reserve bank may at any time reduce its liability for outstanding Federal reserve notes by the deposit of Federal reserve notes.

The system and underlying principle of other provisions in the proposed bill are not out of the ordinary, but in line with systems and methods embodied in banking and currency legislation of other nations. The bill provides for dividing the Continent of the United States into not less than 12 districts, to be known as Federal reserve districts. It provides for 12 Federal reserve banks that, when so formed, shall become a body corporate, and as such shall have power to perform all those acts and to enjoy all those privileges and to exercise all those powers described in section 5136, Revised Statutes, save in so far as the same shall be limited by the provisions of this act. The Federal reserve bank so incorporated shall have succession for a period of 20 years from its organization, unless sooner dissolved by act of Congress, and shall be exempt from taxation, Federal, State, and local, except on real estate.

Every Federal reserve bank shall be conducted under the oversight and control of a board of directors, whose powers shall be the same as those conferred upon the boards of directors of national banking associations under existing law, not inconsistent with the provisions of this act. Such board of directors shall consist of nine members, holding office for three years, and divided into three classes, designated as classes A, B, and C.

Six, or classes A and B, are chosen by member banks, and three, or class C, by the Federal reserve board. The Federal reserve board is given power, at its discretion, to remove three

or any directors of class B. It provides for a Federal reserve board, consisting of seven members, including the Secretary of the Treasury, Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President, by and with the consent of the Senate, not more than one of whom shall be selected from any one Federal reserve district.

The four shall devote their entire time to the business of the Federal reserve board and shall receive an annual salary of \$10,000 each and actual traveling expenses. Not more than two shall be of the same political party, and at least one shall be an experienced banker. The Federal reserve board is authorized and empowered to permit or require Federal reserve banks to rediscount the discounts from prime paper of other Federal reserve banks; to suspend for a period not exceeding 30 days, and to renew such suspension for a period not to exceed 15 days in each and every reserve requirement; to supervise and regulate the issue and retirement of Federal reserve notes; to suspend and remove the officials of the Federal reserve bank; to suspend for cause Federal reserve banks and appoint a receiver thereof. It provides for a Federal advisory council, which shall consist of as many members as there are Federal reserve districts, who shall serve without compensation, who are to be selected annually by the board of directors of the Federal reserve banks. Shares of capital stock of the Federal reserve banks shall not be transferable nor be hypothecated; member banks shall subscribe for an amount of capital stock of the Federal reserve banks of its district equal to 20 per cent of the bank's own capital, 10 per cent of said subscription to be paid in cash and 10 per cent to become a liability. If national banks shall fail to comply with the provisions of the act within one year, they shall be dissolved. State banks or trust companies may come in under rules and regulations prescribed by the Federal reserve board. Earnings to be divided, first, 5 per cent dividend on the paid-in capital stock; 60 per cent of the remainder shall be paid to the United States, and 40 per cent to the member banks in the ratio of their average balance with the Federal reserve bank for the preceding year.

That within 12 months all moneys now held in the general fund of the Treasury and thereafter the revenue of the Government shall be deposited and apportioned among the Federal reserve banks, which banks shall act as fiscal agents of the United States. Disbursements shall be made by checks drawn against such deposit. No Federal bank shall receive deposits except from the Government of the United States and its own member banks. Country banks shall maintain reserve equal to 12 per cent, of which 5 per cent shall be kept in bank's own vault, 5 per cent in the Federal reserve bank of its district, the balance either in whole or in part in bank's own vault or of credit balance with the Federal reserve bank of the district. Central reserve city banks and reserve city banks shall maintain a reserve of 18 per cent, of which 5 per cent shall be deposited with the reserve bank in their districts, the remainder either in whole or in part in the banks' own vaults or credit balances with the credit reserve banks of their districts. Federal reserve banks shall maintain a reserve of 33½ per cent in gold or lawful money in their own vaults. National banks not situated in reserve cities or central reserve cities may make loans secured by improved and unencumbered farm land at an aggregate sum equal to 25 per cent of their capital and surplus. A national bank may open a savings department, but the sum set apart for the use of the proposed savings department shall in no case be less than \$15,000, or a sum equal to 20 per cent of the paid-up capital and surplus of said national bank. National banks with \$1,000,000 capital may establish branches in foreign countries. Hence we have a system providing for private ownership of banks, first, 12 central or regional banks, with 1 branch for each \$500,000 of their capital. The regional banks, under Government control, with a note-issue monopoly and their notes guaranteed by the Government, are made fiscal agents for the Government and custodians of its funds, sharing their profits with Uncle Sam, besides 25,000 independent banks, all in line with the system and methods employed in foreign countries. Practically all central banks of European countries are private banks; that is, the Government has no ownership or interest in their share holding, and are made fiscal agents and custodians of Government funds, yielding part of their profits to their respective Governments. Practically all are given a note-issue monopoly and are under Government control.

The English system consists of the Bank of England, a number of important joint-stock banks, which do most of the commercial business of the country, and discount houses acting as brokers or intermediaries between borrowers and the commercial banks and between the commercial banks and the Bank of England. The Bank of England was authorized under special

charter in 1694. The act states that the direction and management of the said corporation shall be under a governor, a subject of England, a holder of £4,000 in the bank; deputy governor, a holder of £3,000 in the bank; and 24 directors, holding £2,000 each. The act appointed the first governor and deputy governor and states that they have been chosen by a majority of the subscribers having £500 each in the capital stock. It provides for the annual election of the governor and directors and restricts the right to vote to holders of at least £500 stock in the bank. Custom has enacted that its directors shall never be chosen from the ranks of the other bankers. They are generally taken from the merchants, firms, and accepting houses. Its only exclusive privilege is note issue.

The credit institutions of France are composed of the Bank of France, the great joint-stock banks, a mortgage bank, the *Crédit Foncier*, which is under Government control, issuing its own obligation against mortgages held by the bank and others. The governor of the Bank of France, who directs the general policy of the bank, and two deputy governors are appointed by the Chief of State. Two hundred of the largest shareholders elect 18 regents. About 70 per cent of the business of the Bank of France comes from other banking institutions.

The German system includes the *Reichsbank* and a considerable number of joint-stock banks; the latter do commercial business, and also more or less of underwriting syndicate business. Besides, thousands of cooperative credit societies, on the order of our national savings banks, depending absolutely upon the *Reichsbank* for resources and assistance in time of stress, are a part of the comprehensive system. About 65 per cent of the business of the *Reichsbank* comes through other banks. The *Reichsbank* is managed by a president, vice president, and 7 directors appointed by the Emperor. The stockholders elect a central committee of 15 members with limited advisory powers; hence the Government institution accepts its ownership under the control and management of expert bankers.

The Bank of England and the Bank of France are not required to divide their profits directly with the State, but indirectly through the payment of franchises and taxes. The Bank of England pays the Government annually \$1,200,000, the Bank of France about one-third of its net earnings, and the *Reichsbank* \$3,400,000, or about two-thirds of its net earnings. Government funds and all payment of public moneys are paid to the banks, which render services and act as fiscal agents of their respective Governments without direct compensation.

In Denmark 1 national bank with 6 branches, a joint-stock company in private ownership, is managed by 5 directors, 2 appointed by the Government and 3 elected by the board of directors, which consists of 15 representatives of the stockholders. Its dividends range from 7 to 7½ per cent. Two hundred and one thousand kroner of its 750,000 kroner profit goes to the State, then 6 per cent to shareholders, and of the balance one-fourth to the State; besides, Denmark has 133 other banks with fifty-three million capital and eleven and one-half million reserve, with \$185,500,000 deposits.

The Bank of Norway, with 12 branches, remains entirely in the hands of the Government. The president of the managing committee of 5 is appointed by the Crown, the other members by the Parliament, which also elects the 15 members of the board of directors. Managers of branches are also appointed by the Parliament. Of the profits, shareholders get up to 6 per cent, one-tenth of the balance to be added to reserve up to 5,000,000 kroner, the balance divided equally between State and stockholders until the latter have received 10 per cent, beyond which the State takes three-fourths and shareholders one-fourth. Nearly a hundred other banks are in existence in Norway.

The Bank of Sweden (the *Riksbank*), with at least one branch in each county except Stockholm, remains under guaranty of the Parliament, and is managed by a president, seven directors, and managers of branches appointed in accordance with the law, jointly sanctioned by the King and Parliament. The capital, exclusive of real estate, is 50,000,000 kroner, or about \$13,000,000. Under the law the Government is entitled to an open credit of 1,500,000 kroner. Parliament determines the disposal of the yearly profits. Private banks chartered by the Crown are entitled to credit but not to note issue.

The National Bank of Belgium, with capital of 50,000,000 francs, divided into 50,000 shares, was established under royal decree of May 7, 1900, which provides that the bank's management shall be in the hands of a governor and six directors; that there shall be a council of censors and a committee of discounts; that the governors shall be appointed by the King, director and censors elected by the general assembly of the shareholders, and a commissioner appointed by the Government; that one-fourth of the profit in excess of 4 per cent dividend be assigned to the Government; that one-half of 1 per cent annually

on the average circulation notes in excess of 275,000,000 francs and the profit from the bank between 3½ per cent interest and interest collected shall be assigned to the State; and that the bank may deal in gold and silver, receive money on deposit, and act as cashier for the State.

The Bank of Netherlands is under the supervision of the royal commission, managed by a president and secretary who are permanent officers appointed by the Sovereign, 5 directors, and 15 bank commissioners, or a supervising council elected by the shareholders. It is a joint-stock company with 103 branches, authorized by royal decree of March 25, 1814, which has been amended from time to time. It has a capital of 20,000,000 florins.

The Russian system consists of the Imperial Bank, besides joint-stock banks, with a capital of 282,900,000 rubles and deposits of 785,900,000 rubles, a municipal bank with a capital of 46,700,000 rubles and deposits of 108,900,000 rubles, and a credit association with a capital of 47,300,000 rubles and deposits of 202,900,000 rubles.

Japan, after a short trial of a banking system modeled upon ours, which authorized banks to issue bank notes to the amount of 34,000,000 yen, abandoned the system. The Bank of Japan, in October, 1832, was issued a charter with an original capital of 10,000,000 yen; in July, 1884, it was authorized to issue notes under the supervision of the minister of finance, and in 1888 it was authorized an untaxed issue of 70,000,000 yen above the specie reserve of the bank, which was increased to 85,000,000 yen in 1890 and to 120,000,000 yen in 1899. The balance sheet of the Bank of Japan for 1909 reports capital, 30,000,000 yen; surplus, 44,400,000 yen; Government deposits, 182,200,000 yen; other deposits, 5,600,000 yen; notes issued, 352,800,000 yen; gold coin and bullion, 221,500,000 yen. Agricultural, industrial, and the hypothec bank, which makes long-time loans with funds principally secured by sale of debentures: Capital, 40,500,000 yen; deposits, 145,000,000 yen; loans, 71,100,000 yen. Other banks, capital and surplus, 460,000,000 yen; deposits, 1,238,000,000 yen.

Central banks are not and should not be in the ordinary sense commercial banks or competitors of banks of deposit and discount, but, as has been stated, banks of banks. Their function is to sustain public confidence, and their responsibility to the public and other banks is principally to supply other banks with currency, especially in time of stress, and to always have an adequate gold reserve available. In other countries they practically hold the entire specie reserve. The Bank of England holds on an average a reserve of 45 per cent of its entire liability; the Bank of France, 70 per cent of its demand liability; and the *Reichsbank* 40 to 50 per cent on current deposits. The joint-stock banks of England and other countries practically do the commercial business of their respective countries. They hold practically no specie reserve, as only till money is held in their own vaults, or about 3 or 4 per cent of their deposit liabilities. They draw from their central banks day by day the amount of money needed, and carry a reserve in cash and in banks of about 14 or 15 per cent. I take it that that is what is intended in the proposed bill.

Objection has been raised to forcing national banks to subscribe for stock in the regional bank. It has been pointed out that in so doing the Government is repudiating a contract entered into in charters issued to national banks, which, it is said, amounts to confiscation of property or vested rights. No one believes in confiscation of property or repudiation. That is, as has been pointed out, the act of the highwayman and not the act of an honorable man. It spells ruin, dishonor, and disgrace, no matter how, where, or by whom. All believe in just laws and an honest administration of the same in legislation, so as not to confiscate or deprive a single individual, interest, or corporation of a single dollar or right honestly acquired, but legislation to meet the views of those who would proceed in an honorable and dignified manner with a determination to do justice and right to everybody; to promote the best interest, prosperity, happiness, and welfare of all people in all communities, regardless of class or creed, and if the purpose of the proposed bill is to confiscate property or to deprive banks of a single dollar or right honestly acquired, then it should be branded as such, rejected, and condemned to the everlasting disgrace and humiliation of those who produced it. All agree that this grand and glorious Government of ours, with its splendid and magnificent institutions, should not be placed, as pointed out, in the attitude of a highwayman threatening one with his money or life. I admit that it would not be fair for Congress to pass a bill demanding of a bank holding an unconditional charter its surrender or 10 per cent of its capital and 5 per cent of its deposits, but that is not the situation in this case. Back of the charter is the law authorizing the

charters issued to national banks, reserving the right to amend, alter, or repeal. If so, there should be no question but that Congress has the right to alter and make new requirements from time to time. But whether it has the right or not, no one will contend that the 20 per cent of capital or 5 per cent deposit is taken without compensation, as the bill provides for a 5 per cent dividend on stock and 40 per cent of earnings in excess of the 5 per cent dividend to be paid the member bank as interest on deposits; besides, the legal reserve is reduced from 15 to 12 per cent in country banks and from 25 to 18 per cent in reserve banks and banks in the three central reserve cities. It also provides for the issue and loaning of currency to member banks, a privilege which alone in time of stress, in my opinion, would compensate banks for their investment and deposit.

Why is it necessary to resort to the proposed method? If capital is required, certainly the investment must either be made attractive enough to induce enough banks to subscribe for the stock or they must be compelled to do so in order to make the organization proposed in this bill possible. If made optional with banks or individuals as to subscription, if they fail to subscribe, the regional banks can not be organized, and without the organization the proposed measure is of no effect; hence the capital is essential and must be assured. If made attractive enough to a certain syndicate to invest and not to the public or bankers, the syndicate takes the stock; if so, they will own the bank, and, I fear, in time control it. We would then have central banks with branches and note-issue monopoly owned by a syndicate as is desired by them, except a limit as to the number of branches. Next it will ask for privilege to increase the number, and if the request is granted we would have a system of central banks with branches and note-issue monopoly owned, controlled, and operated by a syndicate. Rather than that I much prefer the plan suggested.

What are the facts in the matter? According to the Statistical Abstract of 1912, published under the direction of the Secretary of Commerce and Labor, we had, in 1912, 13,381 State, 1,922 savings, and 1,091 private banks, and 1,410 loan and trust companies; total, 17,804—with capital \$977,272,828; surplus, \$890,990,068; loans, \$3,226,653,760; individual deposits, \$11,198,606,440; due banks, \$454,471,635; or total deposits of \$11,653,078,095 and total resources of \$14,124,878,895. On September 4, 1912, we had 7,397 national banks, with a capital of \$1,046,000,000; surplus, \$701,000,000; undivided profits, \$242,700,000; loans and discounts, \$6,061,000,000; total resources, \$10,963,400,000; national-bank circulation, \$713,800,000; individual deposits, \$5,891,600,000; due to banks and reserve agents, \$2,177,400,000; total deposits, \$8,069,000,000; or a total number of banks of 25,201, with an aggregate capital of \$2,023,272,828; surplus, \$1,591,990,068; total capital and surplus, \$3,615,263,514; loans, \$13,999,244,205; individual deposits, \$17,000,206,440; due banks and reserves, \$2,631,871,655; or a total deposit of \$19,722,078,095 and total resources of \$25,088,278,895.

Here we are with more than \$2,000,000,000 invested in capital stock in 25,000 banks, with a surplus of more than one and one-half billion dollars, capital and surplus aggregating more than three and one-half billion dollars, an amount equal to the total amount of money in the Treasury and in circulation. That, together with the undivided earnings of the banks, represents the holdings of the thousands of stockholders of these banks. A handsome sum, indeed, and I believe worthy of consideration when you stop to consider that the stock is held by all classes of people. Next, 10,010,304 people with an average deposit of \$444.72, aggregating about four and one-half billion dollars, deposited in 1,922 savings banks alone, and more than \$17,000,000 in individual deposits in 25,000 banks, representing the interest or holdings of depositors outside of deposits by banks, the holdings of the depositor, then, being about five times as great as that of the stockholder. Next we have millions of borrowers, who borrow nearly fourteen billion dollars from the 25,000 banks. The loans constitute the principal asset of the bank, the principal function of a bank being to receive deposits and to loan on proper securities. Of course everybody understands that a bank can not long continue its business by simply maintaining an office and storing away the deposits, as the expense and interest paid on deposits would soon eat up the capital and surplus of the bank. The expenses of running a country bank capitalized at \$50,000 generally runs from about \$3,000 to \$5,000 annually. Then taxes, insurance, and interest on deposits must be paid. Hence the money deposited must be loaned at a profit for itself, or the various items and demands made on the bank would soon consume the capital. So, under the law and what is considered as sound banking, the country bank loans from 75 per cent to 80 per cent of its deposits. A country bank with a hundred-thousand deposit loans outside of its capital and surplus undivided profits \$75,000 to \$80,000, and when its re-

serve falls below the legal reserve of 15 per cent it is compelled to replenish its reserve, either by rediscounting or calling in loans. To call on a customer for payment of a loan may be a hardship to him; he might not have the money and no way of getting it conveniently. The banker, being anxious to accommodate the customer, instead of compelling him to pay the loan, rediscounts paper held by the bank. Usually the money is obtained from a correspondent, and as the reserve is increased, either by deposits or collection, the banker takes up the paper rediscounted. The customer has been taken care of and no one has been inconvenienced. Under ordinary circumstances everything moves along nicely; but unexpectedly, like a thunderbolt out of a clear sky, as on October 28, 1907, comes the startling news that banks in the central reserve cities have suspended payment. Nine per cent of the bank's 15 per cent legal reserve is deposited with its correspondents in reserve cities. Its correspondents have not only ceased to loan money but have suspended payment. The country bank is unable to borrow and also unable to obtain the money deposited with the reserve banks.

This was the situation in 1907. With this exception, bankers generally could get their money by paying a broker about 7 per cent brokerage. What happens under such circumstances? The banker must maintain his reserve and meet all legal demands or close his doors. He can not borrow or rediscount, because practically all banks in the country are in the same situation; hence he must either collect outstanding notes or close the bank. If the country bank suspends payment the depositor may have obligations to meet or an opportunity to invest his funds to good advantage and will be disappointed, and possibly injured, if he can not draw his money deposited. The stockman and the grain dealer depending on the bank for currency have no way of raising money to pay for their grain or stock. You say that stock and grain can be shipped and remittance made in cash by express. No; I tried that in 1907. I shipped a couple of carloads of cattle from a farm to Chicago and instructed my commission men to remit proceeds of sale by express. The answer was that the market was low—in fact, it was off about one-third—that they had decided to hold the stock over until the next day; that the stock could not be sold for cash; and that I must either accept of a draft or have the stock returned. Manufacturers who had large pay rolls, and who had money in banks, told me that they paid brokers as high as 7 per cent for currency drawn against deposits in banks within 300 miles of Washington. Merchants were unable to borrow money to meet obligations, and thereby were unable to discount or pay bills.

As to the cause of the panic of 1907 many ideas have been advanced. One is that it was due to overspeculation, with undue inflation of value; another overextension of credits; and another that it was due to country banks withdrawing deposits from New York City banks. I believe most generally the blame is laid at the door of a country banker. To my astonishment, a banker who ought to know better recently made that statement before a committee, and that statement went unchallenged. Others lay it at the door of a bank syndicate of New York. It is believed that this syndicate, in order to purchase stocks and bonds and get control of certain railroads and interests at greatly reduced, if not at their own prices, created a panic in order to compel holders of stock and margins to sell. Let us see. About October 28, 1907, New York City banks suspended payment. Holders of margin or stock and bonds outside of the deal were unable to renew their notes or borrow money to make their margin good. Stocks and bonds were disposed of and margin wiped out. Men worth millions were reduced to poverty in a single day. People with money deposited in banks could not get it out. Country banks with their reserve deposited in New York City banks could not get a dollar in currency. The question is, Who got the New York City banks' money? Where had it gone to? It is an easy matter to ascertain where it went, but just who got it can not be ascertained under the law. National banks are required to make reports. New York City banks reported cash held on August 22, 1907, \$218,786,132. Uncle Sam rushed over \$47,576,335 between August 22 and December 3, the date of the next report. Total to be accounted for, \$266,362,467. On December 3 New York City banks reported cash held \$177,093,821, hence \$89,000,000, which included \$12,000,000 of Treasury gold certificates and \$20,000,000 of gold clearing-house certificates had disappeared. Who got it? Certainly not the country banks. True, they increased their cash about \$26,000,000, but banks in the other two central reserve cities and other reserve banks reduced their cash \$34,000,000, an amount \$8,000,000 in excess of the increase in the country banks. Evidently the increase of cash in country banks was due to the withdrawal from the two other central cities' reserve and

other reserve banks. It is true that New York national banks reduced their indebtedness to banks \$26,000,000, but it is not likely that any considerable amount of that was produced by cash payments but out of commercial transactions or transfer of credits. New York's deposits increased \$53,000,000. Evidently the increase of deposits was produced by loans, as the net increase in loans was \$63,000,000. That fact coupled with the fact that the \$32,000,000 of Treasury and clearing-house gold certificates disappearing were not of a character that generally circulate or is used for living expenses or in commercial transactions, and the same immediately returning to the New York City banks is evidence that the speculators—the syndicate—in order to deplete the reserve not only drew out their own money, but borrowed money in order to withdraw the \$89,000,000 necessary to force the suspension of payment and force the sale of stocks and bonds desired. Whether done for that purpose or not, certainly the country banks did not get the currency.

Who were benefited by the panic of 1907? Certainly not the banks, not the depositors, not the merchants, not the stock or grain dealers, not the farmers; to the contrary all suffered by it, and the only one benefited, if any, was the syndicate of speculators, its creator.

If so, I take it that people in general engaged in worthy and legitimate enterprises desire sound banking and currency legislation, and that practically all the people will be benefited thereby, and that such legislation is not only in the interest of banks, but commercial, industrial, and agricultural interests—in short, in the interest of our general welfare. What is needed? First, a supply of currency in time of stress. If the purpose of this bill is to mobilize and centralize bank reserves and to authorize the issue of additional currency where not only it and the bank reserve but Government funds now held in the Treasury can be made available to banks and to the people in time of money stringency or emergency or, as has been said, where it can be drawn from these great reservoirs as water is drawn from reservoirs to put out fire and to supply the people; if the purpose is to transfer from these central reserve cities and reserve city banks some \$900,000,000 of reserve held for some 7,400 national banks and the \$150,000,000 or \$250,000,000 balance in our United States Treasury to the 12 regional banks and make it all available in time of stress, then very well; that is exactly what is needed and what should be done, unless such legislation results in central banks with branches owned and controlled by a bank trust.

It is, of course, contended that a central bank with branches and note-issue monopoly is not contemplated in the proposed bill, but simply 12 regional banks, with branches and note-issue privilege, under Government control. It matters not whether it be 1 or 12 or what name is given the banks, but it matters what power is given and by whom the banks are controlled. One syndicate and board can control 12 central banks as well as 1. One hundred million dollars capital can be raised as easily for 12 as for 1. Canada has 29 central banks with 2,000 branches, all controlled by one association. If the banking trust of Canada can control its 29 banks and 2,000 branches, certainly the New York syndicate, now controlling trusts with an aggregate stock of more than twenty billion, can also control 12 central banks with 25,000 branches. If you give them a chance, they will run them, and be glad to do so. Yet, with the provisions in the proposed bill which provides for dividing the Continent of the United States into 12 districts, that all member banks shall subscribe and own the capital stock in the regional bank in their respective district, and that the regional banks shall be under Government supervision and control, it would seem that the danger of ever giving the syndicate control had been safely guarded against.

I appreciate that it is beyond the power of any committee to draft and report a bill of such importance with all its provisions meeting the approval of all, especially under the present rules and practice. Certainly perfection can not be expected when a bill is prepared through the instrumentality of scissors and paste pot, subject to the approval of one or a few men, and jammed through the committee and House by the big stick under a caucus system, thus not only legislating by a small minority of the House, but also making it practically a one-man law. It is to be regretted that the bill was not submitted to all the members of the committee in charge for consideration, and hearings given. Instead of a few members of the majority party preparing this bill in secret, experienced bankers, students of banking and currency, in short, the people, and certainly members of all parties on the committee—Democrats, Republicans, and Progressives—should have been given an opportunity to be heard and offer suggestions, if not advice; then possibly the bill would have come to the House backed by a unanimous report; if not, at least a much better bill would have been re-

ported. No one or few men will claim to have all the knowledge pertaining to banking and currency or necessary to prepare a bill such as should be enacted into law.

Senator Aldrich, chairman of the National Monetary Commission, after serving 18 months on the commission, and after an extensive investigation and after giving the subject the most careful consideration and study, said in one of his speeches that 18 months previous he thought he had some knowledge of the subject; that he had been studying these questions for 30 years; yet if a blank piece of paper was handed to him, with absolute authority to write upon it the terms and conditions of a banking and currency bill which he thought should be adopted by the United States, he could not do it, stating that further time and study was required to determine what plan should be adopted. Another distinguished Senator, a member of the Committee on Banking and Currency, recently said: "We are just beginning to learn what this bill means." Again, some days ago, when discussing the proposed banking and currency legislation with a gentleman at the head of one of our large and successful banks—one with 50 years' experience in banking and who had made banking a life study—in response to my question as to what he had to suggest in the matter, answered by saying that many years ago he used to think he knew everything about banking, but now, after 50 years of experience and study, he had learned that he knew very little about it.

With such evidence, and considering the importance and far-reaching effect of the legislation proposed, it must be obvious to all that knowledge and most careful consideration are required in passing such legislation and that the bill should not have been jammed through the committee and caucus and through this House, as it is proposed to do—certainly not by a party having so emphatically declared against centralization of legislative power; certainly not by Democrats who have so vigorously and persistently denounced and condemned concentration of power in this House.

Why they should now advocate and defend a policy they have heretofore condemned; why they should abandon a policy so long championed by them is beyond my comprehension. Heretofore the rule and custom have been to require a majority vote or two-thirds under the suspension of the rules, quorum present, or unanimous consent to pass bills. Under the rule pursued bills are passed not by a majority of the Members of the House, but by a small minority. Why this by a party having in the past most emphatically and conspicuously condemned the very thing which its Representatives in Congress are now doing? Why by a party which has firmly and lavishly proclaimed in the past that its lofty purpose, its dominant course and stock in trade is to emulate to make the House of Representatives a representative body; by a party having condemned autocratic rules and power; a party impelled by lofty and pure motives solemnly declaring for reform, as, for instance, in its platform of 1908, when it declared:

The House of Representatives was designed by the fathers of the Constitution to be the popular branch of our Government, responsive to the public will. The House of Representatives as controlled in recent years by the Republican Party has ceased to be a deliberative and legislative body, responsive to the will of the majority of its Members. * * * We demand that the House of Representatives shall again become a deliberative body controlled by a majority of the people's Representatives—

and pledging rules and regulations to govern the House of Representatives that will enable a majority of its Members to direct its deliberation and control legislation.

I submit, is a banking and currency bill an important measure, vitally affecting the welfare of all the people, prepared by the Executive or by one or more members of the Cabinet or Government officials, ordered reported by a committee without giving hearings, without giving members of the committee representing other parties permission to aid in its preparation, except in going through the formality of inviting them to a meeting or two after certain members of the committee have definitely determined what bill shall be reported—a bill jammed through a secret caucus, tying Democratic Members hand, foot, and body, and sealing their lips forever, so far as opposition to the bill goes, thus depriving Democratic Members of this House the right to vote their honest convictions on this floor, thereby sacrificing the rights and interests of those whom they are expected to represent—a bill thus passed without giving the public or those interested an opportunity to be heard, and thus passing bills not by a majority vote, but by Executive orders through a caucus system requiring a two-thirds vote of the caucus, a quorum present, instead of a majority vote of the House—is that making the House of Representatives a popular branch of our Government, a deliberative and legislative body, in response to the public will as designed by the fathers of the Constitution, and as declared for in the Democratic platform?

Is that making laws under a rule enabling a majority of its Members to direct its deliberations and control legislation? Under such practice, is the House of Representatives a deliberative body controlled by a majority of the people's representatives, as declared for? Again, in 1912, the Democratic Party in convention assembled, and, controlled by backers of this bill, congratulated themselves on the splendid achievements attained in revising the rules of the House of Representatives—

so as to give the Representatives of the American people freedom of speech and of action in advocating, proposing, and perfecting remedial legislation—

And concluded by solemnly declaring—

Our platform is one of the principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during campaign, and we invite the co-operation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country.

Under the vicious caucus system the principle of legislation by majority has been reversed, as under it the House, with a membership of 431 present, or 216 Democrats and 215 Republicans and Progressives—two-thirds of the 216, or 144—determine and pass bills, while under the rule and practice heretofore it would require a majority of the 431, or 216 votes. In other words, under the caucus system only 1 to 3 is required, while under the rules of the House under the Constitution a majority is required. Hence, under Democratic caucus system the enactment of law no longer requires a majority vote of the House. Why this departure from platform declarations? Why legislate by a minority rather than a majority, as has been the practice?

To seal the lips and silence Democratic Members in opposition and those in favor of amending the bill by a two-thirds vote in a secret caucus, as has been frequently admitted was done, thus barring them from the right to vote against the bill or for a single amendment offered outside the committee amendments, no matter how much they might wish to have it incorporated in the bill, is that giving the Representatives of the American people freedom of speech and action in advocating, proposing, and perfecting remedial legislation, or is it to be understood that Democratic Members, bound by caucus action, are not the Representatives of the American people? Is that keeping pledges when in office as pledged in the campaign?

If a Government by the people, of the people, and for the people, why disqualify its Representatives for voting? Why not legislation by a majority of the Representatives, as declared for recently in Democratic convention? Why the departure from law, a long-established custom and practice and a doctrine so long and loudly proclaimed for, and adopt a policy so vigorously and universally condemned and repudiated? The Democratic Party got in power under pretense of favoring a liberal rule guaranteeing a representative form of government. Why abandon it now? For years its leaders in Congress proclaimed for it and denounced the restriction of rights and privilege of Members through autocratic power when playing politics, when in the minority and before election it was to ameliorate, to give every Member of the House freedom of speech and of action in advocating, proposing, and perfecting remedial legislation, which means the privilege of voting one's own convictions, not others', on every bill coming up for consideration in the House, not in caucus. Now, when in power and after election we find every one of its Members marching with bag and baggage into the caucus, practically all submitting to its dictates, and coming out subdued, with hands and feet tied, lips sealed, as meek as lambs, proclaiming their allegiance to the party caucus, and offering not a word against its methods prohibiting any and all Members from voting or saying a word in favor of amendments offered outside of the committee, no matter what their merits may be nor how much their adoption may be desired. When playing politics and aspiring for control it was, "Down with autocratic power." Now, when in control, not only autocratic rule is restored, but in order to make legislation certain and party power complete, the vicious, unwarranted, and uncalled-for caucus system is provided, depriving those with independent mind and thought who subscribe to its dictate of their right and privilege to vote their best judgment and honest convictions on this floor. Why? Are you afraid to trust to the judgment, integrity, and patriotism of all your Democratic Representatives, or are those who submit to the sealing of their lips and the tying of hand, foot, and body, thus submitting to the dictates of the caucus, afraid to trust themselves.

Considering that under existing conditions the proposed bill is the only legislation that can be had, and that our only choice is in passing the pending bill or return to conditions existing prior to the enactment of the Vreeland bill, I would much prefer to give the Vreeland bill with broadening provisions a new lease of life and postpone general legislation until a bill

could be given exhaustive investigation and consideration and passed under rules permitting the entire membership of this House to vote its own convictions on amendments and passage, but, that being out of the question, and considering the many splendid provisions in the proposed bill, especially the one providing for a note issue, thus guaranteeing currency to the banks and people in times of stress against security provided for and approved, rather than risk the danger likely to be encountered in returning on May 20, 1914—the date of the expiration of the Vreeland Act—to conditions existing prior to its enactment, I shall vote for this bill.

Mr. PLATT. Mr. Chairman, I do not care to take much of the time of the committee on this amendment, but I just want to quote from memory, and possibly somewhat inaccurately, what Prof. Sprague, of Harvard University, said last week during the Senate hearings. He said that both the banks and the bank haters—he did not use that word, but I use it—are wrong about this section which creates a Federal reserve board. He said it does not make any material difference whether the banks elect the Federal reserve board or the President appoints it. The white light of publicity will be on the members of that board and they will have to wield the great powers intrusted to them in the public interest. It does not make any particular difference which way the board is created. It does make a difference whether there is politics in it, and therefore the control of the board ought not to change with each incoming administration.

Mr. FESS. Mr. Chairman, I would not vote for a bill that would surrender the control of the banks by the Government to the banking interests. That is one reason why I have a distinctive objection to the Aldrich plan.

I also hesitate to vote for any measure that repudiates or does not recognize the right of the interests that are being employed to have any voice in the management. The banking business, as is recognized by this bill, is both private and public, and so far as the administration or operation goes it ought to be private, but so far as the control goes it ought to be public. We can not surrender the control of this business to any private interest. That would be dangerous. On the other hand, we ought not to disrespect the rights of private interests, those interests furnishing the money, by denying them any voice whatever in the operation of their business. In this amendment, which provides for four appointive officers by the President and three others selected by the interests whose money is being used, you have the solution. It seems to me that there is no danger whatever in the four being controlled by the three. On the other hand, the four who will be responsive to the demands of the public as expressed through the President will be the controlling factor. The fear that one of the four might be a banker, and therefore pass over the control of the board to the banking interest, is certainly not well founded. It was stated by the chairman of the committee that the Secretary of the Treasury would likely be a banker. In all our history the Secretary of the Treasury has not been a banker except in the last few years. I wonder whether you have noted the fact that the first Secretary of the Treasury who was a banker was Hugh MacCulloch, Lincoln's Secretary of the Treasury.

Beginning with Alexander Hamilton, who was Secretary of the Treasury under Washington, most of those in charge of the Government finances have been outside of the bankers—generally lawyers. Samuel Dexter, who was Secretary of the Treasury under John Adams; Albert Gallatin, under Thomas Jefferson; and Alexander J. Dallas, under Madison, all had distinguished themselves in politics, but not finance. Mr. Dallas was the author of the second Bank of the United States, in 1816. Coming on down through history, the Secretaries of the Treasury were generally lawyers. Richard Rush, under John Quincy Adams; Duane and Tawney, under Jackson; Ewing, under Harrison; Walker, under Polk; Corwin, under Taylor; Guthrie, under Pierce; Chase, under Lincoln; Boutwell, under Grant; Sherman, under Hayes; Windom, under Garfield; and Carlisle, under Cleveland. Lincoln recognized the practical banker when he appointed the famous Hugh MacCulloch, the banker of Fort Wayne, who was reappointed by Mr. Arthur.

Mr. GLASS. The gentleman will concede that most of the Secretaries of the Treasury since Lincoln's time have been bankers.

Mr. FESS. Only three—Daniel Manning, under President Cleveland, first term; Lyman J. Gage, under McKinley; and Mr. MacVeagh, under the recent administration.

Mr. HAUGEN. Gov. Shaw was a banker.

Mr. FESS. Gov. Shaw was a lawyer.

Mr. LOBECK. He is a banker.

Mr. GLASS. He is a banker to-day.

Mr. FESS. He is a banker now. If that is what you mean, that they become bankers after leaving office, I do not deny it. Some of them have, but not many.

Mr. HAUGEN. Mr. Shaw was a banker before he became governor.

Mr. FESS. Mr. Chairman, I do not wish to be considered as an enemy of this bill. In the main it is good, in my judgment, but there are some serious defects as I see it. I very much deplore the fact that when amendments have been offered there seems to be a party division. Here is the most conclusive arraignment of legislation by caucus. It closes the door to all changes, no matter how meritorious. I have no desire, however, to oppose the bill for that reason alone. I opposed the Aldrich plan because it was dangerous in its centralization. It seems to me the plan that is proposed by the present committee has also a danger, an error, a weakness, that can be corrected here. Instead of making this a partisan board, totally political, entire control by the party in power, to the entire ignoring of the rights of property, we should make it a board free of partisan control, just the opposite of what this bill provides. Surely in the light of recent utterances this is important. I would like to read an utterance from a great, big-hearted man, who upon this floor recently spoke his convictions on the probability of a board acting in a nonpartisan character. Here are the words of Speaker CLARK on April 29 of this year relative to a nonpartisan tariff board:

There is no such thing as a nonpartisan board. It is an impossibility in nature. It is a thing incredible that any man who is fit to sit on a tariff board has no political opinions which lead him into some sort of affiliation with some political party in this country. As far as I am individually concerned, if I were making up a tariff board, or a board of tariff experts, you could rely upon the fact that it would have a working Democratic majority.

In the light of this official utterance, what should we expect when we provide a board of seven men, all chosen by the same political head, not to gather facts upon which to build a tariff measure, but to handle the banking resources of the country, making two-fifths of all the resources in the world; what are we to expect in the way of partisan manipulation by this small group with such a weapon in hand?

The amendment proposed would at least greatly reduce this element of danger.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. GLASS. Mr. Chairman, I will yield 10 minutes to the gentleman from Texas [Mr. DIES].

Mr. DIES. Mr. Chairman, if I could crave the indulgence of the caucus for a moment—

The CHAIRMAN. The Chair suggests to the gentleman from Virginia that as there was no agreement as to who should control the time for debate the Chair doubts very much whether the gentleman from Virginia can yield time to the gentleman from Texas.

Mr. GLASS. That had escaped my attention, Mr. Chairman, and I withdraw it.

Mr. COX. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COX. Is it proper for the chairman of the Committee on Banking and Currency to give recognition to any gentleman and yield him 10 minutes?

The CHAIRMAN. The Chair has just called the attention of the gentleman from Virginia to that fact, that there was nothing in the agreement to divide the time, and the gentleman from Virginia has withdrawn it, and the Chair will recognize the gentleman from Texas for five minutes.

Mr. BORLAND. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. BORLAND. Without any such agreement, would not the time be divided between the chairman of the Committee on Banking and Currency and the ranking Republican member of that committee?

The CHAIRMAN. No; it is in the discretion of the Chair.

Mr. MANN. Mr. Chairman, it was stated during the discussion that the Chair would control the time.

Mr. DYER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. DYER. I would like to know if the gentlemen who have amendments to offer will not have an opportunity to offer them?

Mr. MANN. Mr. Chairman, I ask unanimous consent, if the gentleman from Texas will allow me, that gentlemen who desire to offer amendments be permitted to offer them now, to be voted on in the order they are offered after debate is closed.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that all gentlemen who wish to offer amendments may offer them now, and that they may be considered in the

order that they are offered after debate is closed. Is there objection? [After a pause.] The Chair hears none.

Mr. DYER. Mr. Chairman, I have several amendments I desire to offer, and they are all short.

The CHAIRMAN. The gentleman will send them up.

Mr. DYER. I ask to have them reported.

The CHAIRMAN. They will be reported when called up in regular order after debate is over.

Mr. FOWLER. I have a small amendment, Mr. Chairman. On page 19, I desire to insert the word—

The CHAIRMAN. The gentleman can offer that when the time comes. The gentleman from Texas is recognized for five minutes.

Mr. DIES. Mr. Chairman, I ask unanimous consent to be allowed to proceed for 10 minutes.

Mr. COX. I dislike to object.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that he may be permitted to proceed for 10 minutes. Is there objection?

Mr. MANN. That is hardly fair, Mr. Chairman.

Mr. BUTLER. Will that debate come out of the 50 minutes?

The CHAIRMAN. It comes out of the 50 minutes.

Mr. GRAY. Mr. Chairman, I reserve the right to object.

The CHAIRMAN. The gentleman from Texas is recognized for five minutes, if he desires it.

[Mr. DIES addressed the committee. See Appendix.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. DIES. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

Mr. MANN. Mr. Chairman, reserving the right to object, let me suggest to the gentleman from Texas that there are amendments enough offered by gentlemen who desire to discuss their own amendments to probably take up every minute of the time, and under the circumstances does the gentleman think he ought to take up time in elementary propositions?

Mr. DIES. Mr. Chairman, I take that to mean an objection on the part of the gentleman from Illinois.

Mr. MANN. Oh, I put it in that way squarely to the gentleman from Texas.

Mr. DIES. Mr. Chairman, I congratulate myself that I have not taken one-millionth of the time of the Congress that the gentleman from Illinois has.

Mr. MANN. The gentleman has taken as much time in this debate and more than I.

Mr. DIES. This is the first moment that I have spoken.

Mr. MANN. And I have not spoken for five minutes in debate.

Mr. DIES. The body is to be congratulated.

Mr. MANN. Perhaps that is so. The gentleman is as complimentary as usual, and, thank God, he does not compliment me.

The CHAIRMAN. This debate is out of order. The gentleman from Texas asks unanimous consent that he may be permitted to proceed for five minutes. Is there objection?

Mr. MANAHAN. Mr. Chairman, reserving the right to object—

Mr. MANN. I object.

The CHAIRMAN. The gentleman from Illinois objects, and the gentleman from Missouri [Mr. DYER] is recognized.

Mr. DYER. Mr. Chairman, section 11 of this bill, providing for a Federal reserve board, is to my mind most objectionable as it is written. I have sent to the Clerk's desk several proposed amendments to this section, as follows:

Page 18, line 11, after the word "of," strike out "seven" and insert "eleven."

Page 18, line 15, after the word "Senate," strike out the period, insert a comma, and add the following, to wit, "and four appointed by the President of the United States from a list composed of one from each district, chosen by the respective electors thereof; of the four appointed by the President from the list submitted by the electors one shall serve for two, one for four, one for six, and one for eight years, and thereafter each member so appointed shall serve for a term of eight years. Whenever a vacancy shall occur among the four members appointed by the President from the list submitted by the electors of the Federal reserve banks a successor shall be appointed by the President from a new list of names prepared for that purpose to fill such vacancy, and when chosen shall hold office for the unexpired term of the member whose place he is expected to fill."

Page 19, line 4, after the word "the," insert "four"; same line, strike out "appointed" and insert "chosen"; also, on line 6, after the word "one," add the words "of whom."

Page 19, line 11, after the word "cause," strike out "by the President" and insert "by a vote of the majority of the board, with the approval of the President."

Page 19, line 15, after the word "the," strike out "Secretary of the Treasury and board" and insert, after the word "officer," in line 16, the word "thereof."

If this section of the bill could be modified as indicated by these amendments, much of the objection to the bill itself would be removed. Capital for these Federal reserve banks must be furnished by the banks. This money comes from the stockholders and depositors, and it only seems fair that they should have representation on the Federal reserve board by having four members thereof. It certainly would not affect the efficiency of the Federal board to increase the membership in this regard, and it would create better feeling than now exists. Taxation without representation is never very acceptable to the average American. It is believed by many that there is too much power placed in the hands of the President, as regards the Federal reserve board, and that there should be some limitation placed upon it, as indicated by the above amendments.

Mr. Chairman, I represent a city district, and one in which there are many banks. On the 26th of July last all of the banks in my city and district agreed upon recommendations to the Committees on Banking and Currency of the House and of the Senate as regards certain changes that they thought should be made in this bill. In my remarks of September 10 I referred to these recommendations in detail. The amendments which I have offered are in line with some of their suggestions. In my judgment they are most important, and ones to which there ought to be no objection. If I am fortunate in securing their adoption, I will present other amendments, carrying out their advice to the Banking and Currency Committee. If these amendments do not meet with your approval, I shall not offer any others, because I will be satisfied of the futility of it.

Mr. Chairman, what we need in our financial and banking system is stability. I do not believe that the absolute right of dismissal of a manager of a Federal reserve board by the President should be permitted. I think it should be the action of the board, with the approval of the President. In other words, I do not think it is proper that the President of the United States should control and direct the banking system of our country. I think the power of supervision of it by the President is ample for all needs and purposes.

Unless some satisfactory modification of this bill is had, either in the House or in the Senate, I doubt if a sufficient number of banks can be found to cooperate with the Government to make this proposed law a success.

Mr. Chairman, one of the amendments that I have offered has simply to do with making a certain portion of this section clearer and does not change the effect of it in any respect. I would like to have the attention of the chairman of the committee to this amendment. I believe he will accept it.

It is on page 19 of the bill, beginning on line 4, after the word "thus," to strike out the word "appointed" and insert the word "chosen," and after the word "President," in line 5, to insert the words "by and with the advice of the Senate"—

Mr. WINGO. Mr. Chairman, will the gentleman pardon me?

Mr. DYER. Certainly.

Mr. WINGO. The bill already provides that these appointments shall be "by and with the advice and consent of the Senate."

Mr. DYER. Yes; but it does not provide so where I have indicated, and I think it would come in very properly there.

Mr. WINGO. What is the use of repeating it when it is already provided for where the appointments are provided for?

Mr. DYER. It does not provide for it here, and there might be some question about it.

Mr. COX. Mr. Chairman, I want in a few moments to briefly discuss this section of the bill. As the gentleman from Minnesota well stated, in my judgment this is by far the most important section of the entire bill. All through the measure I have been only able to see the structure of the bill, as it were, because I am not a banker versed in any of its details, but somewhat of a lawyer, but I believe I can see in this bill a great superstructure, and I do not believe that anyone would contend for a moment, even the splendid committee which reported the bill, that it is a perfect bill in all of its details. But I sincerely believe that the structure is here on which Congress can from time to time build with details until we will get as near a perfect banking system in this country as it is possible for us to get. If I remember correctly, the agitation for the Interstate Commerce Commission was begun in 1873. It was finally crystallized into a bill which Congress enacted in 1887, but it was far from being perfect, far from it, and I doubt very much whether it is perfect to-day, and yet Congress on two or three different occasions has undertaken to revise the law which regulates 250,000 miles of steam railroad in the country. But the first thing that Congress did was to undertake to get a structure on which it could build. So, in my judgment, if everything else is thrown out of this bill except this particular

section, it will be enough to commend itself to every Member of this House if he can get far enough away from his political prejudices to vote for it. I regret, Mr. Chairman, very sincerely, to find incorporated in this bill language providing that not more than four of the appointees made by the President shall be of the same political faith as the President. I would have preferred to have seen a bill brought in here without one word of politics being mentioned in it, because I am one of the men who are not afraid to trust the President of the United States. We have trusted him for 135 years; we have trusted him to make, as it were, a great coordinate branch of the Government in the appointment of the Supreme Court, in the appointment of the judges of the inferior courts, and they have never made very many mistakes in those appointments.

So I would rather have seen the questions that even point in the direction of politics eliminated from this bill. I doubt very much whether the amendment offered by the gentleman from Illinois [Mr. MADDEN] would add very material strength to it if adopted, because I can not believe, and I never will believe until I have an ocular demonstration, that any man elected to the exalted position of President of the United States would ever for one moment bow the knee to the moneyed interests of this country. I am not in favor of being too radical, but on the contrary I am rather disposed to be conservative; but after all we are presented with one of two things, either that the people of this country, through our President, are going to retain the control of the banks of the country or the banks themselves are going to control the country. Which will you have? Are you going to have a man elected by the popular vote of this country control it by and through his appointive power, and who is supposed to represent the will of the people, or are you going to have more or less a selfish interest to control it? And when I speak of a selfish interest I do not desire to criticize the banks in the least, because they are all human and so are we. The banker is interested in making dividends on the stock of his bank. The President, as the agent of all the people, is and will be interested in seeing that all the people of the United States who have to do with banks or not get a square deal. I would rather trust my President for equal justice than the banks.

Mr. POWERS, Mr. HELGESEN, Mr. MANAHAN, and Mr. GRAY rose.

The CHAIRMAN. The gentleman from North Dakota [Mr. HELGESEN] is recognized.

Mr. HELGESEN. Mr. Chairman, I have been in hopes that I would have an opportunity of voting for a currency measure that would give us a better currency law than the one we now have. The present bill proposes a plan that might be very acceptable to the people if it were somewhat amended. In my opinion there are some weaknesses and objections in the bill. Most of these I would be willing to accept, believing that Congress would correct them as rapidly as possible as they found the mistakes or errors in the law, but there is one feature in it that it seems to me is of such importance that I do not see how I can vote for the bill unless at the other end of the Capitol or here it shall be amended. I refer to the political character of the Federal reserve board. This bill makes it a political football. It throws into the political arena a political prize that has never been equaled in the history of the country. Now, what does this bill do? It appears that the terms of the two members of the Cabinet and the Comptroller of the Currency and one of the other four members that are to be appointed by the President shall expire with the expiration of the presidential term. That means that the incoming administration will immediately have an opportunity to appoint a majority of the board. Now, you can readily see, my friends, if that is the case it would be a great political prize. You have said a great deal about the moneyed interests of the country being in politics, and the Money Trust, so called, being in politics, and that they have even opposed your party at times. If you really believe that, why do you offer this political prize that will entice these people to get into politics as they have never been in politics before?

I have sent to the desk an amendment which will be read later, which provides that the Secretary of the Treasury shall be the only member of this board from the President's Cabinet. Six men are to be appointed by the President outside of the Cabinet for terms of 2, 4, 6, 8, 10, and 12 years, respectively; after which they are to serve for 12 years. Now, if you will study it a minute you will find that it will be utterly impossible for any incoming President to appoint a majority of the board during its first term of office. In order to appoint a majority of that board he would have to be reelected, and if you do that

you are taking it as nearly out of politics as it is possible to get it. Of course, this is barring deaths.

Now, it seems to me, if you want a board that is to be absolutely in the control of the Government, as it represents the people and the people's interests, you can well afford to take that portion of the bill back into your committee or into your caucus, if necessary, and see to it that that political feature is removed from the bill. I have not in that amendment changed one iota of the rest of your plan with the exception of taking the political feature out of the appointment. And it seems to me that if you are sincere in this matter, you do not want to even have the possibility of the bankers or the great moneyed interests that you speak about controlling this board. You can well afford to take it back and revise it before you force it through the House, which I know you have the ability to do.

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized.

Mr. GRAY. The Federal reserve board is charged with the issue of money, the control of its volume, and its distribution among the people. This is not only a constitutional function and a power vested exclusively in the Government, but it is the most vital function that is or can be exercised by government. Money is a vital public agency.

The control of money under our state of civilization and under our social and industrial conditions is as vital to the welfare of the people as the safeguards of human rights or the guaranty of the liberty of men. Money is used by all the people as a medium to effect the exchange of all commodities and services, and to enable the people to convert every product and every service promptly and conveniently into any other product or service without loss, to meet the varied demands and requirements of our social and industrial conditions.

Money affects the business of all the people in every pursuit, avocation, and trade. Its use is continuous, permanent, and common to all men alike in their everyday affairs of life, whether as individuals, acting through corporations, or as all the people acting collectively through the General Government itself. Its necessity is as universal to our social and industrial welfare as light and air is to life. It is the life fluid of industry coursing through the veins and arteries of commerce and trade. It is to the body of industry what the blood is to the physical body.

Money is the most vital of all public agencies, and as such vital public agency it should be held in the full and complete control of the public, all the people—its issue, volume, and its distribution, to insure its availability to all the people equally and impartially for their use. Such a public function should never rest in the control of private or selfish interests, to be made the subject of monopoly and concentration into the hands of a few. The provisions of the Glass bill place such control where it properly belongs—in the Government—to be administered by the sworn and chosen representatives of the people.

The unrestricted power to issue money carries with it the power to control the volume of currency, and thereby the power to fix prices of all products, commodities, services, and property, and of all values as measured in money. To surrender this power to private control would be to surrender the most potent and vital authority of the Government—the control of money and the virtual control of the welfare of the people.

Give me the absolute power to control the volume of money and I will control the destinies of this Nation more fully and completely than the exercise of arbitrary power by a czar. Give me the power to expand the volume of money when contracts are executed and the power to reduce the volume of money when such contracts are to be liquidated, and I will impoverish the debtor class and concentrate all wealth in the creditor class at will. I will make millionaires of one class and mendicants of another.

While defending a central bank under private control and making the claim that centralized power in the banks was indispensable to the issue of sound and stable currency, to the control of its volume and the uniform distribution of the same, they now oppose centralization of power in the Government to be exercised by the sworn and chosen representatives of the people and assuming great alarm warn the country against the awful ruin and devastation to follow public control as being political.

This House is under political control, the Senate is under political control, the Executive is under political control, the judiciary—the high priests in the temple of justice—is under political control from appointment, the Interstate Commerce Commission guarding the people against extortion and the misuse of public utility power is under political control, the schools of the country for the education of the young—the hope of posterity—are under political control, all the sacred civil

institutions to guard and guarantee the rights of self-government and the liberties of the people are under political control, all the public institutions of benevolence, all the charities that soothe and heal and bless are administered under political control.

Political control means the rule of the people, and it has terrors only for those who are afraid of and recoil from the rule of the people.

Human rights are in jeopardy only when selfish power triumphs over political control, when the selfish invisible government supplants political or public government.

The complaint of to-day is not against political government, but is for the want of political government; it is that the political government is not allowed to operate; it is the usurpation of political powers by private, selfish interests.

The history of the world shows that men have never appealed to a bank for the preservation of human liberty, that men have never been heard to petition a bank to establish the equality of human rights, that men have never looked to a bank to sustain the principle of human equality before the law.

The rights of persons are more sacred than the rights of property. While you are willing to trust the rights of persons to political control, you tell us you can not trust the rights of property to political control. You either fail to appreciate the rights of persons or you are holding the rights of property above human rights and personal welfare.

A few days ago I listened to a very able gentleman make an argument on the floor of this House protesting against the creation of the Federal reserve board on the ground that the law vested that body with 69 powers. How many powers are vested in the President of the United States? The gentleman referred to had brought upon the floor of the House a wooden monument bearing an enumeration of these powers to be vested in the Federal reserve board. I could set that wooden monument down beside the great Washington Monument, and I could spread over the face of the Washington Monument upon all its sides from the ground to the top an enumeration of the powers vested by the Constitution in the executive department of the Government to be exercised by the President, and there would not be room enough to enumerate them all. And yet the opponents of this bill take the position that the comparatively few powers enumerated on the wooden monument brought in upon this floor make the Federal reserve board a dangerous political body. If the exercise of great power is dangerous in one department, still greater power is even more dangerous in another department. In order to be consistent they must either take steps to abolish the power of the President or they must cease their opposition to the Federal reserve board on the ground that it is creating a dangerous political power.

Of all private selfish power, the exercise of power by financial interests has always been regarded as the most dangerous, and far more dangerous than political power.

Our forefathers recognizing this danger, in the early days of the Government, a resolution was introduced in the United States Senate to prohibit a member of a banking organization from being a Member of either House of Congress while holding office or stock in any bank corporation.

I quote the following from the annals of Congress (CONGRESSIONAL RECORD, vol. 4, page 31), the same being a part of the proceedings of the Senate of Tuesday, January 14, 1794, showing the following provision of a resolution which was considered before the Senate:

Nor shall any person holding any office or stock in any institution in the nature of a bank for issuing or discounting bills or notes payable to the bearer or order, under the authority of the United States, be a Member of either House whilst he holds such office or stock.

Two days later the resolution passed the Senate, after being fought by the bankers, and was finally amended so that it prohibited only stockholders of the United States Bank to sit in Congress; but it served as a protest against control of legislation by bankers and to show the dangerous character of their influence as regarded by the people at that time.

The first national bank, founded by Alexander Hamilton in 1789, was destroyed by Thomas Jefferson in 1814 because its power had become a menace to the public welfare and the liberties of the people. The second national bank, chartered in 1817 and championed by Nicholas Biddle, was dethroned by Andrew Jackson in 1836 because it had become a rival power with the Government to dictate the policies of the Nation.

And it has been reserved for Bryan and Wilson to sustain Jefferson and Jackson and to defeat the conspiracy of 1906 to again enthrone financial power supreme over the rights and liberties of the people. [Applause on the Democratic side.]

Mr. POWERS. Mr. Chairman, I have offered an amendment, which will be reported in due time, and if it should be enacted

into law it would place the appointing of the entire seven members of this Federal reserve board in the hands of the President, and there would be no ex officio members of this board.

Not only that, but my amendment provides that not more than three members of this Federal reserve board shall be members of any one political party. In other words, it would give the Democrats three members, the Republicans three members, and the Progressive, or Bull Moose, Party one member of this board; that is, as long as the Bull Moose Party lives. [Laughter.] After it is dead, which will not be long hence, that one member could be transferred to the Prohibition Party or some other political organization. [Applause.]

The argument has been made on the floor of this House that there is no danger of this board becoming a political machine; that it will be appointed mostly—a part of it—by the President of this great country; that the limelight of publicity will be upon the actions of this Federal reserve board, and for that reason its members can not afford to let politics enter at all into the transactions or doings of this particular Federal reserve board.

Why, politics has entered into the transactions of every President who has been in the White House. There never has been one there yet that has not attempted to serve his party, and there never will be one that will not attempt to serve the political party that put him in power. There is no politics in the official duties rendered by the postmasters anywhere over this great country, and yet for years the incoming administrations have turned out of office all the postmasters all over the country differing from them politically and have put men in office of their own political persuasion.

It is true, of course, that a good deal of that pernicious habit has been remedied by the Civil Service Commission and the laws that govern it; but at every opportunity which President Taft and President Roosevelt had, they put into office postmasters of their own persuasion, and the present President exercises every opportunity that he has to put his friends in office as postmasters. There is no politics in the performance of duty by the postmasters in this country. Now, if politics enters into the appointing of postmasters all over this land, when postmasters have no political duties to perform, what do you suppose will enter into the appointment of this board and into the actions of this board—a board that has control of the national banks all over this great country? You say there will be no politics in it. You put up the plea that it is going to be nonpartisan and nonpolitical; and yet, making that plea, you put on this board the Secretary of Agriculture, in accord with the administration of course, the Comptroller of the Currency, in accord with the administration of course, and the Secretary of the Treasury, in accord with the administration of course, and it will be in accord with the administration if the Republicans come into power. Then you provide that the four remaining members to be appointed by the President shall not belong to the same political organization. What is the use of that? What is the use of having that provision in the law, after you provide that the three members shall virtually be of the same political party? What is the use of dividing the four remaining members? Of what service can they be? Will that render it nonpolitical? Why, gentlemen, these two members who are Republicans, or whoever they may be—of a different political persuasion from the other two—will have nothing more to do in shaping the action of this Federal reserve board than the Republican members on the tariff conference committee are now having to do with the shaping of that measure. [Applause.]

Mr. GREEN of Iowa was recognized.

Mr. GLASS. Mr. Chairman, what is the status in regard to time?

The CHAIRMAN. There are eight minutes remaining. The Chair could not know how each gentleman stood on the amendment, and therefore did not know whom to recognize; but the Chair did recognize each gentleman as he rose in his place to get recognition, especially those who had offered amendments.

Mr. GREEN of Iowa. Mr. Chairman, I will only occupy the attention of the committee for a moment. I regret to disagree with my friend from Minnesota [Mr. MANAHAN], who I know is a lawyer and a very good one, but he certainly forgot his law for a few moments when he compares the powers of the Interstate Commerce Commission with the powers of this Federal reserve board. The Interstate Commerce Commission has powers which are very broad in some directions and exceedingly limited in others. It can not make a final order of any kind except after a hearing at which the common carrier affected has an opportunity to present its case, and even after the order is made there is a provision for further hearing by a proceed-

ing in the nature of an appeal, although it is not called an appeal, to the Commerce Court or the Supreme Court.

Mr. KELLEY of Michigan. But only on questions of law.

Mr. GREEN of Iowa. That is true, but the findings on questions of fact can only be made after hearing and determination. This Federal reserve board is not to have any hearings; their decisions are ex parte and are to be final.

Mr. KINDEL. Mr. Chairman, I rise for the purpose of saying that the Interstate Commerce Commission does make rulings without hearings. I know that to be true, that they have made many rulings without any hearings at all.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. KINDEL. Certainly.

Mr. GREEN of Iowa. I said "final order"; they may make temporary orders which will only last for a certain number of days, but that is all.

Mr. KINDEL. They can give consent to any proposition the Postmaster General will make in the parcel-post regulations. The law says that the order must be proposed by the Postmaster General and consented to by the Interstate Commerce Commission, which they did in the crazy-quilt order which we are now operating under.

Mr. MONDELL. Mr. Chairman, the gentleman from Texas [Mr. DIES], who spoke a few moments ago, is always entertaining and generally accurate, but he is very inaccurate when he suggests that the only objection we on this side have to this bill lies in the fact that it originated in a caucus or that it finally received the seal of the caucus. On the contrary, there are some of us who object to it because it is, in our humble opinion, fundamentally wrong, because it contains provisions that are wrong in principle.

Mr. DIES. Will the gentleman yield?

Mr. MONDELL. With pleasure.

Mr. DIES. I would like to ask if the gentleman has been converted recently to the so-called open caucus, or is he still in favor of the old Republican and Democratic idea of a conclave behind closed doors?

Mr. MONDELL. Well, Mr. Chairman, I did not rise to discuss the matter of caucus, but I will say to the gentleman from Texas that he has been bound by caucus more times in this one short session of Congress than I have been in the whole 18 years that I have been here. [Applause on the Republican side.] I do not recall in my whole experience in this House but two occasions in which I have been in a binding caucus.

Mr. Chairman, there are many of us on this side that oppose this bill because in our opinion it is fundamentally wrong, and one provision in the bill that is fundamentally wrong is the provision before us. I shall support the amendment of the gentleman from Illinois, although it is not just the sort of an amendment I would have drawn. The fact in regard to the situation in my opinion is this: In the first place, the Federal reserve board has too much power in any event, and I should be compelled to vote against the bill, no matter how the provision was amended, if other provisions granting power to the Federal reserve board were not also amended.

If the bill was to be amended so as to somewhat curtail the powers of the reserve board, so the powers would not be dangerous if they were lodged in the proper nonpartisan hands, then I think the amendment offered by the gentleman from Illinois would be proper.

On the other hand, if the bill were radically amended so as to largely curtail the power of the reserve board, give the reserve banks more independence, and make some of the powers now lodged in the reserve board a matter of statute, then it would be entirely proper to have a board constituted somewhat as provided in this bill, excluding the Secretary of Agriculture, because he has not the time to give to these duties, and the Comptroller of the Currency, because he has quite enough to do without these duties, and some of his other duties are not consistent with his duties as a member of the reserve board. If all this board had to do was to regulate the banks, was to exercise that proper supervision which the Government ought to hold over the banking institutions and the credit issues of the country, then it would be entirely proper to have that sort of board provided for in this bill, except that in no case should the Secretary of Agriculture, who is an overburdened official, be on the board. But if the board is to have powers that amount to large control and even management, then the general interests of the country, the business interests of the country, the nonpartisan and nonpolitical interests, should be represented on the board for the protection of the people.

The CHAIRMAN. The time of the gentleman from Wyoming has expired. All time has expired. The question is on the

amendment offered by the gentleman from Illinois, which has already been reported.

The question was taken; and on a division (demanded by Mr. MADDEN) there were—ayes 28, noes 63.

So the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. HELGESEN, as follows:

Amend, by striking out on page 18, lines 10 to 26, inclusive, and on page 19, lines 1 to 17, inclusive, and insert in lieu thereof the following:

"Sec. 11. That there shall be created a Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, who shall be ex officio a member, and six members chosen by the President of the United States, by and with the advice and consent of the Senate. In selecting the six appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of different geographical divisions of the country. The six members of the Federal reserve board chosen by the President and confirmed as aforesaid shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of \$10,000, together with an allowance for actual necessary traveling expenses. Of the members thus appointed by the President not more than three shall be of the same political party, and at least one shall be a person experienced in banking and one an agriculturalist. One shall be designated by the President to serve for 2, one for 4, one for 6, one for 8, one for 10, and one for 12 years, respectively, and thereafter each member so appointed shall serve for a term of 12 years unless sooner removed for cause by the President. Of the six persons thus appointed, one shall be designated by the President as manager and one as vice manager of the Federal reserve board. The manager of the Federal reserve board, subject to the supervision of the Secretary of the Treasury and Federal reserve board, shall be the active executive officer of the Federal reserve board."

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Dakota.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 43, noes 66.

So the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. POWERS, as follows:

Page 18, line 11, after the word "members," strike out "including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, who shall be members ex officio, and four members," and insert in line 16 the word "seven" for the word "four"; and on page 19, line 5, strike out the word "two" and substitute the word "three" therefor.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Kentucky.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. DYER, as follows:

Page 18, line 11, after the word "of," strike out "seven" and insert "eleven."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. DYER, as follows:

Page 18, line 15, after the word "Senate," strike out the period, insert a comma, and add the following, to wit, "and four appointed by the President of the United States from a list composed of one from each district, chosen by the respective electors thereof; of the four appointed by the President from the list submitted by the electors one shall serve for two, one for four, one for six, and one for eight years, and thereafter each member so appointed shall serve for a term of eight years. Whenever a vacancy shall occur among the four members appointed by the President from the list submitted by the electors of the Federal reserve banks a successor shall be appointed by the President from a new list of names prepared for that purpose to fill such vacancy, and when chosen shall hold office for the unexpired term of the member whose place he is expected to fill."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. DYER, as follows:

Page 19, line 4, after the word "the," insert "four"; same line, strike out "appointed" and insert "chosen"; also, on line 6, after the word "one," add the words "of whom."

Mr. GLASS. Mr. Chairman, I will say that the committee has no objection to that amendment.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri.

The question was taken; and on a division (demanded by Mr. STAFFORD) there were—ayes 53, noes 27.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read an amendment by Mr. DYER, as follows:

Page 19, line 11, after the word "cause," strike out "by the President" and insert "by a vote of the majority of the board, with the approval of the President."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the next amendment. The Clerk read an amendment by Mr. DYER, as follows:

Page 19, line 15, after the word "the," strike out "Secretary of the Treasury and board" and insert, after the word "officer," in line 16, the word "thereof."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri.

The question was taken, and the amendment was rejected.

The Clerk read an amendment by Mr. FOWLER, as follows:

Amend, page 19, line 19, after the word "to" at the end of the line, by inserting the word "their," so that the sentence will read: "The Federal reserve board shall have power to levy semiannually upon the Federal reserve banks, in proportion to their capital stock, an assessment sufficient to pay its estimated expenses," etc.

The CHAIRMAN. The question is on the amendment.

Mr. FOWLER. Mr. Chairman, I think the chairman of the committee has no objection to the amendment.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Sec. 12. That the Federal reserve board hereinbefore established shall be authorized and empowered:

(a) To examine at its discretion the accounts, books, and affairs of each Federal reserve bank and to require such statements and reports as it may deem necessary. The said board shall publish once each week a statement showing the condition of each Federal reserve bank and a consolidated statement for all Federal reserve banks. Such statements shall show in detail the assets and liabilities of the several institutions, single and combined, and shall furnish full information regarding the character of the lawful money held as reserve and the amount, nature, and maturities of the paper owned by Federal reserve banks.

(b) To permit or require, in time of emergency, Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks, at least five members of the board being present when such action is taken and all present consenting to the requirement. The exercise of this compulsory rediscount power by the Federal reserve board shall be subject to an interest charge to the accommodated bank of not less than 1 nor greater than 3 per cent above the higher of the rates prevailing in the districts immediately affected.

(c) To suspend for a period not exceeding 30 days (and to renew such suspension for periods not to exceed 15 days) any and every reserve requirement specified in this act: *Provided*, That it shall establish a graduated tax upon the amounts by which the reserve requirements of this act may be permitted to fall below the level hereinafter specified, such tax to be uniform in its application to all banks; but said board shall not suspend the reserve requirements with reference to Federal reserve notes.

(d) To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.

(e) To add to the number of cities classified as reserve and central reserve cities under existing law in which national banking associations are subject to the reserve requirements set forth in section 20 of this act; or to reclassify existing reserve and central reserve cities and to designate the banks therein situated as country banks at its discretion.

(f) To suspend the officials of Federal reserve banks and, for cause stated in writing with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

(g) To require the writing off of doubtful or worthless assets upon the books and balance sheets of Federal reserve banks.

(h) To suspend, for cause relating to violation of any of the provisions of this act, the operations of any Federal reserve bank and appoint a receiver therefor.

(i) To perform the duties, functions, or services specified or implied in this act.

The committee amendments were read, as follows:

Page 21, lines 18 to 19, strike out the words "the several institutions" and insert in lieu thereof the words "such Federal reserve banks." Page 22, lines 1 and 2, strike out the word "board" and insert the words "Federal reserve board."

The question was taken, and the amendments were agreed to.

Mr. GLASS. Mr. Chairman, I wonder if we could not get unanimous consent to limit debate on this section and all amendments thereto? We have not made much progress on this bill to-day, and I desire to avoid a night session if possible.

Mr. MANN. How many amendments are to be offered on this side? Well, will the gentleman make his request to close debate on this section?

Mr. STAFFORD. I wish to submit a question which is pertinent to the paragraph—

Mr. GLASS. I will be glad to answer.

Mr. STAFFORD. And that is as to the power vested in the Federal reserve board as carried under the subdivision B. The bill provides that the power of rediscount shall be at a rate not less than 1 or more than 3 per cent above the higher rate prevailing in the district. I wish to direct this inquiry to the chairman to ascertain from him who is to determine the special rate to be charged by the rediscount banks; whether the Federal reserve board or the rediscounting bank is to be given the power of fixing a rate between 1 and 3 per cent above the higher of the prevailing rate?

Mr. GLASS. The Federal reserve board is to determine whether it is to be 1 per cent above the higher prevailing rate or whether it shall be 2 per cent or 3 per cent.

Mr. STAFFORD. In reading its phraseology, which you notice is rather vague in that particular, it says:

The exercise of this compulsory rediscount power by the Federal reserve board shall be subject to an interest charge to the accommodated bank of not less than 1 nor greater than 2 per cent above the higher of the rates prevailing in the districts immediately affected.

That is rather vague. Would the gentleman have any objection, if it is his purpose to have the Federal reserve board fix the rediscount rate in each individual case, to accepting an amendment after the word "charge," in line 5, as follows: "to be fixed by said board," which would remove the ambiguity and make certain that the Federal reserve board is in each individual case to determine the rediscount rate or when this paper is to be rediscounted by the Federal reserve bank?

Mr. GLASS. I do not agree that it is vague. I think it is perfectly plain that the Federal reserve board alone can make the charge.

Mr. MANN. Can not they rediscount paper without asking the Federal reserve board if everybody is agreeable?

Mr. GLASS. No.

The CHAIRMAN. Does the gentleman from Virginia make a request?

Mr. GLASS. There seems to be no desire to offer amendments on either side—

Mr. MANN. Several gentlemen wish to discuss the question. Make it 30 minutes.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on this section and all amendments thereto be closed in 30 minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on the pending section and all amendments thereto be closed in 30 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. MURDOCK. Mr. Chairman, I would like to ask the gentleman from Virginia a question before debate begins. I call his attention to subdivision B. I desire to ask the gentleman what is meant by the word "tenor"? The paragraph reads:

To supervise and regulate the issue and retirement of Federal reserve notes and to prescribe the form and tenor of such notes.

What is the real meaning of that word "tenor"?

Mr. GLASS. It is simply a customary statutory expression.

Mr. MURDOCK. Does it mean that the board shall have the power to fix the inscription on the face of the notes and say what the notes shall carry in the way of words and figures?

Mr. GLASS. No. As a matter of fact, the note provisions of the bill, section 17, on page 29, make explicit provision for that.

Mr. MURDOCK. I would like to know what the word "tenor" means.

Mr. MADDEN. It means character.

Mr. GLASS. Frankly, I do not know what it means, except the usual statutory requirement.

Mr. DIES. "Tenor" means tone.

Mr. MURDOCK. I want to say this to the gentleman from Virginia [Mr. GLASS]: That when the Aldrich-Vreeland currency bill went through the House it passed, as the gentleman knows, with great expedition. I think it was to the surprise of most of the Members of Congress that afterwards, when the new currency came out, it had at the top, in the scroll, these words: "Secured by United States bonds and other securities." The unexpected addition were the words "other securities."

I want to know if this power in the subsection gives the right to the reserve board to fix the phrases to go on these notes?

Mr. WINGO. The gentleman certainly knows what the legal definition of the word "tenor" is.

Mr. MURDOCK. I do not. That is why I am asking.

Mr. WINGO. I suggest that the gentleman could easily ascertain.

Mr. MURDOCK. I suggest that the gentleman from Arkansas [Mr. Wingo] be permitted to answer the question.

The CHAIRMAN. Does the gentleman from Virginia [Mr. GLASS] yield; and if so, to whom?

Mr. GLASS. To anybody who wants to answer.

Mr. WINGO. I do not think it is necessary to advise the gentleman from Kansas what the meaning of the word "tenor" is. If he wants my personal opinion about the practical application of this provision to these notes, I think it would mean, outside of the specific directions contained on page 29, providing that they "shall be the obligations of the Government," and so forth, that it will give them the right to specify the language and the wording that is on the notes. But, of course, it must be subject to the provisions of the bill here. Of course, that is not strictly a technical definition of that word, but I think that is the way it would be applied to these notes. That is my individual opinion, of course.

[Mr. DIES addressed the committee. See Appendix.]

Mr. SWITZER. Mr. Chairman, I would like to ask a question of the chairman of the Committee on Banking and Currency. Paragraph D seems to provide for issuing, regulating, and retiring the note issues provided for later in this bill. I desire to ascertain who is to sign these obligations, or how the holder or the person who receives one is to know that the Government signature has been properly affixed?

Mr. GLASS. That is exactly what the Federal reserve board will do.

Mr. SWITZER. My question is, Who will sign these obligations in the shape of notes? Are they United States notes?

Mr. GLASS. The Federal reserve board will itself prescribe the form.

Mr. SWITZER. That is not it. Who will sign them?

Mr. GLASS. That will depend on whom the Federal reserve board commits that authority to.

Mr. SWITZER. Do I understand that some member of the Federal reserve board shall sign them?

Mr. GLASS. I do not know what the gentleman understands, but that officer of the Government to whom that power shall be committed by the regulations of the Federal reserve board under that section D will sign them, presumably the Treasurer of the United States and the Register.

Mr. SWITZER. Should not the Secretary of the Treasury or somebody designated by Congress sign an obligation—sign something purporting to be an obligation of the United States?

Mr. GLASS. We have committed that power to the Federal reserve board.

Mr. SWITZER. And it will be whoever the Federal reserve board shall designate?

Mr. GLASS. Yes.

Mr. SWITZER. Well, are these United States notes?

Mr. GLASS. Oh, the gentleman has read the bill. If he reads the new provision of the bill he will see precisely what they are. They are Federal reserve notes and they are obligations of the Government and they are to be taken care of by the banks.

Mr. SWITZER. Heretofore when provision has been made to issue United States notes there was an express provision of the law requiring the Secretary of the Treasury or the Register to sign them, and if they did not sign it authorized some other person to.

Mr. GLASS. Well, we have proceeded in a little different way. We have conferred the authority on the Federal reserve board as to what shall be the form and tenor of the notes.

Mr. SWITZER. The gentleman does not know whom the Federal reserve board will finally authorize to sign these obligations?

Mr. GLASS. No. You will find that out later.

Mr. TEMPLE. Mr. Chairman, this is another example of the indefinite but very great variety of powers conferred upon the Federal reserve board. If one could find anywhere in this bill a list of the powers conferred upon the Federal reserve board it would be in section 12. A number are mentioned here, but they are not classified, they are arranged in no order; but at the end of the miscellaneous list there is this statement, continuing the beginning of the sentence in the first part of the paragraph, "That the Federal reserve board hereinbefore established shall be authorized and empowered to perform the duties, functions, or services specified or implied in this act."

The way to enable a reader of the bill to understand what are the powers of the Federal reserve board would be to classify them. In the report of the committee there is a long list of between 40 and 50 miscellaneous powers, but they are not classified nor arranged according to any order. In order to attempt briefly such a classification we may take up first the powers of the board to deal with the organization of the banks. They elect three of the nine directors and may dismiss them. They elect the president of the Federal reserve bank and may dismiss him at pleasure without notice. They may dismiss three more of the nine directors. They may, upon written charges, with the approval of the President, dismiss the officials of the Federal reserve banks. That is, they control six of the nine directors and all of the officials of every one of the Federal reserve banks.

Mr. PHELAN. Will the gentleman yield?

Mr. TEMPLE. I will if I get through before my five minutes elapse. They control the whole organization of each one of the Federal reserve banks. In the second place they control the operation of those banks. No rate of discount can be fixed by the Federal reserve banks that is not subject to the determination and review of the Federal reserve board, which is required to review and determine the rate of discount which each Federal reserve bank must suggest and submit to the Federal reserve board at least once each week.

In addition to that they may shift the reserve from one bank to another. They may compel one bank to rediscount the notes of another, binding the 12 banks together so closely that the identity of each one of them is lost and the real bank is in Washington, controlled by the seven directors of the central bank with 12 branches, which in turn are permitted to have several branches. So much for the control of that Federal reserve board in the operation of the bank.

In the third place the Federal reserve board controls legislation, as we have just seen. The question asked by the gentleman from Ohio [Mr. SWITZER] has brought out the fact that the committee does not know who will sign the notes that are to be sent out until the Federal reserve board legislates on that point. The committee does not know under what terms State banks and banking associations and trust companies may come in until the Federal reserve board has made the by-laws controlling that matter.

The committee and the Congress can not know what rate of taxation on the Federal reserve notes, what rate of taxation on the capital stock for the support of the operations of the reserve board, may be imposed upon these Federal reserve banks until the Federal reserve board legislates on those questions. We have delegated to this board of seven men the power of Congress to make laws for the control of these banks. We are surrendering our law-making power to the seven men on the Federal reserve board, who are the seven appointees of the President, and whichever party is in power will have political control of the banks. In the fourth place, it seems to me that the greatest danger in the political character of the board is not merely the fact that the party in power will control the national banking system. We must consider the further fact that this bill may render the national banking system so unattractive that a very large number of the banks of the country will not come in, but will remain out and set up another banking system. There is real danger that this other banking system will be tempted to go into politics to prevent the rival banking system from controlling it. The big banks will go into politics under the operations of this bill, if they do what the bill tempts them to do, in a fashion that they have never done before. The bill gives the party in power control over the national-bank system, and it gives the banks outside of the system every inducement to go into politics to control that system. And those are the big investment banks, the big promotion banks that float the great loans. They will have small inducement to come under the operation of this bill, because it provides a system of commercial banking, not of investment banking. There are dangers in this bill that we could see more plainly if the committee had only classified and arranged in orderly fashion the enormous, the immeasurable powers conferred on the Federal reserve board. [Applause.]

Mr. MONDELL. Mr. Chairman, I had prepared several amendments to this section; but I shall not offer them. As a matter of fact, I am getting rather weary of offering and voting for amendments with the knowledge that there is no possibility of any of them being adopted. In fact, it is hardly worth while for one to discuss the provisions of the bill; and I for one should not do it, if I did not feel it a duty to call attention to some of the multitude of errors which the bill contains.

As I said a moment ago, the Federal reserve board under the bill has, in my opinion, too much power, no matter how it shall be constituted. There are a number of powers granted to the Federal board that ought not to be granted to any body of men anywhere. The powers of the Federal board, as the gentleman from Pennsylvania [Mr. TEMPLE] has remarked, is scattered all through the bill. Only a few are enumerated in this section. But, take them all together, they make the Federal reserve board the greatest central banking institution in the world, with 12 branches. A gentleman on the other side a moment ago said there were 12 central banks. There is only 1, and its name is the Federal reserve board, and its Poo Bah is the Secretary of the Treasury, and that Secretary and that board are granted powers that no body of men should ever be granted.

Some of the powers granted to the Federal board should be left with the Federal reserve banks, and some of the powers granted to the board should be clearly stated in legislation and not placed in the discretion of any body of men.

If the bill were so amended that the powers of the board related only to the proper regulation of the issue of the currency and of the banking business of this country, there would be no objection to having a board all appointed by the President, with such changes in the provisions in regard to appointment as have been suggested, so that no one President could appoint all the board and control it. If we are going further than that and leave anything like the powers granted by this bill in the hands of a board that can not escape the temptation to use them for partisan purposes, we make a great mistake. The only way to take the board out of politics is to give the people of the country, the people who own the deposits of the banks, the people who are stockholders of the banks, an opportunity to name at least a minority of the board—not necessarily bankers; I should not have them bankers, but men representing the business of the country—as an equalizing and steadying force upon the board.

The sections of the bill we are now considering really establish a great central bank under political control. I am one of those who believe that such a bank would in the long run be a greater menace to the country, its prosperity, and the liberties of the people than such a bank largely or wholly under private control. The mistake lies first in granting to any body of men the broad powers, the dangerous authority which this bill grants. If we remedy that feature of the bill, the question of the character of the board is not so important a one. I believe that in another body the powers of the reserve board will be largely curtailed and that provisions will be adopted to have the board representative in character and, as far as possible, nonpartisan. If that is not done, we shall have more trouble through political control or attempt to control the finances of the country than gentlemen now dream of.

The Clerk, proceeding with the reading of the bill, read as follows:

FEDERAL ADVISORY COUNCIL.

SEC. 13. There is hereby created a Federal advisory council, which shall consist of as many members as there are Federal reserve districts. Each Federal reserve bank by its board of directors shall annually select from its own Federal reserve district one member of said council, who shall receive no compensation for his services, but may be reimbursed for actual necessary expenses. The meetings of said advisory council shall be held at Washington, D. C., at least four times each year, and oftener if called by the Federal reserve board. The council may select its own officers and adopt its own methods of procedure, and a majority of its members shall constitute a quorum for the transaction of business. Vacancies in the council shall be filled by the respective reserve banks, and members selected to fill vacancies shall serve for the unexpired term.

The Federal advisory council shall have power (1) to meet and confer directly with the Federal reserve board on general business conditions; (2) to make oral or written representations concerning matters within the jurisdiction of said board; (3) to call for complete information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities by reserve banks, open-market operations by said banks, and the general affairs of the reserve banking system.

Mr. GLASS. Mr. Chairman, if there is no material amendment to be offered to this section, I shall ask to close debate.

Mr. GRAY. I request five minutes.

Mr. STAFFORD. Mr. Chairman, I have an amendment but not a material one. I would not have the temerity to offer a material amendment.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that all debate on this section and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Virginia asks that all debate on the section and amendments thereto close in five minutes. Is there objection?

Mr. GRAY. I would like to have five minutes on this section.

Mr. GLASS. Does the gentleman propose to offer an amendment, because I want to call attention of the committee to the fact that we have made little progress on the bill to-day, and we have consumed nearly the whole day.

Mr. GRAY. I do not intend to offer an amendment, but I would like to speak on the section.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia? [After a pause.] The Chair hears none.

Mr. STAFFORD. Mr. Chairman, I offer the following amendment: Insert after the word "council," line 21, page 23, the following: "To hold office during the calendar year."

Mr. Chairman, this is a minor amendment, which I think the chairman of the committee will accept, because there is no provision stating the term for which the members of the advisory council will hold office.

Mr. GLASS. Yes; it says they shall be annually elected.

Mr. STAFFORD. Yes; annually elected by the 12 or more reserve banks, and each might elect at a different period, and there would be no definiteness as to the term. In the last clause of this paragraph it is provided that "vacancies in the council shall be filled by the respective reserve banks and members selected to fill vacancies shall serve for the unexpired term."

Mr. GLASS. Mr. Chairman, I shall make no objection to that amendment.

Mr. MANN. "Shall annually select?"

Mr. McLAUGHLIN. Yes; but it may be on the 1st of July or the 1st of May.

Mr. MANN. Very well. To hold office how long?

Mr. STAFFORD. To hold office during the calendar year.

Mr. MANN. Then if they do not elect on the day mentioned they would not hold over.

Mr. STAFFORD. They shall annually hold an election according to this phraseology.

Mr. MANN. They shall be selected annually, and I take it that they would hold until their successors were selected and qualified.

Mr. STAFFORD. But that can easily be remedied by providing that they hold until their successors are selected.

Mr. GLASS. So that the gentleman is about as crude in his amendment as he intimated the paragraph was in its construction?

Mr. STAFFORD. No. I think the chairman of the committee when he accepted the amendment agreed that there should be some definiteness of terms. Merely providing for an annual election does not make any definiteness of terms.

Mr. GLASS. I think that means that each member shall serve for one year when he is selected for one year.

Mr. STAFFORD. Then what objection is there to limit the term for one calendar year?

Mr. GLASS. The gentleman from Illinois [Mr. MANN] made the objection.

Mr. STAFFORD. The objection would lie as much against the phraseology in the bill without as with the amendment.

Mr. GLASS. The gentleman from Illinois did not seem to think so.

Mr. STAFFORD. Mr. Chairman, I shall submit the amendment. It is a matter of indifference to me whether it be accepted or not.

The CHAIRMAN. Does the gentleman offer an amendment?

Mr. STAFFORD. I have.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 23, line 21, after "council," insert: "To hold office during the calendar year."

Mr. GLASS. Mr. Chairman, I move that the amendment be referred to the committee, so that we may consider it.

Mr. STAFFORD. I will be very glad to withdraw it for that purpose.

The CHAIRMAN. Without objection, the proposed amendment will be referred to the Committee on Banking and Currency.

Mr. MANN. But, Mr. Chairman, that is impossible. The gentleman has withdrawn his amendment. This Committee of the Whole has no power to refer an amendment to another committee.

The CHAIRMAN. Then, without objection, the amendment is withdrawn.

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

REDISCOUNTS.

Sec. 14. That any Federal reserve bank may receive from any of its stockholders, or, solely for exchange purposes, from other Federal reserve banks deposits of current funds in lawful money, national bank notes, Federal reserve notes, or checks and drafts upon solvent banks, payable upon presentation.

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or may be used, for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act; but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise from being eligible for such discount. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount the paper of the classes hereinbefore described having a maturity of more than 60 and not more than 120 days, when its own cash reserve exceeds 33 1/3 per cent of its total outstanding demand liabilities exclusive of its outstanding Federal reserve notes by an amount to be fixed by the Federal reserve board; but not more than 50 per cent of the total paper so discounted for any member bank shall have a maturity of more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount acceptances of such banks which are based on the exportation or importation of goods and which mature in not more than six months and bear the signature of at least one member bank in addition to that of the acceptor. The amount so discounted shall at no time exceed one-half the capital of the bank for which the rediscounts are made.

The aggregate of such notes and bills bearing the signature or indorsement of any one person, company, firm, or corporation rediscounted for any one bank shall at no time exceed 10 per cent of the unimpaired capital and surplus of said bank; but this restriction shall not apply to the discount of bills of exchange drawn in good faith against actually existing values.

Any national bank may, at its discretion, accept drafts or bills of exchange drawn upon it having not more than six months sight to run and growing out of transactions involving the importation or exportation of goods; but no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half the face value of its paid-up and unimpaired capital.

With the following committee amendments:

Page 24, line 19, strike out the words "of these stockholders" and insert the words "member banks."

Page 25, line 7, strike out the semicolon and insert a comma.

Page 25, line 9, strike out the comma and insert a semicolon.

Page 26, line 10, after the word "capital," insert the word "stock."

The CHAIRMAN. Without objection, the committee amendments will be agreed to.

There was no objection.

Mr. KORBLY. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 24, line 18, strike out all of lines 18 to 23, inclusive, and insert: "Sec. 14. That any Federal reserve bank may receive from any member bank deposits of current funds in lawful money, national bank notes, Federal reserve notes, or checks and drafts upon solvent banks, payable upon presentation; or, solely for exchange purposes, may receive from other Federal reserve banks deposits of current funds in lawful money, national bank notes, or checks and drafts upon solvent banks, payable upon presentation."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana.

Mr. STAFFORD. Mr. Chairman, will the gentleman please state the reason for that amendment?

Mr. KORBLY. Mr. Chairman, the part sought to be stricken out by the amendment was in the bill prior to certain changes that were made concerning Federal reserve notes. That change is a tax of 10 per cent for every dollar of Federal reserve notes that one Federal reserve bank may issue which may have been issued by another Federal reserve bank. In other words, the Federal reserve banks may do nothing with the notes of another Federal reserve bank but send them back for collection through the clearing house or retire the paper put up with the Federal reserve agent, and this provision, as it stands now in the bill, allows the Federal reserve banks to receive deposits from other Federal reserve banks, for exchange purposes only, of Federal reserve notes.

Mr. MANN. Will the gentleman yield?

Mr. KORBLY. Yes.

Mr. MANN. Is this to carry out further the proposition that when a Federal reserve note goes to a Federal reserve bank it is to be canceled there?

Mr. KORBLY. It is to compel a Federal reserve bank that gets a note coming from another Federal reserve bank to send it back for collection or redemption.

Mr. MANN. As I understand the bill—if I am incorrect, I would be glad to be informed—when one of the Federal reserve notes comes into one of the Federal reserve banks it is not to be paid out again.

Mr. KORBLY. If it is issued by another reserve bank, it is not to be paid out.

Mr. MANN. If it is issued by the bank itself, it is not to be paid out.

Mr. KORBLY. I do not so understand it. When it comes back to the bank that issues it, it becomes a mere nullity or loses its vitality. The tax of 10 per cent—

Mr. MANN. Well, the tax of 10 per cent will prevent it ever being done; I presume that is what it is for.

Mr. KORBLY. If the notes of Federal reserve bank B come into possession of Federal reserve bank A, Federal reserve bank A can not utter or issue those notes except upon pain of 10 per cent tax on every dollar's worth.

Mr. MANN. So it can not be paid out again?

Mr. KORBLY. It can not be paid out by bank A, but the note issued by bank B, when it gets back into the till of bank B may be paid over the counter, and there is no reason why bank B should not issue it again.

Mr. MANN. Can bank A, when it gets a note in of bank B, transmit that note to bank B?

Mr. KORBLY. It is required so to do under the terms of this bill.

Mr. MANN. To be paid out again by bank B?

Mr. KORBLY. Whatever bank B does I can not undertake to say. They may issue it again if they desire.

Mr. MANN. I had supposed this bill had the one good feature in it that when these notes were issued as a matter of elastic currency and were used and came back to the bank that they were to be canceled; without that the bill is simply a bill of extraordinary inflation.

Mr. KORBLY. I think the gentleman from Illinois is very much mistaken if he believes that the fact the bank may again utter the note which comes back to it for collection or redemption in any wise limits the elasticity of that sort of currency. We had a bank out in Indiana as early as 1834 that had a currency as perfectly elastic as this country has ever had experience with.

Mr. MANN. One of the greatest inflations, too.

Mr. KORBLY. No; the gentleman is mistaken. No; it was not an inflation. That Indiana bank has been praised by all scientific writers in the United States and some who are not in the United States. This bill does not go to the extent of providing for canceling notes as soon as they come back to the

bank which issued them. When the bank's notes come back to its counter and are paid by the bank or redeemed they no longer have vitality until the notes are put out over the counter again, and then they get vitality.

Mr. MANN. None have vitality until they are put out over the counter.

Mr. KORBLY. If, for instance, a note comes from bank A and gets into the possession of bank B, it may not be uttered by bank B, but must be sent back to bank A for collection.

Mr. MANN. Then it does not amount to anything at all. If the note is sent back, as the gentleman says, to bank A, if bank A can put out the same note, it does not amount to anything at all.

Mr. KORBLY. I do not know what the gentleman means by saying it does not amount to anything.

Mr. MANN. It is allowing notes of the bank to be issued without regard to the amount of money in circulation; pure inflation.

Mr. KORBLY. It is just as much out of circulation when it gets back to the bank that first issues it as if it had never been in existence.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. KORBLY. Mr. Chairman, I ask unanimous consent for five minutes more time.

The CHAIRMAN. The gentleman from Indiana asks unanimous consent for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. KORBLY. I yield to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. I want to be clear on this provision. If bank A issues one of these notes and it comes back to bank A, is that the end of the life of the note?

Mr. KORBLY. No. This is to be a somewhat expensive instrument, so far as its engraving is concerned, and to treat it as the Bank of England treats its notes would be perhaps expensive and unnecessary.

Mr. MURDOCK. I have got that settled in my mind, and now I want to know this.

Mr. KORBLY. Just a minute. I want the attention of the gentleman from Illinois [Mr. MANN] if I may have it. I would like to say to him that the fact the Bank of England cancels the notes of the Bank of England as soon as they come back to the bank for redemption or payment does not give elasticity to the Bank of England notes. Elasticity is one of the qualities the Bank of England note does not possess.

Mr. MANN. It is the cancellation of the note that prevents inflation. It is impossible to have elasticity and inflation together.

Mr. KORBLY. Does the gentleman contend for a minute that the Bank of England, because it cancels one note and may immediately print another one to take its place, changes the situation or the essence of it?

Mr. MANN. I am not discussing the question of the Bank of England, because I am not sufficiently informed in regard to it. I think the gentleman is as much mistaken about the Bank of England as he is of what this bill provides. I think the gentleman is mistaken about what the bill provides.

Mr. KORBLY. I not only think the gentleman from Illinois is mistaken; I know he is mistaken. I never was more certain of a thing in my life than I am of the fact that what I am saying here now is sound and correct in every particular, and I think the gentlemen of the Banking Committee on that side of the House will corroborate me.

Mr. MANN. I do not know whether the gentleman from Indiana is mistaken or not. I think he is. If he is not mistaken, then other gentlemen on the Committee on Banking and Currency with whom I have talked do not know what is in the bill. A number have explained to me that it meant cancellation of these notes when they came back to the Federal reserve bank. Now, the gentleman says it does not mean anything when it says that.

Mr. MURDOCK. Will the gentleman yield to me for another question?

Mr. KORBLY. Yes.

Mr. MURDOCK. The gentleman answered that when one of these notes came back to the issuing bank it could be again put out. Now, if bank B issues the note and it comes to bank A in the course of business, then it can not be put out again by bank A, but is returned to bank B?

Mr. KORBLY. It can be put out by bank A if bank A is willing to pay the penalty, but that penalty is so great it probably will not do it.

Mr. MURDOCK. What I want to know finally is this: What does the gentleman's amendment do in regard to those

two propositions? I refer to the amendment you have submitted here.

Mr. KORBLY. The amendment I have submitted here simply takes away from one Federal reserve bank the right to receive from another Federal reserve bank, for exchange purposes, a deposit of Federal reserve notes, and it does not do anything else.

Mr. MURDOCK. I understand it.

Mr. BUTLER. Will the gentleman answer me a question, please?

Mr. KORBLY. I will yield to the gentleman in a moment.

Mr. TEMPLE. Is it not true that these notes can not be kept afloat at all unless there is rediscounted paper behind them?

Mr. GLASS. That is the whole thing.

Mr. TEMPLE. Now, whether that is put out for another bill or not, it makes no difference provided the rediscounted paper is behind it?

Mr. BUTLER. Will the gentleman please tell me where the compulsory retirement part of this bill is? I am afraid of inflation. I am afraid there is no power to take this money out of circulation after it is put in.

Mr. KORBLY. You need not be afraid of inflation. Any bank note that is based upon commercial paper can not lead to inflation.

Mr. BUTLER. It can not do it?

Mr. KORBLY. Certainly not.

Mr. BUTLER. I thought this bill provided for the retirement of the note when it reached the bank that issued it. As I understand the gentleman's explanation, it does not.

Mr. KORBLY. On page 31, line 13, you find this language:

No Federal reserve bank shall pay out notes issued through another under penalty of a tax of 10 per cent upon the face value of notes so paid out.

Mr. BUTLER. But then the note is returned to the bank of issue?

Mr. GLASS. I will say to the gentleman that the note is automatically retired at the maturity of the commercial paper behind it.

The CHAIRMAN (Mr. BURNETT). The time of the gentleman from Indiana [Mr. KORBLY] has expired.

Mr. TRIBBLE. This is the most important section in this bill. It regulates the method of making more elastic the currency. One paragraph I will insert in the Record, to wit:

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or may be used, for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act, but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities; nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products or other goods, wares, or merchandise from being eligible for such discount. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 90 days.

It is claimed by the friends of this bill that it will make our currency system more responsive to the demands of commerce and trade. When conditions are favorable the money of the country freely circulates, but when an alarm is sounded bank deposits are withdrawn from the bank, the money lender calls in his coin, and everybody becomes panic-stricken and money is concealed in safety vaults, chimney corners, in socks, in bed-ticking, and any place conceived to be a place of safety and concealment. This causes a contraction of the currency, followed by panic and periods of hard times. This bill hopes to relieve that situation by establishing a chain of banks controlled by the Government, with power to issue Government notes, commonly known as money. In short, it proposes to relieve the situation by authorizing the Federal reserve bank to issue money to a member bank on security furnished by such member bank and properly indorsed by a member bank. If a citizen seeks a loan of a member bank and furnishes good security, the bank can not say to him, "We have no money; our funds are out," because the bank can indorse the security offered and go to the reserve bank and get a new issue of money to take the place of the money desired by the customer of the bank.

This section also includes the amendment making eligible as security certain staple agricultural products about which so much has been said. Many amendments were offered in the caucus on this question, and finally an amendment was agreed upon which is embodied in this section. There was much wrangling over the proposition, as everybody knows, and there was much stated in the newspapers about it. I offered an amendment in the caucus—in substance the amendment adopted by the caucus. I discussed my amendment privately with the

chairman of this committee after the adjournment of the caucus one afternoon, and the chairman of the committee stated at that time that he desired to remove the cloud from this section as to agricultural securities. He read the amendment I submitted, and I suggested to him that he prepare an amendment during the night that would cover the subject entirely and offer it on the following morning and let the same be backed by the approval of the committee; and I said to him that I hoped it would be satisfactory to all of the Members who were offering amendments of this character. He drew this amendment and presented it the next morning.

The committee amendment, prepared as I suggested, was submitted to the caucus. My colleagues from Georgia were solidly for an agricultural amendment to this bill, and they were all interested in the adoption of such amendment. It was submitted to the various gentlemen in the caucus who were advocating an agricultural amendment, and it was agreed upon. Before the amendment was submitted I presented and read the amendment to the caucus, so that all could study it. The chairman of the committee brought the amendment in and introduced it the second day after I read it to the caucus, and it was accepted without resistance. It may not be perfect, but it was the best we could get through the caucus after many days of contest over the question.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Georgia yield to the gentleman from Ohio?

Mr. TRIBBLE. Yes.

Mr. WILLIS. The gentleman from Georgia is familiar with this subject. Will he state what, in his judgment, will be the effect of the language to which he has referred—the language of the bill on page 25, lines 11 to 13? That language is—

Nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products or other goods, wares, or merchandise from being eligible for such discount.

How does that change the original bill, if it changes it at all?

Mr. TRIBBLE. It makes certain staple agricultural products such as cotton eligible to rediscount. It removes the question of discrimination in the bill against this class of security. It is contended by some gentlemen that it has not changed the original bill as much as it should, but it seems clear to me. It changes materially the original draft of the bill.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

Mr. TRIBBLE. The Chairman of the committee in construing this section said there was doubt about it, and gave his opinion that if the bill stood as it was originally written, agricultural products might be construed to mean a gambling transaction if those products were held for a higher price. He made that statement in construing the bill, but welcomed an amendment to it. There were others who did not welcome an amendment to it.

I will state to the gentleman, if I have time, what it means. It is this: If John Smith goes into a bank and offers Mr. WILLIS as security to his note for \$100 and passes it into the local member bank, and the local bank furnishes him \$100 on that note, the member bank can take the note of John Smith, indorsed by WILLIS, and by indorsing same and becoming responsible for the payment of same rediscount the note at the Federal reserve bank, and thereby secure \$100 new money to take the place of amount loaned John Smith.

The CHAIRMAN. The time of the gentleman has expired.

Mr. TRIBBLE. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. TRIBBLE. Continuing to answer the gentleman's question, if John Smith should go to his local bank and offer his note for \$100 and offer to put up as collateral 10 bales of cotton worth \$700, it would make no difference whether that cotton was represented by a warehouse receipt, a mortgage, or any kind of transfer or lien, the reserve bank would refuse, under the bill as originally drawn, to take his note thus secured by cotton collateral and rediscount, as it did in the first illustration, where John Smith's note was only secured by personal indorsement of WILLIS.

Mr. WILLIS. Will the gentleman yield?

Mr. TRIBBLE. Yes.

Mr. WILLIS. What provision is there in the original bill under which the bank would be required to refuse such a note? I am trying to find out how this amendment changed anything in the bill.

Mr. TRIBBLE. The bill now specifically provides that they shall not discriminate against agricultural products when the note is accepted by the member bank and indorsed by the member bank secured by staple agricultural products. If you will compare the original bill with the section before you, you will

see the original bill did not make that provision. It did not provide at all for notes secured by agricultural products being subject to rediscount.

Mr. TOWNER. I agree entirely with the gentleman. The provision immediately preceding this, commencing on line 4, says that the Federal reserve board shall have the right to determine or define the character of the paper that is offered for discount. Now the gentleman will see that they can not make any rule against the discounting of agricultural paper. So it takes away from the board the power to exclude agricultural paper from discount.

Mr. TRIBBLE. Yes; the amendment divested the board of this power. The bill provides that no paper founded on any gambling transaction can be rediscounted. Now, if the bill had passed as it was first written, if the board had decided that the holding of cotton or any other agricultural product for a higher price was a gambling transaction, the paper could not have been rediscounted at the reserve bank. The meaning of the original bill was so construed by several members of the committee who had studied the question and prepared the bill.

Mr. MADDEN. One question.

Mr. TRIBBLE. Yes.

Mr. MADDEN. I should like to know how they would ascertain the fact that this commodity was held for a higher price when the paper was issued? How would they investigate that?

Mr. TRIBBLE. Of course, you would have to interrogate the man who presented his note at the bank counter and ask him for what purpose his cotton, his corn, or wheat was being held.

Mr. MADDEN. And he could tell you what he liked, could he not?

Mr. TRIBBLE. Certainly; he could tell you what he pleased about that.

Mr. SWITZER. Will the gentleman yield?

Mr. TRIBBLE. I decline to yield further. My time is nearly exhausted. The southern Members insisted that this section should be amended. Why, Mr. Chairman, it is known to everyone that cotton is the very best collateral that can be offered as security. There is no better collateral. It ranks with gold.

In the early days of this Republic, when the prosperous section of the Union was in the South, the cornerstone of that prosperity was cotton; the validity of cotton as a collateral and as a security to obtain money was not questioned then; in the days of the struggle between the States, when we contested for the supremacy, the validity of cotton as a security and as collateral was not questioned then; in the days of reconstruction following the war, when there was fluctuation of the currency, and at a period when the legal-tender notes of the United States went down to 65 per cent, the validity of cotton as a security to obtain money was not questioned then. It has never been questioned heretofore. The South has stood by the Democratic Party in season and out of season, and I am happy to stand here before you and announce that the caucus of Democrats has settled this question and the Democracy of the country stands for the validity of cotton security, and I appeal to the Republican side of this House not to attempt to discriminate against this great section of the Union in the currency bill that will soon go to the country, passed by Congress and approved by the administration. [Applause.]

Mr. PHELAN. Mr. Chairman, there may be some confusion arising out of the questions asked by the gentleman from Illinois with reference to this note issue. I wish to say that the bill does provide an elastic note issue, but I do not want at this time to explain the provisions of that section. When we reach that section I think we can prove to the satisfaction of everybody that this is an elastic note issue.

Mr. MURDOCK. We want to hear that explanation.

Mr. KELLY of Pennsylvania. Mr. Chairman, I offer an amendment.

The CHAIRMAN. There is an amendment already pending, offered by the gentleman from Indiana [Mr. KORBLY], a committee amendment. The question is on that committee amendment.

The amendment was agreed to.

The CHAIRMAN. The question is on the committee amendment.

The question was taken, and the amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I offer the following further committee amendment.

The Clerk read as follows:

Page 25, line 4, after the word "purposes," strike out the rest of the line and all of the following lines down to and including the word "discount," in line 13, and insert in lieu thereof the following:

"The Federal board to have the right to determine or define the character of the paper that is eligible for discount, within the meaning of this act: nothing herein contained shall be construed to prohibit such notes or bills of exchange, secured by staple agricultural products or other goods, wares, or merchandise, from being eligible for such discount;

but such definition shall not include notes or bills issued or drawn for the purpose of carrying on trade in stocks, bonds, or other investment securities."

Mr. BULKLEY. Mr. Chairman, this amendment simply transposes two clauses and does not change the meaning of the bill at all. It simply makes it more grammatical and clear and is unanimously reported from the committee.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

Mr. BULKLEY. I will.

Mr. WILLIS. I desire to propound to the gentleman from Ohio the same inquiry I made of the gentleman from Georgia. In the judgment of my colleague, how does this language in lines 9, 10, 11, 12, and 13, supposed to relate to the extension of agricultural credits, change or affect the bill as it stood before that famous amendment was inserted?

Mr. BULKLEY. I do not think it changes it materially, but it makes the meaning more apparent.

Mr. WILLIS. One more question. What does the statement "staple agricultural products," as used in the bill, mean?

Mr. BULKLEY. The products of agriculture.

Mr. WILLIS. Does the gentleman think the language is sufficiently accurate to define the use in a great measure of this kind?

Mr. BULKLEY. Yes; because the security is a matter that will be determined by the individual member bank.

Mr. WILLIS. If the member bank is to settle it, what does it amount to by saying it may base it on staple agricultural products?

Mr. BULKLEY. I do not think it means very much, but some Members think it makes it more clear.

Mr. MURDOCK. Well, Mr. Chairman, if the gentleman will yield, I would like to get the gentleman's idea. Does he regard the language "staple agricultural products" as permissive on the Federal board in rediscounting, or mandatory? Is it an order or simply saying you may do so if you desire?

Mr. BULKLEY. The language was inserted for the purpose of making it clear that the Federal reserve board should not be precluded from accepting paper so secured.

Mr. MURDOCK. If it so desired.

Mr. BULKLEY. Yes; but if the paper is drawn against actual agricultural, industrial, or commercial transactions my interpretation would be that the Federal reserve board could not refuse to make it eligible for rediscount, because the only discretion they have in the matter is within the meaning of the act, and the act says paper drawn against such transactions shall be rediscountable.

Mr. MURDOCK. The gentleman has changed this section in putting one phrase below the other. Would it be possible under this bill, as he has changed it, for a cotton raiser to take his cotton warehouse receipt to the bank, borrow money on it, and have it rediscounted?

Mr. BULKLEY. Certainly.

Mr. MURDOCK. Even if he said that he wanted the money for the purpose of holding the cotton until it might bring a higher price?

Mr. BULKLEY. The gentleman will notice that the bill provides that notes and bills are rediscountable if issued or drawn for agricultural purposes or "the proceeds of which may be used for such purposes." It is quite conceivable that the grower of the cotton might bring to the warehouse a certain amount of cotton and borrow money against a warehouse receipt for the purpose of paying the cost of producing that cotton. Then the proceeds of the paper having been used for agricultural purposes, it would be immaterial whether or not he negotiated the loan to carry the cotton.

Mr. J. M. C. SMITH. Mr. Chairman, will the gentleman yield?

Mr. BULKLEY. Yes.

Mr. J. M. C. SMITH. I notice the last paragraph of this section provides for national banks accepting bills of exchange drawn for transactions involving importation and exportation of goods. I would like to know whether that means foreign or domestic transactions?

Mr. BULKLEY. It means foreign transactions.

Mr. J. M. C. SMITH. So that when a person would ship alfalfa from one State to another a bill of exchange drawn upon it could not be cashed by a national bank?

Mr. BULKLEY. The words "exportation and importation" refer to foreign exportation and importation.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. WINGO. Mr. Chairman, I wish to say that the gentleman from Ohio [Mr. BULKLEY] is in error in saying that this is a unanimous report of the committee. I had intended to offer as a substitute amendment the amendment I offered in the

committee, but I doubt whether it would be in keeping with the proprieties, and I shall not do it; but in order that I may not be misunderstood and to keep the record straight I will read my amendment, which provides such a change, as the provision would read as follows:

The Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act, but such definition shall not exclude such notes or bills of exchange secured by staple agricultural products, or other goods, wares, or merchandise, nor include notes or bills issued or drawn for the purpose of trading in stocks, bonds, or other investment securities.

I preferred my amendment. I preferred it, first, from the standpoint of phraseology, and, next, because I believe that is what the Democratic caucus intended, and I am always in favor of saying exactly what I mean. The more I study it the more firmly convinced I am that the adoption of the amendment did not change the bill in one single respect; but the gentleman from Ohio [Mr. WILLIS] is mistaken when he says that under the bill as it reads the judgment of the member bank at last controls. He is wrong about that. That is what I contend should be the provision of the bill. I contend that the paper that is taken by the country banks of the South, secured by cotton or other staple agricultural products, upon being indorsed by the country bank should be eligible for rediscount at the Federal reserve banks.

Mr. MURDOCK. And the gentleman does not believe it is under this bill?

Mr. WINGO. I regret that I have not time to yield to the gentleman from Kansas. I do not think this Federal reserve board should have the right to determine what the class of security should be. I think it is the duty of the Federal reserve board to exercise a general oversight so as to see at all times that the paper that is rediscounted by the reserve banks is based upon bona fide commercial, agricultural, or industrial transactions, but they should not be given the right to exclude notes given by farmers and secured by their products. I believe you can trust the conservative banker to pass on the security, and when that banker puts the whole assets of his bank behind the paper by its indorsement, and it is given for a legitimate purpose. I think it should be eligible for rediscount. Under this provision as it now stands I believe it simply leaves to the Federal reserve board the right to determine it. I do not think they should have a right to exclude it. But, Mr. Chairman, I believe in accepting the decision of the common council of my party. I am a Democrat and bow to the will of the majority. My Democratic colleagues think that I am wrong in my contention and have decided against me in the party caucus by a majority vote, and I would be a very presumptuous young man if I wanted to put my judgment against the judgment of my party, and I shall not do it; but I want to say this much in conclusion—

Mr. COOPER. Will the gentleman yield at that point?

Mr. WINGO. I regret I have not the time to yield now. I have no patience with the man who says the cotton farmer of the South is a gambler simply because he wants to hold his cotton for a better price when he finds that the cotton market has been juggled by the gamblers and has been borne down to a price below the cost of production.

Why should he not be permitted to hold his cotton if he wishes? It is his property, the product of his labor, and he has a right to do with it as he pleases. If he wishes to store it and hold it for a better price, and goes to his local bank and borrows money on it to meet his debts, it is a legitimate loan and not a speculative one, as has been contended by some. I say that note secured by cotton, when indorsed by the holding bank, is good paper, and should be eligible to rediscount at the reserve bank, and I have no patience with those who wish to outlaw this paper and close the door of the Government bank in the face of the farmer.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WILLIS. Mr. Chairman, I move to strike out the last word. Mr. Chairman, I admire the clearness, eloquence, and frankness of my friend from Arkansas [Mr. WINGO] when he says that in his honest opinion this so-called agricultural amendment, which has received such extensive advertising, really does not change the provisions of the original bill at all. The language of this amendment is as follows:

Nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise from being eligible for such discount.

The fact is, Mr. Chairman—and I have been waiting for some of the Democratic brethren on that side of the aisle to state the facts—the fact is, as I see it, that this language in lines 9, 10, 11, 12, and 13, on page 25, was put into the bill simply in order to enable certain warring brethren on the Democratic side to save their faces and to crawl in under the flap of the tent. That

was the fact. There has been a great deal of talk in the country and a good deal of newspaper statement about a system of agricultural credits for the benefit of the farmers and laboring people of our country; and, personally, I am strongly in favor of such a system. I have before me an extremely interesting item from the Washington Herald of the issue of July 25, a statement that was made by one of the most able and distinguished gentlemen on the Democratic side of the House, and here is what that gentleman said:

If large business and the bankers are again determined to force the Government into the partnership with the banks, and if we are to disregard the teaching of Jefferson, Jackson, Calhoun, Benton, and Bryan, and again institute marriage relations between the Government and banks in order to establish a large and permanent asset currency, then I insist we shall so amend the Glass-Owen bill as to permit the farmer and wage earner to come into the scheme upon the same terms, at the same cost, upon which we admit the banker and commercialist.

It was asserted then that the bill as it stood amounted to an abandonment of the teachings of Jefferson and Jackson and Benton and Bryan, but that this amendment would be insisted upon. There was a tremendous announcement of battle. The charge was sounded, the saber was bared with a clash, and, after the battle was over upon this agricultural amendment, which was supposed to be something in the interest of the farmer, here are these three or four pitiful little lines, which the gentleman from Arkansas [Mr. WINGO] himself admits absolutely mean nothing and do not change the effect of the original bill at all; and yet they are put in here so that gentlemen, with suave statements, from time to time may rise in their places upon that side of the aisle and announce their intention to support the bill, in which they really do not believe, if we are to judge by the statements that have been already made through the press and otherwise. I am simply going to call attention to the fact that, so far as this bill is undertaking to provide any system of agricultural credit for the benefit of the people, it is an absolute fraud, as is admitted by the gentlemen who are now defending it and are proposing to vote for it. It is said somewhere in the classics—

Parturiunt montes et nascitur ridiculus mus.

The mountain labors and a ridiculous little mouse is born. This is the "mouse" here in these three little lines. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I desire to offer a committee amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 25, line 18, after the word "than," strike out "sixty" and insert in lieu thereof the word "ninety."

Mr. BULKLEY. Mr. Chairman, this amendment is made necessary by inadvertence. The time of rediscout was changed by the preceding paragraph from 60 to 90 days and this change is made to conform to that.

The question was taken, and the amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I offer a further committee amendment.

The Clerk read as follows:

Insert, at the bottom of page 36, as a new paragraph the following: "Section 5202 of the Revised Statutes of the United States is hereby amended so as to read as follows: No association shall at any time be indebted or in any way liable to an amount exceeding the amount of its capital stock at such time actually paid in and remaining undiminished by losses or otherwise, except on account of demands of the nature following: First, notes of circulation. Second, moneys deposited with or collected by the association. Third, bills of exchange or drafts drawn against money actually on deposit to the credit of the association or due thereto. Fourth, liabilities to the stockholders of the association for dividends and reserve profits. Fifth, liabilities incurred under the provisions of sections 2, 5, and 14 of the Federal reserve act."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio [Mr. BULKLEY].

Mr. BULKLEY. Mr. Chairman, this is a reenactment and amendment of section 5202, which provides the limitation on the indebtedness of national banks. The purpose of our bill is to permit national banks to rediscout with the Federal reserve banks freely so long as they have good commercial paper which can be rediscouted and which meets with the approval of the directors of the regional reserve banks. Section 5202, if not amended, would limit rediscouts to the amount of the capital stock of the several national banks. This we believe undesirable, and we did not intend any such limitation in the bill.

Mr. MADDEN. What limit does this place on them?

Mr. BULKLEY. This places no limit so far as capital stock is concerned. The banks will be limited only to the good paper they can bring up, subject to the discretion of the directors of the reserve banks in accepting it for rediscout. In other words,

it will permit the smaller banks to have the same facilities for rediscout as the larger banks. There will be no artificial limitation growing out of the amount of the capital stock.

Mr. MURDOCK. I would like to ask the gentleman from Ohio a question. I have the statute here pertaining to national banks, and I listened very attentively to his amendment. His amendment repeats in exact words section 5202 of the Revised Statutes, and then he makes this addition, as I caught it, that the exception should include paper issued under sections 2, 5, and 14.

Mr. BULKLEY. Obligations incurred.

Mr. MURDOCK. What you are really doing is this, namely: You are changing the national-bank act so far as the liability of the bank is concerned. The liability of a national bank at present, I will say to the gentleman from Ohio, as he knows, is the capital stock. There ought to be a liability to the national bank. Now, what you are doing is putting no liability on the national bank. You are absolutely putting no limit on the right of the bank to loan money without liability.

Mr. BULKLEY. Do you mean why have any limit on the liability?

Mr. MURDOCK. Why have any liability at all? You are taking it all away by this amendment.

Mr. BULKLEY. I do not understand the gentleman when he says, "Why have any liability?"

Mr. MURDOCK. Here is the proposition: Section 5202 says the liability of a national bank will be its capital stock.

Mr. BULKLEY. It says it shall not exceed the amount of its capital stock—

Mr. MURDOCK. And it makes certain exceptions, and the gentleman adds to the statutory exceptions a fifth exception—that there shall be no liability on the paper at all.

Mr. BULKLEY. No. The statute provides that the amount of the liability shall not exceed the capital stock, with these exceptions, and the amendment adds to these exceptions. It does not affect the liability on the capital stock in any sense.

Mr. MURDOCK. But it permits the banks to loan the money, evidently, without increasing their original liability.

Mr. BULKLEY. Oh, no.

Mr. MURDOCK. I think it does.

Mr. BULKLEY. No. It simply removes the limit on the liability which a bank may incur. It does not remove the liability on the capital stock. The amount of capital stock is merely a measure of this liability, and section 5202 provides that a bank shall not increase its liabilities in excess of the amount of its capital stock except in certain respects. Now, we simply add the further exception that that limit shall not apply to obligations incurred under the three sections of this act.

Sections 2 and 5 relate to the subscriptions to the capital stock of the Federal reserve banks, and there is a liability remaining against the member banks for one-half of the stock they subscribe to the regional reserve banks. It removes the limitation in respect to that liability, and also the liability incurred by making a rediscout with the regional reserve bank.

Mr. MURDOCK. Section 5?

Mr. BULKLEY. Sections 2 and 5 relate to capital stock and section 14 to rediscouts. Now, section 14, relating to rediscouts, is the important part of that. Sections 2 and 5 are concerned with a smaller matter.

Mr. MURDOCK. Mr. Chairman, I ask that I may have one minute more.

The CHAIRMAN. The gentleman from Kansas [Mr. MURDOCK] asks to be allowed to proceed one minute more. Is there objection?

There was no objection.

Mr. MURDOCK. Does the gentleman say that he is not increasing the loaning power of the bank by this amendment without increasing the liability of the bank?

Mr. BULKLEY. I say this, that we are increasing the loaning power of the bank.

Mr. MURDOCK. Without increasing its liability?

Mr. BULKLEY. Its liability would increase, because whenever it rediscouts with the regional reserve bank it is liable, since it must indorse the paper that it rediscouts and carry that liability. There is no question about that—that it increases its liability when it makes the rediscout.

Mr. MURDOCK. I confess I do not see it that way.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Ohio [Mr. BULKLEY].

Mr. WINGO. Mr. Chairman, I offer an amendment to the amendment. I suggest to strike out the word "fourteen" in the amendment.

The CHAIRMAN. The gentleman from Arkansas [Mr. WINGO] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Strike out of the amendment the word "fourteen," in the last line, so that the line will read: "Fifth. Liabilities incurred under the provisions of sections 2 and 5 of the Federal reserve act."

Mr. WINGO. Now, Mr. Chairman, in justice to myself, I may say that I do not violate the rule of the caucus when I offer to oppose this amendment. I have a perfect right to do it under the rules. I would not oppose the amendment of my colleagues on the committee if I were not compelled to do so for the reasons that I want to give.

The Democratic Party has been charged, and I think wrongfully, in times past with being the party of cheap money and inflation. I believe in sound money and I believe in a sound credit system. I believe that the man who suffers most by inflation and overtrading is the man who does very little trading—the wage earner and the small farmer in the country.

My amendment simply says that you cut out "14." That is the rediscounting provision. If you fail to adopt my amendment, you simply do this: You simply say that any bank can rediscount as much paper as it can feed to the regional reserve bank and as much as the regional reserve bank will take.

Under the present system—and, before the gentleman from Ohio [Mr. BULKLEY] offered his amendment, under the bill as it stood—every national bank was limited in rediscounting to the amount of its capital stock. He proposes to amend that very salutary provision of the national-bank act and provide that you take the lid off.

Gentlemen, I do not believe in it. I do not approve the possibilities of inflation that may follow. I do not think that requirement cuts any figure with the sound banker. I do not think the conservative banker needs these requirements. It is the reckless man, the unwise man, that ought to have some provision of law to hold him in check. [Applause.]

Mr. Chairman, if this committee shall vote down my amendment, it will simply say that under this bill the only check against inflation will be the reserve requirement. The reserve money of the country is \$3,500,000,000, and three times that would be \$10,500,000,000. If you vote down my amendment, it will simply mean that the rediscount operations under this bill as well as the note issues could go to the alarming extent of \$10,500,000,000. Do you want it, gentlemen? Is there a Republican who wants it? Is there a Democrat who wants it and who thinks it wise? Do you want to go to that extreme?

Oh, gentlemen, in the last few months I have been called a radical and an insurgent because I pleaded for certain provisions for the farmers and opposed bank monopoly, but now I find myself in the position of a conservative among conservatives, pleading with those who then styled themselves conservatives not to permit inflation. [Applause.]

I appeal to my Democratic brethren to pause before they vote down my amendment to the amendment. You are not bound by the caucus now on this question. This is an independent proposition. I say, gentlemen, consider it carefully. If I am right, you ought to adopt my amendment to the amendment. If you think you ought to have ten and a half billions of these notes, very well. I know you will say that there is a check by the regional reserve bank, that the regional reserve bank directors will not permit it, but I do not think you ought to put all the responsibility on the regional reserve bank directors. What does it mean? It means that in a little bank in my town with \$25,000 capital stock I will bring a note for \$100,000 to my cashier and I will say, "I want \$100,000 on this note." He will say, "My God! I haven't got it." I will say, "I do not care. It is a good note. Take it to the regional reserve bank and get \$100,000 of Treasury notes on it." And so the local bank will have to put it up to the regional reserve bank. If you adopt this amendment, it means that that country banker will not have to put it up to the regional reserve bank. Do you not see? If the local banker gets \$100,000 worth of reserve notes upon my paper, the next day this gentleman here comes in and says, "You got \$100,000 worth of these reserve notes for Wingo yesterday. I have got to have \$100,000. I have got \$100,000 of good paper." Under the Bulkley amendment you do not have to put up any reserve, but the reserve bank must take care of that. That is, the check on the amount you can indorse is taken off, and you go up and present that to the regional reserve bank and get \$100,000 worth of reserve notes.

I may be wrong about this, and I am told that I am. I do not know. I submit it for your consideration.

Mr. GLASS. Mr. Chairman, this is not an individual amendment of the gentleman from Ohio [Mr. BULKLEY], but an amendment that was seriously considered by the Banking and Currency Committee, all the members of which, except my friend from Arkansas [Mr. WINGO], agreed to report it. If the amendment is adopted it will not affect to the extent of one dol-

lar the aggregate of rediscounts in the ordinary course of business. If it is not adopted, all State banks and trust companies which come into the system may get accommodations at the regional reserve banks without limit, while national banks can get accommodations only to the extent of their capital. In other words, failure to adopt the proposed amendment will involve a disastrous discrimination against national banks in favor of State banks and trust companies.

Mr. MADDEN. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. MADDEN. If a State bank comes into the system, will it not have to come in under the rules laid down by the Federal reserve board?

Mr. GLASS. Yes; but such rules must be subject to the provisions of the bill. The Federal reserve board could not lay down a rule that was contrary to the express provisions of the bill.

Mr. MADDEN. No; but could the Federal reserve board grant rediscounting facilities to a State bank that came in under the provisions of this bill which would be greater than the rediscounting provisions granted to the national banks?

Mr. GLASS. It undoubtedly could as the bill is now written. I doubt if it would; but, under the law, it might do so, unless this amendment should prevail.

Mr. MADDEN. Then the gentleman admits that this amendment will, as a matter of fact, increase the right of the national banks to rediscount paper beyond the limit of their capital.

Mr. GLASS. It will do that, and to that extent it will put them on a fair basis with the State banks and trust companies that come into the system.

Mr. WINGO. Will the gentleman yield?

Mr. GLASS. In just a moment. I deny the proposition that this amendment would affect the reserves required. What difference does it make, as far as sound banking is concerned, whether the reserve behind a commercial transaction is in the vaults of the regional reserve bank or in the vaults of the member bank? The reserve of 33½ per cent of gold is there, and it is immaterial whether it is in the regional bank or the member bank.

Mr. WINGO. The gentleman has pointed out that if you do not adopt the Bulkley amendment it will give the State banks an advantage over the national banks.

Mr. GLASS. The State banks would have a right to rediscount accommodations without limit unless the law of a particular State might put some limitation on it.

Mr. WINGO. Will the gentleman let me finish my question? Then, will the gentleman explain to us how the adoption of the Bulkley amendment, which amends the national-bank act controlling the national banks, not State banks, will relieve it?

Mr. GLASS. It will permit national banks to get unlimited rediscounts, just as it will permit State banks to do.

Mr. WINGO. Because only the State bank has inflation—

Mr. GLASS. I do not concede that there is any inflation involved. The bill as it stands will discriminate against State banks and trust companies themselves to the extent and in the degree that one State imposes limitations and another State does not. This proposition is to make the accommodation uniform to all member banks, as far as this bill is concerned.

Mr. HAUGEN. Will the gentleman yield?

Mr. GLASS. Yes.

Mr. HAUGEN. If the proposed amendment is adopted it will make it possible for the regional banks to supply the smaller banks with the amount required without distinction?

Mr. GLASS. And thus enable the smaller banks to compete with the larger banks.

Mr. HAUGEN. If the bank has a run on it and has a capital of \$25,000 and it needs \$30,000, under this provision they may supply the \$30,000, but if the amendment is not adopted all it could get would be \$25,000.

Mr. GLASS. If it had prime commercial paper to put up it would get accommodation to any reasonable extent within the limitations of prudent banking.

The CHAIRMAN. The question is on the amendment to the amendment.

Mr. PLATT. Mr. Chairman, in this case it seems to me that the amendment offered by the gentleman from Ohio should be adopted. If it is not, the banks with small capital and large deposits will get no relief from this measure. This is an amendment to section 5202, is it not?

Mr. BULKLEY. Yes.

Mr. PLATT. For instance, in Frederick, Md., there is a bank with \$100,000 capital and nearly \$3,500,000 deposits. If you are going to limit the rediscount that such a bank can get to the amount of its capital, it might be entirely inadequate, as the reserve it must carry amounts to about \$400,000. Now, this

bank that I speak of in Frederick is doing a good, safe banking business. It has deposits, as I say, of over \$3,000,000, and the whole question is whether such a bank has got sufficient reserve against it. If it has the reserve, the paper is sufficient.

Mr. WINGO. Will the gentleman yield?

Mr. PLATT. I will.

Mr. WINGO. I would like to ask the gentleman this question. The gentleman speaks of a bank with \$100,000 capital, and something has been said about a small bank. When a bank has a capital of \$25,000 in those States where there is a double liability there is a total liability of \$50,000, and the only security back of it is the assets of the bank. Does the gentleman believe that a bank with \$25,000 capital and a total stock liability of \$50,000 should be permitted to rediscount \$200,000 of paper?

Mr. GLASS. My answer to that would be, if the gentleman from New York will pardon me, by asking another question. Does the gentleman believe that any sane director or cashier of a regional reserve bank would permit a bank under circumstances of that sort to get accommodations to the extent of \$200,000?

Mr. WINGO. I will state to my good friend that I am at a loss to know what to believe, because when the amendment was urged upon me that very proposition and the same illustration was made and approved. It was contended that as it was good paper and met the demands of commerce it made no difference how much paper they rediscounted. I say, and I stick to it and will leave it to any reasonable man on the floor, that the banker who indorses four times over the liability of the stockholders is an unsound banker. [Applause.]

Mr. MURDOCK. Will the gentleman yield?

Mr. PLATT. I will.

Mr. MURDOCK. Why in the original bank act was there a limitation of liability of a bank to the original stock?

Mr. PLATT. That is a question of making loans to a single individual. Under the national-bank act no bank can make a loan to an individual greater than 10 per cent of the capital stock. This is an entirely different proposition, the coming to the regional bank to get relief.

The relief certainly is to come to the depositors in the banks. A bank may have large deposits and a small capital, and if it is doing safe banking there is no reason why its capital should be an absolute limit on the amount of relief it should get from the regional bank.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that the debate on the pending amendment be concluded in five minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on the pending amendment be concluded in five minutes. Is there objection?

There was no objection.

Mr. RAGSDALE. Mr. Chairman, it seems to me it would be exceedingly unwise to limit the amount of money that could be borrowed by these smaller country banks, and especially the banks in the rural communities. In the spring of the year these gentlemen running the country banks are confronted by an entirely different proposition than that which confronts the city banks. In the city banks the deposits stay about the same thing all the year round. In the spring of the year the country bank is confronted with people who want to borrow money for six, eight, or nine months. They put this money to their credit; that is, the amount received from their notes, without drawing much out, and as they go further along into the summer more and more of this money is drawn out. The New York banks realize this situation, and even the Wall Street bankers, who have been denounced by so many people, have recognized this condition that exists in the agricultural communities, and from time to time they are to-day loaning two and three times the amount of capital stock of the country banks in order to relieve a condition that necessarily exists.

Mr. WINGO. Mr. Chairman, will the gentleman yield?

Mr. RAGSDALE. I can not yield at this time. I have given up all of my time heretofore and I want to finish this. This is the condition you will find: If a little country bank had a capital stock of \$50,000 or \$100,000, and had deposits running up to \$200,000, and if it had first-class security that would be acceptable anywhere, and if the deposits began to fall and then it had good security that could be rediscounted, you would put it in the position of having to go into bankruptcy or having a receiver appointed, because you would not let it utilize the securities which it has, and instead of being a benefit to its depositors you would absolutely shut its doors and prevent the depositors from getting the money that is there. If you do not put this limitation on and leave the matter to the people who are accepting these bills receivable as rediscount and bills payable with bills receivable as collateral security, you put these

country banks in the position to relieve the situation in the various communities.

Suppose in the panic of 1907 when New York told us we could not get our money, suppose when bankers tell us we can not get our money from one particular place, or suppose we are doing business with a large bank and this big bank should fail and we had our money on deposit there, and suppose we had good bills receivable that we wanted to hypothecate somewhere else, to place with some other national bank, in order to get a line of credit to run on; by putting on this limitation you would preclude that possibility and force us to shut our doors, and absolutely put us in a position where we could not take care of ourselves or our depositors that trusted us with their money or the banks we already owed. By this you invite the people who are doing business with the smaller banks in this country to shift their accounts and do business only with the larger banks that have larger borrowing possibilities.

To me, Mr. Chairman, it seems a foolish thing, a ludicrous thing, to say that a man who has the money is not wise enough, is not careful enough, and judicious enough to determine upon what security he may loan it. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas to the amendment offered by the gentleman from Ohio.

The question was taken; and on a division (demanded by Mr. Wingo) there were—ayes 28, noes 67.

So the amendment to the amendment was rejected.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was agreed to.

Mr. LINDBERGH. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Section 14, after the word "securities," in line 9, on page 25, insert "except notes secured on improved and unencumbered farm lands"; and after the word "merchandise," in line 12, on the same page, insert "or notes secured by improved and unencumbered farm land."

Mr. LINDBERGH. Mr. Chairman, the amendment which I offer here is of great importance to be added to the provisions of this bill. If it becomes a law trust companies and State banks are to be admitted. Those trust companies and State banks make loans upon improved farm property. There is also a section in this bill which will authorize national banks to make loans upon unencumbered improved farm land. The effect of the amendment which I offer is this: That when the notes secured by these loans have a maturity of no more than 90 days, as is provided by this section for the classes of paper permitted to be discounted, these farm notes shall be subject to rediscount the same as any other class of notes. As a matter of fact, the farmers of this country make their deposits in the bank in the same way that other people do and they should have the same advantages that any other person should have.

I do not claim that the notes that have four or five years to run should be subject to discount where they have a long time to run before maturity, but when the notes have only 90 days or less time of maturity that then those notes should be subject to discount in the same way any other paper is, and they should have the same right to be used as security for Government issue of notes as any other paper. The people who owe these notes and seek money to pay them should come in in the consideration of this bill with all the advantages that any other class of paper has. The price is fixed for the farmer when he puts anything upon the market. He does not fix the price of the thing that he buys, but the price of that thing is fixed by the parties who control the articles that he purchases.

Mr. MADDEN. Is not that true of everybody?

Mr. LINDBERGH. That is not true of everybody.

Mr. MADDEN. Oh, sure.

Mr. LINDBERGH. It has been stated upon this floor, in the discussion of this bill, that the farmers are paying annually an immense amount of interest and that the interest they pay is added to the price of the products they have to sell. The first part of the statement is absolutely true. The farmers do pay an immense amount of interest, and unfortunately, on the general average the amount of interest—that is, the per cent—they pay is considerably more than the interest paid by any other industry that involves a large amount of investment. That is, I take it no one will question that the farm, the buildings upon the farm, and the stock that the farmer owns, is his investment and that he is entitled to as large an interest return upon his investment as anybody in any other business is entitled to upon their investment. But as a matter of fact the farmer can not add the interest, either that he pays or that he would be entitled to upon his investment, to the price of

the products he has to sell. He is not in the position of the railroad company or any of the other great industrial interests of the country which fix prices, and in fixing them add enough to the price to give them a dividend or an interest upon their investment. The courts have decreed that the railway companies are entitled to a reasonable return in the nature of a profit upon the capital invested and for the risk taken, but the farmer has no such decree to support him in fixing the prices of the products of the farm. He must sell for the price that is fixed in the market where he sells, and he has no voice in fixing that price. The only thing he can do is keep his products, if he is able to, in the event that the prices do not satisfy him. In the great majority of cases he is compelled to sell at the prices fixed by others. On the other hand, when he makes any purchases he does not fix the price on what he buys. If he ships grain or other farm products, the railway companies fix the prices to be charged for freight and they add a sufficient profit, so that they can declare a regular dividend and pay interest upon the bonds and notes, and so forth, that they may be owing. Therefore I think that the Member, in stating that the interest paid by the farmers is added to the price of the products that the farmer sells, is in error.

There is no decree of any court determining that the farmer has any right to add a reasonable amount to the price for his profit. As a matter of fact, it would not be practical to do so.

Mr. MANN. He can add all he wants to, but there is no decree of court requiring anybody to ship anything by a railroad.

Mr. LINDBERGH. The gentleman is correct in his suggestion, but that does not do away with the fact that the farmer is at a disadvantage and is discriminated against by this bill. If, however, you make this 90 days maturity—

Mr. HELGESEN. The gentleman must not forget the fact that the farmer's obligation usually has a year's redemption, which would make it 15 months maturity instead of 90 days.

Mr. LINDBERGH. That is only in case of foreclosure.

Mr. HELGESEN. That has to be taken into consideration.

Mr. LINDBERGH. The gentleman from North Dakota [Mr. HELGESEN] is aware of the fact that the farmer, the same as any other person, is liable upon his note and may be sued when the note becomes due and a judgment secured against him in the same manner as may be done against any other person. The mere fact that the note is secured by a mortgage does not change the rule. The mortgage may be waived for the time being and a judgment recovered upon the note and execution issue and be collected independent of the security originally given. Furthermore, it must not be forgotten that the farmer is not only liable upon his note, but when his note would be rediscounted with the Federal reserve bank the bank rediscounting the same would indorse the note, and therefore the bank, in addition to the farmer, would be liable. If the note were passed on from the Federal reserve bank to the Government to become security for currency, the Federal reserve bank would also be liable. Therefore the mere fact that the note is secured by a mortgage should in no way cause a discrimination against the note. The security is merely that much of an advantage rather than a disadvantage. However, I do not think the gentleman from North Dakota [Mr. HELGESEN] means to be understood as opposing the rediscounting of farmers' notes secured by mortgages with one of the Federal reserve banks.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on this section and all amendments thereto may be concluded in five minutes.

Mr. KELLY of Pennsylvania. I have an amendment pending, Mr. Chairman.

Mr. NORTON. I have an amendment on which I wish to speak for five minutes.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on the pending section and all amendments thereto be closed in 15 minutes.

The CHAIRMAN. Is there objection?

Mr. KINKEAD of New Jersey. Reserving the right to object, I would like to ask the chairman if in these 15 minutes I can get 2 minutes for a short statement.

Mr. GLASS. I can not tell; I hope so.

Mr. MANN. There are four gentlemen who want to discuss the bill in the 15 minutes.

Mr. GLASS. Does the gentleman from New Jersey desire to offer an amendment to this section?

Mr. MURDOCK. The gentleman from Pennsylvania [Mr. KELLY] has an amendment pending.

Mr. GLASS. I am talking about the gentleman from New Jersey [Mr. KINKEAD]. Does the gentleman desire to offer an amendment to this section?

Mr. KINKEAD of New Jersey. No.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on this section and amendments thereto be closed in 15 minutes. Is there objection. [After a pause.] The Chair hears none.

The CHAIRMAN. The gentleman from Oklahoma [Mr. WEAVER] is recognized.

Mr. WEAVER. Mr. Chairman, the Democratic Party is redeeming its pledges to the people. To write into the statutes the Underwood tariff bill and the Glass banking and currency bill is glory enough for the administration and for the Democratic Party if it were to accomplish nothing further, to the last syllable of recorded time. But a third great constructive measure will soon engage the best endeavor of the Sixty-third Congress. Hear the Democratic Baltimore platform on the subject of rural credits:

Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural-credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real-estate security.

We recognize the value of vocational education, and urge Federal appropriations for such training and extension teaching in agriculture in cooperation with the several States.

Mr. Chairman, this subject of agricultural finance, of importance to him above all others, is ever in the thought of the American farmer.

Mr. Chairman, I was born and grew to manhood in a north Texas village in a rich and beautiful agricultural country. I revere the maxim I learned from the lips of the "Old Alcalde," Gov. Oran M. Roberts, of Texas, that "Civilization begins and ends with the plow." The State of Oklahoma, which I am proud to represent upon this floor, is one of the great agricultural States of this Union. I was sent here by the votes of farmers, and I would be disloyal to the primal instinct of gratitude, as well as dead to the holiest sense of public duty, if I were not vigilant and keenly alive to all that affects the interests of the farmers of my State and of this great Nation.

I count myself fortunate and happy to be a member of the Banking and Currency Committee of this House, to which has been referred the great responsibility of drafting a law upon the subject of rural credits or agricultural finance. To that subject the committee will give exhaustive study, and in due time offer to this House the fruits of its labors.

It is not my purpose now to deliver a speech, though great is the temptation and fascinating the theme. I rise, Mr. Chairman, to incorporate into the RECORD a statement recently given to the public by the President of the United States upon the subject of rural credit legislation.

The President's statement follows:

Again and again during the discussion of the currency bill it has been urged that special provision should be made in it for the facilitation of such credits as the farmers of the country most stand in need of—agricultural credit as distinguished from ordinary commercial and industrial credits. Such proposals were not adopted because such credits could be only imperfectly provided for in such a measure. The scope and character of the bill, its immediate and chief purpose, could not be made to reach as far as the special interests of the farmer require.

COMMISSION TO REPORT.

Special machinery and a distinct system of banking must be provided for if rural credits are to be successfully and adequately supplied. A Government commission is now in Europe studying the interesting and highly successful methods which have been employed in several countries of the Old World, and its report will be made to Congress at a regular session next winter. It is confidently to be expected that the Congress will at that session act upon the recommendations of that report and establish a complete and adequate system of rural credits. There is no subject more important to the welfare or the industrial development of the United States; there is no reform in which I would myself feel it a greater honor or privilege to take part, because I should feel that it was a service to the whole country of the first magnitude and significance. It should have accompanied and gone hand in hand with the reform of our banking and currency system if we had been ready to act wisely and with full knowledge of what we were about.

UNITED STATES NEGLECTS FARMERS.

There has been too little Federal legislation framed to serve the farmer directly and with a deliberate adjustment to his real needs. We long ago fell into the habit of assuming that the farmers of America enjoyed such an immense natural advantage over the farmers of the rest of the world, were so intelligent and enterprising and so at ease upon the incomparable soils of our great continent, that they could feed the world and prosper, no matter what handicap they carried, no matter what disadvantage, whether of the law or of natural circumstances, they labored under. We have not exaggerated their capacity or their opportunity, but we have neglected to analyze the burdensome disadvantages from which they were suffering and have too often failed to remove them when we did see what they were.

NEED PROMPT FINANCIAL AID.

Our farmers must have means afforded them of handling their financial needs easily and inexpensively. They should be furnished these facilities before their enterprises languish, not afterwards.

And they will be. This is our next great task and duty. Not only is a Government commission about to report which is charged with apprising the Congress of the best methods yet employed in this matter, but the Department of Agriculture has also undertaken a serious and

systematic study of the whole problem of rural credits. The Congress and the Executive, working together, will certainly afford the needed machinery of relief and prosperity to the people of the countryside, and that very soon.

Mr. NORTON. Mr. Chairman, I wish to offer an amendment.

The CHAIRMAN. The gentleman from North Dakota offers an amendment which the Clerk will report.

The Clerk read as follows:

On page 25, line 15, strike out the word "ninety" and insert in lieu thereof the words "one hundred and twenty," and in line 10 strike out the word "sixty" and insert in lieu thereof the words "one hundred and twenty," and in line 19 strike out the words "one hundred and twenty days," and insert in lieu thereof the words "six months," and on page 26 strike out the word "ninety" and insert in lieu thereof the words "one hundred and twenty."

Mr. NORTON. Mr. Chairman, the amendment that I have offered, I believe, will give more real relief to the agricultural class in this country than anything that has been placed in or that has been proposed to be placed in this section. I believe everyone here who is acquainted with agricultural transactions and business carried on in agricultural regions knows that notes that the small banks have to handle run for periods of more than 90 days. I fully understand that as the section now stands notes running for a longer period than 90 days may be discounted, but they may not be discounted before 90 days prior to the date of their maturity. My amendment provides, first, that these notes may be discounted when they have a maturity of not more than 120 days at the date of being discounted, and, second, that when the regional reserve bank has a reserve exceeding 33½ per cent they may be discounted when they have a maturity not exceeding six months, the amount of the discounts in the latter case not to exceed 50 per cent of the capital stock of the member bank. Now, as the provision stands I believe that it will result in this: That in the case of the small country banks it will be necessary for these banks to secure the credit that they may need to go to some large city bank and borrow the money at a high rate of interest and turn over their bills payable to the city bank, which in turn will be able under the provisions of this bill to rediscount the notes of the country banks with the regional reserve bank. By the adoption of this amendment this process, so expensive to the country banks, will be avoided, and the country bank, the bank that serves the great producing class of this Nation, will be enabled to secure directly from the regional reserve bank the money that it requires to assist in carrying on the business of those engaged in agricultural pursuits. I do not believe the adoption of this proposed amendment will mean or encourage unsound banking.

The directors of the regional reserve banks would have in their discretion the right to accept or reject these notes. They may accept, in any event, a certain amount of notes that have a maturity not exceeding 30, 60, or 90 days, but the adoption of this proposed amendment would simply give them the authority to accept notes for discount having a maturity of 120 days and, in some cases, a maturity of six months. And this in fairness to the country bank. [Applause.]

The CHAIRMAN. The gentleman from Pennsylvania [Mr. KELLY] is recognized.

Mr. MANN. Mr. Chairman, is there not an amendment pending?

The CHAIRMAN. The gentleman from Pennsylvania [Mr. KELLY] has an amendment pending. The Chair understands that the gentleman from Pennsylvania [Mr. KELLY] and the gentleman from Nebraska [Mr. SLOAN] each has an amendment that will take up the time allotted. The Clerk will report the amendment offered by the gentleman from Pennsylvania [Mr. KELLY].

The Clerk read as follows:

Amend, page 25, line 15, after the word "days," by adding the following: "Member banks desiring rediscounts shall have available at all times for the use of their stockholders and depositors full information regarding the amount, nature, and maturity of the paper owned by such member banks."

Mr. KELLY of Pennsylvania. Mr. Chairman, I ask that the chairman will notify me when I have used three minutes of my time, as I desire to yield two minutes to the gentleman from New Jersey [Mr. KINKEAD].

Mr. Chairman, the purpose of this amendment is simply to apply a little more widely the publicity principle of this bill, which has been wisely incorporated in it. On page 21 it is provided that the statement made by the reserve banks each week shall give full information about the nature, amount, and maturity of the securities of the reserve banks.

This amendment would apply the principle of publicity of assets to the member banks. It is recommended in the report of the Pujo money investigating committee, but has not been brought up in the way of amendment. I believe that it is an important matter and deserves consideration.

The Comptroller of the Currency has advocated publicity of bank assets, and it has also been approved by leading bankers, such as Jacob Schiff, of the National City Bank of New York, and others. On page 154 of the report of the Pujo investigating committee it is strongly urged. Their recommendation is as follows:

The usefulness of national banks as instrumentalities of the banking groups which have been described, particularly as outlets for security issues, would be still further curtailed if their assets other than the names of borrowers were open to public inspection. In this way it would be possible to know exactly what use was being made of a bank's funds. The investment of a disproportionate part thereof in given securities would be made more difficult.

A depositor is entitled to have the information in which to determine for himself whether the bank in which he has his money is secure, and prospective investors in the stock of a bank are entitled to know what its property is. A bank is such a sensitive organization that the more of its affairs are known to the public the more completely will it secure the public confidence.

Mr. Murray, the Comptroller of the Currency, expressed himself strongly in favor of publicity, both as regards this subject and publicity of the names of stockholders. No sufficient reason has been urged against it.

I submit, Mr. Chairman, that this amendment should be adopted, inasmuch as it is just to the depositors, who have a right to know what is done with their money, is just to those who are investing in the bank as stockholders, and is just to the public, whose welfare is vitally related to the proper conduct of banking institutions.

Now I yield to the gentleman from New Jersey [Mr. KINKEAD] two minutes.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. KELLY] asks unanimous consent to yield two minutes to the gentleman from New Jersey [Mr. KINKEAD]. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from New Jersey [Mr. KINKEAD] is recognized for two minutes.

Mr. KINKEAD of New Jersey. Mr. Chairman, I take advantage of the courtesy of the gentleman from Pennsylvania [Mr. KELLY] to say to the committee that before the pending bill was sent to the Democratic caucus I wrote to the president of every bank in my district, whether a national, a State bank, or trust company, for an expression of his views on the pending measure, and while I have a great deal of sympathy with the efforts of gentlemen from the agricultural districts of the country to protect the farmer, yet it seems to me that an expression of opinion from the banking industries in the richest section of New Jersey might well be written into the Record at this time.

It must be very gratifying to the chairman having charge of this bill to realize that although I wrote to no less than 52 banks in the northern section of the State of New Jersey yet there comes from but one of them a severe criticism of this bill. [Applause on the Democratic side.]

I ask unanimous consent, Mr. Chairman, to insert in the Record three or four letters from the leading bankers of my district on the bill in question.

The CHAIRMAN. The gentleman from New Jersey [Mr. KINKEAD] asks unanimous consent to extend his remarks as indicated. Is there objection?

Mr. MANN. Is the gentleman sure the letters are not from the packers? [Laughter.]

Mr. KINKEAD of New Jersey. I am sure they are not.

The CHAIRMAN. Is there objection?

There was no objection.

Following are the letters referred to:

IRONBOUND TRUST CO.,
Newark, N. J., August 29, 1913.

HON. E. F. KINKEAD,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Some time ago I received your letter inclosing copy of the pending currency bill and stating you would be glad to receive any views which I might care to make. I have no particular suggestions to make in reference to this bill, but I do believe that Congress should give at least fair consideration to the suggestions or recommendations made by the various banking committees or associations who have given the matter considerable thought. It does seem to me that the suggestions of men who are experts in this line and whose life business it is should be given more consideration than is being given to such views at Washington.

Thanking you for your courtesy in this matter and appreciating your desire to be of service in any way, believe me,

Very truly, yours,

J. H. BACHELLER.

SAVINGS INVESTMENT & TRUST CO.,
East Orange, N. J., August 27, 1913.

HON. EUGENE F. KINKEAD,
House of Representatives, Washington, D. C.

DEAR SIR: Since my last the currency bill has been very fully discussed by prominent bankers, who naturally object to the prospect of losing the reserves which they now carry for country banks.

The country banks are not worrying about the prospect of having Congress control the central reserve board.

There still appears to be but little inducement for State banks to join, and I suggest that as a great deal of trouble comes to these banks owing to questions of taxation, which they meet by purchasing non-

taxable securities, indorsing the bill, making the stock of national banks nontaxable would be very favorably received.

I make this suggestion, leaving it to your judgment as to presenting it to the House.

Yours, very truly,

DAVID BINGHAM, *President.*

P. S.—The writer is president of three New Jersey banking companies, including one at Bloomfield, and vice president of a fourth.

UNION TRUST CO. OF NEW JERSEY,
Jersey City, N. J., July 28, 1913.

Hon. EUGENE F. KINKADEE,
Washington, D. C.

MY DEAR CONGRESSMAN: In compliance with your request of recent date as to my views on the proposed currency legislation I respectfully suggest as follows:

Fundamentally I believe the proposed bill to be a good one. As a matter of fact, it is rare that legislation attempting to regulate an economic element as broad and important as the question of banking and currency can at its initial enactment be perfect. Neither is it possible to synchronize all minds in connection with such legislation. Unfortunately in the matter of adjusting the laws in regard to banking and currency we find a wide difference of opinion among men who would be, perhaps, best qualified to consider a matter of this kind. This but proves my contention of inability to please all in an initial enactment.

I have felt that what we have really needed was a completely new banking and currency act rather than an attempt to correct our present national-bank act and its amendments. Of course I appreciate the difficulties that might arise in an attempt of this kind, but I feel certain that the time will come when a completely new bank act will be forced by conditions.

However, we are at present to consider the legislation that has been so wisely attempted by the present administration. We find that as a matter of fact the greater proportion of the men at the head of the largest banks, or those in the central reserve cities, seem to be opposed to the present currency reform. Their principal ground for contention lies in the apparently complete subjugation of our banking system by a Federal reserve board in which the banks have no representation of their own selection. This was the principal objection I found to the bill when I had read a summary of it on the first day it was released to the press and before I had heard any other criticisms, because it seemed to me that from the standpoint of democracy representation should be given, at least a minority one, to the interests that would be most affected by the law, on the ground that the banking business is conducted by private capital and not by public funds. While the Government's supervision should be an absolute one in respect to banking, nevertheless the power of direction as to policy should be to some extent under the advice of representatives chosen by those whose capital is actually involved. I so wrote to the President; but at the same time I stated that personally I had no fear as to absolute domination of the Government in the Federal reserve board. This is still my position in view of the fact that, after all, the direction of the physical operation of the funds in the Federal reserve banks will be under the majority direction of the representatives selected by the banks in the various districts. In explanation of my first position, however, the fact that the Government has a minority representation on the boards of Federal reserve banks suggests that a minority representation on the Federal reserve board would be but fair to the banks.

I have maintained for many years that one of the weaknesses of the banking system in this country was its separation into so many units represented by the various State bank acts, together with the national bank act and its amendments. With so many banking institutions operating under the several acts, there can never be an absolute mobilization of reserves, and under conditions such as these there can never be a standardization of banking credits. This is one of the difficulties that we always found in an endeavor to harmonize our banking system and mobilize our banking reserves. I am inclosing to you herewith a copy of an address made by me early this year, in which I went into this situation more fully. In reading the address you will see that to a large extent my ideas anticipated the present bill.

In considering the current plans of banking and currency reform there are two elements which stand out more prominently for treatment than any others. One the mobilization of reserves, and the other the necessity for providing proper machinery by which the medium of exchange may be enlarged and contracted automatically and with facility when conditions demand a greater or less volume of currency. It is true that this country, by reason of its banking practice, has a much greater circulating medium per capita than any other country in the world. I mean by this that while the actual money in circulation is large it is of a much smaller proportion than the paper representative of money in the form of bank checks that are always in transit and actively engaged in the commercial markets. This paper or check currency illustrates definitely the need for a wider circulating medium, especially at certain times. When money is actively employed or when credit conditions are seriously strained, the liquidation of this check or paper currency becomes involved and difficult, and when conditions become overburdensome recourse has had to be taken to the issuance of a paper currency that was nothing more or less than a substitution of check paper currency in the form of clearing-house certificates. A large volume of the clearing-house certificates, however, were only issued after suitable credit had been pledged with the clearing houses of issue.

In considering the first question as to the mobilization of reserves we must admit that theoretically the ideal mobilization would be the concentration of all reserves into one given center or institution. It has been this form of banking reform that some of our largest men have advocated for several years. Personally I have been opposed to this form, although admitting its theoretical soundness. My objection has been that under our present form of society, as well as government, there would be danger of the central body becoming the absolute controller of these reserve funds and their domination by interests whose motives might be anything but altruistic. I believe that the present bill, providing, as it does, for the mobilization of reserves in more than one Federal reserve district, is predicated on a safe theory. This in itself, however, would not go sufficiently far to amalgamate the reserves, and therefore a central governing body with sufficient power to regulate the disposition of reserves in the separate units as conditions of the various communities demanded is essential. The Federal reserve board is in my judgment an essential factor for the proper perfection of the plan. The only question that could possibly enter into the discussion would be the advisability of allowing the banks which are to be regulated by this Federal reserve board representation on the said board. The bill could be changed to provide that the several boards of directors of the Federal reserve banks might select three men by a system of ballots somewhat similar to the method by which we select commis-

sioners under our present form of commission government in Jersey City. Each member of the board of directors of the Federal reserve banks to have a vote and any citizen might then become a candidate for election on the Federal board by filing in the initial instance with the reserve bank organization committee and thereafter with the Federal reserve board a petition signed by a reasonable percentage of the total number of directors of all the Federal reserve banks. Each director thereafter of all the Federal reserve banks might vote for three names out of those filing their applications as candidates, and the six men receiving the greatest number of votes would then be candidates for election. The three receiving the highest number of votes at the final election to serve, one for one year, one for two years, and one for three years, and thereafter each year one representative to be elected in a similar way to fill the vacancy of the retiring member. Some such plan as this, providing for the election under the Federal reserve board and in the initial stage by the reserve bank organization committee with due allowances for the number of votes that might be available to be cast by each Federal reserve bank, would meet the criticisms that are more prominent, but would give everybody who might appear ambitious to serve the opportunity of becoming a candidate, thus eliminating the possibilities of denying capable men the opportunity, and also provide an absolutely democratic representation on the board of Federal control. That board could then consist of nine members, including the Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, three citizens appointed by the President of the United States, and three members selected in the above manner by the Federal reserve bank boards. Under the above plan I believe we would get as near to providing an instrument through which the reserves might be properly mobilized as it would be practical to attempt at this time. In connection with the rules provided in the act for the detail management of the Federal reserve banks and as to the functions assigned to them, there are several details which in my judgment might be modified to advantage, but the general plan is good. I believe that more latitude should be given to the banks in the distribution of their reserve funds.

It is difficult to regulate by statute the territories in which banks can most expediently maintain all their banked reserves. For instance, the predominance of certain activities in Kalamazoo might require in the conduct of the banks' reserves and exchange business there that they maintain a large amount of free exchange on New York City rather than, we will say, in Chicago. To restrict the banks, therefore, to an unreasonably larger percentage of reserves in any one territory than the demands of its business require places the banks at a great disadvantage and practically requires that they maintain reserves much in excess of that required in the natural conduct of their business. If we are to operate in part under the present national-bank act, the status of the central reserve banks should not be changed by arbitrary methods at this time except by modifications which would permit the country bank to keep a portion of its reserves with the Federal reserve banks and a portion with banks in reserve or central reserve cities approved by the Federal reserve board. Protection under this system is obtained by the fact that those same reserve and central reserve banks do in turn keep reserves with the Federal reserve banks. I would not modify in the act the requirements regulating the placement of reserves by banks in the central reserve cities with the Federal reserve banks, except that I would permit the banks located in the reserve and central reserve cities to keep, say, 50 per cent of their reserves required with the Federal reserve banks with Federal reserve banks located in districts outside of their own Federal reserve districts, thus enabling them to transact current business between other districts in the country with the same freedom as is now permitted. The Federal reserve board, it is true, is given discretion after 36 months as to the proportion that the country banks may maintain with reserve or central reserve cities, but this is not good practice, in my judgment, and permits of too much latitude to the Federal reserve board in a matter which could not possibly be intelligently considered with the facility necessary to meet the current and ever-changing conditions of trade. By fixing a schedule for country banks of, we would say, 5 per cent in cash in vault, 5 per cent with the Federal reserve bank, and 5 per cent with reserve or central reserve banks approved by the Federal reserve board, we would come nearer a practical solution of this problem. This same objection would apply to the banks in reserve cities, they being required, under the proposed act, to maintain eventually all of their bankable reserves with the Federal reserve bank in their district, leaving them no circulating fund with which to conduct their current exchange business. The above are some of the practical deficiencies in the current bill, and, in my judgment, might be corrected before it is enacted into law.

In connection with the provisions covering the extension of bank currency, there are many features in it that might be modified to advantage. There is no doubt that there are some features that will be found subject for modification at a later date, but I will not go into a lengthy discussion of this.

In regard to the question of providing for the protection of the current Government bonds, a majority of which are now security for circulation, I would say that as a matter of fact at the time these low per cent issues were circulated they were offered by the Government in good faith and the banks availed of them for circulation purposes and at a profit. It is unfortunate that conditions have developed which prove that the rate of interest at which they were issued was too low to preserve their par value without artificial means. The banks should have recognized this at the time and so should the Government. It was a two-sided proposition, but the banks practically took the chance, and to allow for any protection in the loss at this time would hardly seem reasonable. I think that the bill as it is prepared gives the banks now carrying circulation as much protection as could consistently be considered. It is no new thing for banks to invest in securities that shrink in value. It is not unusual for the securities of a stable government to shrink below par; in fact, the United States Government securities have more of a tendency to shrink below par, so far as bank circulation is concerned, in prosperous times than when the reverse is the condition. It has always been maintained that banks make proportionately more money out of circulation when money rates are low than when money rates are high. If the Government can consistently and for some better reason than to save the national banks from a loss incurred in a legitimate transaction refund the 2 per cent bonds by 3, permitting circulation against the new ones at an advanced tax rate, thus preserving their marketability without creating an opportunity for the banks to profit by the change, then perhaps it should be done.

I have not attempted in this letter to go into the situation in any very great detail; in fact, it would be merely injecting another series of ideas into an already very much afflicted question. I want to reiterate, however, that in my opinion fundamentally the bill is a good one. I feel that the suggestions I have made as to the representation on the Federal board and the permission of the banks to maintain a portion of their reserves with reserve and central reserve banks are practical

necessities formulated from the standpoint of an actual knowledge of the requirements. If there is any special question that you would like to discuss with me, I would give you the benefit of such ideas that I feel that I am justified in having. You must know that since I was 17 years old I have done nothing else but operate from the practical standpoint of banking, from bank messenger through every process of the game; in a Wall Street bank, New York commercial bank, and a national bank and trust company in Jersey City. I have traveled extensively all over the country and for three years did little else but visit and talk with country banks. I feel that I am to a certain extent qualified by this experience in judging of the necessities of the business. I have always tried to do so from a broader standpoint than a selfish one. If there should be any occasion for me to come on to Washington to confer with you or any of your colleagues, I would consider it my duty and privilege.

Sincerely, yours,

S. LUDLOW, Jr.

GREENVILLE BANKING & TRUST CO.,
Jersey City, N. J., July 28, 1913.

E. F. KINKEAD, Esq.,
House of Representatives, Washington, D. C.

MY DEAR SIR: I thank you for sending me under date of July 16 a copy of the proposed currency bill. The New Jersey Bankers' Association has a committee, composed of ex-Gov. Stokes, Mr. Van Deusen, and myself, on the subject of currency reform, and we are very carefully securing the views of bankers throughout the State. I will advise you of our suggestions in reference to the bill. Generally speaking, I view the bill very favorably, particularly with the suggestions for amendment that have already been approved by the House committee.

Very truly, yours,

EDW. S. PIERSON, President.

HUDSON COUNTY NATIONAL BANK,
Jersey City, N. J., July 19, 1913.

Hon. EUGENE F. KINKEAD,
House of Representatives, Washington.

DEAR SIR: The copy of bill H. R. 6454 which you kindly sent us has been duly received and shall have attention.

So far we see no very serious objectionable features in it; it is somewhat complex and there are some points of minor importance which we think might be improved, but you will not be able to draft a bill acceptable to everyone.

The delay in settling the question one way or another has been very detrimental to business interests, and the quicker you can arrive at a conclusion the better.

Yours, truly,

N. J. H. EDGE, Vice President.

CITY TRUST CO. OF NEWARK, N. J.,
Newark, N. J., July 19, 1913.

Hon. E. F. KINKEAD,
House of Representatives.

MY DEAR SIR: I am in receipt of yours of the 16th instant, addressed to Mr. Hannahs, containing copy of the proposed currency bill, for which I thank you.

Directors of our institution are very much interested in the matter of currency legislation and are heartily in accord with the views expressed by the currency commission of the American Bankers' Association, whose recommendations we should very much like to see embodied in the bill before its passage.

We trust that you may be able to further the adoption of such a bill and wish to enlist your efforts toward the accomplishment of such legislation.

Yours, very truly,

E. S. CARR, Secretary-Treasurer.

Mr. SLOAN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Nebraska [Mr. SLOAN] offers an amendment which the Clerk will report.

The Clerk read as follows:

Amend, page 26, line 7, after the word "than," by striking out the word "six" and inserting the word "four."

Mr. SLOAN. Mr. Chairman, I shall take advantage of the privilege that is given and shall insert as a part of my remarks the last paragraph found on page 25 and the first paragraph on page 26.

Mr. MANN. Of what?

Mr. SLOAN. Of this pending bill. They are as follows:

Upon the indorsement of any member bank any Federal reserve bank may discount the paper of the classes hereinbefore described having a maturity of more than 60 and not more than 120 days, when its own cash reserve exceeds 33 per cent of its total outstanding demand liabilities exclusive of its outstanding Federal reserve notes by an amount to be fixed by the Federal reserve board; but not more than 50 per cent of the total paper so discounted for any member bank shall have a maturity of more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount acceptances of such banks which are based on the exportation or importation of goods and which mature in not more than six months and bear the signature of at least one member bank in addition to that of the acceptor. The amount so discounted shall at no time exceed one-half the capital stock of the bank for which the rediscounts are made.

It will be noted from a reading of these two paragraphs that the first paragraph relates to such paper as may be indorsed by the member bank, based upon domestic business and used as a basis of banking, while the other relates to business to be transacted and acceptances to be purchased or sold, based upon importations and exportations.

And I am very much pleased to be able to follow the gentleman from New Jersey [Mr. KINKEAD], who in season and out of season has been pressing upon the people of this country the advisability of opening the ports of America to the meat and cattle of the world, so that he and his people in the wealthy part of New Jersey, of which he has just boasted, may discriminate in

favor of the Pedros and Joses of Argentina against the farmers of the interior of the United States.

Mr. KINKEAD of New Jersey. Surely the gentleman from Nebraska does not mean that.

Mr. SLOAN. I mean what I say.

Mr. KINKEAD of New Jersey. We are not giving any bounties to the Pedros and Joses of Argentina.

Mr. SLOAN. No one said you gave any bounty.

Mr. KINKEAD of New Jersey. But you said we discriminated in their favor.

Mr. SLOAN. Yes.

The CHAIRMAN. Gentlemen must address the Chair. Does the gentleman from Nebraska yield to the gentleman from New Jersey?

Mr. SLOAN. Not when he is talking in that way.

The CHAIRMAN. The gentleman declines to yield.

Mr. KINKEAD of New Jersey. Will the gentleman yield when I am talking in this way?

Mr. SLOAN. No; not until you enter another state of mind.

The CHAIRMAN. The gentleman declines to yield.

Mr. SLOAN. This is a special provision for the purpose of favoring the importer, giving the importer six months, while the utmost given to domestic shippers is four months. That is the discrimination that we find in the banking bill; and the discrimination which we find in the companion bill—the tariff legislation—is the opening of our ports to the entrance of the Argentine products, whether they be cattle, or meat, or grain.

Mr. KINKEAD of New Jersey. Will the gentleman permit an inquiry right there?

Mr. SLOAN. I have only five minutes.

Mr. KINKEAD of New Jersey. I will only take three seconds.

The CHAIRMAN. Does the gentleman yield?

Mr. SLOAN. Yes; for three seconds.

Mr. KINKEAD of New Jersey. Mr. Chairman, I want to ask the gentleman whether he thinks it is fair to the American people to have innumerable men in his own party write down to me and to other Members of this House—

Mr. SLOAN. Mr. Chairman, I note that five seconds have elapsed.

Mr. KINKEAD of New Jersey. That they were able to buy American beef at 50 per cent less in England than they are paying for it in this country? And does not the gentleman know that the measure that we are shortly to enact into law will give to the American people that which the Republican Party so often pledged but never fulfilled—a square deal?

Mr. SLOAN. Mr. Chairman, I am sorry the gentleman from New Jersey is so easily imposed upon. I heard him read a letter from across the water a short time ago—

Mr. KINKEAD of New Jersey. No; it was from a minister—Rev. John J. Lawrence, Binghamton, N. Y.—a member of the party to which the gentleman belongs.

Mr. SLOAN. I can not yield further.

The CHAIRMAN. The gentleman declines to yield.

Mr. SLOAN. A letter was read stating that American beef was sold cheaper in England than it is here in America. I challenge that statement, and if the gentleman will study the statistics of the last two or three years he will find that practically no beef is being shipped to England now from the United States.

Mr. RAGSDALE. Mr. Chairman, I rise to a point of order, that the discussion which the gentleman is carrying on does not relate to the pending amendment.

Mr. KINKEAD of New Jersey. Oh, let him go on.

Mr. RAGSDALE. They made that point on me this morning.

Mr. MANN. The time has expired anyway.

Mr. SLOAN. The Committee on Ways and Means said:

In our judgment the future growth of our great industries lies beyond the seas—

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. RAUCH. Mr. Chairman—

The CHAIRMAN. All time has expired. The question is on the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH].

The amendment was rejected.

The CHAIRMAN. The next amendment is that offered by the gentleman from North Dakota [Mr. NORTON].

The amendment was rejected.

The CHAIRMAN. The next amendment is that offered by the gentleman from Pennsylvania [Mr. KELLY].

The amendment was rejected.

The CHAIRMAN. The next amendment is that offered by the gentleman from Nebraska [Mr. SLOAN].

The amendment was rejected.

The Clerk read as follows:

OPEN-MARKET OPERATIONS.

Sec. 15. That any Federal reserve bank may, under rules and regulations prescribed by the Federal reserve board, purchase and sell in the open market, either from or to domestic or foreign banks, firms, corporations, or individuals, prime bankers' bills, and bills of exchange of the kinds and maturities by this act made eligible for rediscount, and cable transfers.

Every Federal reserve bank shall have power (a) to deal in gold coin and bullion both at home and abroad, to make loans thereon, and to contract for loans of gold coin or bullion, giving therefor, when necessary, acceptable security, including the hypothecation of United States bonds; (b) to invest in United States bonds, and bonds issued by any State, county, district, or municipality; (c) to purchase from member banks and to sell, with or without its indorsement, bills of exchange arising out of commercial transactions, as hereinbefore defined, payable in foreign countries; but such bills of exchange must have not exceeding 90 days to run and must bear the signature of two or more responsible parties, of which the last shall be that of a member bank; (d) to establish each week, or as much oftener as required, subject to review and determination of the Federal reserve board, a rate of discount to be charged by such bank for each class of paper, which shall be fixed with a view of accommodating the commerce of the country; and (e) with the consent of the Federal reserve board, to open and maintain banking accounts in foreign countries and establish agencies in such countries wheresoever it may deem best for the purpose of purchasing, selling, and collecting foreign bills of exchange, and to buy and sell with or without its indorsement, through such correspondents or agencies, prime foreign bills of exchange arising out of commercial transactions which have not exceeding 90 days to run and which bear the signature of two or more responsible parties.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

Mr. GLASS. I should like to inquire if there are any amendments to be offered to section 16.

Mr. MANN. Gentlemen were very generally informed that the committee would rise at the end of this section, so I do not know.

Mr. GLASS. Very well. I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7337) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. MORGAN of Louisiana, for 10 days, on account of important business.

To Mr. NEELEY, indefinitely, on account of having accepted an invitation some months ago to address the students at the opening of the Kansas State Agricultural College.

To Mr. KINKEAD of New Jersey, for three days, to accompany Secretary Daniels on his visit to the proposed naval fight in Jersey City, N. J.

ADJOURNMENT.

Mr. GLASS. I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 23 minutes p. m.) the House adjourned until Wednesday, September 17, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Glencove Creek, Long Island, N. Y. (H. Doc. No. 238); to the Committee on Rivers and Harbors and ordered to be printed.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of the channel of Little Pedee River at Williams Landing, S. C. (H. Doc. No. 239); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

3. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination and survey of Siskiwit River, Wis., on Lake Superior (H. Doc. No. 240); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

4. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Brule Harbor, Wis., with a view to its improvement for minor lake craft (H. Doc. No. 241); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. LEVER, from the Committee on Agriculture, to which was referred the resolutions (H. Res. 240 and H. Res. 245) directing the Secretary of Agriculture to communicate to the House of Representatives the cost and result of the investigation of the boll-weevil and hog-cholera plague, reported a substitute (H. Res. 254) for the same without amendment, accompanied by a report (No. 76), which said bill and report were referred to the House Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. ALLEN: A bill (H. R. 8187) to provide for the safety of employees and passengers upon railroad trains by requiring common carriers engaged in interstate commerce to operate cars constructed of steel, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. COPLEY: A bill (H. R. 8188) making an appropriation for the improvement of Fox River, Ill.; to the Committee on Rivers and Harbors.

By Mr. CLARK of Missouri (by request): A bill (H. R. 8189) to establish a flood-protection and drainage fund and to provide for the protection, drainage, and reclamation of the overflowed and swamp lands in the United States, in promotion of the general welfare, in prevention of the dissemination of malaria and other diseases among the several States, and to promote interstate commerce by navigation; to the Committee on Rivers and Harbors.

By Mr. FALCONER: A bill (H. R. 8190) to provide for the erection of a public building in the city of Port Angeles, in the State of Washington; to the Committee on Public Buildings and Grounds.

By Mr. POST: A bill (H. R. 8191) to amend an act entitled "An act to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late Civil War, the War with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late Civil War," approved April 19, 1908; to the Committee on Invalid Pensions.

By Mr. CANDLER of Mississippi: A bill (H. R. 8192) to prohibit interference with commerce among the States and Territories and with foreign nations, and to remove obstructions thereto, and to prohibit the transmission of certain messages by telegraph, telephone, cable, or other means of communication between States and Territories and foreign nations; to the Committee on Agriculture.

By Mr. LEVER: A bill (H. R. 8193) to provide for the collection, transcription, and publication of material relating to the educational history of the United States; to the Committee on Education.

Also, a bill (H. R. 8194) for the relief of employees of the Forest Service injured in fire fighting or other hazardous work; to the Committee on Agriculture.

By Mr. JOHNSON of Kentucky: A bill (H. R. 8195) to dispose of unclaimed bank deposits in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 8196) granting a pension to Nannie A. Hill; to the Committee on Invalid Pensions.

By Mr. BARTLETT: A bill (H. R. 8197) granting an increase of pension to John S. Lewis; to the Committee on Pensions.

By Mr. BOWDLE: A bill (H. R. 8198) for the relief of Loren W. Greeno; to the Committee on Naval Affairs.

By Mr. COOPER: A bill (H. R. 8199) granting a pension to James P. Johnson; to the Committee on Pensions.

Also, a bill (H. R. 8200) granting a pension to Mary Gannon; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8201) granting an increase of pension to John M. Brown; to the Committee on Invalid Pensions.

By Mr. COPLEY: A bill (H. R. 8202) granting an increase of pension to Edgar H. Sampson; to the Committee on Invalid Pensions.

By Mr. CULLOP: A bill (H. R. 8203) to reimburse J. T. Nance; to the Committee on Claims.

By Mr. DRISCOLL: A bill (H. R. 8204) granting an increase of pension to Jeremiah Van Riper; to the Committee on Invalid Pensions.

By Mr. GERRY: A bill (H. R. 8205) granting a pension to Benjamin A. Dennis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8206) granting an increase of pension to Margaret Quinn; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8207) granting an increase of pension to Adelaide H. Baker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8208) granting an increase of pension to Catherine Loud; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 8209) granting an increase of pension to John Preston; to the Committee on Invalid Pensions.

By Mr. LEVER: A bill (H. R. 8210) granting a pension to Jesse H. Hutto; to the Committee on Pensions.

Also, a bill (H. R. 8211) granting a pension to John B. McCravy; to the Committee on Pensions.

By Mr. LAFFERTY: A bill (H. R. 8212) granting a pension to Susan S. Benson; to the Committee on Invalid Pensions.

By Mr. LEVER: A bill (H. R. 8213) granting a pension to Woodbine L. McLane; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8214) granting a pension to H. P. Kohn; to the Committee on Pensions.

Also, a bill (H. R. 8215) granting a pension to Stanmore Y. Morris; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8216) granting a pension to James V. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8217) granting a pension to Wade H. Wilson; to the Committee on Pensions.

Also, a bill (H. R. 8218) granting a pension to Albert M. Thomas; to the Committee on Pensions.

Also, a bill (H. R. 8219) granting a pension to Margaret Hertel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8220) granting a pension to David T. Kirby; to the Committee on Pensions.

Also, a bill (H. R. 8221) granting a pension to Thomas H. Rawl; to the Committee on Pensions.

Also, a bill (H. R. 8222) granting a pension to Hamilton Shuler; to the Committee on Pensions.

Also, a bill (H. R. 8223) granting a pension to Charles G. Sontag; to the Committee on Pensions.

Also, a bill (H. R. 8224) granting a pension to John N. Long; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8225) granting a pension to William Preston Raines; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8226) granting a pension to Wade H. Rucker; to the Committee on Pensions.

Also, a bill (H. R. 8227) granting an increase of pension to Simon P. Weed; to the Committee on Pensions.

Also, a bill (H. R. 8228) for the relief of Samuel S. Gardner; to the Committee on Military Affairs.

Also, a bill (H. R. 8229) for the relief of Polly Hayes; to the Committee on War Claims.

Also, a bill (H. R. 8230) for the relief of F. F. Felder; to the Committee on War Claims.

Also, a bill (H. R. 8231) for the relief of Powell S. Boatwright; to the Committee on War Claims.

Also, a bill (H. R. 8232) for the relief of E. P. Gibson; to the Committee on War Claims.

Also, a bill (H. R. 8233) for the relief of George W. Newman, guardian of Joseph W. Newman; to the Committee on War Claims.

Also, a bill (H. R. 8234) for the relief of Lieut. (Junior Grade) Hamilton F. Glover, United States Navy; to the Committee on Naval Affairs.

Also, a bill (H. R. 8235) for the relief of the estate of Joseph Funderburk, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8236) for the relief of the University of South Carolina; to the Committee on War Claims.

Also, a bill (H. R. 8237) for the relief of St. Stephen's Church; to the Committee on War Claims.

Also, a bill (H. R. 8238) for the relief of heirs of Michael H. Brennen; to the Committee on War Claims.

Also, a bill (H. R. 8239) for the relief of the heirs of Nathaniel Kleckley, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8240) for the relief of the heirs of A. J. Geiger, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8241) for the relief of the heirs of Louisa Hook, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8242) for the relief of the heirs of John Harman, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8243) for the relief of the heirs of Jesse Bouknight, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8244) for the relief of the heirs of Joshua Kyser, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8245) for the relief of the heirs of Daniel Drafts, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8246) for the relief of the heirs of John W. Brown, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8247) for the relief of the heirs of Miles Busbee; to the Committee on War Claims.

Also, a bill (H. R. 8248) for the relief of Mary E. Stelling, sole heir at law of A. S. Frietas, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8249) for the relief of the heirs of Erasmus Harsey, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8250) for the relief of the heirs of Adolphus Feininger; to the Committee on War Claims.

Also, a bill (H. R. 8251) for the relief of the heirs of Harriet Holman, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8252) for the relief of the legal representatives of Naloti Biraghi; to the Committee on War Claims.

Also, a bill (H. R. 8253) for the relief of the legal representatives of Mary S. Brennan, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8254) for the relief of the trustees of the German Lutheran Church of Orangeburg, S. C.; to the Committee on War Claims.

Also, a bill (H. R. 8255) to provide for the erection of a monument to Maj. Gen. Thomas Sumter; to the Committee on the Library.

Also, a bill (H. R. 8256) authorizing the President to nominate and, by and with the advice and consent of the Senate, appoint E. F. Slater, a first lieutenant in the Medical Reserve Corps of the United States Army, a captain in the Medical Corps on the retired list, and increasing the retired list by one for the purposes of this act; to the Committee on Military Affairs.

By Mr. POST: A bill (H. R. 8257) granting a pension to Caroline Tingley; to the Committee on Invalid Pensions.

By Mr. TEMPLE: A bill (H. R. 8258) for the relief of Patrick H. McGee; to the Committee on Military Affairs.

By Mr. WINGO: A bill (H. R. 8259) to correct the military record of James M. Smith; to the Committee on Military Affairs.

By Mr. KENNEDY of Connecticut: A bill (H. R. 8260) granting an increase of pension to Charles F. Hubbell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8261) granting an increase of pension to Fannie Czamanski; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8262) granting an increase of pension to Catharine Dillane; to the Committee on Invalid Pensions.

By Mr. SINNOTT: A bill (H. R. 8263) granting a pension to William C. Hathaway; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BELL of California: Petition of the Board of Trade of Pasadena, Cal., favoring immediate construction of four battleships and the formation of a naval reserve; to the Committee on Naval Affairs.

By Mr. CURRY: Petition of the San Mateo County (Cal.) Development Association, favoring the passage of legislation for the formation of a naval reserve; to the Committee on Naval Affairs.

Also, petition of the San Mateo County (Cal.) Development Association, favoring the passage of legislation for the construction of four new battleships and necessary auxiliary boats; to the Committee on Naval Affairs.

By Mr. ESCH: Papers in support of House bill 2641, granting a pension to Elmer E. Palmer; to the Committee on Invalid Pensions.

Also, papers in support of House bill 2640, granting a pension to Rachel Hawkins; to the Committee on Invalid Pensions.

Also, papers in support of House bill 2644, granting an increase of pension to Lucien A. McWithey; to the Committee on Invalid Pensions.

Also, papers in support of House bill 2643, granting an increase of pension to Louis K. Turner; to the Committee on Pensions.

Also, papers in support of House bill 2638, granting a pension to Elizabeth Thurston; to the Committee on Invalid Pensions.

Also, papers in support of House bill 2639, granting a pension to Marcia J. Dewey; to the committee on Pensions.

By Mr. LAFFERTY: Petition of the Portland Chamber of Commerce, Portland, Oreg., favoring the passage of legislation for the formation of a naval reserve; to the Committee on Naval Affairs.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, September 17, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Our Father in heaven, keep us in all our intercourse with our fellow men in touch with Thee lest we forget the admonition, "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured unto you," and help us to put into our daily life that other injunction, "All things whatsoever ye would that men should do to you, do ye even so to them, for this is the law and the prophets." Thus may we hallow Thy name, in the spirit of the Lord Jesus Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

THE MODERN WOMAN.

Mr. GEORGE. Mr. Speaker, I ask unanimous consent to print in the RECORD an article by Helen Keller, entitled "The modern woman."

The SPEAKER. The gentleman from New York asks unanimous consent to print in the RECORD an article by Helen Keller. Is there objection?

There was no objection.

CALENDAR WEDNESDAY.

Mr. GLASS. Mr. Speaker, I move to dispense with the proceedings under Calendar Wednesday for to-day.

The SPEAKER. The gentleman from Virginia moves to dispense with proceedings under Calendar Wednesday for to-day.

The question was taken; and two-thirds having voted in favor thereof, the motion was agreed to.

THE CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, the currency bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the currency bill, with Mr. GARNER in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LANGLEY. Mr. Chairman, I ask unanimous consent to address the committee for 10 minutes.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to address the committee for 10 minutes. Is there objection?

There was no objection.

Mr. LANGLEY. Mr. Chairman, on last Monday during the consideration of this bill the gentleman from Connecticut [Mr. DONOVAN] made certain references to Members of this House that I do not think should be permitted to pass unnoticed. I would have replied at the time, but owing to the confusion in the Chamber I did not fully grasp the meaning of what the gentleman said. I would have brought the matter up yesterday, but the gentleman from Virginia [Mr. GLASS] in charge of the bill, who has been so courteous to us all, was anxious to hurry along its consideration, and I refrained.

Mr. Chairman, although the gentleman from Connecticut has been here but a short time, he undertook to lecture the Members of this House and to charge them with dereliction of duty. He not only criticized individual Members, but he attacked whole State delegations in the broad sweep of his arraignment. He denounced the New York delegation because of their absence on that day, when he should have remembered that they were absent by order of the House to pay the last tribute of respect to their dead colleague, who was loved and honored in his district as few men have been. But the New York delegation can take care of itself.

He denounced the Kentucky delegation also for being absent. That delegation was not all on the floor at the moment, it is true; but I think every one was here in the city attending to his duties and ready to vote when needed except the gentleman from the seventh district, Mr. CANTRELL, who was by the bedside of his sick wife, where every Kentuckian and every other fair-minded human being will concede it was his sacred duty to be.

I beg to say to the gentleman that even excluding the two Republican Members of that State from consideration, he would have had to commence work in this House at a time "whereof the memory of man runneth not to the contrary," and would have to work until the sea gives up its dead and the heavens roll together as a scroll, before he could approach the record which has been made by the present Democratic membership from Kentucky in the matters of devotion to the public interests and the faithful performance of their duty as they have seen it. [Applause.]

The gentleman made the statement that I had not been here for several months until within the last few days. The statement was so unjust to me that I hastily replied that it was not true and that the gentleman knew that it was not true. I have served in this body for a good many years now, and I have always tried to observe the rules, to do no one injustice, and to treat every Member with courtesy and kindness. If a single one of you bears me any ill will, you have carefully concealed it from me. I honor the dignity and high character of the membership of this great body, and I want to ask you to pardon me for having made an unparliamentary statement in your presence, even though the provocation may have excused it. I reiterate the assertion that the gentleman's statement about my absence was not true, as I have been here most of the time during that period and have been working for my people practically every day; but I want to withdraw the statement that he knew that it was not true. I shall charitably assume that he did not know it. And perhaps we ought not to be too harsh with him for the other things he said. He has not been here long enough to learn the amenities that are observed between gentlemen in public life; and especially ought we to be a little lenient with him, since he is to be a one-term Congressman, for I am told that the people of his district already regret their action last fall and have resolved to do better next time. [Laughter.]

If the gentleman thinks that he has succeeded in embarrassing me in the slightest by what he said about my absence, he is very much mistaken. I am answerable to my constituents. They know what I am doing for them, and they know where I was during the time that I was away from Washington. The gentleman has not been here long enough to know—and he will not be here long enough to learn—that an efficient Congressman has a great deal to do besides sitting around here in this Hall, and loitering in the cloak rooms waiting to go on record, pestering his fellow Members and blindly answering roll calls. I have missed a number of roll calls, even while here in Washington, on matters that were not important to my district, because I was looking after matters in committees or in the departments that were important to it. And while I was down in Kentucky recently I spent many days in helping old soldiers prepare their cases for action and in looking after many other official matters. Indeed, I had a branch congressional office and bureau of official information down there, and much of the time was spent in telling my Republican friends about how soon I thought the ax of the Democratic headsman would fall and in telling my Democratic friends, in answer to their earnest inquiries, how to work the present administration for a job, notwithstanding the civil-service law. [Laughter.] I had sense enough to know that I would not be allowed to have anything to do with framing the tariff and currency bills, and I was putting in my time in other ways that were useful to my people. I can truthfully say that I have not had 15 days of actual vacation this year.

The gentleman said, in effect, although the remarks do not appear in the RECORD in that way, that Members have been guilty of petit larceny in drawing their salaries for services when they were not here.

Carrying his contention to its logical conclusion, the gentleman convicts himself, not of petit larceny, but of grand larceny every time he draws his salary. I am told that in his campaign last fall he charged his opponent with favoring too low a rate of duty on certain Connecticut products, and that he won his election that way; and yet he voted for the Underwood bill, which made the duty still lower.

They tell me also that the gentleman from Connecticut—

Mr. THOMAS rose.

The CHAIRMAN. Does the gentleman from Kentucky yield to his colleague?

Mr. LANGLEY. No, Mr. Chairman; I can not yield. If the gentleman were able to give me any more time I would be very glad to yield. They tell me that the gentleman from Connecticut [Mr. DONOVAN] came down here under the specific pledge that he would see that Danbury hats were properly provided for in the tariff bill. He has not accomplished that, and if my information is correct it strikes me that the conclusion is unavoidable.

able that he is holding his present job under false pretenses and is not, therefore, equitably entitled to any salary at all.

Mr. Chairman, although it does not so appear in the RECORD, the gentleman from Connecticut said, in effect, that if anyone drew his salary while he was not here it was practically equivalent to stealing.

The records of this House show that the gentleman from Connecticut [Mr. DONOVAN] was himself absent on 10 roll calls during this session, surprising as it may seem in view of his statements the other day, this being nearly one-third of the roll calls during this extra session of Congress. [Applause and laughter.] If the gentleman is correct in his contention, the gist of his complaint seems to be, employing his own characterization of the alleged offense, that some other Member has been able to manage it so as to steal just a little bit more than he has.

Some gentlemen have suggested that we ought to apply his argument to his own case and pass a resolution directing a deduction from his salary of the amount paid him for the time that the RECORD shows that he was absent. But, Mr. Speaker, I do not want to see that done. Let him draw his full salary, especially since he is to draw it for such a short time. I think, however, that as a matter of retributive justice the people of the fourth Connecticut district ought to do penance for their mistake by reimbursing the Treasury of the United States. In conclusion, let me commend to the venerable but ill-advised gentleman from Connecticut that beautiful gem of the philosophy of human life embodied in the Savior's Sermon on the Mount:

Cast out first the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye.

[Applause.]

In other words, gentlemen who abide in glass houses should keep their gravels in their pockets. [Applause and laughter.]

Mr. GOULDEN. Mr. Chairman, in behalf of the delegation from the State of New York I ask unanimous consent to proceed for three minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for three minutes. Is there objection? There was no objection.

Mr. GOULDEN. Mr. Chairman, I would not do so if the gentleman from Connecticut [Mr. DONOVAN] had not attacked the Members from the State of New York and the gentleman from Kentucky had not alluded to it. By an order of the House, House resolution 253, passed on Saturday last, 18 of the Representatives from the State of New York were detailed to attend the funeral services of our late lamented colleague, TIMOTHY D. SULLIVAN. The gentleman from Connecticut [Mr. DONOVAN] should have known that fact before, as I think, inadvertently and unintentionally he made his very badly timed attack upon the Representatives from the State of New York. Personally I am willing to put my record of eight years' service in this House against his record after he has served for that period of time, which I hope he may do, and then I shall compare roll calls and the record of attendance for those eight years. I desire to quote his own statement from the RECORD, appearing on page 4939 of the RECORD of September 15, 1913:

Take a great State like the State of New York, with scarcely any of its Members present, and other great States, and there is a very small percentage of them present.

It is well known to myself and to many others that there were at least 10 of the New York Members present on the floor when this charge was made. And there were 12 or more present at the funeral ceremonies of T. D. SULLIVAN, of New York. Now, others were in the city, but not present, at the time being engaged in official business elsewhere. I desire simply to make this statement, so that the public press, which has quoted this matter, the gentleman from Connecticut, and other Members of the House may know that the New York Members attend to their duties as faithfully, as zealously, and as well as Members of any other State in this Union, and we are accountable to our own people and not to the gentleman from Connecticut. [Applause.]

Mr. MURDOCK. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MURDOCK. How far had the Clerk read?

The CHAIRMAN. The Clerk had finished reading paragraph 15.

Mr. MURDOCK. That brings us down to line 11, page 28.

The CHAIRMAN. Yes.

Mr. DONOVAN. Mr. Chairman, I presume the proper motion to make is to ask unanimous consent for time.

The CHAIRMAN. The gentleman can ask unanimous consent for time.

Mr. DONOVAN. Then I ask that I may be allowed seven or eight minutes.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent that he may address the committee for eight minutes.

Mr. DONOVAN. Five minutes then.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. DONOVAN. Mr. Chairman, no single statement that I made the other day was lacking in truth. Technically there may be a day or two out of the way. The gentleman from Kentucky [Mr. LANGLEY] left this Chamber some time during May and he returned a few days ago, practically absent four months.

Mr. LANGLEY. Will the gentleman yield?

Mr. DONOVAN. The gentleman from Kentucky was practically away four months. Now, in the meantime there have been three or four bills—

Mr. LANGLEY. I only want the facts shown. I have nothing to conceal. The gentleman is mistaken. I have been here time and again—

The CHAIRMAN. Does the gentleman from Connecticut yield to the gentleman from Kentucky?

Mr. LANGLEY. I merely wanted to say again that the gentleman is entirely wrong, and I can easily show it if—

Mr. DONOVAN. Not at this moment.

The CHAIRMAN. The gentleman declines to yield.

Mr. DONOVAN. And during that time I believe there were four bills put in that basket for pensions or relief of old soldiers. That is the result of four months' work. Now, a word in regard to the New York situation. In that case it was a most aggravated one. We had been here without a quorum day after day, and during those days it was noticeable that the Members from New York were absent.

Mr. GOLDFOGLE. Mr. Chairman—

Mr. DONOVAN. We have had a few, but the percentage was very great.

The CHAIRMAN. Does the gentleman yield to the gentleman from New York?

Mr. DONOVAN. Not at this time; in a moment.

The CHAIRMAN. The gentleman declines to yield.

Mr. DONOVAN. Now, I am speaking of one particular section of New York running from the river to the extreme end of Long Island, and most of the time every one of those Members have been absent. There has been now and then one here who marches up one aisle and down the other and shows himself in the course of half an hour, and who is not seen again until pay day. [Laughter and applause.] Now, the number of Members from that particular section is 11, greater than the average number from the States of the whole Union. They do not average that. Of course the gentleman from New York, Mr. GOLDFOGLE, he is here—now and then. [Laughter and applause.] The gentleman from New York—I forget his name for a moment—Mr. GOULDEN I think it is—

Mr. GOULDEN. The gentleman has it.

Mr. DONOVAN. If he was an honorable man, as I always thought he was—he was in New York for a couple of months running for office, running for a nomination, and now he is nominated and holds on to the position with a salary, and if he was an honorable man he would resign one place or the other.

Mr. GOLDFOGLE. Mr. Chairman, I rise to a question of order.

The CHAIRMAN. The gentleman from New York [Mr. GOLDFOGLE] rises to a question of order.

Mr. GOLDFOGLE. Mr. Chairman, I rise to a point of order. The gentleman is violating the rules by indulging in personalities. When he had reference to my colleague [Mr. GOULDEN] he violated the express rule of this House by indulging in personalities and attacking a Member on the floor.

The CHAIRMAN. The point of order is sustained. The gentleman from Connecticut [Mr. DONOVAN] will take his seat until the committee gives him unanimous consent to proceed.

Mr. CLARK of Florida. Mr. Chairman, I ask unanimous consent that the gentleman from Connecticut [Mr. DONOVAN] may be allowed to proceed in order.

Mr. GOLDFOGLE. Mr. Chairman, I join in the request.

The CHAIRMAN. The gentleman from Florida [Mr. CLARK] asks unanimous consent that the gentleman from Connecticut [Mr. DONOVAN] may be permitted to proceed in order. Is there objection? [After a pause.] The Chair hears none. The gentleman from Connecticut [Mr. DONOVAN] is recognized.

Mr. DONOVAN. Mr. Chairman, it is a pity that some of the distinguished gentlemen who have risen on the floor did not refer to the portion of the charge the other day, and that was the portion relating to the able men of our body being absent and allowing the management of the business to new Members, or inexperienced ones. Outside of a few the rest of us were

inexperienced. Here was a currency bill before us for action, and they were away at home. Mr. Chairman, am I out of order now? [Laughter.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. DONOVAN. Mr. Chairman, I ask unanimous consent for three minutes more.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent that he may proceed for three minutes. Is there objection?

Mr. WILSON of Florida. Mr. Chairman, we must go on with the currency bill. I must object.

The CHAIRMAN. The gentleman from Florida objects.

Mr. THOMAS. Mr. Chairman—

Mr. GLASS. Mr. Chairman, I want to proceed with this bill. I hope there will be no further miscellaneous discussions.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent for two minutes.

Mr. GLASS. I give notice now that from now on I am going to object.

The CHAIRMAN. The gentleman from Kentucky [Mr. THOMAS] asks unanimous consent to proceed for two minutes. Is there objection? [After a pause.] The Chair hears none. The gentleman from Kentucky [Mr. THOMAS] is recognized.

Mr. THOMAS. Mr. Chairman, it seems to me that the gentleman from Connecticut [Mr. DONOVAN] has been animadverting against the delegation from Kentucky, accusing them of absenteeism. Well, he did not mean me, because I have been here nearly all the time, and I do not think that I have missed but one or two roll calls during this session of Congress.

Mr. DONOVAN. Mr. Chairman, now just a word. I can say that, as the gentleman has stated it, he has misstated it. He ought to have read the Record before making the statement.

Mr. THOMAS. I did; and that is what I say, though you may not have meant Kentucky.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] is recognized.

Mr. GOLDFOGLE. Mr. Chairman—

Mr. GLASS. Mr. Chairman, I shall positively object to any further interruptions. I ask to proceed with the consideration of this bill.

Mr. GOLDFOGLE. Mr. Chairman—

Mr. LINDBERGH. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Chair will state the unanimous consent first. The request is made for unanimous consent that all debate on section 15 and amendments thereto be concluded.

Mr. GLASS. Mr. Chairman, I ask unanimous consent—

Mr. MURDOCK. Mr. Chairman, I want five minutes and the gentleman from Minnesota [Mr. LINDBERGH] wants five minutes.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that all debate on this section and amendments thereto conclude in 15 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent that all debate on this section and amendments thereto be closed in 15 minutes. Is there objection?

Mr. GOLDFOGLE. Mr. Chairman, reserving the right to object, I would like to ask the gentleman from Virginia [Mr. GLASS], who, I am sure, wishes to dispose of this bill in the shortest possible time, and I join with him in that, whether he will give his consent that I may have five minutes on the floor. I do not wish to speak for myself. There is no necessity for asking that, but I do wish to speak for the New York delegation, and as I am the senior member on the floor at the present time I deem it my duty to the New York delegation to reply to the gentleman from Connecticut.

Mr. MANN. No; you are a junior by 20 years.

Mr. PAYNE. Mr. Chairman, while I appreciate the courtesy of my colleague [Mr. GOLDFOGLE], I do not want the gentleman to appear for me, although I am a member of the New York delegation. I think the reference that has been made to them by the gentleman from Connecticut [Mr. DONOVAN] would not injure them.

Mr. GOLDFOGLE. My colleague is right. I did not observe him on the floor. [Laughter.]

The CHAIRMAN. Is there objection?

Mr. DONOVAN. I reserve the right to object, Mr. Chairman, unless I can have five minutes in which to reply.

Mr. BORLAND. Mr. Chairman, I call for the regular order.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none. The gentleman from Minnesota [Mr. LINDBERGH] offers an amendment which the Clerk will report.

The Clerk read as follows:

Amend, page 28, line 1, after the word "country," by striking out the semicolon and inserting in lieu thereof a period, and striking out all in said line following said period and all of lines 2 to 10, inclusive.

Mr. LINDBERGH. Mr. Chairman, the part of the section which my amendment proposes to strike out is that authorizing the Federal reserve banks to establish agencies in foreign countries. There is in this bill a section which authorizes the establishment by our national banks of branch banks in foreign countries, and I believe under that section it is possible and probable, and reasonable, in fact, that the banks so authorized to be organized can attend to all the business that would be required to be performed in connection with our foreign commerce.

The Federal reserve banks will have in their vaults the deposits of the Treasury of the United States. They will be the fiscal agents of the United States. I do not believe that the money belonging to the people of the United States should be diverted from this country and used for speculation or for the buying of paper in foreign countries. I think that should be left entirely to the branch banks that are authorized under another section of this bill to be established by our national banks.

I am not in favor of the Government guaranty of bank deposits, nor in favor of giving the banks the money in the Treasury.

After the 1907 panic there were many people who advocated the guaranty of bank deposits as a remedy for panics. The guaranty of bank deposits would have little, if any, relation to the cost of living and would not affect any of the fundamental relations of the people with each other.

I should have grave fears as to the ultimate success of a guaranty of bank deposits. In the first place, unless there should be some provision prohibiting certain kinds of speculation, or unless human nature should change, even the guaranty of bank deposits would not prevent panics, but would simply defer the day by postponing the hour of fear; for by the very nature of things, when a bull market starts the boom or speculative excitement continues until it reaches a point when economically a breakdown is inevitable.

There is, in so far as the legitimate industrial pursuits of the country are concerned, both a theoretical and a practical possibility of a self-sustained credit system, based upon monetary foundation for the exchanges, but when you inject into that the complications arising out of speculative gambling the more you reinforce the system of credit and give an unguarded confidence in it the greater the opportunity the gambling speculators have to fleece the public by keeping up a bull market.

Confidence, when based upon solid economic conditions, is of great value, but I wish to emphasize the necessity for the people to be suspicious enough to carefully scrutinize the Wall Street manipulations. Just as long as we leave that Wall Street gambling contingent, with its allied banks in the large cities, in a position that enables it to throw its influence into the markets we are going to have our occasional panic troubles, the Glass bill notwithstanding.

It is probable that if the Government had guaranteed all of the deposits in October, 1907, and continued that guaranty the panic would not have occurred in that month; but it had to come sooner or later, because the rottenness that caused it would not have been eradicated. Speculative parasites had oversubscribed the credit and crowded out legitimate industry by overbidding it for the use of the money and credits of the country. If our credit had been still more expansive and if the people, in addition to what they had on deposit, had deposited a considerable part of the \$1,666,000,000 which they then held outside of the banks, industry could have thrived a while longer, but the growth of the speculative parasites would eventually have monopolized the credit. Yes; the speculators would have pushed the bull game and pushed up the prices until such times as even a Government guaranty could not hold back a panic; and when it did come it would be greater in its severity in proportion to the amount to which the market was overbullied, and the fact that the Government was responsible for the guaranty amount might ultimately destroy the credit of the Government.

We must not forget that our confidence is the stock in trade and capital of the professional gambling bulls, and that we must not have too much of it; nor should we forget that distrust is the stock in trade and capital of the professional gambling bears, and that these two sets of speculators are watching the plain people with the keenest eyes. They rob the people on both the rising and falling markets. The bulls catch the public when prices go up by selling to the public, and the bears then force the price down. This is done to make the public pay the higher prices and sell at the lower prices. A satisfactory remedy for panics can not be gained by creating confidence unless we can eliminate the professional speculators. In other words, we need confidence in legitimate enterprise and distrust in predatory speculation. The plain people must not repose confidence in the speculator class of people and thereby permit them to work the confidence game on us to our own ruin. The more confi-

dence we have in our present system the more we shall lose in the end.

I have another reason for doubting the advisability of guaranty of bank deposits. Under the present loose system of examining banks the doors are left open for easy trickery, which makes it possible for sharpers to rob the people. Let me illustrate: Under our present system it is possible for 10 men to combine and start a national bank with 50 per cent of the capital required and to immediately borrow from the deposits that they secure enough to recoup their 50 per cent capital and, in addition, enough to fully pay their stock, so as to leave no capital in the bank except their promissory notes; and, what is more, they are free to repeat that operation by starting a hundred banks in as many different towns and not invest an actual dollar. But even that is not all. The loose way in which banks are examined makes it possible for them to put into the banks the notes of irresponsible parties, which notes might eat up the deposits as rapidly as they are received. No one can prevent this condition except the bank examiners. I have seen an examiner enter a bank in the morning and finish his examination the same day. During that time he had covered a business of several hundred thousands of dollars without learning the value of any of the bills receivable. I have seen this happen again and again in various banks. Bankers are men of integrity and responsibility. Otherwise they could easily have done all that I have described as possible, and some of them do carry on a note-kiting system, as we all know.

From what I have said it may easily be seen that a few schemers could abuse the privilege the system gives them. In fact, some of them could so arrange it that their representatives could have large deposits evidenced upon the books of the bank in their control and never have deposited any money, but merely covered the deposits by the class of notes before referred to. These deposits, under a guaranty system, would be protected unless the fraud could be established. That can not often be proven, regardless of the fact that it exists.

If there is to be a guaranty of bank deposits, the guaranty of the deposits of any one person in any one bank should be limited. Under no condition should we favor a guaranty of deposits of the hundreds of thousands and millions of dollars that are owned by single individuals.

But even the guaranty of the smaller deposits would have its dangers, for those with large deposits, if they became frightened, might make a run for the excess and defeat the very object of the law. Such a law, again, would, from the standpoint of securing deposits, put the careful, conservative, able, and honest banker on the same footing with the careless, indifferent, or even dishonest banker. Depositors would also be careless under such a system.

These, I believe, are sufficient reasons to show that it is unwise for the Government to guarantee bank deposits.

Let us suppose, for instance, that in October, 1907, instead of a lack of confidence in the bankers the people should have had so much confidence in them that they had deposited in the banks and with the trust companies the most of the \$1,666,000,000 that was then in general circulation outside of the banks. What would have happened? The banks would have made loans to anybody from whom they thought they had a fair chance of getting it back. We would have seen such a boom and inflation as have never been known in the history of the world. That might have continued for two, three, or four years. What do you suppose the gambling contingency would be doing during that time? Everybody knows. Will somebody answer where a guaranty of bank deposits would have landed us under such conditions when the crash actually did come?

The people require a system that will make their capital available, in order that they may develop the natural physical resources of the country. Everybody desires to encourage enterprise. I have noticed that when there is active enterprise there is also a tendency to bull the markets, and the mark is constantly being overshot, because the country is honeycombed with speculators possessing the gambling instinct. Setbacks are the economic penalty and there is not the least possibility, even with a guaranty of bank deposits, of averting them under our present plan of finances. The Glass bill is not panic proof. A guaranty of bank deposits would only serve to promote a temporary confidence which would be more completely shattered when it was found that that confidence would be seized upon by speculators to further their selfish interests.

Mr. BORLAND and Mr. MURDOCK rose.

The CHAIRMAN. The gentleman from Kansas [Mr. MURDOCK] will be recognized.

Mr. MURDOCK. Mr. Chairman, we have now reached that part of the bill where we are to deal with the change in a considerable portion of the Nation's money. We have concluded

that part of the bill that has to do with the organization of the new banking system.

During the panic of 1907 I called at the Treasury Department and asked an expert to show me the difference, in kindergarten fashion, in the various money issues of this country. While he was putting me through my lesson he held up a national bank note and a greenback. He asked me if I knew the difference between the banking functions of the two issues, and I told him that I did not, and he said there was a very vital difference; that a national bank note was not reserve money, and that a greenback was.

I never believed that the national bank note was a wholly equitable money. I believe that if Congress 50 years ago could have understood just exactly what part the bank note was to play, it would not have provided for its issue in the form it bears. I believe that one of the most serviceable things that could have been done for this country in the last 50 years would have been to have swung over the Speaker's table, there, this legend: "The issue of bank notes is profitable to the banks, as it means the payment of their indebtedness by the issue of promissory notes bearing no interest, instead of by paying out lawful money and contracting their powers to grant credit."

Mr. KORBLY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Kansas yield to the gentleman from Indiana?

Mr. MURDOCK. I regret I can not yield now. The gentleman can answer me in his own time.

The CHAIRMAN. The gentleman from Kansas declines to yield.

Mr. MURDOCK. Now, under the system of bank-note issues in which bank notes are kept out in circulation, the banks of this country have been prosperous above most other businesses. I picked up recently the market quotations of the prices of New York bank stocks, and I found that the quoted price of the Chemical National Bank stock was \$650; that of the Hanover National Bank, \$645; and that of the First National, \$975; and while these are the highest quotations among the New York national banks, still the quoted prices of the stocks of the other New York banks are high. The banks have been prosperous hitherto.

Now, we are going shortly to make a change in the system. It is a momentous change. There is nothing that Congress has done in the last 50 years, probably, that surpasses, in public interest, that change. I hope it will be for the better.

Now, what have we here? We have been three days in Committee of the Whole debating this bill. Members have offered amendment after amendment.

Beyond doubt some of them have been meritorious. Every time an amendment has been offered, save those offered by the gentleman from Virginia and those with him on the committee, it has been voted down. Each in its turn has gone up against the stone wall of the caucus pledge. Now, why continue the farce? The President urges immediate action. He wants expedition. The Senate is waiting. It has nothing now to engage it. The country does not believe in this sort of procedure. The country would like this Committee of the Whole to give this bill actual consideration, so that amendments could be offered in good faith and voted upon in good faith, and if meritorious, adopted; and if not meritorious in the opinion of Members, then voted down. The country does not believe in the doctrine that the three coordinate branches of this Government consist of the executive, the judiciary, and the Democratic caucus. The people want this House to consider this measure in the open. If you are not going to open up this currency bill for actual consideration, if legislation is to be confined to the caucus, if the word of the caucus is to be final, then why go along with this farce? Why not stop here, expedite your bill, get it out of the way, get it over to the Senate, and put it through?

Now, Mr. Chairman, in view of the methods of legislation here, I ask unanimous consent to suspend the further reading of this bill, that the committee rise and report it to the House with the recommendation that it do pass.

A MEMBER. I second that motion.

Mr. KITCHIN. We are all with the gentleman on that over here.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent that the further reading of the bill be suspended and that the committee recommend its passage.

Mr. MURRAY of Oklahoma. Reserving the right to object—

Mr. MANN. I object.

Mr. MONDELL. I object, too.

The CHAIRMAN. Objection is made.

Mr. PHELAN. Mr. Chairman, I just want to say a word in response to the gentleman from Minnesota [Mr. LINDBERGH] as to the reason why the Federal reserve banks are given the right to establish foreign branches. The gentleman should keep in mind all the time the fact that this bill is not framed primarily for the purpose of aiding the banks, but primarily for the purpose of helping business, commerce, and agriculture in this country. If the gentleman will bear that fact in mind, he will see more clearly why that provision was put in the bill. We want to develop our foreign trade. Up to the present time there has been no American bank in any foreign country. In addition to giving national banks having a capitalization of \$1,000,000 the right to establish banks abroad, we have also given the Federal reserve banks the right to establish themselves abroad in order to develop American trade. It may be that the national banks will take care of that trade. In all likelihood they will take care of it in some countries, but there may be other countries in which they will not take care of the trade, and we want to provide the means whereby this trade will be taken care of, and whereby they will be given American banking facilities all over the world where we have an export or import trade.

Mr. LINDBERGH. Will the gentleman yield for a question?

Mr. PHELAN. Certainly.

Mr. LINDBERGH. Does not the gentleman think that in all cases where it is profitable to do so the national banks will establish these branch banks so that they can take care of the trade.

Mr. PHELAN. I do not know whether that is so or not. It is my understanding that at the present time in the island of Porto Rico the business is done largely by Canadian banks. Although there is authority to establish an American bank there, our American bankers have not taken care of that situation. Now, we do not want to depend entirely, at any rate at the beginning we do not want to depend entirely, on what our national banks may do. We want to have a provision in this bill so that foreign trade will be taken care of, and it can be met by this provision as well as the other provision.

Mr. LINDBERGH. Referring further to the deposit of the United States Treasury funds in the Federal reserve banks, suppose we should have a war with some nation with which, or with whose citizens, the Federal reserve banks were doing business, and the United States Treasury deposits were invested in such country in deposits, in notes, bills of exchange, and so forth, would not that complicate the situation here in some ways?

Mr. PHELAN. It will be a surprising thing if the Government deposits are placed in the branches in foreign countries. They will be put in the banks in this country. The foreign branches are simply agencies that are provided for, but the Government deposits are not going to be kept in those Federal agencies.

Mr. LINDBERGH. But they can use those Government deposits to invest in bills of exchange, and so forth, in foreign countries?

Mr. PHELAN. If they are a part of their assets they can; yes.

Mr. LINDBERGH. Then, they would be invested over there, and if we had a war with a foreign country, that might in some dangerous degree interfere with the use of our deposits.

Mr. MONTAGUE. Mr. Chairman, if the reason the gentleman advances is sound, why is it that England, Germany, and other European countries do a very large banking business throughout South America as well as other foreign countries?

Mr. LINDBERGH. The banks of those countries do the business and not the governments. My objection is not to the banks taking care of the foreign commerce, but to the United States Treasury funds being used for that purpose.

Mr. PHELAN. I do not believe there is any danger in this provision.

Mr. LINDBERGH. There may be great danger, and we should avoid any danger.

Mr. BORLAND. Mr. Chairman, I rise to oppose the amendment offered by the gentleman from Minnesota. The feature of this bill that relates to the extension of the banking system to foreign countries is among the most valuable features that the bill contains. If there has been any notable lack of banking system in this country it has been the handicap we have been under in the transaction of business in foreign countries.

Mr. LINDBERGH. Will the gentleman yield?

Mr. BORLAND. Certainly.

Mr. LINDBERGH. Does not the gentleman think that the branch banks provided for in this section would take care of that business?

Mr. BORLAND. No; and I am going to answer the gentleman's contention. I think we can not have too many facilities over there. It is true the bill does provide that the national-bank associations of this country having a capital of a million dollars may establish foreign branch banks under the consent of the Federal reserve board. That is a very valuable provision, because not only are the foreign countries without American banks but the British banks and the German banks aid their business men in other countries to compete with the American merchant. We have not even the facilities in our own Colonial possessions. As the gentleman has said, in Porto Rico practically the entire banking business is done by the Royal Bank of Canada, and they get even our commercial business.

I understand there was an American bank went down there. I do not intend ignorantly or intentionally to reflect upon an American enterprise, but my understanding is that that was a State bank chartered by some State in the Union that is in the habit of issuing charters to do foreign business to enterprises that they would not issue to do business in this country. I am not absolutely positive that that occurred, but I do know that the American bank did not get the bulk of the business.

Now, this provision that a million-dollar bank in this country may establish foreign agents is a good one. A bank in this country ought to have a financial standing before it undertakes to do a foreign business, but how is your little bank going to participate? What is the miller in a little town where there is a small bank to do when he wants to make a shipment?

The CHAIRMAN. The time of the gentleman from Missouri has expired; all time has expired.

Mr. BORLAND. Mr. Chairman, I did not know that there was any limitation of time.

The CHAIRMAN. The time is limited by unanimous consent to 15 minutes.

Mr. BORLAND. My understanding was that that was objected to.

Mr. GOLDFOGLE. Mr. Chairman, I recollect that when the Chair put the question I objected.

Mr. MANN. The gentleman was too late.

The CHAIRMAN. The gentleman from New York reserved an objection, and after the discussion the Chair again put the question for unanimous consent, and asked in an audible tone if there was any objection, and announced that there was none, and the gentleman from New York did not question it.

Mr. GLASS. The Chair is exactly right.

The question was taken, and the amendment was lost.

The Clerk read as follows:

GOVERNMENT DEPOSITS.

SEC. 16. That all moneys now held in the general fund of the Treasury shall, upon the direction of the Secretary of the Treasury, within 12 months after the passage of this act, be deposited in Federal reserve banks, which banks shall act as fiscal agents of the United States; and thereafter the revenues of the Government shall be regularly deposited in such banks, and disbursements shall be made by checks drawn against such deposits.

The Secretary of the Treasury shall, subject to the approval of the Federal reserve board, from time to time, apportion the funds of the Government among the said Federal reserve banks, distributing them, as far as practicable, equitably between different sections, and may, at their joint discretion, charge interest thereon and fix, from month to month, a rate which shall be regularly paid by the banks holding such deposits: *Provided*, That no Federal reserve bank shall pay interest upon any deposits except those of the United States.

No Federal reserve bank shall receive or credit deposits except from the Government of the United States, its own member banks, and, to the extent permitted by this act, from other Federal reserve banks. All domestic transactions of the Federal reserve banks involving a rediscount operation or the creation of deposit accounts shall be confined to the Government and the depositing and Federal reserve banks, with the exception of the purchase or sale of Government or State securities or of gold coin or bullion.

Mr. BULKLEY. Mr. Chairman, I offer the following committee amendment.

The Clerk read as follows:

Page 28, line 13, after the word "Treasury," insert: "Except the 5 per cent fund for the redemption of outstanding national bank notes."

Mr. BULKLEY. Mr. Chairman, as provided by section 6 of the act of July 14, 1890, the 5 per cent redemption fund which national banks are required to carry with the Treasurer of the United States for redemption of the circulating notes is covered into the general fund. It is inconsistent with the idea of the redemption fund that that money should be deposited in the Federal reserve banks. Obviously it should be held in the Treasury for the redemption of the circulating notes, and this amendment is intended to correct an inadvertence in the draft of the bill.

The CHAIRMAN. The question is on the committee amendment offered by the gentleman from Ohio.

Mr. BORLAND rose.

Mr. BULKLEY. Mr. Chairman, I have another committee amendment that I desire to add.

The CHAIRMAN. The Chair desires to ask the gentleman from Missouri whether he desires recognition?

Mr. BORLAND. I was asking for recognition, but I desire to yield to the gentleman on the committee.

The CHAIRMAN. If the gentleman desires to discuss this particular amendment, he has that right. The Chair wishes to recognize the gentleman from Missouri, if he desires recognition.

Mr. BORLAND. I yield my right in favor of the committee amendment; otherwise, I would like to have recognition.

The CHAIRMAN. The Chair is advised that it is the universal custom, after the Chair begins to put a question, that a Member shall not then rise and ask for recognition.

Mr. BORLAND. My understanding was, I will say to the Chair, that the Chair had put the question and that the amendment had already been carried—

The CHAIRMAN. It had not.

Mr. BORLAND. And that the gentleman from Ohio was about to offer another amendment.

The CHAIRMAN. That is not the case.

Mr. BORLAND. Then I ask for recognition.

Mr. MANN. Mr. Chairman, a Member is entitled to recognition any time before the negative vote is taken.

The CHAIRMAN. The Chair so understands. The gentleman from Missouri is recognized.

Mr. BORLAND. Mr. Chairman, I had no desire to interrupt the offering of a committee amendment, but there has been a good deal of discussion upon this floor, some of it within the last few minutes, in regard to our debate here upon this bill being a farce. Of course, if we do sit here and listen to gentlemen discuss whether or not they are guilty of petit larceny in drawing their salaries, and discussions upon subjects of that kind, that may bring down upon us that kind of criticism from business men throughout the country, but if we devote a little of our attention to the details of this bill, and when a matter comes up affecting the business men of the country we meet and oppose an amendment offered by a gentleman in the opposition in a serious and thoughtful way, then there is no reason why we should be open to the charge that we are conducting a farce in the discussion of this public measure.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. Certainly.

Mr. MURDOCK. The gentleman has made a statement, and I desire to ask him a question. Is there anything that could be done here that could not have been done in general debate, unless it originates with the committee?

Mr. BORLAND. Unquestionably.

Mr. MURDOCK. Not at all.

Mr. BORLAND. No man's judgment is infallible, and I do not suppose the members of this committee, with their legislative experience, would say that there is no proposition that could be put up to them that would be seriously urged, and urged with force and ability, that would not command their attention, and if it appeared to be an amendment in the way of improvement of the bill, that it would not secure their acceptance.

Mr. MURDOCK. Does the gentleman from Missouri really contend that if he offered an amendment which the gentleman from Virginia [Mr. GLASS] did not approve, regardless of what the sentiment of the House was, that that amendment would be adopted here in Committee of the Whole?

Mr. GLASS. Mr. Chairman, will my colleague from Missouri allow me to answer that question?

Mr. BORLAND. Certainly.

Mr. GLASS. The committee has time and again accepted amendments proposed by the other side, and it has other amendments here which it has accepted, proposed by the other side. The real complaint of the gentleman from Kansas [Mr. MURDOCK] is that this side has not regarded his amendments as meritorious.

Mr. BORLAND. Mr. Chairman, the gentleman will pardon me, but if we were to throw this bill in here to the actions of a shifting majority, sometimes made up of Republicans, Democrats, and Progressives, sometimes made up of Republicans and Progressives, and sometimes made up of Republicans and Democrats, we would finally get a bill that would satisfy no Member of this House, and one which would not express the views of any political party nor the policy of the administration nor the wishes of any set of business men in the country, and no one knows that better than the gentleman from Kansas. [Applause.]

Mr. MURDOCK. Mr. Chairman, I realize the gentleman is sincere in his statement, but the Constitution provides no such procedure. The Constitution does leave it to the entire membership of this House.

Mr. BORLAND. But the Constitution does give a constitutional majority in this House, or any majority in this House, the constitutional right to agree among themselves upon a settled line of party policy which they believe will carry out the pledge they made when they were elected, and when they stand together, after having reconciled differences among themselves, they can go before the people and say, "We have agreed in the main on this policy," and they would have the right not to change that policy at the sudden suggestion of some man who had not been in sympathy with that line of policy at all.

Mr. LINDBERGH. Will the gentleman point out that provision in the Constitution?

Mr. BORLAND. The Constitution gives a majority of this House the absolute right to pass a bill, and if they agree among themselves that a certain line of policy is to be followed they are following their constitutional right.

Mr. LINDBERGH. That is an addition by the gentleman which he is putting on.

Mr. BURKE of Pennsylvania. Does not that apply to a majority irrespective of party, and not to the majority party?

Mr. BORLAND. Oh, yes; if the gentleman can get a majority of the Members of this House to agree with his views he has a constitutional right to enact them into law, but under no other circumstances.

Mr. DONOVAN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. DONOVAN. I make the point that gentlemen in order to get the floor should address the Chair. These able parliamentarians are going along here in potluck style.

The CHAIRMAN. The point of order of the gentleman is well taken. The time of the gentleman from Missouri has expired.

Mr. MANN. Mr. Chairman, a moment ago, when the gentleman from Kansas [Mr. MURDOCK] asked unanimous consent that this bill be reported immediately by the Committee of the Whole House on the state of the Union back to the House with a favorable recommendation without further reading, I objected. Mr. Chairman, if the committee will indulge me for a moment, out of order probably, while I think it would have been better in connection with a currency bill for the Committee on Banking and Currency to have prepared the bill in full committee and submitted the bill to the House without sending it to a caucus, I have never been disposed to criticize the method of the procedure of the majority in a legislative body. The test is, what is the result that comes out of that method? [Applause.] Now, Mr. Chairman, the gentleman from Kansas has suggested that these amendments are idle. No one thoroughly familiar with legislation, who has followed the course of legislation, will assume that because an amendment is offered and voted down there is therefore no result. It is the common experience of legislative bodies that a committee in charge of a bill does not accept offhand even well-digested amendments and much less ill-digested amendments, and the committee in charge of a bill or a chairman in charge of a bill can not assume to determine offhand the merits of a proposition, but when amendments are offered on this floor and discussed, failings are pointed out in the bill, errors are called attention to, wise suggestions are made, and the experience upon this floor and all other legislative bodies is that these propositions are taken into consideration by gentlemen in charge of the bill both in this body and in the body at the other end of the Capitol. We discussed for days here amendments offered to the tariff bill. All amendments offered from this side were voted down; many of them have gone into the tariff bill by way of Senate amendments and probably will remain in the bill. While we could not expect from this side of the House that our propositions in regard to tariff rates would be accepted offhand by the gentleman from Alabama [Mr. UNDERWOOD] in charge of the bill, yet the suggestions which were presented by Members on this side of the House in reference to those matters attracted the attention of the gentlemen in charge of the bill here and of gentlemen in charge of the bill in the Senate, and many of them will finally appear in the law, and, because I believe it is wise to have these suggestions made, I objected to reporting the bill without reading, without consideration, and without discussion.

Mr. MURDOCK. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. MURDOCK. It is to be said for the gentleman that he is absolutely consistent in his action on this occasion, because a similar request was made in regard to the Payne tariff bill by

Mr. SIMS, of Tennessee, and the gentleman from Illinois objected on that occasion.

Mr. MANN. I did.

Mr. MURDOCK. Now, I would like to ask the gentleman this in regard to the procedure. He says that a great many things that we could not adopt here, which were offered as amendments to the pending tariff bill, were adopted in the Senate. Would not our position have been stronger legislatively as a body if we could have adopted those amendments here and then had the Senate agree to them?

Mr. MANN. Oh, no. Here is the proposition. Here a man has found something that ought to be changed in a bill, the tariff bill or the currency bill, but has probably kept it to himself, or, at least, when he presents it on the floor the Members in charge can not go and look up everything connected with that matter in order to determine, and all the facts can not be brought out on each one of these propositions and time given for consideration. Now, I am not defending the committee for not accepting good propositions, but I am defending the idea that good propositions ought to be brought to the attention of the committee in the hope that the committee, in their wisdom, will accept the wiser of the propositions.

Mr. MURDOCK. The gentleman will agree to this, that this is a modified form of general debate, so far as the practical propositions are concerned, to get amendments into the bill.

Mr. MANN. There is this distinction, unfortunately, between general debate and debate under the five-minute rule: One is devoted in the main to general subjects, and the other is devoted to specific propositions. These specific propositions attract attention. Glittering generalities do not attract very much attention.

Mr. MONDELL. Mr. Chairman, I agree to a very considerable extent with what our leader on this side has just said. Yet there is one feature of the present situation that the gentleman has not referred to, and with which I am sure he is not in agreement—a feature of the situation referred to by several of the gentlemen on the other side, and notably the gentleman from Texas [Mr. CALLAWAY], when he said that in the caucus certain amendments were adopted, or were about to be adopted, as it was understood the caucus was favorable to them, but that word came, or was given out, that certain people, not Members of the House, were opposed to those amendments, and after that word was brought, delivered, and promulgated a majority of the caucus voted against the propositions without regard to the previous view of a majority of the Members.

Mr. GLASS. Now, I will say—

The CHAIRMAN. Does the gentleman from Wyoming yield to the gentleman from Virginia?

Mr. MONDELL. I can not for a moment. I think I have fairly stated what the gentleman from Texas [Mr. CALLAWAY] said. I would not misstate him for anything in the world, because his was a calm, dispassionate statement. There lies the danger. Assuming, for the sake of argument—and I only assume it for the sake of argument, for I never myself have been much taken with the idea of binding party caucuses, and I have been bound by mighty few of them—but assuming, for the sake of argument, that on a political question a party is justified in taking up political matters in a party caucus and binding its members, is a party justified in using the party caucus for the purpose of binding its members, not to propositions that express the majority will, conviction, and judgment, but propositions that express the mandate of people outside of Congress—members of the executive branch of government, for instance? That is the real evil of the situation. In my opinion, the binding vote in the Democratic caucus did not express the view of the majority on that side in all matters, but did express in a number of matters what the Members believed to be the view and opinion of certain members of the executive branch of the Government. I am sure there is no one within the sound of my voice who will approve that sort of procedure. It was a caucus binding the majority to support the views of the executive branch of the Government.

Mr. WILSON of Florida. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WILSON of Florida. What is before the committee?

Mr. MANN. A committee amendment.

The CHAIRMAN. A committee amendment, offered by the gentleman from Ohio [Mr. BULKLEY].

Mr. WILSON of Florida. I make the point that we are not considering it.

The CHAIRMAN. The Chair has been unable to hear and is not clear as to what the gentleman from Wyoming [Mr. MONDELL] has said.

Mr. MONDELL. Mr. Chairman, I was about to observe, in order to be in order, that as to the amendment of the gentleman from Ohio, without regard to that amendment, the secret caucus has lent itself to the coercion of the Members of the majority to the will of the executive branch of the Government. That, in my opinion, is really the great evil of the secret caucus, as illustrated in this case. Some of the gentlemen have defended the caucus on the ground that it gave the majority the power to make its will effective. That has not been true in this case. The caucus has not reflected the view of the majority but of the Executive through the caucus.

Mr. GARRETT of Texas. Will the gentleman yield?

The CHAIRMAN. The time of the gentleman from Wyoming [Mr. MONDELL] has expired. The gentleman from Indiana [Mr. GRAY] is recognized.

Mr. GRAY. Mr. Chairman, I do not wish to speak with reference to those men who consistently oppose a caucus, because they are entitled to the respect of everybody. I do wish to speak, though, with reference to those men who inconsistently oppose a caucus, because they are entitled to the respect of nobody.

I am a member of the Democratic caucus, and I believe that I am in good standing, and yet under the rule of that caucus I am permitted to stand here and to vote for all amendments in full accord with my platform pledges to the people upon every question whatsoever. I intend to vote for all amendments offered by the friends of this bill to perfect it and make it better and secure its passage, but I intend to vote against all amendments offered by the enemies of this bill [applause on the Democratic side] to destroy it or to divide its friends in order to defeat it. [Applause on the Democratic side.]

While I am in favor of an open caucus, and have always voted for an open caucus and will always continue to so vote, and while I will always favor and vote for publicity of all committee action [applause on the Republican side], yet I am comparatively well satisfied with the progress that the Democratic Party has made toward fair and liberal rules and publicity. We meet in caucus as the friends of certain measures and policies to compare notes and exchange fraternal greetings, and I rather like it. [Laughter on the Republican side.] We meet to discuss measures and we have a full hearing. We meet to vote upon amendments, and we have a public-record vote upon the same conditions and upon the request of the same proportion of Members as we have here in the House.

Other parties have declared for liberal rules and publicity when they were out of power and had nothing to do. But the Democratic Party is the first party that has declared for liberal rules and publicity when it was in power and had something to do. [Applause on the Democratic side.] Democracy is the only name under heaven that stands for the rule of the people. [Applause on the Democratic side.]

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Wyoming?

Mr. GRAY. Yes.

Mr. MONDELL. The gentleman said that the Democratic Party declared for publicity. It did so in regard to the appointment of Federal judges. But did the Democratic Party stand by that pledge?

Mr. GRAY. I stood by that pledge, as my record will show, on every roll call in this House. [Applause on the Democratic side.] Democracy is a rock in a weary land, a shelter in time of storm, sheltering and protecting the masses from the impositions of the few. Thank God, I am a Democrat. [Applause on the Democratic side.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Ohio [Mr. BULKLEY].

The amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I offer another committee amendment.

The CHAIRMAN. The gentleman from Ohio [Mr. BULKLEY] offers another committee amendment, which the Clerk will report.

The Clerk read as follows:

Page 29, line 10, after the word "operation," insert the word "loan."

Mr. BULKLEY. Mr. Chairman, in the course of the general debate it was contended by the gentleman from Iowa [Mr. SCOTT] that under the terms of this bill it would be possible for the regional reserve banks to make loans directly upon personal security to individuals, even for speculative purposes. The committee, after carefully considering this proposition, has come to the conclusion that the gentleman was unquestionably technically correct. The committee is not willing to concede that such loans ever would have been made, because the

directors of the regional reserve banks would have fully appreciated that such loans would be contrary to the whole spirit and purpose of the law. Nevertheless we are all in accord on the proposition that there ought not to be even any technical justification for such a loan, and we feel indebted to the gentleman from Iowa for his careful study of this point and his able exposition of it.

I want to say further—

Mr. SCOTT and Mr. HARDWICK rose.

Mr. HARDWICK. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield, and to whom?

Mr. BULKLEY. Yes; I yield to the gentleman from Iowa [Mr. SCOTT].

Mr. SCOTT. I am very thankful to the gentleman for his expression of good feeling. I want to say at this time that the chairman of the committee asked me last night as to the effect of inserting the word "loan" at a certain point in this section, and I think I told him it would have the desired effect. However, I have thought that matter over a little more carefully this morning, and by reading the last section it seems to me the amendment just proposed injects the word at the wrong point and is likely to overreach what they are attempting to do. The sentence reads:

All domestic transactions of the Federal reserve banks involving a rediscount operation or the creation of deposit accounts shall be confined to the Government and the depositing and Federal reserve banks, with the exception of the purchase or sale of Government or State securities or of gold coin or bullion.

Now, by inserting the word "loan," it will read:

All domestic transactions of the Federal reserve banks involving a rediscount operation, loan, or the creation of deposit accounts.

The operation involving a loan cuts both ways. It not only limits the power of the regional banks to make the loan, but as worded here it limits their power to borrow. I think that will conflict with the provision on page 27, line 11, relating to open-market operations. That sentence is—

Every Federal reserve bank shall have power (a) to deal in gold coin and bullion both at home and abroad, to make loans thereon, and to contract for loans of gold coin or bullion.

Now, I take it that it is desirable that the regional bank may in time of necessity have power to borrow gold coin and bullion—in other words, make a loan running to the bank—and I therefore suggest now that, after the word "accounts," in line 10, the words ought to be inserted—

Or loans made by such banks.

Mr. BULKLEY. I understand the gentleman's contention that the words "by such banks" ought to be added. What difference does it make at which point the amendment is inserted?

Mr. SCOTT. The word "operation" would qualify the word "loan" put in there with a group with two other classes, whereas if you insert it after the word "account," preceded by the word "or," it would simply prevent banks making loans, but would not prevent the banks borrowing.

Mr. BULKLEY. I will ask the gentleman if he does not think it might be still better to insert the amendment in the preceding line, following the word "involving," so that it will read:

All domestic transactions of the Federal reserve banks involving a loan by such banks, a rediscount operation, or the creation of deposit accounts.

Mr. SCOTT. That would be the same thing.

Mr. PHELAN. Is it not advisable to put in the words "a loan made by such bank"?

A loan by a bank may be a loan made by it or a loan contracted by it. I think the word "made" ought to be inserted there.

Mr. SCOTT. I have already suggested that.

Mr. PHELAN. Not "loan by such bank."

Mr. BULKLEY. Mr. Chairman, I ask unanimous consent to modify the committee amendment so that it will read as follows:

After the word "involving," in line 9, on page 29, insert the words "loans made by such banks."

The CHAIRMAN. The gentleman asks unanimous consent to modify the amendment in the manner indicated. Is there objection?

There was no objection.

The CHAIRMAN. The question is on the amendment as modified.

Mr. HARDWICK. Mr. Chairman, I have secured the floor to ask one or two questions of the gentleman in charge of the bill. I have been voting almost mechanically so far for these amendments suggested by the committee, and have been doing so under the caucus understanding that the Committee on Banking and Currency were to present such amendments only as were directed to matters of form or changes of phraseology. As I

understand, the explicit agreement, binding on us and upon the members of the committee, was entered into in our caucus that only such amendments were to be proposed by the committee. Do I understand that this amendment or any of these amendments propose substantial changes in the bill?

Mr. BULKLEY. This amendment is for the purpose of making clear what is the meaning of the bill. We agree with the gentleman—

Mr. HARDWICK. That was meant all the time?

Mr. BULKLEY. We think there is a loophole in the bill which we did not intend should be there.

Mr. HARDWICK. So that this amendment comes clearly within the spirit of the agreement to which I have referred?

Mr. BULKLEY. Oh, absolutely.

Mr. HARDWICK. It seems to me that yesterday you presented an amendment that entirely changed a very important and essential part of this bill, and I think you did it in violation of the caucus agreement.

Mr. BULKLEY. I will not agree with the gentleman about that.

Mr. HARDWICK. Although we agreed in caucus that there should be no substantial amendments to the bill, either from the committee or from the outside, did you not present here an amendment and get it voted on, with a very small attendance, in which you took off from the member banks the limit that the Democratic caucus had put in this bill, that they could not discount a larger amount of notes than the amount of their capital stock, and did you not remove that limit and thereby add to the danger of inflation by this bill?

Mr. BULKLEY. No; absolutely not. We put in an amendment which carried out the purpose of the bill, as it was repeatedly explained in the caucus.

Mr. HARDWICK. And changed the language of the bill in an important particular?

Mr. BULKLEY. We changed the language in order to accord with the meaning that we repeatedly stated in the caucus. In other words, it is my contention and opinion and the opinion of the committee that the bill would not have been in accordance with what was adopted in caucus if we had not made that amendment.

Mr. HARDWICK. Now, a moment right there. On the contrary, the bill as the Democratic caucus agreed to it and as the gentleman agreed to support it without substantial amendment was that a member bank should not be allowed to discount more commercial paper than the amount of its capital stock.

Mr. BULKLEY. The gentleman is mistaken; the bill did not contain any such provision.

Mr. HARDWICK. Did it not contain it until the gentleman amended it on yesterday?

Mr. BULKLEY. No.

Mr. HARDWICK. Then I can not read the English language.

Mr. BULKLEY. I will challenge the gentleman to show any draft of this bill containing that provision.

Mr. HARDWICK. Will the gentleman read the language of the section that he amended yesterday afternoon as it originally stood? Can the gentleman find it?

Mr. BULKLEY. Yes; I can find it.

Mr. HARDWICK. Will the gentleman mind doing so?

Mr. BULKLEY. Does the gentleman desire the whole section read?

Mr. HARDWICK. No; that part of it that you found necessary to amend.

Mr. BULKLEY. We did not amend except by adding a new paragraph.

Mr. HARDWICK. And the new paragraph had the effect of changing the provision of existing law that had not been repealed by the bill?

Mr. BULKLEY. That is true.

Mr. HARDWICK. And therefore you did adopt a substantially different proposition from the bill agreed on in caucus, which did not change the provision of existing law to which I refer?

Mr. BULKLEY. I want the gentleman to understand what I said.

Mr. WILSON of Florida. Mr. Chairman, I make the point of order that the gentleman from Georgia and the gentleman from Ohio are both out of order.

Mr. HARDWICK. And the point of order, Mr. Chairman, is not well taken. We are discussing a question collateral to the one under consideration, and no Chairman of the Committee of the Whole has ever gone as far as to rule discussions of that character out of order.

Mr. BULKLEY. I hope, Mr. Chairman, that we shall be permitted to continue.

Mr. HARDWICK. We want to find out where we are.

Mr. WILSON of Florida. The gentlemen were discussing whether or not the committee has gone outside of the rule adopted in the caucus?

Mr. HARDWICK. Yes.

Mr. WILSON of Florida. What has that to do with the pending amendment?

Mr. HARDWICK. It has everything to do with it.

Mr. WILSON of Florida. What has the other side got to do with it?

Mr. BULKLEY. Mr. Chairman, I am anxious that this proposition shall be explained.

Mr. HARDY. Will the gentleman yield to me?

Mr. HARDWICK. I have the floor, and I would rather not just at present.

Mr. HARDY. I thought the gentleman from Georgia was asking a question of the gentleman from Ohio.

Mr. HARDWICK. No; I have the floor, and I am yielding to the gentleman from Ohio to explain.

Mr. BULKLEY. I want to make clear what I said. We did not change any express provision of the bill.

Mr. HARDWICK. Did not we change a substantive proposition?

Mr. BULKLEY. We did make a change in the existing law, but that makes no difference in the meaning of the bill. Let me add a word. The committee's idea is that unless section 5202 of the Revised Statutes be amended the spirit of the bill, as repeatedly expressed in the caucus, would not have been carried out. We submit that we have repeatedly said that this bill gives the small bank the same facility for rediscount as the large bank.

Mr. HARDWICK. It is true, even if the section 5202 of the Revised Statutes is left in, each one gets the amount of the capital stock. Each bank, large or small, is fed out of the same spoon under existing law.

Mr. BULKLEY. It was stated that they should have unlimited facilities.

Mr. HARDWICK. I thought you gentlemen contended in the caucus that there would be no great inflation.

Mr. BULKLEY. This has nothing to do with inflation at all. It will not change the aggregate amount discounted by a dollar.

Mr. HARDWICK. It will, because you remove the limit fixed by law that a bank could not discount more than the amount of its capital stock. In other words, a bank with \$50,000 capital under your bill that we agreed to in caucus could not have rediscounted more than \$50,000 of commercial paper, while under the amendment you have since presented that same bank that could not rediscount but \$50,000 of commercial paper as the proposition left the caucus can now discount \$1,000,000. It seems to me that you have by that amendment substantially changed the proposition to which the caucus assented, and to the support of which, without substantial amendment, the members of your committee were equally bound with myself. Besides, I regard the amendment you presented as exceedingly dangerous to the country and as greatly increasing the risk of overexpansion and unwise inflation of credits.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. MANN. Mr. Chairman, this section provides that the funds of the Government shall be deposited in the Federal reserve banks, distributing them, as far as practicable, equitably between different sections at a rate of interest to be fixed, covering all parts of the country.

Mr. Chairman, I am not disposed to be particularly captious concerning the action of a Democratic national convention which swindled or defrauded the Speaker of this House out of the nomination for the Presidency [applause], and I have on several occasions heretofore called attention to planks in the Democratic national platform which have been forgotten on that side of the House. Perhaps the Committee on Banking and Currency and the Democratic caucus are to be complimented and congratulated upon the fact that they have much greater wisdom, possibly, than the national convention of their party. But lest we forget, let me read a part of the Democratic national platform, as adopted at Baltimore. Speaking of the deposit of national funds the platform says:

and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality, upon approved securities, and subject to call by the Government.

Mr. GLASS. Mr. Chairman, may I interrupt the gentleman? Mr. MANN. No; the gentleman may not interrupt me.

We pledge our party to provide by law for their deposit by competitive bidding.

Mr. Chairman, like most of the rest of the Democratic national platform, although it is only a little over a year old, the Demo-

crats have forgotten this plank. Perhaps you are to be congratulated upon having a lapse of memory, but you pay no attention to your platform. When you came to make up your banking and currency bill, what did you read? Not the Democratic national platform, but the Aldrich national monetary bill, and you copied every idea in your bill from that National Monetary Commission's bill. [Applause on the Republican side.]

Mr. GLASS. Mr. Chairman, I simply want to say a word in response to what has been said by the gentleman from Illinois [Mr. MANN]. When that platform pledge was made it related to deposits of Government funds in 7,300 national banks throughout the country, in none of which the Government had any pecuniary or other than a supervisory interest. It did not contemplate a system, such as has been provided here, of 12 regional reserve banks, in the earnings of which the Government has a substantial interest. It would have been absurd, as the gentleman will agree, for us to have embodied in this bill the substance of the platform pledge referred to.

Mr. MANN. The platform was absurd. I will accept the gentleman's apology in respect to that. [Laughter.]

Mr. MAJES. Mr. Chairman, I would like to ask the chairman of the committee a question, which has been suggested to my mind by the colloquy had between the gentleman from Georgia [Mr. HARDWICK] and the gentleman from Ohio [Mr. BULKLEY] over the effect of the amendment that was adopted yesterday. The gentleman from Georgia seems to have the idea that the bill as it stood before the adoption of that amendment allowed the Federal reserve banks to discount for the member banks enough paper to equal the amount of their capital stock. The gentleman from Ohio interprets his amendment to mean that the amount that the Federal reserve banks can now discount is unlimited. I would like to ask the chairman of the committee how he reconciles that amendment with the paragraph beginning with line 3, on page 26, and particularly the last sentence of that paragraph, which reads as follows:

Upon the indorsement of any member bank any Federal reserve bank may discount acceptances of such banks which are based on the exportation or importation of goods and which mature in not more than six months and bear the signature of at least one member bank in addition to that of the acceptor. The amount so discounted shall at no time exceed one-half the capital stock of the bank for which the rediscounts are made.

Mr. GLASS. It refers to bank acceptances in the foreign trade.

Mr. HARDWICK. And if the gentleman from Virginia will pardon, that also in terms relates to only a particular class of paper.

Mr. GLASS. It does; but since the gentleman has asked me the question, I will answer that the alteration made in the bill yesterday does not change in any particular the intent of the bill as drafted and reported to the Democratic caucus by the committee. As a matter of fact, it was repeatedly stated by me and by other members of the committee in the caucus that there was no limitation upon rediscounts.

Mr. HARDWICK. Mr. Chairman, will the gentleman yield?

Mr. GLASS. Not right now. Later on it was found that by reason of the limitation in the existing national-bank act State banks and trust companies becoming members of the system would have unlimited privileges of rediscount, whereas the national banks would be limited by the national-bank act. It was in order to put all banks upon the same basis that the alteration was made. We will not agree with the gentleman from Georgia, and apparently the gentleman from Georgia will not agree with us. We contend that there was no material alteration of the intent of the bill, as plainly and repeatedly stated in the caucus. The gentleman from Georgia thinks otherwise and that is all there is to it.

Mr. HARDWICK. Will the gentleman now yield, he having finished his statement?

Mr. GLASS. Yes.

Mr. HARDWICK. The gentleman, then, understands that he was only to present, or the committee was only to present, such amendments as involved immaterial changes of form and phraseology?

Mr. GLASS. I understood that nobody would be bound by any amendment presented here that involved a material alteration.

Mr. HARDWICK. Or that the committee itself would have the right to present any amendments except those?

Mr. GLASS. The rule gave the committee the right to do that.

Mr. HARDWICK. Oh, well, I am speaking about a matter of agreement.

Mr. GLASS. Well, I do not see that the inquiry is pertinent; I say we have not done it.

Mr. HARDWICK. Yes.

Mr. GLASS. And the gentleman says we have.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. GLASS. Mr. Chairman, if there are no other amendments to this section I ask unanimous consent—

Mr. MURDOCK. May I ask the gentleman some questions before he passes from this subject?

Mr. BUTLER. Do not shut us off for two or three minutes.

Mr. GLASS. Very well.

Mr. BUTLER. Mr. Chairman, the country is not troubled so much with what the Democratic caucus did as what this House may do, and I think everybody in here is endeavoring—

Mr. GLASS. I wish very much the gentleman could convince Members on that side and on this as to that and let us hear less about the caucus.

Mr. BUTLER. I have had no trouble in all my life with other people; the trouble I have had is with myself. [Applause.] I am now in the dark and I am asking somebody to lead me into the light. I am confused first—

Mr. GLASS. I remind the gentleman that I yielded to him for a question.

Mr. BUTLER. Then I will wait until the gentleman gets through, and then I will ask the committee to give me two minutes.

Mr. GLASS. I will; the gentleman can proceed.

Mr. BUTLER. Mr. Chairman, I ask the committee to give me two minutes of time.

The CHAIRMAN. The Chair will state to the gentleman from Pennsylvania that the gentleman from Virginia has the floor.

Mr. GLASS. I will yield to the gentleman from Pennsylvania to ask a question, and he can proceed with his speech.

Mr. BUTLER. I thank the gentleman very much. The gentleman is not requiring me to put my statement in the shape of an interrogatory. I was greatly interested in what the gentleman from Arkansas [Mr. Wingo] said yesterday and very favorably impressed with it.

Mr. DYER. Will not the gentleman from Pennsylvania give us some information over here?

Mr. BUTLER. The gentleman from Missouri will obtain his own information; he is as well able to do it as I am. I am not here to instruct anybody, but I want to be informed. There is a conflict of opinion upon the effect of the amendment offered by the gentleman from Ohio yesterday. The gentleman from Arkansas does not agree with the gentleman from Virginia as to the effect of that amendment. I am not the only Member of this House who is in a quandary over what the effect of it may be. As I understand, before the amendment was adopted there was a limitation in the proposed bill touching the amount of notes authorized to be issued by banks, and that by the adoption of this amendment that limitation is removed.

If I understand the gentleman from Arkansas [Mr. Wingo], we have reserve money that might be used; in short, money that might be used as a reserve amounting to \$3,500,000,000. It was not contemplated by the committee that reported this bill, I understand, that all of that money would be used for reserve purposes to secure the issue of currency, but that there was in some place in the pending bill a limit imposed upon the issue. But as a result of the amendment there is no limit. If I understood the gentleman from Arkansas [Mr. Wingo], banks may, since the adoption of the amendment, issue money to the amount of \$10,500,000,000. Such an amount was not contemplated by gentlemen who presented this bill. Am I right on that? Certainly the American people did not contemplate it.

Mr. GLASS. As a matter of fact, according to the actuaries' report there are only about \$2,000,000,000 that may be rediscounted in the course of business under this bill. The limitation upon rediscount is the amount of available paper based upon 33½ per cent of gold reserve.

Mr. BUTLER. There was no limit as to the use of this paper before this amendment was adopted?

Mr. GLASS. Not intended to be any.

Mr. BUTLER. Then I do not understand the gentleman from Arkansas. I understood the national banking law limited the issue to the amount of capital. Am I right in that?

Mr. PHELAN. Will the gentleman yield a minute?

Mr. BUTLER. I will yield to any gentleman who is informed.

Mr. GLASS. I have already stated that there was a limitation, of which the committee and of which the caucus were not aware, upon the rediscounts available to national banks, but there was no limitation upon the rediscounts available to State banks and trust companies coming into the system. That that was not intended by the committee nor by the Democratic caucus; and when discovered subsequently by the committee this

provision was taken up and the amendment proposed in order to make the provision uniform as to all banks.

Mr. BUTLER. Mr. Chairman, again let me ask the gentleman from Virginia—please do not become impatient, because I am not inquiring for amusement or the simple purpose of asking questions, but because I want the information—let me ask the gentleman from Virginia if there was no limit upon a State bank and upon a trust company before this amendment was adopted?

Mr. GLASS. There is none now.

Mr. BUTLER. You desire to make the privilege uniform, and therefore you remove any limitation that might have been imposed upon a national bank, I understand, so as to give it equal opportunity, and that hereafter, if I understand the gentleman correctly, there will be no limit anywhere by law?

Mr. GLASS. It never was intended by the committee or the caucus to make a limit.

Mr. HARDWICK. I utterly disagree with the gentleman.

Mr. GLASS. I understand perfectly well that the gentleman disagrees with me, but I still insist.

Mr. HARDWICK. I dispute it.

Mr. GLASS. And I assert it.

Mr. BUTLER. And I learn all bars are down.

The CHAIRMAN. The time of the gentleman from Virginia [Mr. GLASS] has expired. In fact, all time on the present amendment has expired. The question is on the amendment offered by the gentleman from Ohio [Mr. BULKLEY].

Mr. WINGO. Mr. Chairman, I ask unanimous consent to proceed for one minute.

The CHAIRMAN. The gentleman from Arkansas [Mr. Wingo] asks unanimous consent to proceed for one minute. Is there objection? [After a pause.] The Chair hears none.

Mr. WINGO. In justice to myself, I want to put into the RECORD that in the statement which the gentleman from Virginia [Mr. GLASS] makes, that no member of the committee was aware of that present law, he is certainly mistaken. I was aware of that.

Mr. GLASS. I accept the gentleman's statement.

Mr. WINGO. I have a distinct recollection that in the caucus when my friend from Georgia [Mr. HARDWICK] was charging inflation and he asked me what provision of law prevented it, I called his attention to this particular statute and the reserve requirements. I was familiar with this statute and knew its value as a check to inflation.

Mr. MURDOCK. That was in the caucus?

Mr. WINGO. In the caucus; yes.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio [Mr. BULKLEY].

The question was taken, and the amendment was agreed to.

Mr. LINDBERGH. Mr. Chairman, I offer the following amendment.

Mr. GLASS. Mr. Chairman, I would like to inquire how many more amendments there will be.

Mr. MURDOCK. I have one.

Mr. MORGAN of Oklahoma. I have two.

Mr. GLASS. Mr. Chairman, I ask unanimous consent that debate on this section and all amendments thereto may conclude in 15 minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that debate on the pending section and all amendments thereto be closed in 15 minutes.

Mr. MORGAN of Oklahoma. I reserve the right to object.

Mr. BURKE of Pennsylvania. Reserving the right to object, I do not want to prolong this—

Mr. MORGAN of Oklahoma. I have two amendments, and I would like five minutes on each one.

The CHAIRMAN. The gentleman from Oklahoma [Mr. MORGAN] will be recognized for that purpose. Is there objection?

Mr. MORGAN of Oklahoma. I object.

Mr. GLASS. I move, then, Mr. Chairman, that debate on this section and all amendments thereto be closed in 15 minutes.

The CHAIRMAN. The gentleman from Virginia moves that all debate on the pending section and all amendments thereto close in 15 minutes.

The motion was agreed to.

Mr. LINDBERGH. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota [Mr. LINDBERGH] offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 28, line 12, strike out all following "Sec. 16" and lines 13 to 19, inclusive, and insert thereafter, so as to make the first paragraph of section 16 read as follows:

"GOVERNMENT DEPOSITS.

"Sec. 16. That when it appears to the Federal reserve board that the interests of the public shall be best subserved thereby, such part of the general funds in the United States Treasury as may to such board seem

expedient may be deposited in the Federal reserve banks; that when making deposits as provided in this section the policy shall be to withdraw such deposits, or any portion thereof, from the Federal reserve banks whenever the same may be done without injuring the public interest, it being the purpose to make such deposits only when financial conditions make it expedient; Government disbursements may be made by drawing checks against such deposits; except, as provided in this section, no Federal reserve bank shall pay interest upon any deposits."

In line 20, on said page 28, after the comma, insert the words "whenever such deposits are made."

Mr. LINDBERGH. Mr. Chairman, this amendment which I offer is one to place in the hands of the Federal reserve board the disposition of the money in the Treasury of the United States which would be subject under this bill, and in fact required, all to be deposited in the reserve banks. It leaves to the board—the Federal reserve board—the right to deposit the money in the banks whenever it appears that the public interests would be subserved by so doing. It leaves with the Federal reserve board the discretion to withdraw the deposits whenever in the opinion of that board it seems to be to the public interest that it should be withdrawn.

Now, as a matter of fact, under the provisions of this bill there is at the present time something like \$250,000,000, I believe, that would be taken out of the Treasury and deposited in the banks. If there was not a demand by the legitimate interests of the country for that money at the time it was placed in the banks—I mean the business interests of the country—a considerable part of it would be absorbed for speculation, and whenever the legitimate business interests of the country required that money it would have all gone into speculation and there would be competition in order to obtain money and the legitimate interests would have to bid against speculative interests, and we would have the same conditions as have frequently occurred in the past, when the money would not be available, thus resulting in stringency or panic. If it remains in the Treasury of the United States it may, as heretofore, serve as a balance wheel, so to speak, to relieve the general conditions when it is required, and when it is not required it may be drawn in again to the Treasury of the United States, to remain there and be disbursed in the usual way, and only be placed in the banks in case the business interests of the country require it.

We know as a matter of experience that when the banks have a large amount of money and there is no demand for it on the part of the business interests of the country it is absorbed more or less for speculative purposes, and we want to avoid that condition; and it is for that purpose that I have introduced this amendment which the Clerk has just read. Some Member—I do not recall who—yesterday made remarks about short selling.

SELLING SHORT.

We hear many objections raised against short selling, going short in the sales of stocks, securities, grains, provisions, and so forth, on the market. Short selling means the selling of what the vendor does not possess. In Congress there is pending at all times one or more bills purposed to prohibit this practice. There is at the present time serious consideration of passing a bill which will prohibit all short selling, because it is claimed that the practice enables speculators to manipulate the market in a manner that makes it possible for them to pay the producers less and charge the consumers more. This short selling is a much more comprehensive affair than the sponsors of the bills referred to have allowed the public to gather from any expression of theirs which has been given to the public.

It is from the practice of short selling that the bankers derive the greatest profits. That statement will, when first read, meet with resentment and denial on the part of the bankers. It will also surprise many others, but the banker, as well as the others, will admit of its truth when they have fully considered it. If a person were to sell a thousand bushels of wheat or 10 shares of stock that he does not own, it becomes necessary for him to go into the market and buy it at the time that he is required to deliver it to the purchaser. Ordinarily the purchaser on the stock or produce market does not require the vendor to do that, but settles with him for whatever the actual market price is at the time for final settlement. The banker is doing the same thing with the dollar.

All of the money in all of the banks and trust companies combined is only slightly in excess of a billion and a half of dollars, and the banks owe approximately \$20,000,000,000. There is not enough money in all of their vaults to pay one-tenth of what they owe. There is not money enough in the whole country, including that outside of the banks, to pay one-sixth of what they owe. That statement may sound a little different from the statement made about the grain and stock gambler, but to those who understand the effect of existing facts—conditions—it is clear that the banks are sold short just as effectively as the stock and grain gambler.

Let us follow these facts further as to their reality. No bank could pay its obligations without collecting its outstanding credits. If a simultaneous demand were to be made by all of the creditors of all of the banks, all of the banks would fail. That is because they are all short sold. There is, however, one difference between the banker's practice of short selling, and that of the ordinary stock gambler. The man who borrows from a bank will give his note to the bank, and ordinarily the banker simply credits him on the books of the bank with the amount of the note less the interest. The bank does not part with the cash, but lets the borrower draw checks upon the account, and, therefore, merely transfers the credit to some one else, for these checks are, in most cases, deposited instead of cashed. The bank continues to draw interest on the note. The party who borrowed sold short to the bank by agreeing to deliver to the bank, when due, the number of dollars that his note calls for, and the bank sold short to the borrower by agreeing to deliver to him that many dollars before the note comes due. Now, in that transaction there were two short sales. The man who borrowed the money agreed to pay at a future date what he did not have when he borrowed, and the banker agreed to pay immediately what he would not have had if he had first paid his other demand obligations. Now, the difference in the way that deal was conducted, and the manner in which the stock gambler carries on his short sales is, that the stock gambler, when a person sells short to him (that is, agrees to sell him stock or provisions to be delivered), does not pay interest to the person so selling. Anyone who carefully investigates the effect of this fact upon the cost of living will find that the short-selling operations of the stock gamblers influence the cost of living far less than the short selling which I have described as being practiced by the banks. The banks should not be condemned for this, however, because it is the only way in which the business of the country can be carried on under the present system, or until a new system has been inaugurated.

Every student who has carefully considered this subject knows that the people, as a whole, which includes themselves as individuals, the General Government, the States, and municipalities, can not pay interest on all of the money that they have agreed to pay. That is because money does not create itself. It is claimed that everyone who has a dollar and loans it out is entitled to interest. It takes \$1 to furnish the exact equivalent of another dollar. It takes a dollar to pay a dollar debt, and, since that is true, there are no dollars left with which to pay interest. The whole country has sold money short and could not possibly deliver or pay the money that it has agreed to pay. The present outstanding interest-bearing contracts are rapidly approaching the hundred-billion-dollar mark. The annual interest alone, contracted to be paid on these obligations, probably exceeds all of the money in existence. Of course, some of this interest is paid from other interest collected and is offset, and the total net interest is reduced somewhat by the fact, but the greater part of it still remains to be made up from other sources.

The only way that interest can be liquidated, considering the statement in its general application, is by a transfer of the property or the services of the debtor class to the creditor class. But, all interest can not be paid in full even in that way, because as I have already stated in my minority report, the geometrical progression of computing interest accumulates it so rapidly that it would exhaust all there is and fail because of the impossibility of its going further. We, as a people, are in that economic state and can not extricate ourselves from it under existing conditions. The whole country is sold short by the debtors who have agreed to pay what they have not, and what they can not get. The creditors "have a corner" on us. How are they enforcing settlement? It is being done in several ways. We are compelled to work more hours per day, receive less pay per hour, pay more for what we buy, and receive less for what we sell. The consequence is that we must work harder and more hours per day than we should, and in the end have less than what is due to us as our part of the advantages, conveniences, and opportunities resulting from the advancing civilization. This means absolute destitution for great numbers of the debtor class and an enormous general loss. When I say the debtor class I do not mean those only who have borrowed money or who owe open accounts. Debt is now one of the most positive influences in our system. The consumer is a debtor because he owes it to the producer to pay his part of the interest and taxes that are added to the cost of production under the present system. As a consequence, we are all virtually debtors, and comparatively few of us have credits and profits enough to offset the debt, or any other way by which to pay it except from the products resulting from our daily toil. Such a condition reduces the general efficiency of the people and they are compelled to live on a lower scale than they should.

Mr. MURDOCK. Mr. Chairman, I would like to have the attention of the gentleman from Virginia [Mr. GLASS]. In view of what the gentleman from Minnesota [Mr. LINDBERGH] has just said, I would like to ask the gentleman from Virginia about the effect intended in section 16, which deals with Government deposits. That is the section we are now on. What money will come out of the Treasury and go into the reserve banks? Will the gold that is now in the Treasury for the redemption of gold certificates go out?

Mr. GLASS. No; that is a trust fund.

Mr. MURDOCK. Will the gold that is behind the greenbacks leave the Treasury?

Mr. GLASS. No.

Mr. MURDOCK. Then, what money will actually leave the Treasury?

Mr. GLASS. The money that is to be used in the fiscal business of the Government.

Mr. MURDOCK. Does the gentleman mean the general fund?

Mr. GLASS. Yes.

Mr. MURDOCK. That is all that will leave the Treasury?

Mr. GLASS. That is all.

Mr. MURDOCK. What becomes of the subtreasuries under this?

Mr. GLASS. Well, that is a question. Some gentlemen think the system will eventually discontinue the subtreasuries.

Mr. MURDOCK. Does the gentleman think the subtreasuries will continue to do business?

Mr. GLASS. I think some of them will.

Mr. MURDOCK. I would like to have the gentleman explain why some of them will and some of them will not.

Mr. GLASS. Those in New York, St. Louis, and San Francisco may go on. But even that is altogether conjectural. If it shall appear that the Government has need of the subtreasuries, they will continue. Otherwise they will be dispensed with. In other words, if the regional reserve banks demonstrate that they can transact the business of the Government without the aid of the subtreasuries, the latter will be dispensed with.

Mr. MURDOCK. In the matter of gold deposits in these reserve banks, it is not contemplated by this bill that the gold hereafter will be held by the subtreasuries, but will be held by these reserve banks?

Mr. GLASS. Yes.

Mr. MURDOCK. I so understand; and the Government in its accounting will check against those reserve banks?

Mr. GLASS. Yes. The reserve banks will be the fiscal agents of the Government.

Mr. MURDOCK. And the subtreasuries will not?

Mr. GLASS. That is a matter of conjecture, but I think not.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Oklahoma offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 28, line 19, by striking out the period after the word "deposits," and inserting a colon in lieu thereof, and by inserting thereafter the following: "Provided, That nothing in this section shall affect the authority, under existing law, to deposit in the banks of Oklahoma any funds in the Treasury of the United States belonging to any of the Indian Tribes of Oklahoma or the individual members thereof."

Mr. WINGO. Mr. Chairman, I reserve a point of order on the amendment offered by the gentleman from Oklahoma.

The CHAIRMAN. The gentleman from Arkansas [Mr. Wingo] reserves the point of order.

Mr. GLASS. Mr. Chairman, there are other amendments pending.

The CHAIRMAN. At the end of 15 minutes all the amendments will be voted on.

Mr. MORGAN of Oklahoma. Mr. Chairman, section 16 provides in very sweeping terms that all moneys now held in the general fund of the Treasury shall, upon the direction of the Secretary of the Treasury, and so forth, be deposited in the Federal reserve banks.

Under an act passed March 3, 1911, certain funds belonging to the Five Civilized Tribes of Indians of Oklahoma may, in the discretion of the Secretary of the Interior, be deposited in the national or State banks of Oklahoma.

Mr. WINGO. Will the gentleman yield for a question?

Mr. MORGAN of Oklahoma. Just for a question.

Mr. WINGO. Is not that a trust fund?

Mr. MORGAN of Oklahoma. I will get to that in just a moment. Under that law something like \$4,000,000 or \$5,000,000 have been deposited with the banks of Oklahoma, and other funds may be deposited. I took up this matter with the Treas-

urer of the United States, to say whether or not Indian funds are in the general fund or held in a special fund. I have received from the Treasurer of the United States this morning a memorandum in which he says, referring to the Indian funds:

The above funds are deposited in the general fund of the Treasury.

I take it, therefore, there would be no question but what this act would cover all those Indian funds, and under this act they would be required to be deposited in the Federal reserve banks. I believe this House has no desire to repeal that law or to take from the banks of Oklahoma these Indian funds, which really are Oklahoma funds, coming from the people of Oklahoma, and they ought to be deposited in the Oklahoma banks. I hope, therefore, that the committee will consent to this amendment, so that there may be no question about this matter.

The CHAIRMAN. All time has expired. The question is on the amendment offered by the gentleman from Minnesota [Mr. LINDBERGH].

The amendment was rejected.

The CHAIRMAN. The next amendment is that offered by the gentleman from Oklahoma [Mr. MORGAN].

The amendment was rejected.

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer another amendment, to come in as a new paragraph after the word "bullion," in line 13, page 29.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 29, after the word "bullion," in line 13, insert the following as a new paragraph:

"Provided, That all moneys held in the general fund of the Treasury belonging to any Indian tribe or member thereof and which will not be required for a period of two years to meet any payment or obligation due under any law or treaty shall be loaned to bona fide farmers at 5 per cent interest per annum upon improved farms under such terms and rules and regulations as shall be prescribed by the Secretary of the Interior: And provided further, That the funds belonging to any Indian tribe or member thereof shall be loaned to farmers in the State where said Indian tribe or member thereof resides."

Mr. MORGAN of Oklahoma. Mr. Chairman—

The CHAIRMAN. All debate on this section and amendments thereto is exhausted. The question is on the amendment offered by the gentleman from Oklahoma.

The amendment was rejected.

Mr. MORGAN of Oklahoma. Mr. Chairman, I ask unanimous consent to speak for half a minute on that amendment.

The CHAIRMAN. The amendment has been voted on. The gentleman from Oklahoma asks leave to address the committee for one-half minute. Is there objection?

There was no objection.

Mr. MORGAN of Oklahoma. Mr. Chairman, this is a very important amendment, which I think is in the line of giving more credit to the farmers. The millions of dollars in the Treasury of the United States on which the Government is paying \$2,000,000 annual interest ought to be utilized in the Western States, where the Indians have untaxed lands, and in that way help out the farmers.

My understanding is that there is about \$60,000,000 in the Treasury held in trust for Indian tribes and members thereof. Much of this vast sum will not be paid out to the Indians for many years to come. But other Indian lands are to be sold. The proceeds of these sales will add large additional funds to be deposited in the Treasury to the credit of the Indians. These are largely trust funds on which the Government pays 3 and 4 per cent annual interest. This interest charge takes large sums from the Treasury—nearly \$2,000,000 annually. Under the provisions of this bill these funds will be deposited in the Federal reserve banks, upon which they will make a profit. My plan is to loan these funds to the bona fide farmers of the States, loaning to the farmers of each State the funds that belong to the Indians of that State. The loans should be made at not to exceed 5 per cent annual interest and on the most favorable terms possible.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NOTE ISSUES.

SEC. 17. That Federal reserve notes, to be issued at the discretion of the Federal reserve board for the purpose of making advances to Federal reserve banks as hereinafter set forth and for no other purpose, are hereby authorized. The said notes shall be obligations of the United States and shall be receivable for all taxes, customs, and other public dues. They shall be redeemed in gold or lawful money on demand at the Treasury Department of the United States, in the city of Washington, D. C., or at any Federal reserve bank.

Any Federal reserve bank may, upon vote of its directors, make application to the local Federal reserve agent for such amount of the Treasury notes hereinbefore provided for as it may deem best. Such application shall be accompanied with a tender to the local Federal reserve agent of collateral security to protect the notes for which application is made equal in amount to the sum of the notes thus applied for. The collateral security thus offered shall be notes and bills accepted for rediscount under the provisions of sections 14 and 15 of this act, and the Federal reserve agent shall each day notify the Federal reserve board

of issues and withdrawals of notes to and by the Federal reserve bank to which he is accredited. The said Federal reserve board shall be authorized at any time to call upon a Federal reserve bank for additional security to protect the Federal reserve notes issued to it.

Whenever any Federal reserve bank shall pay out or disburse Federal reserve notes issued to it as hereinbefore provided, it shall segregate in its own vaults and shall carry to a special reserve account on its books gold or lawful money equal in amount to 33½ per cent of the reserve notes so paid out by it, such reserve to be used for the redemption of said reserve notes as presented; but any Federal reserve bank so using any part of such reserve to redeem notes shall immediately carry to said reserve account an amount of gold or lawful money sufficient to make said reserve equal to 33½ per cent of its outstanding Treasury notes. Notes so paid out shall bear upon their faces a distinctive letter and serial number, which shall be assigned by the Federal reserve board to each Federal reserve bank. Whenever Federal reserve notes issued through one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank through which they were originally issued, or shall be charged off against Government deposits and returned to the Treasury of the United States, or shall be presented to the said Treasury for redemption. No Federal reserve bank shall pay out notes issued through another under penalty of a tax of 10 per cent upon the face value of notes so paid out. Notes presented for redemption at the Treasury of the United States shall be paid and returned to the Federal reserve banks through which they were originally issued, and Federal reserve notes received by the Treasury otherwise than for redemption shall be exchanged for lawful money out of the 5 per cent redemption fund hereinafter provided and returned as hereinbefore provided to the reserve bank through which they were originally issued.

The Federal reserve board shall have power, in its discretion, to require Federal reserve banks to maintain on deposit in the Treasury of the United States a sum in gold equal to 5 per cent of such amount of Federal reserve notes as may be issued to them under the provisions of this act; but such 5 per cent shall be counted and included as part of the 33½ per cent reserve hereinbefore required. The said board shall also have the right to grant in whole or in part or to reject entirely the application of any Federal reserve bank for Federal reserve notes; but to the extent and in the amount that such application may be granted the Federal reserve board shall, through its local Federal reserve agent, deposit Federal reserve notes with the bank so applying, and such bank shall be charged with the amount of such notes and shall pay such rate of interest on said amount as may be established by the Federal reserve board, which rate shall not be less than one-half of 1 per cent per annum, and the amount of such Federal reserve notes so issued to any such bank shall, upon delivery, become a first and paramount lien on all the assets of such bank.

Any Federal reserve bank may at any time reduce its liability for outstanding Federal reserve notes by the deposit of Federal reserve notes, whether issued to such bank or to some other reserve bank, or lawful money of the United States, or gold bullion, with any Federal reserve agent or with the Treasurer of the United States, and such reduction shall be accompanied by a corresponding reduction in the required reserve fund of lawful money set apart for the redemption of said notes and by the release of a corresponding amount of the collateral security deposited with the local Federal reserve agent.

Any Federal reserve bank may at its discretion withdraw collateral deposited with the local Federal reserve agent for the protection of Federal reserve notes deposited with it and shall at the same time substitute other collateral of equal value approved by the Federal reserve agent under regulations to be prescribed by the Federal reserve board.

It shall be the duty of every Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks and drafts drawn upon any of its depositors or by any of its depositors upon any other depositor and checks and drafts drawn by any depositor in any other Federal reserve bank upon funds to the credit of said depositor in said reserve bank last mentioned, nothing herein contained to be construed as prohibiting member banks from making reasonable charges to cover actual expenses incurred in collecting and remitting funds for their patrons. The Federal reserve board shall make and promulgate from time to time regulations governing the transfer of funds at par among Federal reserve banks, and may at its discretion exercise the functions of a clearing house for such Federal reserve banks, or may designate a Federal reserve bank to exercise such functions, and may also require each such bank to exercise the functions of a clearing house for its shareholding banks.

The Clerk read the following amendments recommended by the committee:

Page 30, line 9, strike out the word "sections" and insert the word "section."

Line 10, strike out the words "and fifteen."

Page 34, line 5, strike out the word "shareholding" and insert the word "member."

The CHAIRMAN. The question is on the committee amendments.

The question was taken, and the committee amendments were agreed to.

Mr. GLASS. Mr. Chairman, I would like to have an agreement as to the time for debate on this section and the amendments thereto.

Mr. BURKE of Pennsylvania. Will the gentleman from Virginia make some suggestion as to the probable time?

Mr. GLASS. I can not until I learn how many amendments and how much time is wanted on that side.

Mr. MURDOCK. There are 8 or 10 amendments to be offered.

Mr. LINDBERGH. I have two amendments, and I would like five minutes on each.

Mr. BURKE of Pennsylvania. I have already requests for an hour and 15 minutes on this side of the House. It is a very vital section of the bill, and I think we should not be parsimonious in dealing out the time.

Mr. GLASS. Mr. Chairman, I ask unanimous consent to conclude debate on this section and all amendments thereto in one hour and a half, one-half of the time to be controlled by the

gentleman from Pennsylvania [Mr. BURKE] and one-half by myself.

Mr. BURKE of Pennsylvania. I will suggest to the gentleman that that will not give five minutes to each gentleman who has requested time and has an amendment.

Mr. GLASS. Well, Mr. Chairman, I will say two hours, to be equally divided, one-half to be controlled by the gentleman from Pennsylvania on that side and one hour to be controlled by myself.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that debate on this section and amendments thereto be closed in two hours.

Mr. MURDOCK. Reserving the right to object, I would like to know from the gentleman from Pennsylvania if we shall have our proportion of the time.

Mr. BURKE of Pennsylvania. How much time does the gentleman want?

Mr. MURDOCK. Fifteen or twenty minutes.

Mr. BURKE of Pennsylvania. Will the gentleman be satisfied with 15 minutes?

Mr. MURDOCK. Yes.

Mr. BURKE of Pennsylvania. Very well.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on this section and amendments thereto be closed in two hours, one-half of the time to be controlled by the gentleman from Pennsylvania [Mr. BURKE] and one-half by himself. Is there objection?

There was no objection.

Mr. GLASS. Mr. Chairman, I suggest that all amendments be reported at the beginning of the debate.

The CHAIRMAN. Without objection, gentlemen will send up the amendments.

Mr. BARTLETT. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BARTLETT. Does this division of time apply to committee amendments as well as to others?

The CHAIRMAN. It applies to all amendments to the section.

Mr. BURKE of Pennsylvania. The time consumed in reading the amendments is not a part of the time for debate?

Mr. BARTLETT. Oh, no.

The CHAIRMAN. Does the Chair understand that the gentleman from Virginia wants the amendments read now?

Mr. GLASS. That is my suggestion.

The CHAIRMAN. The Clerk will report the amendments. First read the committee amendments.

The Clerk read as follows:

Committee amendment: Page 30, line 3, strike out the word "Treasury" and insert in lieu thereof the words "Federal reserve."

Committee amendment: Page 31, line 3, strike out the word "Treasury" and insert in lieu thereof the words "Federal reserve."

Committee amendment: Page 30, line 6, after the word "collateral," strike out all down to and including the word "for," in line 8, and insert the following: "In amount equal to the sum of the Federal reserve note that is applied for and issued pursuant to such application."

Amendment offered by Mr. WILLIS:

Page 29, line 15, after the word "notes," strike out the words "to be issued at the discretion of the Federal reserve board" and insert in lieu thereof the following: "In an amount not to exceed \$500,000,000 and, in addition thereto, a sum equal to the difference between the total amount of national bank notes outstanding at any given moment and the amount of notes outstanding at the passage of this act."

Line 19, strike out the words "United States" and insert in lieu thereof "several Federal reserve banks to which the notes shall be issued."

Amendments offered by Mr. LINDBERGH:

After the word "at," in line 22, page 29, add:

"Any Federal reserve bank, or at," and strike out the word "or." in line 23 on said page, and strike out the words "at any Federal reserve banks," in line 24, on said page 29, and insert in lieu thereof the following: "from the 5 per cent redemption fund hereinafter in this section provided for, or by check upon any Federal reserve bank having Government deposits."

On page 29, line 18, strike out the words "and for any other purpose."

Amendment offered by Mr. TOWNER:

Page 29, lines 21 and 22, after the word "gold," in line 21, strike out the words "or lawful," and also the word "money," in line 22.

Amendment by Mr. SWITZER:

Amend section 17 by striking out of line 20, on page 29, the two commas therein and the word "customs" and inserting, after the word "dues," line 21, the words "except customs," and further striking out of lines 21 and 22 the phrase "or lawful money."

Amendments by Mr. FESS:

Page 29, line 20, after the word "taxes," strike out the word "customs"; and in line 21, after the word "gold," strike out the words "or lawful"; and in line 22 strike out the word "money."

Page 30, line 20, after the word "gold," strike out the words "or lawful money."

Page 31, line 1, after the word "gold," strike out the words "or lawful money."

Line 20, after the word "for," strike out the words "lawful money" and insert the word "gold."

Page 32, line 24, after the word "or," strike out the words "lawful money," and in line 25 the words "of the United States" and insert the word "gold."

Amendment by Mr. BURKE of Pennsylvania:

Page 29, lines 21 and 22, after the word "gold," strike out the words "or lawful money."

Amendment by Mr. PLATT:

Page 29, line 19, strike out all of lines 19 and 20 and the two words on line 21 ending the sentence.

Amendment by Mr. MONDELL:

Strike out all of section 17 down to and including line 12, on page 33, and insert in lieu thereof the following:

"That Federal reserve bank notes to be issued by permission of the Federal reserve board by Federal reserve banks are hereby authorized. The said notes shall be obligations of the Federal reserve banks of issue and shall be receivable by all national and Federal reserve banks and for all taxes, customs and other public dues.

"They shall be redeemed in gold on demand by the bank of issue.

"Any Federal reserve bank upon vote of its directors and within a limit prescribed by the Federal reserve board may issue such amount of the notes hereinbefore provided for as it may deem best.

"Whenever any Federal reserve bank shall pay out Federal reserve bank notes issued by it as herein before provided, it shall segregate in its own vaults and shall carry to a special reserve account on its books gold equal in amount to 40 per cent of the Federal reserve bank notes so paid out by it, such reserve to be used for the redemption of said Federal reserve bank notes, but any Federal reserve bank so using any part of such reserve to redeem notes shall immediately carry to said reserve account an amount of gold sufficient to make said reserve equal to 40 per cent of its outstanding Federal reserve bank notes, except as herein provided.

"The full amount of such note issues by each of said banks shall at all times be covered by such notes and bills of exchange and such bank acceptance as the Federal reserve banks are by section 14 of this act empowered to discount with the indorsement of member banks or by such prime bankers' bills and bills of exchange payable in foreign countries as the Federal reserve banks are by section 15 of this act permitted to purchase in the open market; but nothing herein provided shall prevent the exchange of said Federal reserve bank notes for gold of equal amount, or the issue of said Federal reserve bank notes for the purchase of a like amount of gold. Notes so paid out shall bear upon their faces the name of the issuing bank.

"Whenever the gold reserve is 40 per cent or more such notes may be issued without tax; whenever such reserve shall fall below 40 per cent and shall be between 37½ per cent and 40 per cent such deficiency of reserve shall bear a tax of interest at the rate of 1½ per cent per annum, and for each 2½ per cent or part thereof of further reduction of reserve an additional tax of interest at the rate of 1½ per cent per annum on such deficiency of reserve shall be paid into the Treasury of the United States, and whenever and while such reserve shall be reduced to 33½ per cent of such outstanding notes, no further issue of such notes shall be made.

"Whenever Federal reserve bank notes issued by one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank by which they were originally issued, and at its expense for transportation. No Federal reserve bank shall pay out notes issued by another under penalty of a tax of 10 per cent upon the face value of notes so paid out. The amount of such Federal reserve bank notes so issued by any such Federal reserve bank shall become a first and paramount lien on all the assets of any such Federal reserve bank."

Amendment by Mr. GREEN of Iowa:

Page 31, line 23, after the word "issued," insert:

"When any Federal reserve notes are redeemed by the Federal reserve bank which issued them, such notes so redeemed shall be canceled and not again paid out."

Amendment by Mr. PLATT:

Page 33, lines 21 and 22, strike out the words "to cover actual expenses."

Mr. GLASS. Mr. Chairman, I suggest that the gentleman from Pennsylvania use some of his time. The committee amendments are not so very material.

Mr. MADDEN. Mr. Chairman, before the debate begins I have an amendment which I desire to offer, which I send to the desk and ask to have read.

The CHAIRMAN (Mr. SABATH). The Clerk will report the amendment.

The Clerk read an amendment by Mr. MADDEN, as follows:

Strike out section 17 and substitute therefor the following:

"That Federal reserve bank notes to be issued by permission of the Federal reserve board by Federal reserve banks are hereby authorized. The said notes shall be obligations of the Federal reserve banks of issue and shall be receivable by all national and Federal reserve banks and for all taxes, customs, and other public dues. They shall be redeemed in gold on demand by the bank of issue. Any Federal reserve bank upon vote of its directors and within a prescribed limit by the Federal reserve board may issue such amount of the notes hereinbefore provided for as it may deem best. Whenever any Federal reserve bank shall pay out Federal reserve notes issued by it as hereinbefore provided, it shall segregate in its own vaults and shall carry under special reserve account on its books, gold equal in amount to 40 per cent of the Federal reserve bank notes so paid out by it, such reserve to be used for the redemption of said Federal reserve bank notes, but any Federal reserve bank so using any part of such reserve to redeem notes shall immediately carry to said reserve account an amount of gold sufficient to make said reserve equal to 40 per cent of its outstanding Federal reserve bank notes, except as herein provided. The full amount of such note issues by each of said banks shall at all times be covered by such notes and bills of exchange and such bank acceptances as the Federal reserve banks are by section 14 of this act empowered to discount with the indorsement of member banks or by

such prime bankers' bills and bills of exchange payable in foreign countries as the Federal reserve banks are by section 15 of this act permitted to purchase in the open market, but nothing herein provided shall prevent the exchange of said Federal reserve bank notes for gold of equal amount or the issue of said Federal reserve bank notes for the purchase of a like amount of gold. Notes so paid out shall bear upon their faces the name of the issuing bank. Whenever the gold reserve is 40 per cent or more such notes may be issued without tax; whenever such reserve shall fall below 40 per cent and shall be between 37½ per cent and 40 per cent such deficiency of reserve shall bear a tax of interest at the rate of 1½ per cent per annum, and for each 2½ per cent or part thereof of further reduction of reserve an additional tax of interest at the rate of 1½ per cent per annum on such deficiency of reserve shall be paid into the Treasury of the United States, and whenever and while such reserve shall be reduced to 33½ per cent of such outstanding notes, no further issue of such notes shall be made. Whenever Federal reserve bank notes issued by one Federal reserve bank shall be received by another Federal reserve bank they shall be returned for redemption to the Federal reserve bank by which they were originally issued, and at its expense for transportation. No Federal reserve bank shall pay out notes issued by another under penalty of a tax of 10 per cent upon the face value of notes so paid out. The amount of such Federal reserve bank notes so issued by any such Federal reserve bank shall become a first and paramount lien on all the assets of any such Federal reserve bank."

Mr. BURKE of Pennsylvania. Mr. Chairman, I understand that the time runs on from this point?

The CHAIRMAN. Yes.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. PLATT], a member of the committee.

Mr. PLATT. Mr. Chairman, my amendment was a motion to strike out all of lines 19 and 20 and the first two words on line 21, on page 29, section 17. The striking out of this sentence will make these notes distinctly bank notes, which is what they are in effect.

You will see from the following paragraphs of this section that these notes are in fact made the obligation of the Federal reserve banks in spite of the statement here that they are the obligation of the Government, and the banks are required to keep against them a reserve of 33½ per cent and also to mortgage all their assets for additional security. What kind of a mockery is this sentence calling these bank notes an obligation of the Government? A lot of wild talk has been indulged in on the floor of this House about bank notes. Only a few minutes ago a gentleman read quotations of the selling prices of certain bank stocks in New York City and implied that those banks had made their great profits by paying their debts with notes. Now, that is sheer nonsense. It would be paying one debt with another debt. There is practically no more profit in issuing notes than in creating deposit accounts on which checks may be drawn. If the gentleman will study carefully the figures in the report of the Comptroller of the Currency he will find that several of the banks whose stocks are quoted highest have outstanding the smallest possible issue of notes under the law, and he will also find that State banks in New York make profits just as large from their deposit accounts as banks issuing notes make. There is no essential difference between a bank note and a certified check, and these notes ought to be bank notes pure and simple.

Mr. KORBLY. Will the gentleman yield?

Mr. PLATT. I will.

Mr. KORBLY. I understood the gentleman to say that a bank note is tantamount to a cashier's check on his own bank.

Mr. PLATT. It is tantamount to a certified check, practically. Mr. Chairman, I yield back the balance of my time.

Mr. TOWNER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. TOWNER. Is it the expectation that these various amendments will be voted on at the close of the discussion on this subject?

The CHAIRMAN. That is the understanding.

Mr. TOWNER. I would like to suggest to the gentlemen of the majority side that it will be perhaps difficult for Members to remember the various amendments without the rereading of them, and that they may be acted upon with knowledge of the particular amendment can be perhaps best subserved by a vote on these amendments as they are submitted. I simply make that suggestion to the majority of the committee.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. WILLIS].

Mr. WILLIS. Mr. Chairman, I am one of those who regret exceedingly that this bill is not in such form that those of us on this side of the aisle who are really in favor of a system of currency reform that shall be in the interest of the people shall be able to support it. I recognize that there is a demand in the country for currency reform, but, in my judgment, there is not a demand in the country for the passage of this bill or, at any rate, there would not be if the people understood the provisions of it. I have already referred during the last two days' debate to some things in this bill which, in my judgment,

are objectionable, but it seems to me, Mr. Chairman, that we have now come to a section that is the most vital and fundamental thing in this whole proposition. The amendment which I have sent to the Clerk's desk proposes in substance to do two things. It proposes in the first place to put in the pending bill what was in the original bill when it came from the experienced hands of the chairman of the committee, the gentleman from Virginia [Mr. GLASS], namely, a provision to limit the amount of note issue. I invite attention to the fact, Mr. Chairman, that in this bill there is no limitation provided upon the amount of notes which can be issued. It may be desirable to have elasticity in this system of note issue, but let me say, Mr. Chairman, it is much more essential to have stability.

Mr. KORBLY. Will the gentleman yield?

Mr. WILLIS. For a brief interruption; I have only five minutes.

Mr. KORBLY. The gentleman knows very well there is a limitation of 33½ per cent.

Mr. WILLIS. I am not talking about the reserve. I am calling attention to the fact that in this bill, as it was originally drawn, occurred the language which I have embodied in my amendment, as follows:

In an amount not to exceed \$500,000,000 and in addition thereto a sum equal to the difference between the total amount of national-bank notes outstanding at any given moment and the amount of such notes outstanding at the passage of this act.

Mr. KORBLY. Will the gentleman yield?

Mr. WILLIS. Very briefly.

Mr. KORBLY. Does not the gentleman think that the Federal reserve board has some voice in the matter of these notes?

Mr. WILLIS. That is the dangerous and objectionable proposition, Mr. Chairman. Unless I have absolutely misread and misinterpreted the financial history of this country, it is a dangerous proposition to put into the hands of the Federal reserve board, or any other set of men that could be appointed, the power to determine the volume of currency of this country. There is no limitation as this bill is drawn. I think there ought to be. I think that the language that was in this bill when it came from the experienced hand of the gentleman from Virginia ought to have remained in the bill.

Mr. KORBLY. Point out the difference between deposits and bank notes.

Mr. WILLIS. I understand quite well. If the gentleman can not ask a pertinent question, I do not care to be interrupted.

Now, here is another thing. We have fought financial battles in this country. We had experience with the rag-baby and the greenback craze. We had the fight of 1896. All those battles were fought on the one proposition that we ought to have in this country a stable currency. And you are proposing, if you pass this bill, to undo the work that was done on those momentous occasions. You are proposing to provide a currency that admits of dangerous inflation. You say you want elasticity, but the elasticity in this bill is all one way. No man can prophesy within millions of dollars what volume of notes will be issued if this bill shall become a law. For one, I shall never vote for a measure that permits inflation and possible ultimate debasement of the currency of this Republic.

Mr. GLASS. May I interrupt the gentleman right there?

Mr. WILLIS. Very briefly.

Mr. GLASS. I would like to ask him to explain at this point how Mr. James J. Forgan, one of the most prominent bankers in this country, arrived at the conclusion that there was a contraction of \$1,500,000,000?

Mr. WILLIS. I am not concerned with Mr. Forgan. I am talking about this bill. I want to call attention to another fact. As this bill was originally drawn they approached the subject gingerly. Do you notice the language?—

The said notes shall purport on their faces to be obligations of the United States.

In the bill as it now stands it is provided that "said notes shall be obligations of the United States"; the amendment which I have offered provides that the notes shall be the obligations of the Federal reserve banks. Why should this vast amount of notes be issued to the Federal reserve banks, to be used by them for their profit, and still be made obligations of the United States? Why place this burden on the Government of the United States for the benefit of the Federal reserve banks? Since the people can get these notes from the Federal reserve banks only by paying interest for them, why should not the notes be the obligations of the banks instead of the obligations of the United States?

The gentleman from Virginia [Mr. GLASS] in his original bill said that—

They shall be redeemed in gold on demand.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield one more minute to the gentleman from Ohio.

Mr. WILLIS. Now, then, in the bill as it comes before us in its present form, these obligations are not to be paid in gold, but they are to be paid in gold or lawful money. The honorable Secretary of State, who has been dominating the Democratic Party all these years, controlling conventions and nominating candidates for the Presidency, has at last been able to get into the bill and have it indorsed by caucus action the thing for which he has been fighting for 20 years. And I call the attention of Members on this side of the House to the fact that if you shall vote to enact this bill into law, you are voting for the very thing that you have been fighting against all these years. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania rose.

The CHAIRMAN. For what purpose does the gentleman from Pennsylvania rise?

Mr. BURKE of Pennsylvania. The time, as I understand it, is in the control of the gentleman from Virginia, and I prefer to have him use it.

Mr. KORBLY. May I be permitted to make an observation at this time?

Mr. GLASS. I yield a minute to the gentleman from Indiana [Mr. KORBLY].

Mr. KORBLY. I wanted to observe that the Democratic Party has not waited 16 years to overcome that obstacle to legislation.

The CHAIRMAN. If the committee will indulge me for one moment, I wish to say that some Member here has placed three bills in the basket and omitted to put his name on them. If the Member is present, will he kindly come to the desk and see that his name is placed on the bills?

Mr. BURKE of Pennsylvania. Will the gentleman from Virginia [Mr. GLASS] now occupy some of his time?

Mr. GLASS. Mr. Chairman, I yield three minutes to the gentleman from Massachusetts [Mr. PHELAN].

Mr. PHELAN. Mr. Chairman, it is a difficult thing in a short time to explain anything about this note-issuing section, but there have been so many absurd statements that I think I ought to call attention to one or two of them at least. The statement has been made that under the provisions of this bill it is possible for the Government to issue \$10,000,000,000 worth of these Federal reserve notes. Now let us see whether or not that will hold water. In the first place, to issue \$10,000,000,000 worth of Federal reserve notes it will be necessary for the Federal reserve bank to have in lawful money over \$3,000,000,000.

Assuming that there is that much lawful money in the country, it would mean that the Federal reserve banks would have to gather together in their vaults all the lawful money in existence. That is ridiculous, to start with. But, assuming that that has been done, then they go to the Federal reserve board to get this \$10,000,000,000 worth of notes. How do they get them? They get them by putting up \$10,000,000,000 worth of commercial paper. When they put up that paper they have to take all the lawful money in existence and keep it in their vaults as a reserve against the \$10,000,000,000 that has been issued in Federal reserve notes.

Now, to go a step further, let us see how they get their \$10,000,000,000 worth of commercial paper. The only possible way in which they can get that is from member banks. Now, when they get the \$10,000,000,000 worth of commercial paper from member banks, it is inconceivable that those member banks would put up that paper without carrying some deposits in the regional reserve banks. Indeed, it is absolutely impossible for them to do it, because the law requires that the member banks shall keep a reserve; that is, keep the money in the regional reserve banks which they may count as reserves. Now, if the member banks have deposits in the regional reserve banks, the regional reserve banks under the law must keep a reserve of 33½ per cent against those deposits. How can they have a reserve against those deposits when they have to use all the lawful money in existence to get the notes? It is absurd.

Now, let us go a step further. Let us go right down to the member banks. The member banks to rediscount this \$10,000,000,000 worth of commercial paper with the regional reserve banks, must have obtained that paper in some way. The way they obtained it was by taking loans and taking deposits. When we get down to the member banks we find that the member banks are obliged to keep a certain amount of lawful money in their vaults.

Now, how can they keep that amount of lawful money in their vaults when all the lawful money in existence is in the vaults of the Federal reserve banks? I could go on and point out 40 other absurdities in connection with this rash statement that has been made about the issue of notes.

Now, let me continue. There is a misunderstanding about this proposition, because men have in their minds what has been done in the past, and they have in their minds laws that have existed in the past with reference to the issue of notes. There are certain countries now in which notes may be issued without keeping reserves against those notes. Now, if a bank can issue its notes freely without keeping a reserve against them, of course it is to the advantage of that bank to put the notes out, because they put them out on a loaning process, and on their loans they make money.

Now, let us see what will happen under our bill. These notes are put out and issued by the Federal reserve board. They are issued to the regional reserve banks. When the regional reserve bank gets any notes, it has to keep a deposit of 33 1/3 per cent of lawful money to get those notes issued. It has to keep an equal amount against any credit it extends to the member bank. So what is the advantage to the regional reserve bank in putting out notes rather than giving the credit to the member bank? None, because they have to keep an equal amount of reserve, whether it is notes or credit, with this additional feature, that when they give a credit on their books to a member bank they are not subject to any tax, because they are not taxed on deposits under this bill, but if they put out notes to a member bank they are subject to a tax of at least one-half of 1 per cent and more if the Federal reserve board desires to tax them.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. PHELAN. I yield to the gentleman.

Mr. GREEN of Iowa. What is the highest amount that could be issued under this bill, in the opinion of the gentleman? I do not expect the gentleman to give it in anything like exact figures but approximately.

Mr. PHELAN. I will not attempt even to approximate it, because it would mean going into a great many figures.

Mr. GREEN of Iowa. I thought the gentleman would not. That is one trouble with the bill.

Mr. PHELAN. I will say to the gentleman that the thing has been figured out, because I asked that very same question some two months ago. I have not the figures here, and I am not going into it, because I am not going to try to rely on my memory for the figures. About two months ago I asked that very same question of the expert of the committee, and the figures were all worked out.

Mr. TEMPLE. I notice that the gentleman used the word "tax"—not less than half of 1 per cent tax. Was that an inadvertence? The bill speaks of it as interest.

Mr. PHELAN. It was an inadvertence.

Mr. TEMPLE. I contended the other day that we had delegated our taxing power to the Federal reserve board.

Mr. PHELAN. That expression was an inadvertence. I want to say, in reference to the change which the gentleman from Ohio [Mr. BULKLEY] asked to have made yesterday, which was made, and to which the gentleman from Arkansas objected, I do not wish to bring up that whole question again, but I think perhaps it ought to have a little explanation. It was stated on the floor that it was understood that rediscounts up to the amount of the capital stock of member banks could be made with the reserve banks. I think everybody will agree that that statement was made.

I want to point out that under the bill as we had it they could not get rediscounts even up to the amount of the capital of the bank, and I will state why. The section to which the gentleman from Ohio referred—limiting the liabilities of national banks to a certain amount, contained various items of exceptions, but it did not contain among those exceptions this 10 per cent liability on the stock subscription provided for in the bill. The stock subscription to regional banks is a subscription on which the bank pays in 10 per cent, and the other 10 per cent is a liability. Now, if a bank could not incur indebtedness beyond its capital you must deduct that 10 per cent, because that is a liability; so that if the bill had not been changed the bank could not rediscount to the amount of more than 90 per cent of its capital stock.

Let me add another word: In many cases, if this bill is going to prove the benefit we think it is, the bank could not rediscount even up to the amount of 90 per cent, because we have given to national banks the permission to accept bills of exchange. Now, an acceptance is a liability. It is a contingent liability, to be sure, but nevertheless a liability; so that if a bank accepts \$100,000 worth of bills of exchange that amount also would have to be deducted from the amount of rediscounts that that bank could carry with the Federal reserve bank. The fact of the matter is this: If there were any intention to limit the amount that a bank could rediscount it would be put into this bill as a limitation. In other words, we would not depend

on a particular provision of the existing law, because I believe that thing was not noticed at the time our bill was framed.

To go a step further, I want to show you some of the difficulties of limiting a bank in its permission to rediscount to the amount of its capital stock. We will take the case of the bank suggested yesterday by the gentleman from New York [Mr. PLATT], a bank in Virginia. As I recollect it, he said that bank had a capitalization of \$100,000 and it had deposits of \$3,500,000. It was a country bank. Now, under our bill that country bank would be required to keep 5 per cent of its reserve. Five per cent of \$3,500,000 is \$175,000. The bank has a capital of \$100,000, and yet it is required to keep a reserve in the regional reserve bank of \$175,000. If you allowed the bill to stand as it was that bank could not carry in the regional reserve bank a deposit created by way of rediscount for probably more than \$85,000. I can not give the figures exactly, because I can not tell what the indebtedness of the bank otherwise would be; but we will say that by the rediscounting process it could get about \$85,000 in the Federal reserve bank. The balance of the \$175,000 would have to be carried in the regional reserve bank by a cash deposit. You see what a hardship that would be. Under this bill as it now stands, if that bank desired to create that deposit in the Federal reserve bank as a reserve it could do it by the rediscounting process. It can rediscount that \$175,000 by sending to the regional reserve bank \$175,000 worth of its paper.

The amendment has been voted on, but I think it ought to be cleared up. I want to point out, in conclusion, that this amendment, accepted yesterday, is a help to the small banks, because if the small banks were limited as the bill would limit them it would be a serious disadvantage. A gentleman from Illinois, a Member of this body, got a letter in which this very point was raised. The writer complained that under our bill he would not be able to get enough rediscounts in time of trouble to help him any, because there was a limitation in the bill. As a matter of fact, there was no limitation in the bill, but that is what he complained of.

Mr. MADDEN. Will the gentleman yield?

Mr. PHELAN. Certainly.

Mr. MADDEN. Does the gentleman wish to be understood as saying that the bank described by him could create all the reserve in the Federal reserve bank by rediscount?

Mr. PHELAN. Yes.

Mr. MADDEN. And would not be compelled to keep cash?

Mr. PHELAN. No. I want to say in conclusion that if you require the payment of cash, as suggested by the gentleman from Illinois and in response to his question, you might upset the whole calculations made on the bill, and you can see the hardship that might ensue.

Mr. BUTLER. Will the gentleman yield?

Mr. PHELAN. I will yield to the gentleman.

Mr. BUTLER. Will the gentleman explain why the change was made between the original plan of the bill as reported as that stated by the gentleman from Ohio [Mr. WILLIS], because it seemed to me that there was an attempt to limit the note issue discovered in the first print of the bill, or the bill first introduced in the House?

Mr. GLASS. I can tell the gentleman. Because every bank in the United States howled against limitations and said it was unscientific.

Mr. BUTLER. That was the reason—that it was under protest?

Mr. GLASS. That was one reason.

Mr. BUTLER. It was a protest that induced the Banking and Currency Committee to make the change?

Mr. GLASS. The Banking and Currency Committee realized that it was a sensible protest.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, the amendment which I have offered is merely to strike out from the bill as it now stands the words that have so mysteriously appeared in it, following the word "gold" in the redemption clause, the words "or lawful money."

As this bill was concurrently introduced in the Senate and House by the chairman of the respective committees on June 23 of this year, the provision for redemption was that the redemption should be made in gold on demand. Such was the condition of this bill down as late as July 25, when the committee gave out the bill still in that form to the press. Eighteen days thereafter, when this bill emerged from the majority of the committee for consideration by the Democratic caucus, the words for the first time appeared in this bill, following the word "gold," "or lawful money."

In some way or other in that interval, at somebody's suggestion or solicitation or demand, these words were added, changing materially the basis of redemption in this bill, and making the redemption now under its terms in any money that is lawful as the law of the United States has fixed it. Lawful money embraces silver as well as gold. Redemption may be made in silver as well as gold. Will the demand be made now by these gentlemen and those very efficient influences that have written these words into this bill—will the demand be made—

Mr. WINGO. Will the gentleman yield?

Mr. TOWNER. No; I can not yield.

Mr. WINGO. What influences?

Mr. TOWNER (continuing). Will the demand be made that the Government shall purchase silver at 60 cents on a dollar to redeem these notes rather than use the gold which is worth 100 per cent on a dollar?

Mr. Chairman, it has been supposed that after great tribulation, after extremely long and arduous endeavor, we had finally settled the question in this country that gold was the basis of its currency. Now we are asked in this bill to make as a basis for the redemption of this larger, if not finally exclusive, part of our currency anything the law says may be lawful money of the United States. It would be very interesting to know what the influences within that party and on that side of the House are which are so potent that have caused the amendment of this bill in this material way in the process of its formation.

I shall be extremely gratified if those gentlemen, when they come to their explanations, will tell by what influences and in what manner and upon whose suggestions and what will be the effect of this interpolation in the terms of the bill. This, Mr. Chairman, is a very serious matter. It is a matter that concerns every citizen of this country. It is more important to the laboring man than it is to the bankers or capitalists. It is more important to the poorer classes of people than it is to the richer and more powerful. It is one that affects the very basis and foundation of our system of currency in this country, and gentlemen on that side know as well as we do on this side that it is a question that is a two-edged sword. It will bring to those who do not support this bill very effective influences against its being carried into effect and being made operative. If it shall be believed that this bill makes a change in the basis of the currency of the Nation, this bill can not possibly be made effective in its operations. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. GLASS. Mr. Chairman, I yield 15 seconds to the gentleman from Indiana [Mr. KORBLY].

Mr. KORBLY. Mr. Chairman, I would like to observe to the gentleman who has just taken his seat that had the Republican Party possessed the courage of its convictions in 1900 and really established the gold standard the things about which he worries now so touchingly need never have bothered him.

Mr. GLASS. Mr. Chairman, I yield 10 minutes to my colleague on the committee the gentleman from Arkansas [Mr. WINGO].

Mr. WINGO. Mr. Chairman, the distinguished gentleman from Iowa [Mr. TOWNER] thinks he has discovered a "mare's nest." He pretends to believe because the bill has been changed so as to provide that the redemption of the notes which are to be issued under this act shall be in gold or "lawful money," instead of gold alone, as originally provided, that somebody is trying by underhand methods to repeal the gold-standard act of 1900. He speaks of the change as if it was a mystery and that a crime had been committed by some one. He demands to know who is responsible for this change, when it took place, and what influences were brought to bear upon the person who made the change. The suggestions are not original with the gentleman. He has simply borrowed these charges and insinuations from certain New York newspapers, which have been busy in the last few days trying to make the country believe that by some process of verbal jugglery the words "lawful money" have been interpolated into the bill. One of the newspapers which I have before me asks who dictated the change, who procured it, by whom was it suggested, and for what purpose. Another one of these newspapers which I hold in my hand charges that Mr. Bryan has secretly tried to smuggle into this act these words, so as to repeal the gold-standard act. One of these newspapers in a serious vein expresses a desire to know whether or not the President appreciates the buncombe that Mr. Bryan has thus been able to inject into his bill. As a matter of fact, these newspapers and the Republicans have picked up this question and have tried to make a "bugaboo" out of it and—

Mr. MONDELL. Will the gentleman yield?

Mr. WINGO. I regret that owing to lack of time I can not yield to my friend.

Mr. Chairman, the charge that Mr. Bryan is responsible for this change in the bill is without foundation. As a matter of fact, it was made without consulting him, either directly or indirectly, and I doubt that he even knew that the change was made. There is no mystery about it, Mr. Chairman, and there is no question about who is the author of the much-discussed amendment, as I am the one who is responsible for it. When the bill was originally prepared it carried this provision with reference to the notes to be issued:

They shall be redeemed in gold on demand at the Treasury Department of the United States or at any Federal reserve bank.

The original print of the bill also provided in the same section as follows:

Whenever any Federal reserve bank shall pay out or disburse Federal reserve notes issued to it, as hereinbefore provided, it shall segregate in its own vaults, and carry to a special reserve account on its books gold or lawful money equal in amount to 33 1/3 per cent of the reserve notes so paid out by it.

This same print of the bill also provided for a 5 per cent redemption fund to be deposited by these banks with the Treasurer of the United States with which to redeem these notes, which redemption fund was to be in gold or lawful money. Thus it will be readily seen that the bill as originally prepared required the Government to redeem in gold alone, while it provided that the banks might carry the redemption reserves either in gold or lawful money; and while the Government was required to redeem these notes in gold, yet the 5 per cent redemption fund that the banks were required to maintain in the Treasury was to be of either gold or lawful money.

In other words, Mr. Chairman, while the Government was required to pay gold, and gold alone, in the redemption of these notes the banks were permitted to redeem in lawful money. It was obvious to any reasonable man what the effect of these provisions would have been upon the United States Treasury had they not been changed. Under these provisions the banks could have put up lawful money, and when the Government was called upon to pay out gold in the redemption of these notes the Secretary of the Treasury would have been compelled to have sold bonds to procure the gold, and we would have had a repetition of the raid on the United States Treasury as we did in the days of Mr. Cleveland.

I called the attention of the committee to this unequal load that the bill placed upon the Government and insisted that the requirements with reference to the banks and the Government should be the same. At first the committee adopted an amendment which struck out the words "lawful money," thereby making the provisions of the bill to require both the banks and the Government to redeem these notes in gold. At that time I would have preferred that instead of striking out the words "lawful money" in the reserve requirements imposed on the banks that we put the words "lawful money" in the redemption requirements imposed upon the Government. Finally, at my insistence, the provisions were changed so that the Government might redeem in gold or lawful money, and the words "or lawful money" were put back in the bill after the word "gold" in that provision governing the redemption and reserve requirements imposed on the banks. At the time these changes were made the facts were known and reported to the newspapers—

Mr. TOWNER. Will the gentleman yield?

Mr. WINGO. I regret that I have not the time to yield. I repeat, Mr. Chairman, these changes were made upon my motion, without consultation with Mr. Bryan or anybody else, other than the members of the committee, and the only reason I had in making the change was that the provisions with reference to the Government and the banks should be uniform. In other words, I wanted to impose the same obligations on the banks that were imposed upon the Government.

Now, Mr. Chairman, was there any "jugglery" about that? Is there anything wrong about it? Is not my contention sound? I want to say to my Republican friends, when you condemn this change, when you condemn these lawful-money provisions of this bill, then I say to you that you condemn every piece of legislation upon this same subject that the Republican Party has put upon the statute books. [Applause on the Democratic side.]

Let me call your attention to the provisions of the laws which you have enacted on this subject. Take your favorite act, that of May 30, 1908, which you railroaded through this House with only four hours for debate, and without the Democrats having an opportunity to amend it. What provisions did you make in

that act with reference to redemption? I will read you the provision, which is as follows:

The circulating notes of the national-bank associations when presented to the Treasury for redemption, as provided in section 3 of the act, approved June 20, 1874, shall be redeemed in lawful money of the United States.

Oh, where were you gentlemen then who are so alarmed now? Where were the friends of gold standard then? Did Mr. Bryan suggest the words "lawful money" to you gentlemen then? [Applause and laughter on the Democratic side.] Was Mr. Bryan lurking around the Capitol whispering in your ear and persuading you into discrimination against the gold standard? But let us take another one of your favored currency bills, the Aldrich bill, that you tried to impose upon the people of this country, and which every Republican indorsed, and which every banker in the United States indorsed. What does it provide with reference to the redemption of the notes to be issued under that act? I have that act and call your attention to this provision:

The circulating notes of the national reserve associations shall constitute a first lien upon all its assets, and shall be redeemable in lawful money.

Lawful money! Not gold! Where were you gentlemen then who are so alarmed now? Where were you when the Aldrich bill by this very provision sought to strike down the gold standard? Oh, you friends of the gold standard, who are now charging me and Mr. Bryan with an underhanded and subtle effort of striking down the gold standard, where were you then? Did Mr. Bryan work with Mr. Aldrich to strike down the gold standard and make these notes redeemable in lawful money?

Oh, gentlemen, the truth of the business is that these newspapers and these gentlemen who have raised this question and make these charges now, do it solely for the purpose of playing politics. You do it solely for the purpose of trying to drag in issues that are dead and gone. I say to you, my Republican friends, that before you undertake to criticize this amendment of mine which I had put in the bill, you had better familiarize yourself with the present statutes and the provisions of the act, which you yourself put on the statute books. [Loud applause on the Democratic side.]

Mr. PLATT. I desire to call attention to the fact that the currency provided for in the Vreeland-Aldrich bill was purely an emergency bank-note currency.

Mr. WINGO. That makes no difference. Your contention really is that the obligations of the Government should be made payable in gold, while you want the obligations of the banks to be made payable in any money that the banks may choose, and I take the position that the obligations of the Government are just as good as the obligations of the banks. [Applause on the Democratic side.] Do no misunderstand me. I do not intend by this statement to go into a discussion of fiat money, for my position does not involve fiat money, but I simply arose to make this explanation, and to call your attention to the fact that all of this "bugaboo" and "much-ado-about-nothing" is based upon a lack of information of the provisions of existing law. [Applause on the Democratic side.]

I commend the present existing law and its terms—I commend the history of the Republican Party and its enactments on this question to the careful and prayerful consideration of not only these New York newspapers, but to my distinguished friend from Iowa [Mr. TOWNER].

Mr. TOWNER. Has the time of the gentleman expired?

Mr. WINGO. I beg the gentleman's pardon. I did promise to yield to him.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. Fess].

Mr. FESS. Mr. Chairman, I want the attention of the gentleman from Arkansas [Mr. Wingo]. The first error in the statement of the gentleman from Arkansas is that the Aldrich plan as recommended was a violation of the gold standard if this plan that you recommend is a violation of the gold standard. Anyone who does not distinguish between the obligations of the Government and the obligations of an agent under the Government fails to see the core of this question absolutely; for the Government, whose obligations must be redeemed, is an entirely different proposition from a corporation, whose obligations must be redeemed by it and the Government holding it responsible for the redemption. The Aldrich bill did violate the gold standard up to the place where the gentleman read, but he failed to read on. Let me read the Aldrich plan, and then ask you to be informed on the matter that you spoke of. It says:

It shall be the duty of the National Reserve Association to maintain at all times a parity of value of its circulating notes with the

standard established by the first section of the act of March 14, 1900, entitled "An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes."

Now, I call the attention of the gentleman from Arkansas that where he stopped the gold standard was repealed. But the law of 1900 is written in here to prevent this repeal. [Applause on the Republican side.] Without it, it would have been repealed. That is the first error. The second error is where you say that the national banks' redemption is also to be in gold or lawful money. I want to call your attention to the fact that national-bank notes, except in this special emergency law of 1908, were not redeemable in gold.

Mr. WINGO. I did not say they were redeemable in gold.

Mr. FESS. It has been said upon this floor that there is no difference between this law and the national-bank act. There is all the difference between this law and the national-bank act that there is between two standards—all the difference in the world. The national-bank act does not allow anybody to go to the Treasury and demand any amount less than \$1,000 for redemption, and that is redeemed in United States notes or in Federal notes, and not in gold at all. And there is certainly a difference between this bill the majority are bringing in here and the national-bank act—as much difference as there is between the gold standard and the silver standard. And this is a serious proposition.

I want to pay a compliment to my friend from Arkansas. He was so persuasive on yesterday when he introduced an amendment that I voted with him, because I wanted to show him my respect; although I did not agree with him I voted with him. You have had the same persuasiveness in this committee, and whether it be Mr. Bryan or Mr. Wingo, I do not care which it is, you have won your point, and the great struggle from 1893, when William J. Bryan stood upon this very floor and made the most powerful argument, I think, that has ever been made for the right of the Government to use its own option in the redemption of its obligation in silver as well as in gold, to this day the struggle has gone on; and now, to-day, either you or Mr. Bryan has won this struggle, and you are abandoning the gold standard by this law. [Applause on the Republican side.]

Mr. GLASS. May I interrupt the gentleman for one moment there?

Mr. FESS. If you will give me time.

Mr. GLASS. I will give you time.

Mr. FESS. I am glad to be interrupted by the distinguished chairman.

Mr. GLASS. Does the gentleman think that the representatives of the American National Bankers' Association would abandon the gold standard?

Mr. FESS. The representatives of the national banks were never in favor of the Government issuing its own notes.

Mr. GLASS. Let us see for one moment. I hold in my hand the formal suggestions adopted by the currency commission of the National Bankers' Association, submitted to the Banking and Currency Committee of this House, and I will read.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FESS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Virginia yield?

Mr. GLASS. Yes; I yield the gentleman three minutes more.

Mr. FESS. Thank you.

The CHAIRMAN. The gentleman from Ohio [Mr. Fess] is recognized for three minutes.

Mr. GLASS. I read:

The issue is hereby authorized of Federal reserve Treasury notes which shall purport on their face to be an obligation of the United States and shall be receivable for all taxes, customs, and other public dues.

[Applause on the Democratic side.]

And, further on:

When the notes of one bank are received by another bank they shall be charged to the account of the Federal reserve bank whose designated number they bear and forwarded to it for credit or, if preferred, for payment in gold or lawful money.

That was the suggestion of the currency commission of the American Bankers' Association. And, further:

Whenever any Federal reserve bank shall pay out or disburse Federal reserve Treasury notes, as herein provided, it shall hold in its own vaults gold or lawful money equal in amount to not less than 33½ per cent—

And so forth.

Now, does the gentleman from Ohio [Mr. Fess] pretend that the currency commission of the American Bankers' Association, composed of men like A. B. Hepburn, J. Festus Wade, James B. Forgan, George M. Reynolds, and Sol Wexler, were making "an assault upon the gold standard of the country" when they deliberately recommended to the Banking and Currency Commit-

tee of the House the use of that phraseology in this bill? [Applause on the Democratic side.]

Mr. FESS. Mr. Chairman, I want to answer the gentleman. My answer to the gentleman, who is the chairman of this committee, is that under our present cycle of thinking the banking interests of this country are afraid to open their mouths, for they know that you are going to do certain things, and they are willing to accept the less of evils rather than what you would force down their throats.

Mr. GLASS. No; they have never feared to open their mouths, and they recommended the employment of the very same language that this bill uses.

Mr. FESS. Let me ask the gentleman a question. Suppose a Federal reserve note is presented by me to the Secretary of the Treasury under this bill. Can the Secretary, under the law, refuse to pay gold if I demanded it?

Mr. GLASS. As a matter of fact, the bill contains a provision authorizing the Federal reserve board to require Federal reserve banks to carry a 5 per cent gold fund here for redemption purposes.

Mr. FESS. That does not answer my question. If I present a Federal reserve note to you, as Secretary of the Treasury, and demand gold, under this law can you refuse to pay me gold?

Mr. GLASS. I can not refuse to pay gold.

Mr. FESS. Can you refuse to pay gold?

Mr. GLASS. I think not. "Lawful money" is equivalent to gold.

Mr. FESS. No; it is not.

Mr. GLASS. I say it is.

Mr. PHELAN. Mr. Chairman, I would like to ask the gentleman a question.

Mr. FESS. In one moment. Lawful money is greenbacks. A greenback is not full legal tender.

Mr. GLASS. Is not a greenback redeemable in gold.

Mr. FESS. It has been since 1879, after you people fought it. We made it redeemable in 1879.

Mr. GLASS. It is redeemable now?

Mr. FESS. Yes; it is now.

Mr. GLASS. Well, we do not change that. Now, let me ask the gentleman a serious question. Does the gentleman, in all sincerity, pretend to believe that we are assailing the gold standard in this bill?

Mr. FESS. I do not only believe it but I know you are. [Applause on the Republican side.]

Mr. GLASS. Then I pity the gentleman's comprehension. [Applause on the Democratic side.]

Mr. FESS. I would answer the gentleman that I may be subject to his pity, but the American people have a right to know what is meant by this proposed law.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. FESS. Mr. Chairman, may I ask the gentleman from Pennsylvania [Mr. BURKE] for some more time? Will the gentleman give me one minute?

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield one more minute to the gentleman.

The CHAIRMAN. The gentleman from Ohio [Mr. Fess] is recognized for one minute.

Mr. FESS. Mr. Chairman, I assert now—and I do not want to be interrupted unless more time is given to me—I want to assert to these gentlemen here that they are providing for the possibility of the abandonment of the gold standard. They have done it specifically by putting in the words "lawful money," when previously that word was left out. You gentlemen put it in there for that purpose.

And I want to say to you that aside from that one thing I would be willing to vote for this bill; but I can not vote for it with that provision standing in it.

Mr. GLASS. I assert that we did not put those words in there for that purpose, nor do they accomplish that purpose. [Applause on the Democratic side.]

Mr. BURKE of Pennsylvania. Does the gentleman yield back his time?

Mr. FESS. No; if I have another minute I will use it.

Mr. PHELAN. Does the gentleman maintain that we have upset the gold standard because we have provided for a note that is redeemable possibly in something other than gold?

Mr. FESS. Yes.

Mr. PHELAN. Then how have we got a gold standard to-day, when this silver certificate which I have in my hand is not redeemable in gold?

Mr. FESS. No; it is not redeemable in gold.

Mr. PHELAN. Then how have we got the gold standard, because it is your contention that when the Government issues money that is not redeemable in gold—

Mr. FESS. A national-bank note is not redeemable in gold, either. We have \$700,000,000 in national-bank notes, and not a dollar of them redeemable in gold. That silver certificate which you have in your hand is not redeemable in gold, and yet we have a gold standard. It can be redeemed by silver, and in turn the silver can be exchanged for gold since 1900.

Mr. GLASS. And a national-bank note is not lawful money.

Mr. PHELAN. No; it is issued by the United States Government, but is not redeemable in gold. Does that mean that we have not got a gold standard in this country?

Mr. FESS. I say you are arranging for an unlimited amount of currency to be redeemed in other money besides gold, and that silver certificate which you have there has its redeemer in a silver dollar, and the silver dollar can itself be used as legal tender for any amount. You can get a silver dollar for that silver certificate, and that is legal tender for any amount, and silver is equal to gold now in purchasing power since 1900; but by section 29 of this bill you are repealing the law of 1900, which is in contravention of this bill.

Mr. PHELAN. So is lawful money a legal tender, and hence what these notes are redeemable in is legal tender, just as much as that.

The CHAIRMAN. The time of the gentleman has expired. Mr. BURKE of Pennsylvania. Will the gentleman from Virginia [Mr. GLASS] give his attention? In view of what has transpired in the last few minutes, will the gentleman extend the time on each side?

Mr. GLASS. Nothing has transpired except debate.

Mr. BURKE of Pennsylvania. The time has been consumed. I yield to the gentleman from Pennsylvania [Mr. TEMPLE].

Mr. FESS rose.

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. FESS. I was going to ask whether this body would not agree, on the most important paragraph in this bill, to give a little more time for discussion, when we do not need to run like a race horse?

Mr. BUTLER. You can have the discussion after you pass the bill.

Mr. BURKE of Pennsylvania. I yield five minutes to the gentleman from Pennsylvania [Mr. TEMPLE].

Mr. TEMPLE. I wish to say, first, Mr. Chairman, that I am not here to defend the report of the Monetary Commission or the Aldrich bill, but I think I see a very considerable difference between the provision for the redemption of the notes authorized by that bill in lawful money and the provision for the redemption of the notes authorized by this bill in lawful money. When that proposal was made it was not proposed to issue notes of the United States which should be redeemable in lawful money. Now it is proposed to put the credit of the United States behind notes that are to be so redeemed; and it is further provided in section 29 of this bill, on page 50, that all provisions of law inconsistent with or superseded by any of the provisions of this act be, and the same are hereby, repealed.

Now, that raises the serious question whether the law of 1900, which provided that these obligations of the United States be redeemed in gold, is not hereby repealed, so that the obligations of the United States are to be hereafter redeemable in gold or lawful money; that is, one obligation of the United States is to be redeemable in another obligation of the United States and not in gold.

Mr. SHERLEY. Will the gentleman yield for a question? Is there anything in this bill that undertakes to say what is lawful money that is not now lawful money?

Mr. TEMPLE. Lawful money is already defined by existing law.

Mr. SHERLEY. Then, if you simply say these notes shall be redeemable in lawful money, do you not repeat what is the existing fact?

Mr. TEMPLE. No; you can not have any existing fact about notes that do not yet exist.

Mr. SHERLEY. You can have an existing fact as to what is lawful money.

Mr. TEMPLE. And also all provisions of law inconsistent with or superseded by any of the provisions of this act be, and the same are hereby, repealed. That is the question, whether this law repeals the law of 1900, which put us fairly on the gold basis.

Mr. KORBLY. No; it did not.

Mr. TEMPLE. All right. I still think it did.

Mr. BUTLER. It was intended to do it.

Mr. TEMPLE. It was intended and it is generally believed that it did. Now, we put out a volume of money; we can not estimate exactly how much. I am not afraid it will be too much, but it may be; there are certain provisions in the bill that make inflation possible. Now, if these notes were to be redeemable only in gold, and nothing but gold could be held in

the reserve banks as the 33½ per cent, there could not be as much reserve as there can be when you add lawful money to the gold. There is more danger of inflation when you have gold and lawful money than when you have gold alone.

Mr. KORBLY. Will the gentleman yield?

Mr. TEMPLE. Yes.

Mr. KORBLY. If gold were the only lawful money, you would have no difficulty at all.

Mr. TEMPLE. None.

Mr. KORBLY. Why did not you make it so in 1900, when you pretended to do it and did not?

Mr. TEMPLE. We made all money equivalent to gold for ordinary purposes. Money that is suitable to be used as a circulating medium is not always suitable for reserve purposes. These notes will be suitable as a medium of exchange, and I would not be afraid that there would be any inflation if the reserve were gold alone. The medium of exchange can not be much more than the volume of exchanges to be taken care of. Every dollar of these notes will be based on a dollar's worth of short-time commercial paper representing exchange transactions. That is one safeguard against inflation. The reserve made up of gold and lawful money will be much larger, however, than a reserve made up of gold alone, and whatever restraining power to prevent inflation the gold reserve may have is weakened by adding silver and such paper as is lawful money to that reserve. There is more danger of inflation if you add money which has to be redeemed to the gold, which needs no redemption. [Applause.]

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Pennsylvania [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, it is manifestly impossible in five minutes to discuss clearly and anything like fully the very important propositions contained in this section and in the amendment that I have offered.

My amendment is the amendment adopted by the State bankers' associations and clearing-house associations at the meeting at Chicago, August 22 and 23. There were some things recommended by that conference with which I do not agree, but I am heartily in favor of this recommendation. No doubt the gentleman from Virginia will snort and say that this amendment is simply a howl from the bankers, but I hope that he will feel about it as he did about another suggestion made by the bankers. When the gentleman from Pennsylvania asked why he amended the bill in one particular, he said that it was because the bankers raised a howl; and he was asked why he listened to the bankers, and he said because the committee concluded that it was a sensible protest. I trust that some of the suggestions made by this side, which the gentleman is now inclined to consider in the nature of a howl, will later appear to him as being sensible protests.

Mr. GLASS. Some of them have appeared in that light.

Mr. MONDELL. I trust others will. My amendment does two things: It relieves the Government from the responsibility of loaning its credit to the banks, which the Government ought not to do; and, second, it strikes out of the bill the seed, if not the substance, of greenbackism. There has been considerable discussion as to whether or not the provisions of the section do strike down the gold standard.

The gold standard is maintained by two provisions of law. The one is the first section of the act of March 14, 1900, that makes it the duty of the Secretary of the Treasury to maintain all our money at a parity with gold. That is quite sufficient under a Republican administration to maintain the gold standard; but few people believe that it would be sufficient under a Democratic administration, with Mr. Bryan in the Cabinet.

Mr. GLASS. Oh, the gentleman from Wyoming is injecting partisan poison all through this bill.

Mr. MONDELL. Mr. Chairman, I have not yielded to the gentleman, but I suggest to him that he, not I, put the partisan poison in the bill, I trying to apply an antidote. The gold standard is further preserved by the first lines of section 22 of the same act, which provides for the interchangeability of Treasury notes with gold.

Now, the gentleman from Pennsylvania [Mr. TEMPLE] who has just taken his seat has raised the question, and it is a very pertinent one, whether the provisions of this section do not, by implication, repeal that provision. I think they do. If they are not intended to repeal that provision of law, why do you use the words "lawful money"? What purpose do they serve here unless they are intended to make it optional with the Government to redeem these notes either in gold or in lawful money? If the Government has that option, so has the bank; and the effect of this provision will be, inevitably, if we have a Secretary of the Treasury so inclined, to put us in a position where the gold standard will no longer be the standard of the country and where a poor man presenting a dollar of these notes may be

paid in depreciated currency or depreciated coin. There is no question about it. If the gentlemen do not want to have that occur, all that is necessary is to strike from this bill the words "or lawful money."

Mr. SHERLEY. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. My time is very brief.

Mr. SHERLEY. Suppose the note was redeemed in what is called "lawful money," would that lawful money then be subject to redemption in gold?

Mr. MONDELL. Under the present law, if this provision in this bill does not affect it; but this bill repeals everything that by implication conflicts with it.

Mr. SHERLEY. But a man's fear is not an implication, and you can not legislate on that.

Mr. MONDELL. The gentleman from Kentucky may think there is not any implication. That is where he and I differ, and doctors sometimes disagree.

Mr. SHERLEY. If the gentleman will give something besides his belief, then we will be glad to consider his proposition; but when he bases his statement merely on belief, we have to consider only the belief.

Mr. MONDELL. If there is no such purpose as this, then there is no rhyme or reason in inserting the words in the bill that the gentleman from Arkansas [Mr. WINGO] says were inserted at his suggestion, but which his colleague from Texas on the floor of the House the other day said was in the bill because it was the will and pleasure of certain gentlemen not members of this House, but of the executive branch of the Government.

Mr. PHELAN. Mr. Chairman, will the gentleman yield for a moment?

Mr. MONDELL. Yes.

Mr. PHELAN. Mr. Chairman, I would like to ask the gentleman what he is driving at when the very act that he says provided for the gold standard and which did provide that all forms of money should be maintained at a parity with gold provided, in section 7, for the redemption of the Treasury notes of 1890, which were redeemable in either silver or gold, and substituted for them silver certificates redeemable only in silver. That is the fact.

Mr. MONDELL. What is the pertinency of the gentleman's inquiry? If he will inform me, I will be very glad to answer. What has that to do with the proposition I am arguing?

Mr. PHELAN. If the gentleman can not see that, then he can not understand what the gold standard means.

Mr. MONDELL. The gentlemen have struck at the gold standard, and the gentlemen know it, and they squirm because their party history on this subject is one that they do not like to have recalled.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield four minutes to the gentleman from Ohio [Mr. SWITZER].

Mr. SWITZER. Mr. Chairman, I rise to voice the forceful sentiment that has been so earnestly expressed by my able colleagues from Ohio, Mr. WILLIS and Mr. FESS, on this important section of the bill under discussion. My amendment merely strikes out the words "or lawful money" and the word "customs." It merely commits us to our existing monetary policy and provides the method for the Government to obtain gold.

The gentleman from Arkansas [Mr. WINGO] says that we are not on a gold basis. The proposition, as I understand, under discussion is the currency of the United States, the obligations of the United States.

Mr. WINGO. Mr. Chairman, I beg the gentleman's pardon, but I have never made any such statement as that. I know he does not intend to misrepresent me, but he is very much mistaken.

Mr. SWITZER. If I did not hear the gentleman correctly I am willing to correct my statement, but as I understand it the act of March 14, 1900, commits us to the gold standard, and it provides that the United States notes are redeemable in gold. Why, the title of the act is to define and fix our standard of value and to maintain the parity of our money, whether issued in coin or in currency, and so forth. I may not have the words exactly. It was to strengthen the national currency. It was undoubtedly the outgrowth of that great political battle of 1896, which resulted in that memorable victory for the champions of sound money.

Mr. KORBLY. Mr. Chairman, I desire to call the gentleman's attention to the fact that the manly way, the honest way, for the Republicans to have accomplished what they pretend would have been to refund the greenbacks and retire to silver dollars.

Mr. SWITZER. Mr. Chairman, the gentleman questions the honesty of the Republican Party when it came into power following the great political battle to which I have alluded. I do not know how they could in any more forcible way put them-

selves upon record. But what do you propose? You say that the currency of the United States—that is, a United States obligation in the way of a note—shall be redeemable in gold or lawful money, and I agree with the gentleman from Pennsylvania and the gentleman from Wyoming that this redemption clause of the existing law to which I have just alluded, the act of March 14, 1900, is inconsistent with the redemption provision of this proposed law to redeem these proposed United States notes—

Mr. KORBLY. Will the gentleman yield?

Mr. SWITZER. And as a result the repealing section of this act automatically repeals section 2 of the act of 1900.

Mr. KORBLY. Will the gentleman yield?

Mr. SWITZER. Not now. But regardless of whether or not it repeals section 2 of the act of 1900, regardless of what construction may be placed upon the proposed legislative mix up, as I might call it, by some court, by some Comptroller of the Currency, or by some political exhorter on the rostrum it is undoubtedly an open departure from the policy to which we have been committed by the act of 1900. It seems to me that we are giving to Mr. Bryan about all he asked for in 1896.

If the gold redemption provided for United States obligations in the nature of note issues by the act of March 14, 1900, is not repealed by the redemption provision of this proposed law upon its passage, then we will have this anomalous situation:

There will be outstanding governmental obligations in the form of \$350,000,000 of United States notes and Treasury notes redeemable in gold and a billion dollars of United States notes redeemable in gold or lawful money, for it is proposed to substitute for the \$750,000,000 of national-bank notes the proposed Federal reserve notes, to which will be added other untold millions, to be issued from time to time. With one-fourth or one-fifth of our United States note obligations based on a gold redemption and three-fourths or four-fifths of it based on a redemption in "gold or lawful money," I ask whether we would then be on a gold or silver basis, or both, or on any basis? The redemption provision of this bill when it was referred to the Committee on Banking by the House June 26 last, required these notes to be redeemed in gold.

Why was it changed? Did the chairman come to the conclusion that there was some question as to the ability of the Government to redeem these notes in gold? After providing that the notes were to be governmental obligations and that they would have all the qualities of other United States notes provided for by law and receivable for customs, thereby weakening the Government's power or ability to obtain gold, I have no doubt but that the able chairman was convinced by somebody that there might be some future financial crisis in which the Government might have great trouble in redeeming these notes in gold.

It was charged on the floor of this Chamber during general debate that the change was made or agreed to about the time Mr. Bryan came to the relief of the bill and advised his followers to line up behind the Democratic floor leader, who was then busily engaged in whipping the measure through the Democratic caucus.

This is a serious charge, for Mr. Bryan contended strenuously in 1896 that the gold dollar was too dear. He said it purchased too many bushels of wheat, of corn, and too many pounds of cattle, and that it paid for too many hours of labor. His remedy to cheapen it was an application of free silver.

Since that time there has been an enormous increased yearly production of gold, and it is asserted on good authority that the gold dollar has thereby become materially cheapened. But our Democratic friends are still dissatisfied, and now say that the gold dollar does not purchase enough corn, wheat, and pounds of cattle or hours of labor. To cheapen it we find them recommending the same remedy—"free silver." It seems as if the majority of our Democratic brethren still believe that "free silver" is a panacea for all our financial ills and all the other ills that may beset the Nation in the future.

There will be no limit on the amount of the Federal reserve notes to be issued by this bill when enacted into law but the amount of rediscount paper defined in section 14, which the genius and the ability of the American people, through the agency of the member banks, can succeed in shoving into the Federal reserve banks; and as this currency will be the notes of the Government, I believe it should be as sound as gold coin, and the way to make it as good as gold is to provide that it shall be redeemed in gold.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Minnesota [Mr. LINDBERGH].

Mr. LINDBERGH. Mr. Chairman, the object of my amendment is to place the responsibility of the redemption in the

first place upon the Federal reserve banks. With the exception of the 5 per cent redemption fund which is to be deposited in the United States Treasury, this bill takes all money out of the Treasury of the United States with the exception of the money that is there for trust purposes, and therefore the available funds are in the control of the respective Federal reserve banks, in their control; or, in other words, the redemption of these bills should be first placed upon these Federal reserve banks.

Mr. Chairman, this section 26 is unfortunate in its provisions. There is no greater misconception possible anywhere in regard to any provision in this bill than that which exists with reference to loans made upon improved and unencumbered farm lands. There is no class of paper which furnishes better security, and I doubt if there is any class of paper which is more salable. Any banker or broker who has a good reputation who has farm mortgages for sale can sell them in any kind of times. They are as liquid, in fact, under conditions existing in this country at this time, and as they have been for some time past, as any other kind of paper. There are always parties who are ready and willing to purchase these mortgages at their face value plus the accrued interest to the date of purchase. Even in all sections of the district which I have the honor to represent, and some parts of that district have been settled but a short time, these mortgages are salable. It would be an improvement to this bill to authorize loans to be made upon farms for five years, and it would benefit the farmers in the reduction of the interest which they would have to pay as well as lend additional stability to the system itself. It is manifestly unjust to the greatest of all industries—the farming—of this country to treat the paper of the farmers with so little consideration as this bill does. A loan for 12 months is not such a loan as the farmer wishes to secure upon his farm. If he desires to borrow money at all upon his farm he usually desires to secure a loan for several years; and in the course of banking business, if the banks were authorized to take such loans, part of the loans would be maturing from time to time, and whenever these notes, secured by mortgages, had a maturity not exceeding 120 days, they should be taken out of the 50 per cent limitation and not counted in the limit that is placed upon banks for the amount of such loans to be made. Then they should have the same privileges that any other paper of equal maturity has.

Another reason why these loans should be taken and given full consideration in this bill is that it is proposed to admit State banks, banking associations, and trust companies, and they already have, under the laws of the State in which they are organized, this power to make loans on farm-land security.

It is for the reasons that I have suggested that I have sent to the Clerk's desk an amendment which, if adopted, would authorize national banks to loan 50 per cent of their capital and surplus on unencumbered, improved farm security for any period of time not exceeding 5 years and to take all the notes so secured out of the limitation when their maturity does not exceed 120 days, thus permitting notes secured by mortgages, irrespective of the time for which the mortgage runs, to the same rediscounting advantages that other paper has whenever such notes have a maturity of not more than 120 days. I yield back the rest of my time.

Mr. BURKE of Pennsylvania. Mr. Chairman, how much time did the gentleman consume?

The CHAIRMAN. The gentleman used one minute.

Mr. BURKE of Pennsylvania. Will not the gentleman from Virginia use some of his time?

Mr. GLASS. I wish the gentleman from Pennsylvania would consume some of his time.

Mr. BURKE of Pennsylvania. Mr. Chairman, how much time has been consumed by both sides?

The CHAIRMAN. The gentleman from Pennsylvania has 24 minutes, and the gentleman from Virginia has 35 minutes.

Mr. GLASS. I yield 10 minutes to the gentleman from Indiana [Mr. KORBLY].

Mr. KORBLY. Mr. Chairman and gentlemen, if I were to devote any time to the discussion of the particular question that is bothering the minds of gentlemen on the other side I would feel as if I were trying to break through an open door with a sledge hammer. I will not say anything about the question of the gold standard further than to say again, the Republican Party when it had an opportunity to establish that standard did not do it. There have been some charges made—

Mr. TEMPLE. Will the gentleman yield for a question? Does the gentleman mean to say we are not on the gold standard now?

Mr. KORBLY. You are on it contingently.

Mr. TEMPLE. We are not, then, at this time on the gold standard?

Mr. KORBLY. Not unqualifiedly.

Mr. TEMPLE. And we will not be after this bill passes.

Mr. KORBLY. Just as much as we are now or have been since 1900. Now, I want to say I desire to devote some thought and attention to the question of inflation. In the first place, it is a well-established principle that you can not have inflation if your credit instruments are based on commercial paper. The only limit of a bank's ability to discount is the limit of good commercial paper that offers for discount, and the notes which will be issued under this bill will be based upon discounted commercial paper of the highest conceivable character. And you need not bother your heads about the question of the quantity of the reserve that exists, because the question of reserve in nowise naturally limits or ought to limit the volume of notes or other credit instruments that may issue from a bank. Gentlemen, all the dangers of inflation that you think you see involved in this bill exist to-day and have existed during my lifetime, due to the fact that the banks practically have an unlimited freedom to issue credit instruments, and to-day you can have inflation, with all the dangers that come with it, due to the inflation of deposit credits.

The gentleman from New York [Mr. PLATT], a member of the committee, pointed out a while ago the very striking truth that there is no difference between a deposit credit and a circulating bank note. When you discount a draft or a note at a bank you get the promise of that bank to pay you money upon demand. This promise is noted in a pass book or a bank book. That is a bank note. It is a notation of indebtedness. It is the evidence given to you by the bank to show that the bank is indebted to you and will pay you money on demand. Now, a circulating bank note is merely a written instrument evidencing the fact that the bank is indebted to you.

I would like to have the attention of the gentleman from Kansas [Mr. MURDOCK]. He said in a speech this morning, at the time when he refused to yield to me, that he had gone to the Treasury Department to get a kindergarten lesson. I am glad he made that admission, because it corroborates a suspicion that I have had as to his education on banking and currency matters and the impressions that I have received from things he has said. [Applause on the Democratic side.] There is no difference in the world between a bank note and a bank deposit.

Mr. MURDOCK. Now, the gentleman can be facetious at my expense, but he ought not to misstate my position. I said I learned at the Treasury Department that there was a very great difference in the banking functions of a national-bank note and a greenback.

Mr. KORBLY. I was not talking about that.

Mr. MURDOCK. I know; but the gentleman ought to quote me correctly and not misquote me.

Mr. KORBLY. I will quote you correctly. You made the statement that we proposed in this bill to enable the bankers to pay their debts with circulating bank notes.

Mr. MURDOCK. Oh, no. Now, there the gentleman goes again. If the gentleman would take a little lesson in the kindergarten of money in the Treasury Department, he would know about what he is talking. I made no such accusation against this bill. It is true under the existing system. I did say that bankers paid their indebtedness with circulating notes.

Mr. KORBLY. It is not true under the existing system at all. A man who holds a bank note, holds the evidence of the bank's indebtedness to him, and you can not pay your debt to a man by giving him a note. You are only deferring the day of payment. That is a thing I learned long ago. And to say that you are going to have inflation merely because you are providing for a different form of evidence of a bank's debt to its depositors is too childish almost to need refutation.

Mr. MURDOCK. But I did not say, I will say to the gentleman from Indiana, that under this bill you were to have inflation. I think there is a provision in the bill which prevents inflation. The gentleman simply misquotes me.

Mr. KORBLY. If I have done the gentleman an injustice, I am sorry.

Mr. MURDOCK. You certainly have. I recommend that the gentleman from Indiana make a trip to the Treasury Department in order to learn the functions of money. I think he can do it with profit to himself.

Mr. KORBLY. I do not have to go to the Treasury Department to learn anything about the characteristics and functions of money. But I want to say to the gentleman in honesty and in justice that I do not desire to do him an injury. He is very amiable and very lovable, and I do not want to do him wrong. But I do want to impress on him at this time the important truth that so far as inflation is concerned you can have now, under the legislation of the Republican Party, all the inflation that you possibly could have if banks were allowed to issue notes freely.

There is no difference in essence, no difference in substance, and no difference in principle between a bank note which you pass by taking it out of your pocketbook and handing it to somebody and a note carried by a bank in the form of a deposit, which is transferred by a written order called a check, taken out of a check book. And I see one of the gentlemen on the other side, Mr. TEMPLE, acceding to that proposition.

Mr. MURDOCK. Will the gentleman yield to me?

Mr. KORBLY. Yes.

Mr. MURDOCK. The national bank can not hold in its vaults as reserve money a national-bank note?

Mr. KORBLY. Certainly not.

Mr. MURDOCK. But can hold a greenback?

Mr. KORBLY. Yes.

Mr. MURDOCK. The result is that as money comes and goes in and out of the bank the bank retains the greenback, which extends its power to grant credit to the public, and it pays out the national-bank note, which is of no use as the basis of extension of credit.

Mr. KORBLY. If bank credit is properly extended to the public, it is not extended upon the greenback or upon the gold dollar, but upon the merchandise or goods placed in the control of the bank, due to the fact that the bank has purchased or discounted the notes and bills of exchange which spring from these commercial transactions.

Mr. MURDOCK. And the larger the reserve, the more credit the bank has to extend?

Mr. KORBLY. No.

Mr. MURDOCK. If it would pay out its greenbacks, it would impair its reserve and impair its power to extend credit.

Mr. KORBLY. That is merely in view of the artificial barrier that Congress has put in the way of liquid banking.

Mr. MURDOCK. It is an artificial barrier, and it works to the extension and inflation of credit.

Mr. KORBLY. It does not. There can be no inflation if banks confine their operations to the purchase of bills of exchange that arise out of commercial transactions. The base of bank credit is not gold or greenbacks or lawful money, but merchandise—the products of labor. Banks are given the control of merchandise, and it is the everyday experience of the people that the banks' obligations to them, through deposits, are paid in something else than money. These obligations are paid in a dollar's worth of goods. That is what the people want. They want the dollar's worth of goods.

It is time that Members on the other side of the aisle came to an understanding of the elements of this question. Members on the other side of the aisle ought to go to some of the Republican members of the Committee on Banking and Currency and sit at their feet and absorb some of the wisdom that can be given to them from that source, because there are some gentlemen on the Committee on Banking and Currency from the other side of the aisle who have been students of this subject and understand this question. They are not afraid of inflation under this bill.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. There is not any more time. The time has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield five minutes to the gentleman from Kansas [Mr. MURDOCK].

The CHAIRMAN. The gentleman from Kansas [Mr. MURDOCK] is recognized for five minutes.

Mr. MURDOCK. Mr. Chairman, I would like to have the attention of the gentleman from Indiana [Mr. KORBLY].

A greenback is reserve money. A national-bank note is not. In the natural course of business if a man enter a bank and deposit a five-dollar greenback and a five-dollar national-bank note and immediately thereafter draws his check for \$10 in currency, he will receive back, ordinarily, two national-bank notes for \$5 each. He will not receive back his greenback. Why? Because the greenback is reserve money, and the national-bank note is not.

Mr. KORBLY. I agree with the gentleman.

Mr. MURDOCK. I want to ask the gentleman from Indiana, is that wrong?

Mr. KORBLY. No; that is correct.

Mr. MURDOCK. I did not make my statement this morning without ample authority. I have authority for it, and expert authority. There is an authority in money questions over in New York, by the name of Victor Morawetz, who has written many articles on the subject of banking and currency and who has devoted much attention to this subject.

Mr. KORBLY. Yes; I know him and his work.

Mr. GLASS. Yes; and he is for this bill.

Mr. MURDOCK. I did not know that. The gentleman from Virginia [Mr. GLASS] says Mr. Victor Morawetz is for this bill.

I am for this bill. Before I read a letter from Mr. Morawetz I wish to quote a sentence from this bill. I read:

No Federal reserve bank shall pay out notes issued through another under penalty of a tax of 10 per cent upon the face value of notes so paid out.

I believe that that one sentence in this bill does give this bill elasticity both ways. It gives contraction as well as inflation. I do not believe that we have had an elastic currency under our present system.

Mr. KORBLY. I agree with the gentleman thoroughly on that.

Mr. MURDOCK. I think I am getting to the point where the gentleman from Indiana will agree with me completely. If the gentleman would just cut out his sarcasm and understand the kindergarten view on this proposition, he would be all right. Now I wish to read from Mr. Morawetz. He writes:

As long as bank notes are kept at a parity with other lawful money, as, of course, is essential in any sound system, the public rarely, if ever, presents bank notes for redemption in lawful money. When people have in their possession more currency than they need, they deposit the excess in the banks without discriminating between lawful money and bank notes, which to them are of equal value. The national banks, however, assert this currency and whenever practicable keep the reserve money, while paying out notes to depositors who call for currency. A constant process of sifting the currency thus goes on, the lawful reserve money being accumulated by the banks, which put the notes in circulation in place of reserve money. When there is a demand for an unusual amount of currency for use as a circulating medium, the banks, if they have power to issue notes, pay out notes to meet this increased demand. When the additional currency thus created is no longer needed, people do not pick out the bank notes and return them to the banks and keep the reserve money in circulation, but to the extent of the excess of currency in circulation the reserve money and the bank notes are deposited indiscriminately. The banks again sift the currency so deposited and retain the reserve money, but when the currency is demanded for use as a circulating medium they again pay out notes. This process of substituting bank notes for lawful reserve money in circulation goes on continually and is bound to go on so long as the national banks prefer to pay out bank notes rather than reserve money, and the public is indifferent whether it receives notes or reserve money. Through this process over \$700,000,000 of national bank notes are kept outstanding year in, year out, even when the aggregate amount of the currency is unnecessarily large and when interest rates have fallen to a minimum.

I think that answers the gentleman. This morning I recited here an axiom, and I want to reiterate it to the gentleman.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. MURDOCK. I ask for one minute more.

Mr. BURKE of Pennsylvania. I yield to the gentleman one minute more.

Mr. MURDOCK. I want to recite this to the gentleman from Indiana, because I believe it is absolutely true: The issue of bank notes is profitable to the banks, as it means the payment of their indebtedness by the issue of promissory notes bearing no interest, instead of by paying out lawful money and contracting their power to grant credit.

Mr. KORBLY. I understood the gentleman to affirm that the banks could pay their debts by paying out bank notes.

Mr. MURDOCK. I say that they pay their indebtedness by the issue of promissory notes bearing no interest.

Mr. KORBLY. I say the man who receives the promissory note has not had his debt discharged. He has merely received another evidence of the fact that a debt exists.

Mr. MURDOCK. They do discharge their debts to their customers by that very process.

Mr. KORBLY. No; they do not.

Mr. MURDOCK. I just illustrated it to the gentleman. If a man deposits \$10 in a bank—one \$5 greenback and one \$5 national bank note—he gets a credit of \$10 in his bank book. Then, if he draws a check for \$10 on that bank, he gets back two national bank notes of \$5 each, and the bank has discharged its indebtedness to that man by two national bank notes.

Mr. KORBLY. He has nothing but the notes of the bank.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KORBLY. I want the gentleman's attention for a minute.

Mr. GLASS. I yield to the gentleman from Indiana one minute.

Mr. KORBLY. The man you spoke of, who has a checking account, has a promise by the bank to pay him \$10 on demand. That promise is written in a bank book. That is an evidence of debt. When the man draws his check and receives for it another bank note, that is another evidence of debt, and the situation is not changed in the least. He receives from the bank a promise to pay him money on demand.

Mr. MURDOCK. But in the transaction he surrenders a greenback for \$5, which becomes a part of the reserve money in that bank, upon which the bank is permitted to loan money.

Mr. KORBLY. As soon as he surrenders the greenback it becomes the property of the bank, as a legal proposition.

Mr. MURDOCK. Certainly it does, and the bank holds it and can loan money on it, and extends its power of credit by holding that note. There is no question about that.

Mr. KORBLY. And so far as the bank is concerned, it issues that credit, not because it has that greenback, but because somebody comes along and offers good commercial paper, and that is the proper basis for it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GLASS. I yield five minutes to the gentleman from Texas [Mr. HARDY].

Mr. HARDY. Mr. Chairman, a great deal of this discussion seems to be about the difference 'twixt tweedledum and tweedledee. In 1894 and 1896 I fought the 16-to-1 idea in the State of Texas and in the Democratic Party, and some people say I practically got out of the party by reason of that fight.

I have always believed in the gold standard since that question has arisen, and I believe in it now. The act of 1900 provided that the dollar consisting of 25.8 grains of gold nine-tenths fine, as established by section 3511 of the Revised Statutes of the United States, shall be the standard of unit value, and all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity. But I want to say that this bill absolutely does not touch that question at all. There is, so far as I know, no provision in the law that requires any money which is not lawful money to be redeemed by the Government in gold. This currency is not lawful money. It is not legal tender between the citizens in the payment of debts from one to the other. This not being lawful money, it is like any other currency, only redeemable in lawful money. But where the tweedledum and tweedledee comes in is here: You can demand the redemption of this note in lawful money, and if the bank pays you the greenbacks and you want gold you will take the greenbacks and get the gold from the Government, because the Government is obligated to maintain the parity between all its lawful money, its greenbacks and the gold. Now, suppose some bank having a bank note to-day is called on to redeem that bank note. It can not pay you another bank note. You are not bound to receive it; but it may hand you a greenback bill and you are bound to receive it. You can not demand gold of the bank, but you can take the greenback to the Treasury of the United States and get gold. Things which are equal to the same thing are equal to each other; and therefore ever since the bank has been required to redeem its notes in lawful money, and has done so, the bank note has passed at par with greenbacks and with gold.

Whenever you know that you can get gold you whip the devil around the stump when you redeem the currency with greenbacks and with greenbacks get gold. It is the same thing in any event; it is a pother about nothing. You redeem these notes in lawful money and then take the lawful money, which may happen to be greenbacks, and get the gold or silver certificate and get the gold for it. When the Government put all lawful money on a parity, that made the gold standard of this country once and for all.

I want to say, further, that the man who in this day and time, at this part of the twentieth century, professes to believe that the United States, or any great commercial country of the world, will ever depart from the gold standard and go back to our former uncertain and nonparity maintained currency is fighting a shadow; he is afraid of the east wind and the west wind.

There is no possibility of any great nation ever going back to a doubtful standard again, and so long as our law requiring the Government to maintain the parity between all classes of lawful money remains unrepealed on the statute books—and there is nothing in the law affecting it—every dollar issued by a bank will be good, whether redeemable in lawful money or in gold; it will be as good as gold. We really do not want greenbacks redeemed when we know that we can have them redeemed in gold. As long as the parity of lawful money is maintained we do not care whether our currency is a national bank note, a greenback, or silver certificate, for they are all in the end redeemable in gold.

I will add but one thing more, and that is that if you strike out the words "or other lawful money," as sought by this amendment, so that the banks can only redeem the reserve currency provided by this bill in gold, you will thereby repeal the law which makes greenbacks a legal tender, and I do not believe any man here wants to repeal that law. [Applause.]

I yield back the balance of my time. [Applause.]

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield four minutes to the gentleman from Michigan [Mr. SAMUEL W. SMITH].

Mr. SAMUEL W. SMITH. Mr. Chairman, I send to the desk to be read in my time an editorial from the Evening Star, of this city, of September 14.

The Clerk read as follows:

MR. ALDRICH AND THE CURRENCY.

Why should not the Senate committee in charge of the currency question invite Mr. Aldrich—Nelson W. Aldrich—to appear and give his views about what should be done?

The Rhode Islander has three claims to the committee's attention: First. He is a business man of long experience, large connections, and large success. Second. He was for 30 years a Member of the United States Senate, and for a long time chairman of the Finance Committee. Third. He has made a close and thorough study of the currency question, and is the author of a bill, which has been widely discussed, bearing upon currency reform. Surely a session with such a man would interest the committee, and profit might come of it.

For one thing, it might help to have Mr. Aldrich explain again his bill in comparison or contrast with the plans now under discussion. His bill has been condemned by the Democratic leaders. What does he think of their bills? What did he think of the Glass bill when it was first published? What does he think of the Owen bill as it now stands? If there is a popular misconception of his own bill, upon what is it founded?

At the start the business leaders of the country seemed not to be counted in the equation. Some of them complained. They thought they were entitled to a say about what should be done. As they viewed the matter, the proposed reform bore too much of a political cast and threatened to take the form of a great political machine.

While the administration and its friends denied this, there was a change of attitude on their part toward bankers and other business men, and since then business sentiment has been freely taken. More is to come. Before the Senate begins debate much will be known about what the business world, and particularly the banking portion, thinks of the whole currency proposition.

Mr. Aldrich is out of politics by his own choice. But presumably his interest in public affairs continues keen, and in this particular affair, to which he has given so much thought and attention, he can not but be profoundly concerned. Why not call him and interrogate him about a subject of such wide and general moment?

All shades of opinion should be sought. Many shades exist; and it can only be by obtaining and weighing all that a reform meeting the requirements of the country can be evolved.

Mr. SAMUEL W. SMITH. Mr. Chairman, I want to express the further hope not only that Mr. Aldrich may be called, but that two former Members of this House, who have given the subject a great deal of study and attention, also be called—Mr. Vreeland, of New York, and Mr. Fowler, of New Jersey. [Applause on the Republican side.]

Mr. Chairman, I yield back the balance of my time.

Mr. BURKE of Pennsylvania. How much is the balance.

The CHAIRMAN. The gentleman had half a minute.

Mr. BURKE of Pennsylvania. I yield that to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, in order that I may set myself right and give an opportunity for the majority to say whether they really are in earnest about this, I want to send this amendment to the desk and have it read now and pending.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 50, line 12, after the word "repeal"—

Mr. GLASS. Mr. Chairman, I raise the point of order that we have not reached that provision yet.

Mr. BURKE of Pennsylvania. I yielded the time to the gentleman from Ohio that he might have the amendment read and have it pending.

Mr. GLASS. Very well.

The Clerk read as follows:

Page 50, line 12, after the word "repeal," strike out the period and add the following: "Provided, That nothing in this act shall be construed to repeal the parity provision of the act of March 14, 1900, 'An act to define and fix the standard of value and maintain the parity of all forms of money issued, or coin, by the United States, to refund the public debt, and for other purposes.'"

Mr. GLASS. Will the gentleman vote for the bill if we accept that amendment?

Mr. FESS. I will.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield four minutes to the gentleman from Iowa [Mr. GREEN].

Mr. GREEN of Iowa. Mr. Chairman, I have offered an amendment here providing for the cancellation of such notes as might be redeemed by the bank which issued them. It is quite possible this amendment would not be necessary if there were limiting provisions in the bill. But the bill puts no limit on the amount of notes that may be rediscounted; it puts no limit on the amount of notes which may be issued by the Federal reserve board; and, finally, it does not provide that notes issued by the bank shall be canceled, and there is nothing to prevent their being used for further discount. Under a bill of this character we simply have the lid taken off, everything thrown wide open, prepared for a financial debauch. I know it has been insisted by the gentleman from Virginia [Mr. GLASS] that Mr. Forgan, an eminent banker, has stated that this bill would contract the loanable funds, and Mr. Forgan did say so, but only that it would do so as it was being put into force, but not in its final operation; and I wish to say in connection with the remarks that I have made before that inevitably as

this bill is being put in operation it will contract the loanable funds of the country.

Mr. ROBERTS of Nevada. Mr. Chairman, will the gentleman yield?

Mr. GREEN of Iowa. I am very sorry, but I am unable to yield to the gentleman at this time.

Mr. ROBERTS of Nevada. I only want to ask one question.

The CHAIRMAN. The gentleman from Iowa declines to yield.

Mr. GREEN of Iowa. It is no answer, as has been said by several gentlemen here on this floor, to the argument that this bill will produce a contraction to say that the banks have a year in which to prepare for it. That will not increase the amount of ready money they have, except as they might do it by rediscounting; in other words, by borrowing the funds from the very institution that they expect to start with the funds that they borrow.

Mr. GLASS. Mr. Chairman, will the gentleman yield?

Mr. GREEN of Iowa. Yes.

Mr. GLASS. How are we to answer the gentlemen on that side when one gentleman gets up, as did the gentleman from Iowa, and declares that the bill provides for a monstrous inflation, and now this gentleman gets up and says that it provides for contraction. How can you answer that sort of stuff?

Mr. GREEN of Iowa. If the gentleman is unable to comprehend how a bill may provide for contraction in its origin and inflation as it gets to working, I shall not undertake to explain any further.

Mr. GLASS. I do not think the gentleman can.

Mr. GREEN of Iowa. It does not need any explanation any further than I have stated. The gentleman has been unable to furnish any figures to show how these banks were going to start right away loaning in order to furnish the funds.

Mr. GLASS. The gentleman from Ohio [Mr. BULKLEY] brought charts into the room and made an entire demonstration.

Mr. GREEN of Iowa. Oh, the gentleman put some figures on a board, but they did not prove anything.

Mr. GLASS. The gentleman from Iowa did not undertake to question the accuracy of the figures or the soundness of the conclusion.

Mr. GREEN of Iowa. I did not undertake to question that the gentleman had multiplied and added correctly. That is all there was to it, as far as that is concerned.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. SAMUEL W. SMITH. Mr. Chairman, I ask unanimous consent to ask the chairman of the committee a question.

The CHAIRMAN. The gentleman has time for that, and the gentleman from Pennsylvania has time. If the gentleman desires to be recognized for the purpose of answering the gentleman's question, the Chair will be glad to recognize him.

Mr. GLASS rose.

Mr. SAMUEL W. SMITH. Mr. Chairman, I would like to ask the gentleman a question for information. Will the gentleman yield?

Mr. GLASS. Certainly.

Mr. SAMUEL W. SMITH. I have already indicated my inclination to vote for this bill, and what I am asking is for information. I would like to ask what objection the gentleman has to striking out the words "or lawful money" in this section?

Mr. GLASS. I have the objection stated by the gentleman from Arkansas. We think the Government ought to be on the same basis as the regional reserve banks, which are permitted to redeem these notes in "gold or lawful money." I have been under the impression that we are on a gold basis and that "lawful money" is interchangeable with gold, and that therefore when the phrase "or lawful money" was used in the bill it meant gold. And that is what it does mean.

Mr. SAMUEL W. SMITH. May I ask one more question? What is the gentleman's objection to striking the words out of the section?

Mr. GLASS. We have simply followed the existing statutes in the matter.

Mr. SAMUEL W. SMITH. But what is the objection to striking out the words?

Mr. GLASS. Personally I see none; neither do I see any necessity on earth for doing it.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield two minutes to the gentleman from Pennsylvania [Mr. FARR].

Mr. FARR. Mr. Chairman, I feel as the gentleman from Michigan [Mr. SAMUEL W. SMITH] does—I would like to vote for this measure, but I am in serious doubt about the meaning and effect of these words, "or lawful money," and I want to

tell the gentlemen on the other side that this apprehension is not confined to the enemies of the measure or to the newspapers opposing the Democratic Party. There is a growing fear and apprehension as to the meaning and effect of these words, "or lawful money," and it will continue to increase until that doubt is removed. Now, if there is no purpose in having these words in this measure, why not eliminate them?

Mr. GLASS. Well, I will say to the gentleman that we followed the existing statutes on that matter, and, as I inquired a while ago, does the gentleman imagine that the currency commission of the American Bankers' Association, charged especially with the consideration of this matter, undertook to make any assault upon the gold standard when they recommended the very precise words in the note-issue provision?

Mr. FARR. No; I do not; but, as brought out by the gentleman from Ohio [Mr. Fess], there is a difference with a distinction.

Mr. GLASS. What is the difference with the distinction?

Mr. FARR. The words "or lawful money" in the present law concern the currency issuances of national banks, based on their credit, and for which issues the Government is not responsible, but under the provisions of the measure now under consideration the Government occupies a new position. It will issue currency for which it is responsible, and its obligations should rest securely on the gold standard and on demand be paid in gold.

Mr. GLASS. Does the gentleman believe that the currency commission of the American Bankers' Association wants greenbackism?

Mr. FARR. I do not; but the gentlemen on that side of the House have made the banking interests an authority in but very few lines of this measure; and I do not think it consistent on the gentleman's part to quote the American bankers, because the purpose of this bill is to change existing methods of banking and to make the currency more stable and elastic. The fact is a dread prevails that greenbackism and a possible depreciated currency lurks in this bill. If the gentleman does not want greenbackism, and I do not believe he does, let us strike out the words "or lawful money," and the danger will be removed.

As bearing directly on this important question and showing the fear, I quote an editorial from to-day's Philadelphia Record, ardently Democratic and one of the great and most reputable newspapers of the country:

REDEMPTION IN THE CURRENCY BILL.

In the House debate on the currency bill the following colloquy occurred:

"Mr. HARDWICK. Somebody will come down on the Treasury and say, 'You promised to redeem this stuff in gold or lawful money'—which is it?"

"Mr. BURKE of Pennsylvania. Gold or lawful money."

"Mr. SIMS. That is the same thing."

It is far from being the same thing. Plenty of people now living can remember the difference between the promise of specie payments and the fact of specie payments. The Government is already committed by the law of 1900 to the maintenance of the gold standard. That can only be done by potentially, if not actually, redeeming every sort of money in gold. Why, then, should not the proposed currency be specifically redeemable in gold?

National bank notes were not made redeemable in gold, because there was no gold for the purpose at the time, and because the Government was then issuing its own promises to pay which it could not redeem in gold. But the new notes will not be obligations of the banks ultimately; they will be evidences of the debt of the Government, which has a vast amount of gold and has no occasion whatever for issuing any irredeemable notes. These notes, then, should be redeemable in gold only.

There are two reasons for this. If there is any one financial question that has been settled for all time in this country, it is the question of "greenbackism." It ought not to be reopened even the least little crack by phraseology which would seem to open the way for another issue of Government paper to be made a legal tender and to serve as currency of ultimate redemption. Let us not wake any of the political dead. Let us raise no ghosts.

The other reason is that there are possibilities of inflation in the bill. The preventive of inflation is gold redemption on demand. Let the new notes be issued with the understanding and the obligation of gold redemption, and they are not likely to be issued in redundant amounts. The bill provides that no Federal reserve bank shall pay out the notes issued by another. This is borrowing a part of the very efficient redemption system of the Canadian bank law. The banks there pay out their own notes and return for redemption the notes of all other banks that are paid in to them. Just as fast as the business requirement for notes declines, therefore, just so fast automatically the surplusage gets back to the issuing banks and is retired. It is a good feature to introduce into our system, and with only 12 Federal reserve banks it will be as possible as in Canada to prevent the inflation of the currency and insure that the notes shall not only go out when needed, but come back when they are not. But the redemption should be effected in gold. There is no reason to redeem one sort of Government notes which are not a legal tender in some other sort of Government notes which are.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. Does the gentleman from Virginia desire to use any more time?

Mr. GLASS. I do not care to consume any more time.

Mr. BURKE of Pennsylvania. I yield three minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, in the very brief time which I had a few moments ago I was unable to discuss what to my mind is the most dangerous provision, the most unwise provision of this section, the provision which makes the notes obligations of the United States. There may be some grounds for difference of opinion as to whether or not the words "or lawful money" contained in the bill do, as a matter of fact, menace the gold standard, but there can be no doubt.

Mr. ROBERTS of Nevada. Will the gentleman yield?

Mr. MONDELL. No; I have not the time. There can be no question but that the bill does make these notes obligations of the Government. Now, why should we loan the credit of all the people of the United States to these banks? What good reason is there for doing so? The people of the United States, the Government of the United States, gains nothing by the loaning of their credit. The Government is not to be benefited, the people of the country are not to be benefited any by the loaning of their credit, and yet the Government is expected to stand behind these notes. What reason is there for it? Why, a nebulous theory in the mind of a gentleman occupying a high place in this administration to the effect that all note issues in this country should be obligations of the Government. That is the only reason why these words are in the bill. That has been admitted by a number of gentlemen who have spoken. Mr. Bryan said it must be so, and so it is; and at his dictation you have placed the 90,000,000 of people of the United States in the position of being obligated for hundreds of millions of the notes of the banks of the country.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. Mr. Chairman, it seems to me that whether or not it is the present practice, or whether or not in the course of ancient or modern history the Government has had an option to redeem these notes in gold or lawful money, we are confronted with a very critical proposition at this time.

The country is suspicious of this measure, and it is suspicious because of existing conditions. It is suspicious because the measure was brought into being by the party that has stood for an unsound currency ever since the Civil War, because it was brought into being by a party that struck the word "gold" out of its platform in 1896, and as a consequence of which there followed the greatest political battle we have had in this country for 25 years over a financial question. The country is suspicious because on the 26th day of June the gentleman from Virginia [Mr. GLASS], the distinguished and able chairman of the Banking and Currency Committee, introduced a bill into this House that provided that these notes should be redeemed in gold. There was no option whatsoever to be exercised by the banks or the Government. Furthermore, the chairman stated that this bill was predicated upon information derived and hearings had during the last Congress, and in view of the fact that the bill was based upon the information derived during the Sixty-second Congress, and it contained the word "gold." The word "gold" was subsequently stricken out in a critical period of its career in the Democratic caucus, and the American people are asking why, by whose authority, by whose mandate, and the optional term "gold or lawful money" inserted in its stead. Now, it has been intimated by a gentleman at the other end of Pennsylvania Avenue and some of your leaders in this House that we are just now about to engage in the greatest commercial battle the American people have ever entered upon, and, in the face of that, if there was no other reason for the establishment of a gold standard beyond the peradventure of a doubt, it exists because of the fact that the great giant nations, whom we will be compelled under the new tariff bill, to be signed shortly, to meet and contend with in the markets of the world, all have a gold standard. England, France, and Germany have no optional clauses in the legislation that governs the redemption of their money, and why should we at this period of our commercial career, at this stage of our political existence, enter upon a great struggle with a depreciated or a questionable currency? [Applause.]

Now, if there is no reason in the world other than that given by the gentleman from Arkansas [Mr. Wingo], that it was inserted here because the banks had the right to redeem "in gold or lawful money," and therefore the Government should have the right to exercise the same option, there is no reason why the option should be granted to either the banks or the Government. [Applause on the Republican side.] And if no reason exists why it should be granted to either, why not strike it out and allay the apprehension and remove the alarm?

Mr. GLASS. You think this is an alarm bill. It is no alarm bill. It is a false alarm.

Mr. BURKE of Pennsylvania. I will agree with the gentleman that it is a false alarm, possibly. There is not much that

attaches to it that is not false. It was based upon a false prophecy. Its career in this House, or in the bodies attached to this House, was a violation of the prophecy or a promise made to the American people that legislation of this kind would be considered in the open.

And yet, in spite of that promise to legislate in a logical and public manner, the Banking and Currency Committee of this House was revolutionized in order that the will of the executive department, and not the wish and wisdom of the House of Representatives, should be crystallized in the form of a bill. And when that committee was revolutionized to accomplish this purpose and the bill was brought in before us, we were notified that because somebody over in Baltimore, in the heat of summer, wrote something behind closed doors of a convention, the Banking and Currency Committee were denied the right to consider it. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired. All time has expired. The question is on the committee amendment offered by the gentleman from Ohio [Mr. BULKLEY].

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The question is on the further committee amendment offered by the gentleman from Ohio [Mr. BULKLEY].

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The question is on the committee amendment offered by the gentleman from Indiana [Mr. KORBLY].

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Ohio [Mr. WILLIS].

Mr. WILLIS. Mr. Chairman, may we not have that amendment again reported?

The CHAIRMAN. These amendments were all reported at the beginning of the debate. Without objection, the amendment will again be reported. [After a pause.] The Chair hears no objection.

The amendment was again reported, as follows:

Page 29, line 15, after the word "notes," strike out the words "to be issued at the discretion of the Federal reserve board" and insert in lieu thereof the following: "in an amount not to exceed \$500,000,000, and in addition thereto a sum equal to the difference between the total amount of national bank notes outstanding at any given moment and the amount of such notes outstanding at the passage of this act." In line 19 strike out the words "the United States" and insert in lieu thereof the words "the several Federal reserve banks to which the notes shall be issued."

The CHAIRMAN. The question is on agreeing to the amendment just reported.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is one offered by the gentleman from Minnesota [Mr. LINDBERGH]. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is another one offered by the gentleman from Minnesota [Mr. LINDBERGH]. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the one offered by the gentleman from Iowa [Mr. TOWNER]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the one offered by the gentleman from Ohio [Mr. SWITZER]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the one offered by the gentleman from Ohio [Mr. FESS]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the amendment offered by the gentleman from Pennsylvania [Mr. BURKE]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is one offered by the gentleman from New York [Mr. PLATT]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the one offered by the gentleman from Iowa [Mr. GREEN]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is another one offered by the gentleman from New York [Mr. PLATT]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The next amendment is the one offered by the gentleman from Wyoming [Mr. MONDELL]. The question is on agreeing to that amendment.

The question was taken, and the Chair announced that the yeas seemed to have it.

Mr. MONDELL. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded by the gentleman from Wyoming.

The committee divided; and there were—ayes 31, yeas 83.

So the amendment was rejected.

The CHAIRMAN. The next amendment is the amendment offered by the gentleman from Illinois [Mr. MADDEN]. The question is on agreeing to that amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. FESS rose.

The CHAIRMAN. For what purpose does the gentleman from Ohio rise?

Mr. FESS. Mr. Chairman, I offered two amendments.

The CHAIRMAN. As the Chair understands, the gentleman from Ohio [Mr. FESS] offered two amendments. One has been disposed of, and the next one, which comes on page 50, will not be taken up until we reach that place in the bill. The Clerk will read.

The Clerk read as follows:

BANK RESERVES.

SEC. 20. That from and after the date when the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the fact that a Federal reserve bank has been established in any designated district, every banking association within said district which shall have subscribed for stock in such Federal reserve bank shall be required to establish and maintain reserves as follows:

(a) If a country bank as defined by existing law, it shall hold and maintain a reserve equal to 12 per cent of the aggregate amount of its deposits, not including savings deposits hereinafter provided for. Five-twelfths of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults; and for a period of 14 months from the date aforesaid at least three-twelfths and thereafter at least five-twelfths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the 12 per cent reserve hereinafter required may, for a period of 36 months from and after the date fixed by the Secretary of the Treasury as hereinafter provided, consist of balances due from national banks in reserve or central reserve cities as now defined by law. From and after a date 36 months subsequent to the date fixed by the Secretary of the Treasury as hereinafter provided the said remainder of the 12 per cent reserve required of each country bank shall consist either in whole or in part of reserve money in the bank's own vaults or of credit balance with the Federal reserve bank of its district.

(b) If a reserve city bank as defined by existing law, it shall hold and maintain, for a period of 60 days from the date fixed by the Secretary of the Treasury as hereinafter provided, a reserve equal to 25 per cent of the aggregate amount of its deposits, not including savings deposits hereinafter provided for, and permanently thereafter 18 per cent. At least one-half of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults. After 60 days from the date aforesaid, and for a period of one year, at least three-eighths and permanently thereafter at least five-eighths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the reserve in this paragraph required may, for a period of 36 months from and after the date fixed by the Secretary of the Treasury as hereinafter provided, consist of balances due from national banks in central reserve cities as now defined by law. From and after a date 36 months subsequent to the date fixed by the Secretary of the Treasury as hereinafter provided, the said remainder of the 18 per cent reserve required of each reserve city bank shall consist either in whole or in part of reserve money in the bank's own vaults or of credit balance with the Federal reserve bank of its district.

(c) If a central reserve city bank as defined by existing law, it shall hold and maintain for a period of 60 days from the date fixed by the Secretary of the Treasury as hereinafter provided a reserve equal to 25 per cent of the aggregate amount of its deposits, not including savings deposits hereinafter provided for, and permanently thereafter 18 per cent. At least one-half of such reserve shall consist of money which national banks may under existing law count as legal reserve, held actually in the bank's own vaults; and at least one-fourth of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remainder of the 18 per cent reserve required of each central reserve city bank shall consist either in whole or in part of reserve money actually held in its own vaults or of credit balance with the Federal reserve bank of its district.

With the following committee amendments:

Page 37, line 16, strike out the word "twenty-five" and insert in lieu thereof the word "twenty."

Page 38, line 16, strike out the word "twenty-five" and insert in lieu thereof the word "twenty."

Page 38, lines 22, 23, 24, and 25, and lines 1, 2, and 3, on page 39, strike out the semicolon after the word "vaults" and the following words: "and at least one-fourth of such reserve shall consist of a credit balance with the Federal reserve bank of its district" and insert a period and the following words: "After 60 days from the date aforesaid, and thereafter for a period of one year, at least three-eighths and permanently thereafter at five-eighths of such reserve shall consist of a credit balance with the Federal reserve bank of its district."

The CHAIRMAN. Without objection, the committee amendments will be agreed to.

There was no objection.

The CHAIRMAN. The Clerk will read.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last word for the purpose of asking a question of the chairman of the committee. What was the object or reason of

reducing the reserve requirements from what they were in the original bill?

Mr. BULKLEY. Does the gentleman mean reducing them from 25 to 20 per cent?

Mr. GREEN of Iowa. Yes.

Mr. BULKLEY. That is an immaterial amendment. It reduces it only for 60 days. We thought it would make it a little easier for banks to make the transition to the new system. I will say further to the gentleman that although I have charge of this section that amendment was made during my necessary absence from the city, and it was so immaterial that I did not bother about it.

Mr. GREEN of Iowa. It is immaterial to cut it down from 25 to 20?

Mr. BULKLEY. Yes. There was no objection to the amendment. It is all right.

Mr. GREEN of Iowa. They will begin to rediscount before they get started.

Mr. BULKLEY. There will be a certain amount of rediscounting at the outset. There is no embarrassment about that.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Sec. 25. That from and after the passage of this act the stockholders of every national banking association shall be held individually responsible for all contracts, debts, and engagements of such association, each to the amount of his stock therein, at the par value thereof in addition to the amount invested in such stock. The stockholders in any national banking association who shall have transferred their shares or registered the transfer thereof within 60 days next before the date of the failure of such association to meet its obligations shall be liable to the same extent as if they had made no such transfer; but this provision shall not be construed to affect in any way any recourse which such shareholders might otherwise have against those in whose names such shares are registered at the time of such failure. Section 5151, Revised Statutes of the United States, is hereby reenacted except in so far as modified by this section.

Mr. MADDEN. Mr. Chairman, I move to strike out the section.

The CHAIRMAN. The gentleman from Illinois moves to strike out section 25.

Mr. MADDEN. Mr. Chairman, it does not seem to me that it is fair to make a stockholder in a bank liable if he has transferred his stock 60 days before the failure of the bank. I should like to ask the chairman of the committee what is the purpose of the language in this section of the bill which makes stockholders who may have transferred their stock 60 days before the failure of the bank liable for all contracts and obligations that may be incurred by the bank? If a man has sold his stock in good faith, with no knowledge whatever of any trouble in the bank, and that stock has been transferred to somebody else, why should he be held liable?

Mr. WINGO. Is the gentleman opposed to the present law on that proposition?

Mr. MADDEN. I am not a lawyer, and so can not say exactly what the present law is.

Mr. WINGO. I think, if the gentleman will look at the law, he will see that we have made very little change in it. We have simply made it a little clearer; that is all.

Mr. GLASS. I am not a lawyer, and this is a legal proposition. As I recall, it was stated that that section was reenacted and that it was to a very slight extent modified to correct some existing abuses that had been observed in the operation of the present law.

Mr. MADDEN. Then the committee thinks this is no injustice to the stockholder?

Mr. GLASS. It certainly does not think it is, or it would not have reported it.

Mr. MADDEN. I do not want to press my amendment. I withdraw it.

Mr. BARTLETT. Mr. Chairman, I move to strike out the last word. There is considerable change in this section from the present law. The present law is that—

The shareholders of every national banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts, debts, and engagements of such association, to the extent of the amount of their stock therein, at the par value thereof, in addition to the amount invested in such shares, except that shareholders of any banking association now existing under State laws having not less than \$5,000,000 of capital actually paid in and a surplus of 20 per cent on hand, both to be determined by the Comptroller of the Currency, shall be liable only to the amount invested in their shares.

That is the present law, and it is the law in every State that where the stockholder is individually liable for the debts of the bank he can not escape that liability by transferring the stock, unless he has transferred it, in some States 6 months previously, and in some States 60 days, and in my own State he must publish notice notifying the public that he has transferred the stock in order to escape liability.

But that was not what I wanted to call to the attention of the committee. This bill changes the present law, in that it makes the stockholder liable for all the debts to an amount equal to his stock, and omits the words "equally and ratably, and not one for the other."

Mr. WINGO. What is the difference between that provision and the provision which says "each to the amount of his stock therein"? I ask for information solely.

Mr. BARTLETT. Under neither one of these sections can a man be compelled to pay more than double the amount of the stock he subscribes for.

Mr. WINGO. Is there any distinction between them?

Mr. BARTLETT. Yes; and I am undertaking to point it out. The present law does not make one stockholder liable for another stockholder. In other words, under the present law the stockholder is only liable ratably for the amount of his own stock and is in no way to be held responsible for any debt of another stockholder who may not be solvent.

Mr. PHELAN. Will the gentleman suggest an amendment that will take care of that?

Mr. BARTLETT. Yes; put in the section of the present law and you will have all that is necessary.

Mr. PHELAN. Without any change at all?

Mr. BARTLETT. Yes; that is my judgment about it. The trouble about it is that in lines 24 and 25 you reenact section 5151, which is the section of the Revised Statutes fixing the liability of stockholders, except as you say, as it is modified by this particular section of this act. It has been the policy of the law, both State and national, in fixing the liability of stockholders of State and national banks, to make them liable equally and ratably, and not one for the other, and I see no reason why you should raise this new question in this act or why you should repeal the law, which, as I understand it, is the law in all the States, which makes them liable ratably and equally and not one for the other. In other words, as you have written the law in this bill the courts will look upon it that you intended to repeal a portion of this section and to leave certain other portions of it in force and would hold that a stockholder might be held liable as a surety for another stockholder who had not paid.

Mr. WINGO. I want to get the gentleman's opinion. He calls attention to the fact that in some States they have a statute fixing the time after the transfer when the stockholder's liability ceases.

Mr. BARTLETT. Yes.

Mr. WINGO. Is it not true that some States have not that limitation, and is it not for the court to determine whether the transfer was bona fide, or whether it was made for the purpose of evading liability?

Mr. BARTLETT. Yes.

Mr. WINGO. Is not this a good proposition—to fix it that it shall be 60 days?

Mr. BARTLETT. I think so. I am not complaining of that. My complaint is that we have changed the position of a stockholder, which the law now makes in almost all of the States—all those whose laws I have had occasion to examine, and I have had occasion recently to examine most of them, by reason of a case which I investigated. Most of the States which make a stockholder personally liable do not make that stockholder liable as surety for his fellow stockholders.

Mr. WINGO. I will say to the gentleman that I coincide with his views.

Mr. BARTLETT. We are in an unfortunate position in this matter. I do not understand that I am justified in offering an amendment to this bill. I did not think that the committee was justified in making any amendments to the bill which changed its substance.

Mr. SHERLEY. Why may not this be a good amendment for this reason? Every man who goes in as a stockholder understands that he is liable for the stock and a like additional amount.

Mr. BARTLETT. Yes; double liability.

Mr. SHERLEY. And it may turn out that quite a number of the stockholders are insolvent and so not able to respond to the double liability. Why should you undertake, as under the old law, to reduce the stockholders' liability pro rata?

Mr. BARTLETT. Because it never was intended—

Mr. SHERLEY. I know; but now we are making a new law.

Mr. BARTLETT. I do not think we ought to make them liable for the whole amount.

Mr. PHELAN. If the gentleman will allow me, I want to ask the same question asked by the gentleman from Kentucky. I want to give a case and see how it would operate. Suppose a bank had a capitalization of \$100,000, and suppose there are 10

stockholders, each holding \$10,000. Now, suppose the bank should become indebted to an amount through insolvency equal to \$10,000 beyond its assets, and suppose that 9 of the 10 stockholders have absolutely nothing outside of the bank stock. In that case the only recourse the creditors would have to make up the \$10,000 would be by having the single individual stockholder liable for the \$10,000. Do not you think the law ought to be in that shape?

Mr. BARTLETT. I do not; and never until right now has anybody in the United States Congress since the existence of the banking law ever supposed there was any law that required that sort of liability on the stockholder. Gentlemen must remember that this act changes the present liability of stockholders in national banks.

Mr. BORLAND. Does the gentleman think, in the particular case, that an innocent creditor ought to lose nine-tenths of the debt because only one stockholder is able to pay?

Mr. BARTLETT. I do not think we ought to change the liability of stockholders.

Mr. GRAHAM of Illinois. Mr. Chairman, I desire to ask a question of some gentleman on the committee. If the law obtains, as the committee proposes, that each stockholder in a national bank shall be liable for ten times the amount of his stock, how many people would consent to subscribe and own stock in a national bank?

Mr. PHELAN. In answer to the gentleman, I will say that section 25 does not provide any such thing as he is indicating. Under section 25 a stockholder under no circumstances can be held liable for an amount greater than the amount of his capital stock in addition to what he has invested in capital stock. It is the same double liability as exists under present law.

Mr. GRAHAM of Illinois. Under this provision can it not in any case exceed the double liability?

Mr. PHELAN. Certainly not. It says, in lines 13 and 14, page 43, "each to the amount of his stock therein, at the par value thereof in addition to the amount invested in such stock." Now, I want to say further in reference to a point raised by the gentleman from Georgia [Mr. BARTLETT], that under the provisions of this bill we have left out the words "equally and ratably." There is a reason for that. I will take the case that I took before. Suppose a bank failed and its assets were not sufficient to pay its liabilities by an amount of \$10,000. Suppose the stockholders consisted of 10 men, each having \$10,000 worth of stock, and that 9 of the 10 men had nothing which the creditors could reach in order to collect under the provisions of the present law what was due them. In that case you would have a single debtor who had \$10,000 of stock, who had property which a creditor could reach, and under the provisions of the present law, since he would be charged equally and ratably, all the creditor could get would be one-tenth of his share, which would be \$1,000. We believe the intent and purpose of the double liability is that when a man goes into a bank he goes in with the understanding that he is liable on the bank's debts, not only to the amount of the capital stock but to an equal amount besides, and, with that belief, when he goes in under that liability he ought to be willing to pay that; each individual ought to be willing to pay what the law binds him to pay if his fellows can not contribute their share.

We believe that that is in the interest of the creditors, and we believe that particularly because the history of our country has shown in the national-bank law that the national banks are extremely successful, that if they are managed with any degree of prudence the stockholders are perfectly safe. The history of the banks has shown that, and so we think when a bank gets into the hands of men who are irresponsible and there are one or two responsible or half a dozen responsible men with them, that those responsible men, knowing their liabilities, ought to pay the penalty and not have the loss fall upon the creditor of the bank, who is an innocent party.

Mr. BARTLETT. But suppose all of the stockholders are insolvent; they would be in a bad fix also.

Mr. PHELAN. Certainly; and if they are all insolvent, then this section does not hurt them, because nothing can be collected from them.

Mr. BARTLETT. Does the gentleman believe the provision he places in the bill can increase the liability of stockholders of national banks that have been organized under a law fixing a different liability? It is proposed now to change it. Does the gentleman think he can change the liability of the stockholder who is already a stockholder in a national bank?

Mr. PHELAN. I do not know whether that thing can happen or not. I am inclined to think it can; but it is immaterial whether it can or not. If it can not, it will not hurt them; but as to national banks that are formed hereafter they are going to have that liability, and it is only a reasonable liability.

Mr. BARKLEY. Mr. Chairman, is it not a fact that under the present law the words "equally and ratably" mean that if the debts do not amount to sufficient to consume all of the double liability they shall be charged against each individual stockholder equally and ratably according to their stock?

Mr. PHELAN. I think it has that meaning, but I will not say that it is confined to that meaning.

Mr. BARKLEY. In other words, under the present law, if the debts of the bank exceed the double liability, they would all be liable for the double assessment, regardless of the amount of stock they had under the operation of the law at the present time?

Mr. PHELAN. They would all be liable.

Mr. BARKLEY. Yes; and they would have to pay in their double liabilities to the full extent?

Mr. PHELAN. Yes.

Mr. McKENZIE. Mr. Chairman, I move to strike out the last word. What I am about to say will perhaps not be germane and applicable to this section, but I hope the distinguished chairman of the committee and the Members on that side of the House will not object. The remarks of the gentleman from Georgia [Mr. BARTLETT] a few moments ago that he had understood that no one would be entitled to offer amendments to this bill account in part for my silence in the general debate and in the reading of the bill under the five-minute rule. I love a good forensic battle, when men can meet on an equality, and it is not because I do not that I have remained silent in this fight. But I was brought up a Presbyterian, and I am somewhat familiar with the doctrine of foreordination, which seems to have been applied to legislative measures in this House by the Democratic Party. I well knew, and we all knew, that it was foreordained that this bill should pass just as it came from the caucus.

I want to say to you, gentlemen, that my opposition to this bill is not because it bears the brand of the Democratic caucus or because it originated in a Democratic committee, for I am not one of those who believes that nothing good can come out of Nazareth. If the bill appealed to my judgment as being right, I would support it just as cheerfully coming from your side of the House as if it came from this side of the House, but I do feel that it is deplorable that in this age the representatives of the majority of the American people, as represented by the Republicans and the Progressives on this floor, have no part in the making of the two bills for the regulation and control of the revenue and finance of the country, but that those bills should be formulated, framed, and passed by the representatives of the minority by more than a million votes in this country.

Now, gentlemen, there are many good things in this bill. I am not going to discuss it, but there are one or two things in it which, in my judgment, are obnoxious and contrary to the very spirit of our institutions and the Constitution of our country.

Mr. WINGO. Will the gentleman yield?

Mr. McKENZIE. I have not the time to yield. I have only a few minutes, and I do not intend to make a long speech. There are several objectionable provisions, in my judgment, and one is the provision that provides that this great Government of ours shall go into a partnership with the bankers of this country and compel the debtor class, the borrowers of this country, the unfortunate men whom you have always claimed to defend, to compel them to redeem and pay the entire bonded indebtedness of our country. [Applause on the Republican side.]

I am opposed to that proposition, and if I were given the opportunity and the power to fix the rate of discount of the reserve banks I would fix it so it would go no further than to pay the dividends permitted upon the stock that the member banks put into the regional reserve banks and the expense of operating. If this bill becomes a law the debtor class will be compelled to redeem the bonds of the country. But, after all, gentlemen, I can not help but admire your plan. You, a few weeks or months ago, passed a bill in this House which you expect soon to become a law.

Mr. SLOAN. If the gentleman will permit me I just want to ask if that other Presbyterian doctrine of total depravity would not be more in point than the doctrine of foreordination?

Mr. McKENZIE. Well, I would not make that statement as I have some very good friends over there. But the bill that is soon to become a law, the tariff bill, provides that a tax shall be levied upon the creditor class, the wealth of this country, an income tax, to pay the running expenses of this Government, and now you propose in this bill to levy a tax upon the debtor or unfortunate class to pay for the bonded indebtedness of the Government. Beautiful scheme. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER. Mr. Chairman, I do not rise to make a speech, but to propound a question to the chairman of the committee, if he will yield.

Mr. GLASS. I do.

Mr. COOPER. I desire to call the attention of the chairman to what seems to be an ambiguity in the bill in the section which we have just passed, on page 42, line 9, after the semicolon:

And the officer or officers of a bank making such loans or granting such gratuity shall be likewise deemed guilty of misdemeanor and shall be fined not exceeding \$5,000.

An "officer" is to be fined \$5,000 and the "officers" are to be fined \$5,000. Now, then, suppose that the president alone made this loan or gratuity? He would be arrested and, if convicted, he would be fined \$5,000, and if some three of them participate in making this gratuity or loan—for example, the president, the cashier, or somebody—the fine would be \$5,000. Does it mean all of them in the aggregate shall be fined \$5,000 or each one of them? If the gentleman will pardon the suggestion, I think what the committee meant was this: If you were to strike out all after the semicolon and it should read this way: "And any officer of said bank making or participating in the making of such loans." That seems to me to be an important point.

Mr. METZ. Mr. Chairman—

The CHAIRMAN. The gentleman from Virginia has the floor.

Mr. GLASS. I want to answer the question propounded by the gentleman from Wisconsin. I would suggest that if there be any ambiguity there, and there seems to be, it might be cured by inserting the words "each shall be fined not to exceed \$5,000."

Mr. COOPER. Yes.

Mr. GLASS. But that section has been passed.

Mr. METZ. Mr. Chairman, I rose to correct a misapprehension—

The CHAIRMAN. But the gentleman from Pennsylvania offers an amendment, which the Clerk will report.

Mr. COOPER. Mr. Chairman, I ask unanimous consent that the chairman or I be permitted to return to correct this ambiguity here.

Mr. BULKLEY. Mr. Chairman, for the present I object to going back to sections which have been passed. The committee will take it under advisement, and I hope to get unanimous consent of the committee at a later time to make several changes.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Pennsylvania.

Mr. OGLESBY. Mr. Chairman, I would like two minutes to talk on this amendment.

The Clerk read as follows:

Page 43, line 11, strike out "national banking association" and insert in lieu thereof "national bank."

Mr. BURKE of Pennsylvania. Mr. Chairman, I offer that for the purpose of calling the attention of the chairman to the fact that on pages 42, 43, 44, and 45 the terms "national bank" and "national banking association" are four times used interchangeably with each other. My suggestion would be that the chairman, by unanimous consent, amend by striking out the words "national banking association" and insert the words "national bank," or strike out the words "national bank" and insert the words "national banking association" wherever they occur in the bill.

Mr. GLASS. I will say that we considered it in the committee this morning, and if it meets with approval we will amend it later.

Mr. BURKE of Pennsylvania. That is satisfactory, and I will withdraw my amendment for the time being.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

LOANS ON FARM LANDS.

SEC. 26. That any national banking association not situated in a reserve city or central reserve city may make loans secured by improved and unencumbered farm land, and so much of section 5137 of the Revised Statutes as prohibits the making of such loans by banks so situated shall be, and the same is hereby, repealed; but no such loan shall be made for a longer time than 12 months, nor for an amount exceeding 50 per cent of the actual value of the property offered as security, and such property shall be situated within the Federal reserve district in which the bank is located. Any such bank may make such loans in an aggregate sum equal to 25 per cent of its capital and surplus, or 50 per cent of its time deposits.

The Federal reserve board shall have power from time to time to add to the list of cities in which national banks shall not be permitted to make loans secured upon real estate in the manner described in this section.

Also the following committee amendment was read:

Page 44, lines 14 and 15, strike out the comma after the word "surplus" and the words "or 50 per cent of its time deposits."

The CHAIRMAN. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I offer a committee amendment.

The CHAIRMAN. The gentleman from Ohio offers a committee amendment, which the Clerk will report.

The Clerk read as follows:

Page 44, strike out the word "and," in line 4, and all of lines 5, 6, and 7.

Mr. BULKLEY. Mr. Chairman, this language is considered unnecessary at this point in view of the provision of section 29 of this bill, and the committee believed that some confusion might arise from having it in at that point. Clearness will be served by striking it out.

The CHAIRMAN. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. BURKE of Pennsylvania. Mr. Chairman, I offer an amendment.

Mr. SISSON. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. BURKE], a member of the committee, rises to offer an amendment.

Mr. SISSON. I will say to the Chair and to the gentleman from Pennsylvania [Mr. BURKE] that the purpose of my rising was in order that I might ask the committee a question in reference to the amendment just adopted and to call the committee's attention to the language of section 5137, and which is just in point at this time, and I will only be a moment.

Mr. BURKE of Pennsylvania. I will withhold my amendment.

Mr. SISSON. I would like to ask the committee whether or not they carefully examined this language in section 5137 in reference to the five-year limitation of the ownership of land by national banks. It is my understanding from an individual member of the committee that they did do that. Now, what does the committee think about this suggestion. Under section 5137—

A national banking association may purchase, hold, and convey real estate for the following purposes, and no others.

And then it enumerates the four methods by which the national banks can acquire land. Now, the lines just struck out would amend the first portion of the sentence which prohibits national banks to loan money directly on real estate and the language is as follows:

But no such association shall hold the possession of any real estate under mortgage—

Now, you have amended that much of that section by specifically permitting the loan.

The latter half of that section, and in the same sentence, is:

or the title and possession of any real estate purchased to secure any debts due to it, for a longer period than five years.

Now, would there be any question about the right which the bank had when it gets the right, under this amendment or under this bill, to acquire a title in the land which it may be compelled to foreclose? Would the courts hold that that of itself would give them the right to hold the land in fee?

Mr. WINGO. Does the gentleman want an answer?

Mr. SISSON. Yes.

Mr. WINGO. I will say to my friend from Mississippi that after he called my attention and that of the committee to this matter several days ago I looked into it, and upon the suggestion of the gentleman from Mississippi it was thoroughly thrashed out in the committee. The committee came to this conclusion, that the language in the present section under consideration does nothing more than extend the powers of national banks to this extent, that they may make loans of 12 months' time upon improved farm lands.

Mr. SISSON. I am sure that was the intention of the committee.

Mr. WINGO. That being true, we simply, acting upon the suggestion of the gentleman from Mississippi, added to the provisions of this section, and we did not repeal any part of it. There are two things in the last clause of section 5137, and one is that they shall not hold possession of any real estate, especially under a mortgage, for more than five years, and the other is that the title or possession of any real estate they may purchase to secure any debts due to it shall not be held for a longer period than five years. Now, we think the present provision of the bill as amended coincides with what the gentleman wants and is not inconsistent with either one of those provisions. It simply means this: This provision would still apply and they could not hold possession of this mortgage or lend under this mortgage for more than four renewals. In other words, this provision would still apply and prevent them from holding a mortgage for more than five years.

Mr. Sisson. I am sure that that is the purpose of the committee, because when this matter was discussed in the Democratic caucus this statute was not before me, and I know that the committee did not intend that the money of the national banks should be locked up and tied up in land; that this is a commercial proposition and not a loan company.

But I wanted to be absolutely sure that this limitation that is now put upon national banks should not be extended beyond five years' ownership of land, because I presume that most of the Members of the House realize how much I am opposed to all sorts of land monopolies and all sorts of corporate ownership of farm lands.

Mr. BULKLEY. Mr. Chairman, if the gentleman will yield, I would like to say that one of our reasons for striking out this language is to make it more clear that we did not intend to repeal the language to which the gentleman refers under section 5137.

Mr. Sisson. I am willing to yield any opinion I have to the good judgment of the committee. I had an amendment prepared to cover this point, but I will not offer it, because I presume beyond question that the committee's opinion will be the law.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Pennsylvania [Mr. BURKE].

The Clerk read as follows:

Page 44, line 4, strike out the words "farm land" and insert in lieu thereof the words "real estate."

Mr. BURKE of Pennsylvania. Now, Mr. Chairman, it seems to me that no Member of this body will have any difficulty in admitting that the supreme virtue of all legislation lies in the equality with which it treats all the people affected by it. On the other hand, legislation which is condemned most universally by the American people is that which discriminates between classes and grants and confers upon one class benefits which at the same time it denies to another.

Now, it is perfectly obvious that there is not the slightest necessity for the existence of the words "farm lands" in this section of the bill. You confer upon these banks a loaning power which you strangely confine to the man who owns unencumbered "farm land." The man across the city line may go to the bank which you create in this bill and, with his unencumbered land, secure a loan. The man who resides within the city line, equally honest, equally industrious, equally patriotic, appears at the same bank, at the same hour, on the same day, and he is denied that privilege.

Now, by what process of reasoning can any body of men bring themselves to the adoption of a measure of that kind, especially in this instance, in view of the fact that this bill is regarded by its proponents as the greatest measure that they will have an opportunity of enacting into law for many years to come?

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Illinois?

Mr. BURKE of Pennsylvania. I do.

Mr. GRAHAM of Illinois. If the term "real estate" were substituted for the language used, it would include buildings of every character. They are real estate.

Mr. BURKE of Pennsylvania. Yes.

Mr. GRAHAM of Illinois. Is it not true that in city real estate the building is often of more value than the ground it stands on?

Mr. BURKE of Pennsylvania. Yes.

Mr. GRAHAM of Illinois. Would not that raise questions of insurance and a number of other things that would make it very complicated?

Mr. BURKE of Pennsylvania. That is very true; but the universal custom, as the gentleman, who is an able and distinguished lawyer, knows, is that the insurance is invariably carried on the improvements and not on the land, and held as a protection by the mortgagee. But what is the necessity for this discrimination? Why should we grant to the farmers the right to avail themselves of this privilege and deny it to our friends and fellow citizens in the cities?

The farmer is prosperous. Nobody is complaining about his condition at the present time; and nobody, at least on that side of the House, is prophesying that he will be poverty stricken under the legislation which is being enacted and to be enacted by this administration.

All through this bill you seek for some reason to cater to or fool the so-called farmer. Now, it may fool somebody, but it will not fool or deceive the thinking portion of the American people.

This discrimination that I point out is wholly unjustifiable. There is a trace of the same character of deception running all through this bill. When you create your Federal reserve board you appoint the Secretary of Agriculture upon that board. Why do you do that? You pass by the Secretary of Commerce, the man who has to do with all the great manufacturing industries and all the great volume of products that are produced by the brain and genius and activity of the industrial toilers of this country, aside from those on the farm lands. You bar him.

In a great measure which involves legal intricacies you bar the Attorney General from the board. You bar the Postmaster General, whose army of employees enter every home in the land and who is in position to be in touch with the people from day to day. Likewise you pass by the Secretary of the Interior.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURKE of Pennsylvania. May I have two minutes more?

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that he may proceed for two minutes. Is there objection?

There was no objection.

Mr. BURKE of Pennsylvania. In view of the fact that you pass up all these members of the Cabinet and confer this particular authority upon the Secretary of Agriculture, and, in addition to that, go further and engage in this particular discrimination in favor of the farmer, can you say consistently and fairly that you have enacted into law a bill that treats all classes of the American people alike?

Mr. GLASS. Mr. Chairman, I understood the gentleman distinctly to say the other night that he was in favor of the bill suggested by the Monetary Commission, and I call his attention to the fact that in section 40 of that bill this very discrimination, if it be a discrimination, is involved, in that the Monetary Commission bill provided that the privilege of making loans on improved and unencumbered real estate should not extend to banks acting as reserve agents for banks and trust companies.

Mr. BURKE of Pennsylvania. The gentleman, of course, is predicating his question upon the assumption of a fact that does not exist—that has no foundation. I did not commit myself the other night to the Monetary Commission bill, and I am very sorry that my brilliant friend from Virginia obtained any such idea from the remarks I made at that time.

Mr. GLASS. Did not the gentleman say he was in favor of the bill of the Monetary Commission?

Mr. BURKE of Pennsylvania. No.

Mr. WILSON of Florida. Did not the gentleman say in the committee that he was in favor of it?

Mr. BURKE of Pennsylvania. The gentleman from Virginia has himself condemned that bill, and if he condemns it because of its contents, how can he justify inserting this particular provision in this bill, by declaring that it was part of the Monetary Commission plan?

Mr. GLASS. I am simply showing the inconsistency of the gentleman from Pennsylvania in approving the provision in one bill and condemning it in another.

Mr. BURKE of Pennsylvania. But the "gentleman from Pennsylvania" did not approve it in the other bill.

Mr. BORLAND. Was there anybody over there in favor of the Aldrich bill?

Mr. HAWLEY. No.

Mr. MADDEN. We never passed the Aldrich bill. Why do you refer to it all this time?

Mr. GRAHAM of Illinois. Is not the objection of the gentleman from Pennsylvania [Mr. BURKE] met by the provision at the top of page 47, which provides that the savings department of each national bank may be authorized to loan on real estate?

Mr. BURKE of Pennsylvania. It is not met by that provision, for the reason that the savings bank is only one-fifth of the bank, and has only one-fifth of its assets and ability. You give the farmer five chances and the man in town one chance.

Mr. GLASS. Mr. Chairman, I desire to come to some agreement as to the debate on this section and amendments thereto. I ask unanimous consent that debate on this section and all amendments thereto be concluded in 10 minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on this section and amendments thereto close in 10 minutes. Is there objection?

Mr. CALDER. May I have three minutes of that time?

Mr. SABATH. Reserving the right to object, I desire to ask the chairman of the committee how he wishes to dispose of the 10 minutes? I have not taken up a great deal of the time of the committee or of the House on this matter, and I should like two or three minutes.

Mr. GLASS. Does the gentleman desire to offer an amendment?

Mr. SABATH. Yes.

Mr. HAUGEN. I desire to offer an amendment.

Mr. GLASS. I am perfectly willing that the gentleman from Illinois [Mr. SABATH] shall have two minutes. I ask unanimous consent that debate on this section and all amendments thereto close in 10 minutes. I ask that the time be equally divided between the two sides, the gentleman from Pennsylvania [Mr. BURKE] to control five minutes and I to control five minutes.

The CHAIRMAN. Is there objection?

Mr. HAUGEN. Reserving the right to object, I wish to suggest—

Mr. OGLESBY. I should like two minutes on this section. I suggest to the gentleman that he make it 20 minutes.

Mr. BURKE of Pennsylvania. I yield to the gentleman from Minnesota [Mr. LINDBERGH].

The CHAIRMAN. The gentleman has no time to yield yet. No agreement has been reached.

Mr. BURKE of Pennsylvania. I supposed the request had been granted.

The CHAIRMAN. No. Is there objection to the request of the gentleman from Virginia?

Mr. HAUGEN. Reserving the right to object, I wish to suggest that this is a very important section of the bill—I think one of the most important in it.

Mr. GLASS. We have had it under consideration in debate for some time.

Mr. HAUGEN. Not for any great length of time.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield to the gentleman from Minnesota [Mr. LINDBERGH].

Mr. LINDBERGH. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Strike out the word "twelve," in line 8, page 44, and insert in lieu thereof the word "sixty," in line 13, on the same page, strike out the word "twenty-five" and insert the word "fifty" in lieu thereof.

After the word "surplus," line 13, insert a comma and add the words "all such notes having a maturity of not more than 120 days shall be excluded from such limitation."

Mr. LINDBERGH. Mr. Chairman, this section 26 is unfortunate in its provisions. There is no greater misconception possible anywhere in regard to any provisions of this bill than that which exists with reference to loans made upon improved, unencumbered farm lands. No class of paper furnishes better security, and I doubt if any class of paper is more salable. Any banker or broker, who has a good reputation, who has farm mortgages for sale, can sell them in any kind of times. They are as liquid in fact under the conditions existing in this country at this time and as they have been for some time past as any kind of paper. There are always parties who are ready and willing to purchase these mortgages at their face value plus the accrued interest to the date of the purchase, and even in all sections of the district which I have the honor to represent, and some parts of that district have been settled but a short time, these mortgages are salable. It would be an improvement to this bill to authorize loans to be made upon farms for five or six years, and it would benefit the farmers in a reduction of the interest they would have to pay as well as adding stability to the system itself. It is manifestly unjust to the greatest of all the industries of this country to treat the paper with so little consideration as this bill does. A loan for 12 months is not the sort of a loan that the farmer wishes to secure upon his farm. If he desires to borrow money upon his farm he usually desires to secure a loan for several years. In the course of the banking business, if it would be authorized to take such loans, part of the loans would be maturing from time to time, and whenever these notes secured by mortgages had a maturity not exceeding 120 days they should be taken out of the limitation and not counted in the limit that is placed upon the banks for the amount of such loans to be made. Then they should have the same privileges that any other paper of equal maturity has. Another reason why these loans should be taken and given full consideration in this bill is that it is proposed to admit State banks, banking associations, and trust companies that already have, under the laws of the State in which they are organized, these powers.

It is for the reasons that I suggest that I have sent to the Clerk's desk an amendment which, if adopted, would authorize national banks to loan 50 per cent of their capital and surplus on unencumbered, improved farm security and for a period of not exceeding five years, and to take all the notes so secured out of the limitation when their maturity does not exceed 120 days, thus permitting the notes secured by mortgages, irrespective of the time for which the mortgage runs, to be entitled to the same rediscounting advantages that other paper has whenever such notes have a maturity of not more than 120 days.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield to the gentleman from New York [Mr. CALDER].

[Mr. CALDER addressed the committee. See Appendix.]

Mr. GLASS. Mr. Chairman, I yield to the gentleman from Georgia [Mr. HOWARD].

Mr. HOWARD. Mr. Chairman, the gentleman from Pennsylvania [Mr. BURKE], in offering his amendment, incorporated in his remarks something that struck me forcibly. He asked why the necessity of discriminating between city real estate and farm land; why they should carry in this bill the right to lend money on farm land and not upon city real estate. Off-hand that might strike some people forcibly as a very unjust discrimination against the city real estate, but the gentleman from Pennsylvania must bear in mind that in this country we have hundreds of thousands of acres of available and undeveloped farm land; that a great part of the population go to the cities for different purposes—for education, for social advantages. The astounding fact is forced upon us that over 52 per cent of the citizens live in towns having a population of 2,500 or more. They are continually leaving the country and going to the large civic centers, thus continually adding to the consuming masses. It is much easier—and the gentleman from Pennsylvania knows it—for an individual to obtain a loan from a national bank or any other bank on city real estate than it is for a farmer to obtain a loan on his farm.

In ninety-nine cases out of one hundred the man owning city real estate does not need to mortgage it. If he is solvent, all he has to do is to go to the bank, give his note, and the bank, knowing that he owns the city real estate, will make the loan.

I will tell you where the great trouble has been in this country, especially in the section from which I hail, and that is the farm-loan companies of the East, that have millions of dollars, have squeezed unjust and unfair commissions from the farmers of this country. Commissions and lawyers' fees for examining titles have been heaped upon them. It is not a discrimination, but a justice, that is incorporated in the bill that the farmers may have a place where they can go and secure a loan on their farm property at reasonable rates of interest. [Applause.]

Mr. GLASS. Mr. Chairman, I yield to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. Mr. Chairman, I rise to answer the question of the gentleman, who evidently desired to know what difference there could be between the security of farm lands and city lands. There is the fundamental difference that the farm land is capable of producing the amount of money necessary to pay the debts. In other words, the farm land has a productive value which the city land has not, and in a general scheme for the purpose of loaning money on land that difference must be taken into consideration.

I wish to warn the country that the plan is made and the stakes set to steer any farm-credit measure offered in this Congress into the same rut of private profit that has harassed agriculture for all time in this country.

A certain coterie of bankers, which has been the most insidious of all the "insidious lobbies" that ever struck Washington, is on the job in Washington now, and before this new banking and currency bill becomes a law it will be a Bertillon record of their thumb prints.

These dear, kind souls love the farmers and have already proposed a scheme by which a system of banks shall loan money to the farmers and give them a chance to view their old 8 and 10 per cent friends behind the money counter. The said ten-percenters will be under this scheme fostered by law and permitted to earn as much bread as they can by the sweat of the farmer's brow.

There are only two sides to this farm-credit question.

One side is to let the "beneficent" money lenders run the farm-credit reform, to turn the cure over to those who profited by spreading the disease.

The other side is to let the afflicted people take charge of the cure themselves; let their Government do the doctoring and fire the 10 per cent nurses.

I will print an extract from the St. Paul Daily News of August 23, which tells only part of the story of the money lenders' sudden and active interest in behalf of the farmers:

RURAL-CREDIT SCHEME IS MANIPULATED FOR SINISTER PURPOSE—DEFINITE BELIEF IN WASHINGTON THAT PLAN TO AID FARM PRODUCERS IS BEING DISTORTED TO GIVE WALL STREET WHAT IT COULDN'T GET IN CURRENCY BILL, A CENTRAL BANK CONTROLLED IN NEW YORK—CONGRESSIONAL INVESTIGATION PROBABLE.

[B. W. G. McMurchy.]

WASHINGTON, August 23.

There is a definite belief in Washington that the "rural-credit" scheme and the propaganda for a system of "rural banks" has been manipulated for a sinister purpose.

There is no doubt that many of the advocates of a rural-credit plan are unselfishly patriotic.

There is no doubt that a rural-credit plan could be made a godsend for the American farmer, the small business man, and the whole country west of Wall Street.

But there is a definite suspicion, which will probably result in congressional investigation, that the working out of the rural-credit plan has been manipulated.

THE REAL PLAN.

The rural-credit plan, as its real friends see it, proposed to unite and solidify the borrowing power of the farmers of the country, reduce interest to them, and safeguard them against foreclosure.

For years rural credits were urged by thinking men who had the interests of the farmers at heart. But the movement did not seem to get forward.

During that time every possible effort was being made by moneyed interests to secure the enactment of the Aldrich currency plan—the care of which was a central bank controlled in New York City.

In spite of every effort it has been and is now impossible to put the Aldrich plan over. Instead, to a certain extent, President Wilson has seized and capitalized most of the good things in the Aldrich plan and has left out the "joker," which was a Wall Street central bank.

It now appears that the money interests were just as foxy as President Wilson, except that they got busy first and, cloaking their efforts under a rural-credit plan, sought to secure their central bank by means of it.

What we think of as "Wall Street" wants just one big thing. It wants all surplus money to flow toward and to New York and it wants all credit to flow from New York; that is, it wants New York to have all surplus money and to be able to dictate the terms upon which that money shall be loaned.

The farmers of the United States are now doing business on a borrowed capital of over \$6,000,000,000 and are paying each year over \$500,000,000 in interest. As the American farmer, taken as a whole, is solvent, this means that he has surplus money—cash—enough to carry this enormous business forward. It means, incidentally, that this \$500,000,000 annual interest is added to the city man's cost of living.

KIDNAPING THE PLAN.

The real rural-credit plan, as operated in Europe, would make both the cash and credit ends of this colossal transaction a local transaction.

Suppose, now, that Wall Street several years ago had seen that the establishment of the Aldrich currency-central bank scheme was doubtful. It would naturally look around for a substitute. It might have seen the rural-credit plan then just beginning to attract public attention. It might have plotted to kidnap that plan.

Here are some things that were done:

March 18, 1912, Secretary of State Knox ordered American diplomatic officers to make full reports on European rural-credit plans.

Six weeks later B. N. Breitung, a New York financier, with interests in Cleveland, Ohio, wrote a letter in which he said:

"The establishment of a grand central land-credit company and regional and local companies or associations has been proposed. * * * I and my associates have ample means to start the movement. * * * I am going to Europe within a couple of weeks for the purpose of consulting with some gentlemen and offering my services in collecting information on this subject. * * *"

QUITE SOME DIFFERENT.

A grand central land-credit company is a whole lot different than a rural-bank plan. It is exactly the opposite, in fact.

Three months later Ambassador Myron T. Herrick, of Cleveland, Ohio, at Paris, was conducting the investigation asked for by Secretary Knox.

It appears that associated with Herrick in his research was a committee of the American Bankers' Association, composed of Herrick, chairman, and B. F. Harris, of the Illinois Bankers' Association, and Edwin Chamberlain, of San Antonio, Tex.

When Mr. Herrick filed his report at Washington he said nothing of his having acted also and simultaneously as a banker nor of the presence in Paris of the bankers' committee, of which he was chairman.

David Lubin, American delegate to the International Institute of Agriculture at Rome, dropped in on Mr. Herrick in Paris. He says he found "bankers omnipresent and unless the American farmer looks out he will have bankers omnipotent." Also, he says that a surmise that a move was on foot to secure a new asset currency based on whole-sale farm mortgage bonds, was correct. Lubin added: "American farmers should awake to this danger. Outcome involves the salvation of the American Republic."

ENTER THE S. C. C.

Next comes a more or less shadowy organization called the "Southern Commercial Congress." It is of unknown membership, but it suddenly evinced a desire to study rural credits. It organized the American commission which secured official recognition from the United States Senate, that stronghold of the Aldrich plan's friends, and was given \$25,000 in cash and the right to use the United States mails free. Some mighty and unseen power seemed to be behind it.

The Southern Commercial Congress named a committee of five to go abroad, and on that committee was the same Chamberlain whom the bankers' association had sent. The other members were Clarence Poe, of Raleigh, N. C., and George and F. K. Woodruff, of Joliet, Ill.

Later the governors of the States were asked to send delegates abroad this summer with a southern commercial congress expedition to study. But these men found that their path had been mapped out for them by the "preliminary work" shown above.

SAME OLD JOKER.

Suppose a currency and banking bill were enacted to stem the tide of money that now flows east through the present national-bank arrangement.

Suppose a rural credit plan were authorized by law in which was hidden a plan for "reserve" banks, clearing houses, etc.

Would not the new plan take the place of the old one and leave the currency and national-bank reform bills a painted ship on a painted sea?

On top of all that, if the billions of dollars of farm-land value could be turned into credit and diverted to New York by means of Breitung's "great central land credit company," it would mean that Wall Street would have a new stock of chips larger even than that furnished by the era of trust promotions and stock watering that began in 1898.

Mr. BURKE of Pennsylvania. Mr. Chairman, I yield to the gentleman from Minnesota [Mr. SMITH].

Mr. SMITH of Minnesota. Mr. Chairman, the fact that 53 per cent of the people of this country live in towns, villages, and

cities goes to show that the owners of city real estate should have the same opportunities for borrowing money from national banks as the owners of farms. In the city there is just as great a necessity for the small-home owner to borrow money at a reasonable rate as on the farm. In a large measure the homes in the cities are mortgaged, and the same conditions apply to them that apply to the farms. On making a loan on real-estate security, whether on city property or farm lands, the owner has to pay a commission and attorney's fees for the examination of the abstract, as well as paying the abstract company for bringing the abstract down to date. It is known throughout the country that city real estate is as good security as agricultural property.

The CHAIRMAN. The time of the gentleman from Minnesota has expired. The gentleman from Virginia has one minute remaining. Does he desire to occupy that time?

Mr. GLASS. Mr. Chairman, I do not desire to occupy that time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania.

The question was taken; and on a division (demanded by Mr. BURKE of Pennsylvania) there were—ayes 22, noes 83.

So the amendment was rejected.

The CHAIRMAN. The question now is on the amendment offered by the gentleman from Minnesota.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. GLASS. Mr. Chairman, before the Clerk proceeds to read, I ask unanimous consent that we pass by the savings-department clause of the bill, section 27, for the present.

Mr. LA FOLLETTE. Mr. Chairman, I have an amendment that I desire to offer to the section just passed.

The CHAIRMAN. Will the gentleman from Washington permit the Chair to put the request for unanimous consent made by the gentleman from Virginia before he offers his amendment?

Mr. LA FOLLETTE. Yes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent to pass over section 27 for the present and continue to read the balance of the bill. Is there objection?

Mr. MURDOCK. Mr. Chairman, reserving the right to object, will the gentleman explain the reason for that?

Mr. GLASS. The reason is that the Committee on Banking and Currency desires to have a meeting this evening, after 6 o'clock, to consider some amendments to this section of the bill before it is brought up again for consideration in the Committee of the Whole.

Mr. MURDOCK. The gentleman is then to take a recess at 6 o'clock until 8 o'clock?

Mr. GLASS. Yes.

Mr. MURDOCK. And it is then his purpose to close the consideration of the bill to-night?

Mr. GLASS. I hope so.

Mr. MURDOCK. And to vote on the bill to-morrow?

Mr. GLASS. Yes.

The CHAIRMAN. Is there objection?

Mr. BURKE of Pennsylvania. Mr. Chairman, I understand that there is not to be a vote on the bill until noon to-morrow?

Mr. GLASS. That is correct.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

The Chair will state to the gentleman from Washington that the amendment which he offers, which he has sent to the desk, is to the section which has just been passed.

Mr. LA FOLLETTE. Mr. Chairman, I was on my feet, and understood that the amendment would be permitted to be offered.

The CHAIRMAN. Without objection, the amendment will be reported.

The Clerk read as follows:

Amend, page 44, lines 8 and 9, after the word "than," by striking out "12 months" and inserting "5 years."

Mr. BORLAND. Mr. Chairman, I make the point of order that we have already voted on an amendment which read 60 months. [Cries of "Vote!"] Mr. Chairman, I withdraw the point of order.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will report the second amendment of the gentleman from Washington.

The Clerk read as follows:

Page 44, after the word "surplus," at the end of line 14, insert: "And commercial paper so secured shall be subject to rediscounts by Federal reserve banks at all times."

The amendment was rejected.

Mr. BULKLEY. Mr. Chairman, because of the lack of American banking facilities in foreign countries our export trade is

now compelled to pay a heavy annual tribute to foreign bankers. The provisions of this bill will make it possible for our foreign trade to be financed largely by our own people, and the advantages of this change lie not only in the profits directly derived from such financial transactions, but will be found to be important also in increasing American prestige abroad. The establishment of foreign branches of American banks will thus greatly stimulate our foreign trade both directly and indirectly.

The need for American banking facilities in South America is particularly urgent. Our commerce with that continent has grown very rapidly during recent years, and doubtless will continue to grow even more rapidly in the near future with the development of South America and the opening of the Panama Canal. To a great extent we are competitors for South American trade with England, Germany, and Italy, all of which countries have their own banks in South America. Much of our present commerce with that continent is financed through these institutions established by our trade rivals.

It is obvious that the convenience of our trade and the prestige of the Nation both demand the establishment of American banks in South America; and the dividends paid by European banks doing business there show that ample profits are awaiting banks which enter this field. American exporters have found that many European banks doing business in South America make a practice of copying invoices for the information of exporters of their own nationality, thus putting upon American exporters a severe handicap, from which they are powerless to escape until American banks shall be established. Our own banks will also be of great value to exporters in supplying information concerning trade opportunities and credit rating of customers. The lack of such reliable information is now a considerable handicap to the development of our South American trade.

The Clerk read as follows:

SEC. 29. That all provisions of law inconsistent with or superseded by any of the provisions of this act be, and the same are hereby, repealed.

Mr. FESS. Mr. Chairman, I offer the following amendment. The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 50, line 12, after the word "repealed," add the following: "Provided, That nothing in this act shall be construed to repeal the parity provision of the act of March 14, 1900, 'An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes.'"

Mr. FESS. Mr. Chairman, I do not desire to take up the time of the committee, but I think that in view of the fact that the words "lawful money" are in the bill certainly gives the Government the option of redeeming the notes in gold or refuse to redeem in gold. But if that power is not here, then this amendment can not hurt anything. If the power to refuse to redeem in gold is in the bill this amendment will clear it up. If the committee is really sincere in the belief that this does not affect the gold standard, then I wish this amendment could go in to clear it up, for a good many of us who would like to vote for this bill can not vote for it unless the amendment is made. If there is any objection to my putting it in from anyone on that side of the House, I would be very glad to have some one on the other side of the House substitute an amendment. At any rate, I want the chairman of the committee to know that I am not speaking as an enemy of this bill in the main. I think in many respects it is admirable. There are some other features I would wish to change, but I see they can not be reached.

Mr. BARTLETT. If the gentleman's amendment is adopted will the gentleman vote for the bill?

The CHAIRMAN. Does the gentleman yield, and if so to whom?

Mr. BARTLETT. Mr. Chairman, may I ask the gentleman a question?

The CHAIRMAN. Does the gentleman yield to the gentleman from Georgia?

Mr. FESS. Certainly.

Mr. BARTLETT. Will that remove the gentleman's objections to the bill, so he will support it if the gentleman's amendment is adopted?

Mr. FESS. I want to say to my genial friend from Georgia that it will relieve me greatly, and I desire to say to him that I will vote for the bill if this amendment is carried or any other amendment that will mean the same thing. I do not care anything about whose amendment it is.

Mr. GLASS. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that

committee had had under consideration the bill H. R. 7837, and had come to no resolution thereon.

RECESS.

Mr. GLASS. Mr. Speaker, I ask unanimous consent that the House take a recess until 8 o'clock to-night.

The SPEAKER. The gentleman from Virginia asks unanimous consent that the House take a recess until 8 o'clock to-night. Is there objection? [After a pause.] The Chair hears none.

Accordingly (at 5 o'clock and 47 minutes p. m.) the House took a recess until 8 o'clock p. m.

EVENING SESSION.

The recess having expired, the House (at 8 o'clock p. m.) was called to order by the Speaker.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. RODDENBERRY, indefinitely, from July 20, on account of serious illness.

CURRENCY.

Mr. GLASS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, with Mr. GARNER in the chair.

The CHAIRMAN. The House is in the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7837, which the Clerk will report by title.

The title was read.

Mr. GLASS. Mr. Chairman, before the recess we passed over section 27 by unanimous consent. I ask now that that section be read.

The CHAIRMAN. The gentleman from Virginia [Mr. GLASS] asks unanimous consent to return to section 27. Is there objection?

Mr. FESS. Mr. Chairman—

Mr. BURKE of Pennsylvania. Mr. Chairman, what disposition was made of the amendment offered by the gentleman from Ohio [Mr. Fess]?

Mr. GLASS. No disposition has been made of it as yet.

Mr. BARTLETT. He withdrew it.

Mr. GLASS. He temporarily withdrew it when he was assured that the matter would be considered later.

Mr. MANN. What is the request?

Mr. GLASS. The request is for unanimous consent to return to section 27. It was passed over by unanimous consent.

Mr. MANN. Does it take unanimous consent?

The CHAIRMAN. The Chair thought that the amendment of the gentleman from Ohio [Mr. Fess] was pending.

Mr. BARTLETT. The gentleman withdrew his amendment, Mr. Chairman.

Mr. FESS. No.

The CHAIRMAN. The record does not show that the gentleman withdrew his amendment. The amendment being now pending to section 29 of the bill, it occurred to the Chair it would take unanimous consent to return to section 27 until that amendment was disposed of.

Mr. FESS. Reserving the right to object, I understand that this amendment will be taken up when we reach this section again. There is no jeopardy?

The CHAIRMAN. It will take its place when we come back to that section. The Clerk will read.

Mr. AUSTIN. Mr. Chairman, I ask unanimous consent for 10 minutes. I have had no opportunity to say anything about this measure, and failed to get in on the general debate. I would like permission to address the House for about 10 minutes.

Mr. GLASS. I shall not make any objection.

The CHAIRMAN. The gentleman from Tennessee [Mr. AUSTIN] asks unanimous consent to address the committee for 10 minutes. Is there objection?

Mr. WILSON of Florida. Reserving the right to object, what is the subject?

Mr. AUSTIN. I am going to discuss this bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee? [After a pause.] The Chair hears none. The gentleman from Tennessee [Mr. AUSTIN] is recognized for 10 minutes.

Mr. AUSTIN. Mr. Chairman, one need not hold a brief for the bankers of the United States to be amazed at some of the provisions of this bill. It is entitled:

"A bill to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford a means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes."

A better title would be:

"A bill to provide for the seizure of \$500,000,000 of money without asking the consent of the owners, to place the management of that vast sum in the hands of men whose qualifications are based on their lack of knowledge of the business of banking, to force the unwilling victims of this hold-up to borrow over \$200,000,000 of their own money at arbitrarily fixed rates of interest in order to avoid disaster that is sure to follow the shifting of millions of money from the established channels of trade, to furnish an unlimited supply of currency redeemable in any kind of money, and for other purposes, among which may be included the purpose to ascertain whether a political party holding such vast power over the destiny of the world of business can resist the temptation to use that power to perpetuate its rule."

If it were the purpose of this bill to ask the consent of the owners of the property that is to be taken for public use, or to pay them adequate compensation as provided in the Constitution, or if it were the purpose to seize part of the money of each of the 25,000 banks in the United States, thus treating all alike, it might be tolerated; but to segregate one-third of the banks (and when this law shall have been tried it may prove to be fortunate for the country that Federal jurisdiction extends to only that proportion of the banks) and force them to contribute \$550,000,000 of fixed capital, \$200,000,000 subscribed and paid in or held subject to call, and \$350,000,000 of deposits in Federal reserve banks that can not be drawn out or diminished no matter how urgently its owners may need it, one needs to pause and ask: "Are the socialistic teachings of Karl Marx embodied in the spirit of our laws, or is it only a dream?"

It is true that if any national bank declines to turn over its assessment to the Federal reserve bank to which it is assigned, it has the privilege of withdrawing from the national banking system, redeeming its circulating notes, and holding its United States bonds as a 2 per cent investment or selling them in open market at a price which will be determined largely by the amount of such bonds for sale or the income which purchasers demand.

How cleverly the framers of this measure have worked out the plan to put the Government in the banking business on private capital. "You do as we say or you will regret it. Furnish us the capital necessary for our scheme or get out from under our fostering care and supervision. But when you get out, when you become a State institution, with broader powers in the transaction of your business, we will extend to you a cordial invitation to participate in the benefits of this great system." As the creature of a State we can not force you—you are free to do as you please with respect to our plan; but we ask you to contemplate the manifold blessings that will flow to you if you will turn over to us to be managed without your participation 20 per cent of your capital and 5 per cent of your demand liabilities."

For 50 years the national banks of this country have been the foundation of the great business of banking. They have made possible the issue of Government bonds at low rates of interest. They have furnished a circulating medium based on those bonds which has passed freely through the channels of trade always at par. Through their clearing-house associations they have enabled \$1 of money to do the work that, without their assistance, would have required \$20, and when panic threatened to destroy the fabric of business these associations of banks have stemmed the tide of disaster and restored confidence. During the past 20 years State banks, trust companies, and savings banks, with their broader powers, have become the active competitors of national banks. It is proposed now to force the national banks by drastic measures to furnish the capital and deposits of a series of Government banks, while their active competitors with broader powers are courteously and cordially invited to participate in this beneficial scheme.

How many of the 7,500 national banks will elect to surrender their charters and become State banks with broader powers no one can state. But when it is realized that two-thirds, or 5,000, of such banks are doing business on a capital of \$100,000 or less, one must acknowledge that if a very small percentage of the national banks decline to participate you will have a wagon all ready to be pulled, but no horses to do the pulling.

How many State banks will voluntarily surrender part of their assets to be managed by men whose minds are full of glowing theories, but who lack training and experience in the work they will be selected to do?

It is a cardinal principle of our Constitution that each individual citizen shall be secure in the possession of his property, and that private property shall not be taken for public use without just compensation. The possession of property gives one the right to manage it. He may of his own free will delegate that right to another, but he can terminate the delegated authority at pleasure. That being so universally acknowledged as the corner stone of our American system, is it conceivable that any number of men will voluntarily turn over their property to be managed by others and at the same time surrender the right to terminate that delegated authority at pleasure?

Three members of the Federal reserve board will be partisan appointees of the President, with manifold duties and responsibilities confronting them in the management of the two great departments and one great division of a department of the Government. The other four are to be appointed by the President from civil life, and each member is to receive \$10,000 per year compensation.

It is difficult to conceive of any man or any seven men anywhere in the world who will be clothed with greater power, who will have graver responsibilities, and whose mistakes will cost more than these seven members of the Federal reserve board, except, perhaps, the man who appoints them; and it is proposed to lure them to assume the onerous duties imposed by their position by a salary of \$10,000 per year, when, if they possess the knowledge and ability required to fill these places, they can command in the commercial and banking world many times that much a year. They must be honest men, above reproach, with wide knowledge, based on experience that can be secured only by years of service in the business world, coupled with a profound theoretical knowledge of economics.

Change this provision of the bill so as to permit the President to appoint three members from the business world, who, together with the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency, shall select three additional members from the bankers of the country, and you will have a well-balanced board, three members representing the Government, three members representing the world of trade and commerce, and three members representing the bankers, whose money, taken without asking their consent, is to make this plan workable.

The framers of this bill state that it is intended to decentralize reserves in New York, Chicago, and St. Louis and establish a more scientific reserve system.

The essential feature of a scientific reserve system is centralization of available reserves, whence they can be sent broadcast through branches to the uttermost parts of the land, fed out here and there as needed, and then drawn back and kept until needed again.

This bill provides for not less than 12 reserve banks, each one equipped to mobilize the reserve it holds. If the number can be restricted to 12 or less no harm will ensue; but the danger lies in an unlimited number created here and there at the caprice of the Federal reserve board or through political influence; and as each reserve bank must gather and hold the gold needed to secure its note issues, may we not be treated to the spectacle at some time of a score or more of such banks fighting for gold and holding all they have to the end that one or more will not be able to maintain the necessary reserve to cover the notes it needs to issue?

One central reserve association is more effective than 5; 5 are more effective than 12. One or a few reserve associations are more readily controlled than a greater number, their comprehension of the needs they are to fulfill is keener, and the expense of their management is less.

This bill provides that every national bank shall join the system, subscribe 20 per cent of its capital to the capital of a Federal reserve bank, pay one-half of the said subscription in cash within 60 days after the subscription is made, and hold itself ready to pay the remainder at any time it may be called on for payment.

That provision will tie up \$200,000,000 of funds of the national banks. The report of the Comptroller of the Currency showing the condition of the national banks on June 4, 1913, indicates that many country banks do not carry sufficient reserve in cash in their vaults to meet that first requirement after they become members of the Federal reserve association. It is obvious that compliance with that provision means a contraction of loans in some places.

In addition to the initial capital, the subscribing banks must, during three years after the passage of the bill, transfer all their reserve funds to their own vaults or to Federal reserve banks.

Under the present law the national banks in the 50 reserve cities hold now \$567,000,000 of reserve funds of country banks and banks in secondary reserve cities. During the three years after the passage of this bill a large part of that vast sum must be diverted from the channels of trade in those cities and sent into new and uncharted seas.

How will the banks in those cities manage the transfer? It is true they will be permitted to carry less reserve by 7 per cent than they are required to carry now, and that, amounting to \$245,000,000, may be used as far as it goes to cover the \$567,000,000 they must give up. The remainder, or \$322,000,000, must be supplied either by contraction of loans or by borrowing from Federal reserve banks. If loans are contracted, many business enterprises will suffer. If the banks borrow from Federal reserve banks, they will borrow their own money which they have deposited therein.

Was ever a scheme more subtly planned? The banks supply \$100,000,000 of initial capital, then 5 per cent of their \$7,000,000,000 demand liabilities, or \$350,000,000 more, which is just as much fixed capital as the initial capital, inasmuch as it can not be diminished or drawn out. They get 5 per cent dividends on \$100,000,000 of initial capital and no dividends on the \$350,000,000 of fixed capital. Thus their net returns on the money they will have invested is a little better than 1 per cent.

Then to prevent a panic in the business world they must borrow back from the Federal reserve banks over \$300,000,000 at such rates as may be determined by those who manage their property, thereby creating the very profit out of their own necessity which is doled out to them at the niggardly rate of 1 per cent on their investment.

The surplus created up to 20 per cent of the capital of the Federal reserve banks goes eventually to the Government, and all profits in excess of dividend and surplus requirements is generously divided between the Government and the national banks in the ratio of 6 to 4, in addition to which the Government receives a further profit in the shape of interest which is to be paid by the Federal reserve banks on Government deposits but not on bank deposits.

The whole scheme reminds one of the shrewd fisherman who was hungry and proposed to some boys who had a boat that if they would furnish the boat, the lines, and the bait he would show them to the fishing grounds if they would divide their catch with him. In the evening when they returned with a boatload of shad and herring the old fisherman divided the catch thus:

Wall, boys, here's a herrin' for you and a shad for me. A shad for me and a herrin' for you. A herrin' for you and a shad for me. I always believe in dividin' things fair.

Country banks must and they will continue to do business with reserve city banks, and reserve city banks must and they will continue their relations with banks in central reserve cities. The business of the country demands that this arrangement be continued as it exists now. Change the reserve requirements of this bill and permit country banks to keep one-third of their 12 per cent reserve in reserve cities, and permit reserve city banks to keep one-third of their 18 per cent reserve in central reserve city banks. The result will give reserve city banks \$260,000,000 more of deposits than they would have under the provisions of this bill, and with the saving of 7 per cent of reserve in reserve cities, amounting to \$245,000,000, added to the \$260,000,000 aforesaid, the transfer of over \$500,000,000 of reserves, which is imminent if this bill becomes a law, will be needless, no contraction of loans will follow, and banks in those cities will not be forced to borrow their own money from the Federal reserve banks.

The manufacturing, trade, and commerce of this country are carried on largely in the 50 reserve cities established by existing law. The industries of those cities did not spring up there because they are reserve cities, but they were designated reserve cities because of their industries and their importance in the business world.

Is it the intention of those who framed this bill to strike at the legitimate industries of this country? Do they want to cripple business men whose energy, ability, and foresight have built up enterprises that give work to thousands? Do they want to destroy and tear down that which has required many years of patient industry to build up? Then let this measure be enacted into law. Let millions of dollars be shifted from the channels through which it flows now and the integrity and honesty of those who manage the banks of the country be questioned. There is no better way to accomplish their aim than to strike at the accumulated capital of a country, for there is nothing more

sensitive. And when I speak of accumulated capital I have in mind not the money of wealthy men alone, but the ready funds of the small business man, the modest manufacturer, the storekeeper, the farmer, and the savings of the workmen of the country, all deposited in the 25,000 banks throughout the land. That is the vast fund, managed by the duly chosen trustees of those who own it, which will be drawn on eventually to supply the capital for this experiment in banking which it is the intention of this bill to have the Government embark upon.

One of the most serious defects of the bill is that provision which permits the Federal reserve banks to issue notes but requires that they shall be the direct obligation of the United States and redeemable in gold or lawful money by the Treasury Department at Washington or by the Federal reserve bank of issue.

It is dangerous to the credit of any nation to bind it to guarantee or redeem the obligations of any bank unless the government be given the power to maintain the reserve necessary for such redemption. There is no provision in this bill whereby the Treasury of the United States can accumulate gold. Government funds are to be deposited in the Federal reserve banks and the maintenance of a gold reserve by those banks will eventually draw all the gold that is now on deposit in the Treasury therefrom. Every time a Federal reserve bank gets a gold certificate or a Treasury note, mindful of its need for gold, it will present it for redemption in gold at the Treasury, and the only means whereby the Treasury can replenish its gold stock is by the sale of bonds. Therefore one is impelled to ask are the words "lawful money" inserted in this bill with the intent that silver and Treasury notes, which are lawful money, may be used to redeem Federal reserve notes if there is not enough gold available? How near are we to a silver basis?

The Federal reserve notes, to be issued at the discretion of the Federal reserve board to an unlimited extent against a reserve of 33½ per cent of gold or lawful money, constitute a fiat currency, and there is coupled with the provision grave danger of inflation.

That provision of the bill is contrary to the experience of older nations and the advice of reputable bankers and economists, who agree that if the amount of the issue of such notes is to be unlimited there should be maintained a gold reserve of not less than 50 per cent and the notes should be redeemed in that kind of money on demand by the bank of issue.

I know it is popular to scorn the wisdom and experience of what we are pleased to call the effete nations of the Old World; but can we afford to do so in a matter so gravely important as this, when we consider how completely they have solved the problem of a gold reserve and a circulating medium and how effectively they have eliminated the danger of financial panics?

The Bank of France carries a gold reserve of from 40 per cent to 80 per cent against its circulating notes. The Bank of England carries a gold reserve of from 35 per cent to 50 per cent. The Imperial Bank of Germany carries a gold reserve of 40 per cent. The able men who have framed this measure consider it safe for us to issue an unlimited amount of notes based on a reserve of 33½ per cent of gold or lawful money, well knowing that the term lawful money includes gold, Treasury notes, and silver.

Considering these grave defects in the bill, it is not strange that those responsible for it should conceive it in darkness and attempt to bring it to life under the sheltering care of a caucus that stifles individual opinion. They are intelligent men, and they must know that if these defects were given over to a free and open debate in both Houses of Congress, where each one entitled to a vote could express his opinion and vote according to his belief, they would not become law. Why are such strenuous efforts being made to force this bill, with all its defects, through Congress at this time?

This is the greatest economic problem which the country has faced in 50 years. It should be studied and debated carefully. Nothing should be done hastily. Many who will vote in favor of it under compulsion do not understand the vital principles involved. How can those who do understand the principles at issue remain silent in debate and vote as they are told to vote, not as their convictions dictate, realizing that the tremendous issues here involved may bring disaster and misery and poverty to those they represent? [Applause.]

Mr. MONTAGUE. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Virginia [Mr. MONTAGUE] asks unanimous consent to proceed for 10 minutes. Is there objection? [After a pause.] The Chair hears none. The gentleman from Virginia is recognized for 10 minutes.

Mr. MONTAGUE. Mr. Chairman, in the interesting address of the gentleman from Iowa [Mr. PROUTY] the constitutionality of the pending bill is assailed. There has been, however, since

his remarks no formal reaffirmation of his position that I now recall, save by the speech of the gentleman from West Virginia [Mr. Moss]. The argument of the latter gentleman is grounded almost wholly upon a supposed violation of section 10, Article I, of the Constitution, which provides that—

No State shall * * * pass any * * * law impairing the obligation of contracts.

Now, the gentleman from Iowa and I agree, and whether we do or not the Supreme Court declares, that the provision just quoted is prohibitory upon the States, and the States alone, and that it imposes no inhibition whatever upon the powers of the Federal Government.

But assuming, for the sake of argument, that this provision does bind the Federal Government, I submit that the reservation in the national banking act of the right to alter, amend, or repeal the charters of banks thereunder formed renders this provision wholly inapplicable. Such charter reservations have uniformly been held to remove this constitutional prohibition when applied to the States, and when such reservations are made the famous Dartmouth College case is no longer an authority in point.

The gentleman from Iowa does not invoke this provision of the Constitution, but rests his argument upon Amendment V of the Constitution, which declares that—

No person shall * * * be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

He argues that the present national banks have certain property rights which will be taken without compensation by operation of law upon the repeal of the present charters of such banks and upon the establishment in lieu thereof of the new banking system contemplated by this bill. In other words, that the reservation to the United States of the right to repeal these charters is not sufficiently ample to justify the substitution of this new system, and that the establishment of the new system will resultantly confiscate the property of the present national banks in violation of "due process of law," whether the existing banks came into this system or not.

In the ingenious and able argument of the gentleman from Iowa three cases from the United States Supreme Court are cited by him in support of his contention. The first is *Shields v. Ohio* (95 U. S., 319), which, while technically involving the constitutional provision relating to the impairment of the obligation of contracts, nevertheless passes directly upon the contention that the impairment of the contract therein involved takes property without just compensation. The facts in brief are these: That in 1846 or 1850 a railroad company was chartered by the State of Ohio and given apparently an unlimited right to fix passenger rates; that subsequent to this charter this railroad consolidated with other roads, and under a provision of the statute and constitution of Ohio this consolidation became a new charter, and this new charter contained the expressed reservation on the part of Ohio of the right to amend or repeal such charters. After such consolidation the State of Ohio, in pursuance of its reserved right to amend, prescribed for the consolidated road or one of its divisions a passenger rate less than the rate obtaining under the old charter, and the new company therefore asserted that it acquired all the rights and property contained in the former charter, which was a contract with the State, and that the reduction of the fare was an impairment of such contract.

The court held—

The legislature had provided for the consolidation. In each case, before it took place, the original companies existed and were independent of each other. It [the consolidation] could not occur without their consent. The consolidated company had then no existence. It could have none while the original corporations subsisted. All—the old and new—could not coexist. It was a condition precedent to the existence of the new corporation that the old ones should first surrender their vitality and submit to dissolution. That being done, eo instanti, the new corporation came into existence.

The opinion continues—

When the consolidation was completed, the old corporations were destroyed, a new one was created, and its powers were "granted" to it, in all respects, in the view of the law, as if the old companies had never existed, and neither of them had ever enjoyed the franchises so conferred. The same legislative will created and endowed the new corporation. It did one as much as the other. In this respect there is no ground for any distinction.

This opinion confirmed the constitutionality of this charter reservation and declared there was no impairment of the obligation of contract by reason of the reduction of the earnings of the road by Ohio, and that the property of the company was not taken without due process of law. Therefore, I confidently submit that this case is directly in point to sustain the constitutional validity of the pending bill and nowise in its essential features can any fact or reason therein found support the argument of the gentleman from Iowa.

The Sinking Fund cases (99 U. S., 700) likewise give no aid or comfort to the argument for the invalidity of this measure. The opinion is too lengthy to digest for this occasion. But it should be stated the court held it would not decide what might be the power of Congress over this corporation "if the right of amendment had not been reserved" in its charter; but inasmuch as this right of amendment, alteration, or repeal had been reserved by Congress in the acts of 1862 and 1864, the court would uphold the subsequent legislation of Congress materially enlarging the powers of supervision, and especially the authority to provide and impound a sinking fund to liquidate the bonds of the road, and to this end that the Government could retain moneys in its own hand due by it to the railroad and also apply a proportion of its dividends. So I submit that this case, in all of its legislative and judicial analogies, affirmatively maintains the constitutionality of this bill.

I now reach the third case cited by the gentleman, that of the *Missouri Pacific Railway v. Nebraska* (217 U. S., 198). I must content myself with a very brief statement of the facts. By a statute of Nebraska a railroad is required to permit the erection upon its right of way of grain elevators, and if such permission is denied, the railway may be compelled to construct a sidetrack or switch for a distance sufficiently great to connect with such elevators at or some feet beyond the line of the right of way, for the purposes of loading grain upon the cars, with certain minor conditions which need not here be given. The railway refused to construct such siding or switch, and contended that inasmuch as no compensation was to be paid for the outlay incident to the establishment and maintenance of the sidetrack the State took the property of the railway without just compensation. The court decided that the police power of the State did not give the right to compel the railway company to put in switches at its own expense, and that such a requirement deprives the railway of its property without due process of law. There was no reservation in the charter of this company of a right to amend or repeal the same by the State granting the charter, and therefore the requirement for the construction of the switch was an unlawful exercise of an amendatory power on the part of the legislature. I repeat that the bald question here was one requiring the road to make a considerable outlay for private use without compensation, and the court so held. The analogy, therefore, does not in any way sustain the argument against the constitutional validity of this bill. In this bill no bank is required to enter the banking business under the new provisions, and there is no confiscation of existing banks upon failure so to do. It is true there is a dissolution of existing charters after the expiration of a certain time, a power to impose such a dissolution having been reserved in their charters and accepted by the existing banks. None of the imaginary hardships and confiscations predicted can come to any bank unless it voluntarily enters the system containing these regulatory provisions.

The contract, therefore, is the reserved right of Congress to amend or repeal these charters—contracts assented to when the several banks were organized—and if the banks now resist such amendment or repeal it is they who violate the contract and not the Government.

The argument of the gentleman from Iowa [Mr. Proctor] is that while Congress may amend, the amendment must go only so far and no further; that Congress may repeal, but the repeal must be coupled with certain conditions. That is to say, Congress has the power but is not the judge of the mode and degree of the exercise of the power. The contention bears its refutation. In the Sinking-Fund cases the court, in speaking of the right to amend the charter of the transcontinental railway, observed that—

Whatever rules Congress might have prescribed in the original charter for the Government of the corporation in the administration of its affairs it retained the same power to establish by amendment.

That is to say, that if Congress has the power to bestow it has the same power to recall if the reservation to recall is contained in the original grant or charter. Now, this reservation is explicitly expressed in the charters of all existing national banks; therefore the right of amendment or repeal can be exercised without any violation of the provisions of the Constitution respecting the due process of law or the taking of property without compensation. Moreover, when Congress exercised this undoubted power to amend or repeal it is not a mandate to the banks to "stand and deliver; your money or your life," as declared by the gentleman from Iowa, and I respectfully suggest that we can not judicially discuss or determine constitutional powers and their extent by such hysterical illustrations.

The gentleman concedes that Congress can amend or repeal, but that the "power of alteration or amendment is not without limit," to use his own quotation from the case of *Shields* against

Ohio. Now, while the court did employ this language it nevertheless held that the alteration or amendment enacted by the Ohio Legislature in that case was constitutional. In other words, the fact and principle decided is a direct affirmation of the right to make just such amendment or repeal as is accomplished in the pending bill if it is enacted into law. But I deny that the amendments or repeal wrought by this bill transcend the limitations had in mind by the court when using the language just quoted.

If I had time I think I could satisfactorily demonstrate that the powers of control, the requirement of reserves, the rate of interest, the application of dividends, and other cognate powers contained in the pending bill do not essentially differ from similar or somewhat similar powers found in the existing national-bank laws. It is true the two systems are dissimilar, but the administration of the two systems are not equally dissimilar. As was said in the sinking-fund cases:

The United States occupy toward this corporation [the transcontinental railway] a twofold relation—that of sovereign and that of creditor.

So I may here say that as respects the great system now sought to be set up by this legislation the United States occupies a threefold relation—that of sovereign, that of creditor, and that of debtor. The Nation creates this system, it loans its credit under certain restrictions, and it guarantees the solvency and redemption of the currency issued to the banks of this system. The merits or demerits of this gigantic plan I will not discuss further than to say that the plan calls into activity all the powers of government relevant and necessary to perfect the operation and the success of the system. Nor are these powers of government, which are so vehemently declared against in this debate, greater or more drastic in their exercise or more impinging upon individual right and constitutional guarantees than some of the powers in the present national-bank act, very similar in nature and expressly approved by the judgment of the Supreme Court.

In the case of *Noble State Bank v. Haskell* (219 U. S., 104) the Supreme Court, in passing upon the constitutionality of the Oklahoma depositors' guarantee-fund act, wherein there was a compulsory assessment upon all banks, chartered or rechartered, for the purpose of raising a fund to secure the repayment of deposits in insolvent banks, held this act to be in no violation of the due process of law or of the impairment of the obligations of contract.

The court uses this significant language:

The power to compel, beforehand, cooperation and thus, it is believed, to make a failure unlikely and a general panic almost impossible, must be recognized if government is to do its proper work, unless we can say that the means have no reasonable relation to the end.

The court makes the further observation, to which I ask the especial attention of the committee, that—

The payment [of the assessment] can be avoided by going out of the banking business, and is required only as a condition for keeping on from corporations created by the State.

How applicable to the very situation arising upon the enactment of this bill! The banks may come in or not, as they please. This case will bear careful reading, as it is rather a philosophical contribution to our juristic and constitutional literature. If any case could be found short of a direct adjudication of the very measure now under consideration, the case just cited most clearly and broadly sustains the constitutionality of this probable legislation.

Stripped of refined and technical reasoning, the arguments for the unconstitutionality of this bill run deeper than the invalidity of the provisions relating to the organization and administration of this new banking system. The arguments seem to imply a denial of the constitutional power to establish any banking system differing in any material degree from the present system. But this constitutional right to establish and disestablish banks has been too long tried and too often adjudicated to justify any reconsideration or reversal at this late day; and if we concede the constitutional right to charter new banks or to organize a new banking system, then we are driven likewise to concede all the means and instrumentalities essential to the organization and operation of such a system.

Mr. Chairman, in order to obtain a wider perspective and truer sense of proportion of the constitutional power to establish banks and all means necessary for their administration, I now beg briefly to recall a few historical facts relating to our banking systems.

The First Congress incorporated the Bank of the United States, with the power to establish branches and to do a general banking business. Washington requested Jefferson, then Secretary of State, and Edmund Randolph, then Attorney General, for their opinions as to the constitutionality of the charter. Both of these opinions were adverse to the validity of the charter. Washington then requested Hamilton, then Sec-

retary of the Treasury, and the principal author of the charter, for his opinion, which, when given, convinced Washington of the constitutionality of the charter. Perhaps it may be said that this opinion, found in Hamilton's works, 3 Federal edition, page 446, is the finest example of Hamilton's extraordinary genius and of his brilliant powers of analysis and deduction. Undoubtedly this opinion sank deep into the mind of Marshall, and was the germ, if not the foundation, of his great opinion in *McCulloch v. Maryland*, affirming the constitutionality of the second bank charter, enacted by Congress in 1816. In 1863 and in 1864 Congress passed the general acts for the incorporation of national banks, and their constitutional validity was again affirmed in the case of the *Farmers and Merchants' National Bank v. Dearing* (91 U. S., 29), delivered in 1875.

Now, the only question of perplexity is to identify the exact power or language in the Constitution specifically authorizing the establishment of banks. The power is undoubtedly in the Constitution, but it does not seem to have been disclosed and located with exact precision. In *McCulloch* against *Maryland* and in *Osborn* against *Bank of the United States* the great Chief Justice rested his views of the constitutionality of bank charters upon the ground that a bank is an instrument—

necessary and proper for carrying into effect the power vested in the Government of the United States.

And in *Farmers and Merchants' National Bank* against *Dearing* the court held that—

The national banks organized under the act are instruments designed to be used to aid the Government in the administration of an important branch of the public service. They are means appropriate to that end. Of the degree of necessity which existed for creating them Congress is the sole judge.

Thus we are still left to find the exact language or the precise provision authorizing such acts of incorporation. But, I repeat, the constitutionality of national-bank charters has been too long admitted now to be questioned; yet it may be helpful, even at this late day, to identify the particular clause authorizing the establishment of banks. I will therefore suggest that in this era of marvelous industrial and commercial development we do not have to wander far into the domain of the Constitution to find this authorization. Do not buying and selling and the transportation of things so bought and sold constitute commerce? Is not buying and selling the primary attribute in all commerce? And what buying and selling can be done in this economic age without the aid and function of banks? Commerce can now be carried on without banks no more than commerce can now be carried on without railroads. Therefore I submit to the committee that among the powers to create and control national banks is naturally and necessarily that power found in the clause of the Constitution giving Congress the authority—

to regulate commerce with foreign nations and among the several States.

In these few but pregnant words this great instrument of commerce, the bank, finds the chief source of its life and the main lines of its activities.

Mr. Chairman, I disclaim any discovery of this particular constitutional source whence banks must come and within the limitations of which banks may exercise all their functions and privileges. I only humbly recount the natural and simple discovery of others, and among them no less a jurist and publicist than Hamilton himself, who, as long ago as 1791, in his famous opinion given to Washington, pointed out this commerce clause in the Constitution as one of the authorizations for the first bank of the United States.

Mr. Chairman, I have taken the pains to suggest this particular source of power for the legislative work we are now doing in order that we may the more clearly appreciate the depth and breadth and strength of the foundation underlying the structure we are now building. With the constitutional powers identified or demonstrated we can with more freedom and certainty consider the validity of the provisions of this bill which aim to coordinate this fiscal scheme into administrative unity and vigor, adequate to maintain, promote, and develop the commerce between the States of our Union and between our Union and the nations of the world. We vainly quibble about the constitutional validity of this or that detail necessary for the administrative unity of the plan. If the object be legal, the details essential to the operation and administration of the object are likewise legal. These administrative requirements are imposed upon no bank; they become binding only when the bank of its own volition becomes a member of this fiscal or financial system. The Nation can set up this system, and the Nation can remove all existing obstacles to the operation of this new system. To this end, it gives the banks of the country an opportunity to come in or stay out, and the exercise of either alternative is a plain constitutional right.

Mr. Chairman, this is a mighty age, and a mighty commerce has already grown up amongst us, but a mightier commerce awaits more adequate banking facilities, through the instrumentalities of which credits may be balanced against credits, and the chief means to obtain this equilibrium is a sufficient and flexible currency. To achieve all of these benefits adequate powers and functions must be given to any banking system we may establish. We can not go through the idle performance of creating a fiscal torso without members, functionless, and lifeless. A more animated and vigorous entity is here created, possessing powers, and capable of exerting functions the constitutionality of which will be approved by the Supreme Court of the Nation and by the "right reason" of the law. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SAVINGS DEPARTMENT.

SEC. 27. That any national banking association may, subsequent to a date one year after the organization of the Federal reserve board, make application to the Comptroller of the Currency for permission to open a savings department. Such application shall set forth that the directors of said national bank have by a majority vote apportioned a specified percentage of their paid-in capital and surplus to said savings department, and to that end have segregated specified assets for the purposes of said department, or that cash capital for the said savings department has been obtained by subscription to additional issues of the capital stock of said national bank: *Provided*, That the sum in assets or in cash thus set apart for the uses of the proposed savings department aforesaid shall in no case be less than \$25,000, or than a sum equal to 20 per cent of the paid-up capital and surplus of the said national bank.

In making the application aforesaid any national banking association may further apply for power to act as trustee for mortgage loans, subject to the conditions and limitations herein prescribed or to be established as hereinafter provided.

Whenever the Comptroller of the Currency shall have approved any such application as hereinbefore provided, he shall so inform the applying bank, and thereafter the organization and business conducted or possessed by said bank at the time of making said application, except such as has been specifically segregated for the savings department, and subsequent expansions thereof shall be known as the commercial department of the said bank. National banks may increase or diminish their capital stock in the manner now provided by law, but whenever such general increase or reduction of the capital stock of any national bank operating upon the provisions of this section shall be made such increase or reduction shall be apportioned between the commercial and savings departments of the said bank as its board of directors shall prescribe, notice of such increase or reduction, and of the apportionment thereof, being forthwith given to the Comptroller of the Currency; and any such national bank may increase or diminish the capital already apportioned to either its savings or commercial department to an extent not inconsistent with the provisions of this section, notifying the Comptroller of the Currency as hereinbefore provided. The savings department for which authority has been solicited and granted shall have control of the cash or assets apportioned to it as hereinbefore provided, and shall be organized under rules and regulations to be prescribed by the Comptroller of the Currency.

Both the savings and commercial departments so created shall, however, be under the control and direction of a single board of directors and of the general officers of said bank.

All business transacted by the commercial department of any such national bank shall be in every respect subject to the limitations and requirements provided in the national banking act as modified by this act, and such business shall henceforward be known as commercial business.

The savings department of each such national bank shall be authorized to accumulate and loan the funds of its depositors, to receive deposits of current funds, to loan any funds in its possession upon personal or real estate security, and to collect the same with interest, and to declare and pay dividends or interest both upon demand and time deposits. The Federal reserve board is hereby authorized to exempt the savings departments of national banking associations from any and every restriction upon classes or kinds of business laid down in the national banking act, and it shall be the duty of the said board within one year after its organization to prepare and publish rules and regulations for the conduct of business by such savings departments. The said regulations shall require every national bank which shall conduct a savings department and a commercial department to segregate in its own vaults the cash and assets belonging to such departments respectively to be used by each such department for its exclusive and individual use. The regulations aforesaid shall further specify the period of notice for the withdrawal of deposits made in the said savings department and shall forbid the acceptance of deposits by one department of such national bank from the other department of such bank. The Federal reserve board shall make and publish at its discretion lists of securities, paper, bonds, and other forms of investment, which the savings departments of national banks shall be authorized to buy; and said lists need not be uniform throughout the United States, but shall be adapted to the conditions of business in different sections of the country.

It shall be the duty of every national bank to maintain, with respect to all deposit liabilities of its savings department, a reserve in money, which may under existing law be counted as reserve, equal to not less than 5 per cent of its total deposit liabilities, and every national bank authorized to maintain a savings department is hereby exempted from the reserve requirements of the national banking act and of this act in respect to the said deposit liabilities of its savings department, except as in this section provided. Every regulation made in pursuance of this section shall be duly published, and also posted in every member bank having a savings department.

Every officer, director, or employee of any national bank who shall knowingly or willfully violate any of the provisions of this section, or any of the regulations of the Federal reserve board, or of the Comptroller of the Currency, made under and by virtue of the provisions of this section, shall be guilty of a felony, and on conviction thereof shall be punished by a fine not exceeding \$5,000 or by imprisonment not exceeding two years.

Mr. BULKLEY. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, page 45, line 4, by striking out the word "purposes" and inserting in lieu thereof the word "uses."

Mr. BULKLEY. Mr. Chairman, this is merely a question of English.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Ohio.

The amendment was agreed to.

Mr. BULKLEY. Also the following amendment, Mr. Chairman.

The Clerk read as follows:

Page 45, lines 7 and 8, strike out "sum in assets or in cash" and insert in lieu thereof the word "capital."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I also offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 45, line 9, strike out "\$25,000" and insert "\$15,000."

Mr. BULKLEY. Mr. Chairman, this is a change in the minimum requirement in order to make it easier for small national banks to establish these savings departments.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I also offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 45, line 18, after the word "thereafter," insert the following: "It shall be authorized to receive savings deposits as so defined and."

Mr. BULKLEY. Mr. Chairman, this is simply for the purpose of greater clearness.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio.

The amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I also offer the following further amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 45, lines 2 and 3, after the period, insert the following:

"The said departments shall, to all intents and purposes, be separate and distinct institutions save and except as hereinafter expressly provided. The capital, surplus, deposits, securities, investments, and other property, effects, and assets of each of said departments shall, in no event, be mingled with those of the other department, or used, either in whole or in part, to pay any of the deposits of the other departments until all of the deposits of its own department have been fully paid and satisfied."

Mr. BULKLEY. Mr. Chairman, segregation of assets is already provided for on page 47, but it was deemed desirable to carry such a provision also on page 45 of the bill for greater clearness.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Ohio.

The question was taken, and the amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I also offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 47, line 4, at the end of the line, insert the following:

"To purchase securities authorized by the Federal reserve board."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Ohio.

Mr. BURKE of Pennsylvania. I think the gentleman had better have the amendment reported again to ascertain if it is not in the wrong place.

Mr. BULKLEY. I did not hear what the gentleman said.

Mr. BURKE of Pennsylvania. I asked the gentleman to see if his amendment was properly reported.

Mr. BULKLEY. It should be line 3. I thank the gentleman for the correction.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to revise the amendment. Is there objection? [After a pause.] The Chair hears none, and the Clerk will report the revised amendment.

The Clerk read as follows:

Page 47, at the end of line 3, insert the following: "to purchase securities authorized by the Federal reserve board."

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment.

The Clerk read as follows:

Page 47, line 4, after the word "upon," strike out the words "personal or."

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment offered by the gentleman from Ohio.

The Clerk read as follows:

Page 47, line 5, after the word "estate," insert the words "or other approved."

The question was taken, and the amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment offered by the gentleman from Ohio.

The Clerk read as follows:

Page 47, line 6, after the word "interest," strike out the word "both."

The question was taken, and the amendment was agreed to.

Mr. BURKE of Pennsylvania. Mr. Chairman, may I ask the gentleman from Ohio a question concerning the words "or other approved security"? Does not that vitiate the original amendment striking out the words "personal or"?

Mr. BULKLEY. No. Further on, at the bottom of the page, it is provided that the Federal reserve board shall make and publish, at its discretion, lists of securities, and they are only permitted to approve certain classes, which are enumerated.

Mr. BURKE of Pennsylvania. Then they could loan on personal estate, as was permitted in the original bill, if it is approved?

Mr. BULKLEY. No; I think not. The provision is—

Mr. BURKE of Pennsylvania. They clearly conflict if that is not true.

Mr. BULKLEY. I think the gentleman will agree with my interpretation. Beginning on line 24, it reads:

The Federal reserve board shall publish, at its discretion, lists of securities, paper, bonds, and other forms of investment which the savings departments of national banks shall be authorized to buy.

It does not say anything about loaning on them.

Mr. BORLAND. Is it not contemplated that they can loan on the same class of securities which they are authorized to buy? The words "other approved security" you have inserted on line 5 imply they can loan on securities they approve as being proper after investigation. I would so take it, because certainly if they are authorized to buy certain kinds of securities they ought to be authorized to loan on them, otherwise the words "approved securities" would have no particular significance.

Mr. MADDEN. Would it not be well to add to the language, "such securities as they may be authorized to buy or loan upon"?

Mr. BULKLEY. I think that would make it more consistent.

Mr. MADDEN. I suggest to the gentleman that we add that language to the phrase, then.

Mr. BORLAND. I would suggest to the gentleman that the use of the word "approved" would have no significance at all. The approval referred to at the bottom of page 47 is a list of securities that are approved as those in which they may invest their funds, otherwise the word "approved" would have no significance. It would not appear by whom they could be approved except by the directors of the bank.

Mr. MADDEN. I would like to suggest to the gentleman from Ohio that he add the words "buy or loan upon." I think that would make it better and broader.

Mr. BULKLEY. I did not hear what the gentleman said.

Mr. MADDEN. I suggest that the gentleman add the words "buy or loan upon."

Mr. BULKLEY. Yes; I think that would make it more consistent.

Mr. MADDEN. I would like to suggest that as an amendment.

Mr. BORLAND. Yes; that would make it better.

Mr. MADDEN. I think it would make it consistent to offer that language.

Mr. BULKLEY. If the gentleman wants to offer it, I shall not object to it.

Mr. MADDEN. After the word "buy," on line 3, page 48, add "or loan upon."

The CHAIRMAN. Will the gentleman state his amendment again?

Mr. MADDEN. After the word "buy," on line 3, page 48, add the words "or loan upon."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 48, line 3, after the word "buy," insert the words "or loan upon."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. BURKE of Pennsylvania. Now, Mr. Chairman—

The CHAIRMAN. The gentleman from Ohio [Mr. BULKLEY] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 47, lines 6 and 7, after the word "upon," strike out "demand and time" and insert the word "its."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. BURKE of Pennsylvania rose.

Mr. BULKLEY. Mr. Chairman, I would like to yield to the gentleman from Pennsylvania [Mr. BURKE] if he desires to ask a question.

Mr. BURKE of Pennsylvania. Is the gentleman satisfied now he has cured the defect in line 5 by the suggestion of the gentleman from Illinois?

Mr. BULKLEY. I think so. I will be glad to have your opinion.

Mr. BURKE of Pennsylvania. The bill as you had it when you began reading provided the banks could loan on personal or real estate security. By your amendment you strike out "personal," and to that extent limit it, and then you follow that by inserting another amendment which provides that you can loan money on real estate or other approved security without limitation.

Mr. BULKLEY. I think that is so as the bill reads now.

Mr. BURKE of Pennsylvania. So your defect is not cured by any means.

Mr. SMITH of Minnesota. Will the gentleman yield for a question?

Mr. BULKLEY. Yes; I will yield.

Mr. SMITH of Minnesota. Is it the intention that the savings departments of national banks will have the privilege of loaning on collateral security?

Mr. BULKLEY. That is unquestionably the way the bill reads.

Mr. SMITH of Minnesota. I do not think that is the intention. That is not my understanding.

Mr. BULKLEY. The gentleman from Minnesota is the author of most of those amendments, and I would be glad to have him make a suggestion about it.

Mr. SMITH of Minnesota. I am not sure it would be wise to have a savings bank loan on collateral security. I do not think the practice is in vogue at the present time, and I would not like to embark on it now. It may be wise.

Mr. WINGO. Would it not meet the objection by adding the words "investment securities"?

Mr. BULKLEY. I do not see how that would affect it materially.

Mr. ROGERS. Will the gentleman yield?

Mr. BULKLEY. I will.

Mr. ROGERS. May I suggest this change: "To loan any funds in its possession upon real estate or other security authorized, as hereafter required"?

Mr. BULKLEY. I think that is substantially the way it reads now. I do not think that changes the meaning.

Mr. ROGERS. I do not think you tie up the "approved" with a later authorization. You use the word "authorized" later, and you do not in any way, in your use of the word "approved" here indicate just how you wish the word "approved" defined.

Mr. BULKLEY. Well, does the gentleman mean that the word "approved" ought to be changed to "authorized"?

Mr. ROGERS. I think, for the sake of uniformity, it ought to be, because in the second line of page 48 you use the word "authorized" in this same connection and with this similar meaning desired. I take it.

Mr. BULKLEY. I do not see that the word "approved" could refer to anything else, but neither do I see that it would do any harm to change it to "authorized."

Mr. ROGERS. I simply thought it was desirable to add the phrase "authorized as hereafter stated," so as to indicate clearly the connection between those two portions of the section.

Mr. BULKLEY. I hardly think it would be necessary to add the words "as hereafter stated," and I think it would make the sentence rather clumsy. If the gentleman desires to offer an amendment to change the word "approved" to "authorized," I see no objection to that.

Mr. ROGERS. Does the gentleman see any objection to tying it up beyond the possibility of a doubt with a later authorization?

Mr. BULKLEY. I think it is so tied.

Mr. ROGERS. I can not quite agree with you. There are many possibilities in the word "approved" which are not comprehended within this later authorization.

Mr. BULKLEY. Does the gentleman think if he changed it to the word "authorized" it would be beyond doubt?

Mr. ROGERS. I think not. I think you ought to have reference to the later phrase in the section.

Mr. BULKLEY. Well, I see no particular objection to the suggestion.

Mr. BORLAND. The gentleman is unquestionably right about it. The use of the word "authorized" would be somewhat different from the use of the word "approved."

Mr. BURKE of Pennsylvania. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. BURKE] offers an amendment, which the Clerk will report.

Mr. BURKE of Pennsylvania. I think that will cure it. The Clerk read as follows:

Page 47, line 5, after the word "security," insert "or upon other approved security, as hereinafter provided."

Mr. BORLAND. "Or other authorized security."

Mr. BURKE of Pennsylvania. Yes; "or other authorized security."

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. BULKLEY. One moment, Mr. Chairman. Have we not already adopted an amendment in that line by putting in the words "or other approved" following the word "estate"?

Mr. BURKE of Pennsylvania. Yes. You have to strike that out; otherwise that would destroy the purpose of the first amendment.

Mr. BULKLEY. The gentleman's purpose is, then—

Mr. BURKE of Pennsylvania. To loan upon personal or real estate security—"upon real estate security or upon other approved security, as hereinafter authorized."

Mr. BULKLEY. I think that would be all right, but it should be made part of that amendment to strike out the amendment heretofore adopted.

Mr. BURKE of Pennsylvania. I thought the gentleman could do that himself.

Mr. PLATT. We have just adopted an amendment between lines 3 and 4 giving the savings department the right to receive deposits and purchase securities such as may be authorized by the reserve board.

Mr. BULKLEY. This refers to loans.

Mr. PLATT. Yes.

Mr. SABATH. Mr. Chairman, if the gentleman will permit, the amendment offered by the gentleman from Illinois [Mr. MADDEN] amended the provision pertaining to buying securities, which was on page 48, line 3. It authorizes the buying, and the gentleman from Pennsylvania [Mr. BURKE] now refers to the provision on page 47, in line 4, namely, referring to loans on various securities. So there is a distinction between the power to loan and the power and right to purchase.

Mr. BULKLEY. Yes; there is that distinction.

Mr. SABATH. Now, the amendment of the gentleman from Illinois [Mr. MADDEN] was adopted, applying to the proviso as to buying. The bank shall be authorized to buy.

Mr. MADDEN. If my colleague will allow me for a moment, if the gentleman from Ohio [Mr. BULKLEY] will take the amendment which I offered and which was approved, at the end of line 3, page 47, and then add to that the words "or loan," it will harmonize with the amendment which I offered and will make the two cases harmonious.

Mr. BULKLEY. Just a moment. I do not quite catch that suggestion.

Mr. MADDEN. On page 47, after the word "funds," on line 3, the gentleman from Ohio offered an amendment, and I would like to have that amendment read.

Mr. BULKLEY. I can read it to the gentleman. The amendment is "to purchase securities authorized by the Federal reserve board."

Mr. MADDEN. Or to loan upon them. If that is added to the gentleman's language there, it will harmonize both propositions.

Mr. BORLAND. That has been done.

Mr. MADDEN. No; that was upon another part of the bill.

Mr. BORLAND. If the gentleman will yield to me for a moment, I would like to suggest to the gentleman from Illinois [Mr. MADDEN] that his amendment, on line 3 of page 48, adding the words "loan upon" was adopted. The result will be that the banks will have the right only to buy a loan upon such securities as are authorized by the Federal reserve board. The only change necessary to be made now is the change from "authorized approved securities," on page 47, to "authorized securities," because they have the power now only to borrow upon this authorized list. No other securities could be approved.

Mr. MADDEN. If the gentleman from Ohio will add, after the word "funds," on page 47, line 3, the words "or loan upon," it would read "to loan upon or purchase any funds in its possession in real estate securities."

Mr. BORLAND. The gentleman from Ohio [Mr. BULKLEY] is right, though. It is not necessary to repeat the words at the top of page 47, because you have already restricted their right either to borrow or loan upon certain authorized securities. The only thing that is necessary to do is, at the top of page 47, to change "approved securities" to "authorized securities."

Mr. PLATT. That is all it is necessary to do.

Mr. BORLAND. That is all it is necessary to do, and it is not necessary to repeat, at the top of page 47, "as hereinafter stated," or anything of that nature.

Mr. BULKLEY. I ask unanimous consent that the word "approved," in the amendment already adopted, in line 5, be changed to "authorized." I believe that will serve the purpose.

The CHAIRMAN. There is an amendment that has been offered by the gentleman from Pennsylvania [Mr. BURKE].

Mr. BURKE of Pennsylvania. I will withdraw it.

The CHAIRMAN. If there be no objection, the amendment offered by the gentleman from Pennsylvania is withdrawn. The gentleman from Ohio [Mr. BULKLEY] asks unanimous consent to change the word "approved," in line 5, page 47, to the word "authorized." Is there objection?

Mr. BARKLEY. Reserving the right to object, I should like to ask the gentleman from Ohio if he thinks the word "authorized" is sufficiently specific as to the power of authorization? Does it refer to the Federal reserve board? Can it be implied by the mere word "authorized" that that means that the Federal reserve board must authorize it?

Mr. BULKLEY. I think so. Nobody else is empowered to authorize investments except the Federal reserve board.

Mr. BARKLEY. You think, then, it is unnecessary to put in after the word "authorized" the words "by the Federal reserve board"?

Mr. BULKLEY. I do not think it is necessary.

Mr. SHERLEY. Will the gentleman indicate how it will read if his last proposal is agreed to.

Mr. BULKLEY. It will then read:

To loan any funds in its possession upon real estate or other authorized security.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio [Mr. BULKLEY]?

There was no objection.

Mr. BULKLEY. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The gentleman from Ohio offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 48, line 10, after the word "of," strike out the word "its" and insert in lieu thereof the word "the."

The amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The gentleman from Ohio offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 48, line 10, after the word "liabilities," insert the words "of such department."

The amendment was agreed to.

Mr. BULKLEY. Mr. Chairman, I also offer another amendment.

The CHAIRMAN. The gentleman from Ohio offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 48, line 18, after the word "any," strike out the word "national" and insert in lieu thereof the word "member."

The amendment was agreed to.

Mr. RAKER. Mr. Chairman, I wish to ask the gentleman a question. I have several letters from bankers in California, in relation to this provision in line 21, page 44, which reads:

That any national banking association may, subsequent to a date one year after the organization of the Federal reserve board.

What I want to know is if there would be any objection to striking out of line 22 the words "a date one year after"; in other words, to leave the banking association free to organize the savings department at any time after the Federal reserve board was organized, so that when they are reorganizing their banks to come under the provisions of this act, if they desire, and it is approved by the comptroller, they may at the same time organize their savings department without waiting a year?

Mr. BULKLEY. That question was carefully considered by the committee. The gentleman will understand that in starting this great system the Federal reserve board will have a great deal to do. By the terms of this section the Federal reserve board is required to lay down the rules and prescribe the investments which may be made by these savings departments. The committee believes it would be impracticable to provide for the savings department system to begin at an earlier time. I will call the attention of the gentleman also to this fact, that these

savings departments may be established one year after the organization of the Federal reserve board.

Mr. RAKER. Yes.

Mr. BULKLEY. And the act provides that the Federal reserve board may be appointed immediately after the passage of the act, so that it is practically one year after the passage of the act. After the organization of a reserve bank in any one of the districts, a national bank therein still has a year in which to decide whether it will come into the system or not; so that if it pleased, it could stay out until such time as a savings department might be established.

Mr. RAKER. All I was getting at was this: Supposing the act is approved and the Federal reserve board is appointed. Then the bank desires to come in. It is reorganizing its business to a considerable extent. It says "Now, while we are reorganizing let us adopt the savings department," and instead of making two bites of a cherry they make one and wind up the whole business. These men who have written me these letters have gone over the act and say they are very much pleased with it; that its provisions are splendid, but that this would aid materially in carrying out the act if they were permitted to organize their savings department at the same time they were organizing the other. I wondered whether there was any fundamental reason which prohibited their organizing a savings department at the same time they organized the bank.

Mr. BULKLEY. The committee does not believe it to be humanly possible for the Federal reserve board to do all these things simultaneously, and we think by providing that they shall do it within one year we have given them a big task.

Mr. GUERNSEY. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 48, line 5, after the word "country," insert the following: "Provided, That national banks conducting savings departments shall invest the deposits of such department according to the laws regulating investments of savings banks in the State in which such banks are engaged in business."

Mr. GUERNSEY. Mr. Chairman, I believe that this legislation will break down of its own weight; that it does not offer sufficient inducement for the 7,000 national banks of this country to come in as a whole; that many will not come in. In addition to the 7,000 national banks we have about 18,000 State banks, and the measure, in my opinion, offers practically no inducement for any of the State institutions to come in under the proposed system, and if they do not come in this legislation will utterly fail.

Now, I realize that perhaps the legislation as it is now presented is simply a program of the Democratic Party in the House for presentation to the United States Senate, and that it is not the legislation that will eventually be signed by President Wilson; that Democrats in the House rely on Democratic Senators to make the bill attractive to the banks. If I am correct, I wish to call attention to the savings-department provision in the bill.

Here is a section of the bill providing that national banks shall have savings departments, a provision which contains absolutely no safeguards for the deposits or their investment. Under the provisions of this bill the directors can invest the deposits of the savings department in almost any kind of securities; the conditions of the country, the location, and so forth, being the chief consideration. It is utterly useless to depend on a board at Washington to safeguard the investments of the savings departments throughout the country. State legislatures long ago found that it was absolutely necessary to specify in the legislation itself the class of investment that might be used by savings banks. It is a class of business entirely different from commercial business. Commercial business is continually turned over under the eyes of the directors, while savings investments are long-time investments, not as frequently examined, and under these conditions they should be particularly safeguarded in the first instance by legislation which authorizes such investment. [Applause.]

In view of these facts I have presented this amendment, with the idea that where banks go into States and conduct business of this kind, that in such States they should follow the State regulations as to investments of savings deposits. By so doing they will be safeguarded and under the direct regulations of the State where the money is deposited. Certainly the Federal board can well afford to permit to this extent their authority to be encroached upon. [Applause.]

Mr. BAKER. Mr. Chairman, no one desires to violate a rubric of the House which implies that a new Member may be seen but may not be heard; but one can invoke the amenity of auditorial hospitality.

It is well about 90 out of every 100 of the Members of the House serve the Republic by thought and action rather than by the wounds of oratory. If it were not so the clangor of verbal conflict, like the smoke of torment of the lost, would ascend forever.

The pending bill embraces more concern to the people than any other legislation.

Banking and currency laws reach farther and touch more subtly and potentially the business and happiness of the people than does any revenue system.

Revenue and currency are very intimately related; indeed, in a way they are as interdependent as physical digestion and the circulation of the blood. If there is no revenue there can be no feasible currency; if there is no good digestion there can be no good blood; and if there is no good blood there can be no wholesome circulation.

We need to take heed of natural laws as well as of natural rights. Without dependable revenues to help us round the corners there can be no even, constant, reliable currency.

Currency, from the Latin word "cur," means to run. Run where? To the place where it is needed. It must run or it is useless, as well as nameless. To run is its business; otherwise, like the idle brain, it would soon become the devil's workshop. It must not be detained, congested, nor diverted by some spidering speculator. It must be currency that will "cur"—run—and it must be like the winning horse, sound in wind and limb, or it will not come under the wire on time. We must get it into the hands of the men who have head enough to employ it and keep it on the run, on the track, not men who will pinch it and bury it, but men who know how to make "the wheels go round," men who are wise enough and zealous enough to speed it on its mission of service to all the people.

We have passed a revenue bill that will furnish the springs to move the good blood needed in this circulating system. We have pulled the fangs that have paralyzed the fiscal health of the people. We have knocked out the "you tickle me and I will tickle you" brother. He is dismissed, discharged, and let us hope his obsequies have been duly and finally celebrated.

The banking and currency bill now occupies the front seat in the minds of the people, and we can put it down they propose to rule their own roost. They have commissioned this Congress to formulate the prescription and to administer the medicine, and it behooves us to see to it that they shall not find it necessary to call in another doctor, which they will do, and ought to do, if this long-suffering patient does not under our diagnosis and ministrations speedily show impressive signs of convalescence.

A currency system without the facilities for its utilization afforded by banks and bankers would be as helpless, as useless, as a horse without legs or an engine without steam. Many people grow hoarse and black in the face and spoil their voices decrying banks and bankers. Do they not know that from the Venetian days, when banking was invented, civilization has moved upward with a stronger, steadier stride? Do they not know that from Robert Morris down banks have been a strong fortress of the Republic? Do they not know that without banks and bankers it would be impossible to conduct the business of this country a single day; that they are as necessary to the affairs of civilization as a cooking stove is to a kitchen; that they are not only a convenience but a necessity; that they make the lives and property of their depositors safer by taking away from burglars and thieves the temptation to steal; that they provide, without cost to the patron, a perfect record and memorandum of his business for the careless or incompetent man; and that they, by their assiduous attention to their profession and a broad policy of enterprise and cooperation, have made it possible and do pay to their depositors interest on their daily, monthly, or annual balances, thus securing to their depositors an income from funds that would otherwise be idle? It is neither just nor wise nor reasonable nor patriotic to denounce an institution and men that are as helpful and necessary to the agricultural, manufacturing, business, and domestic life of our country as the shining of the sun and descending of the rain are to the fructifying of our boundless cereal crops.

The defect lies in our laws, not in our banks. Laws that exclude from credit utility the largest, most reliable, and enduring values in the whole country are a crime against both the borrower and the lender and need explanation. It is said hundreds of millions of dollars are now loaned by national banks on the best security on earth but in flat contravention of the technical interpretation of the law by its ministers. The law as it stands to-day is a monument to insincerity or imbecility. If it is the purpose of the law to exclude from its benefits the most dependable part of the property and people of the United

States, it has succeeded. The people have discovered this fact, and that is why they are on the trail of their faithless or glib representatives.

It is only by resort to facilities afforded by laws of some of the States that freeholders are able to provide collateral with which they may secure discounts in the national banks.

The Federal laws should be able to stand alone and to move without a crutch. There are three divisions of the people who are directly and vitally interested in comprehensive and efficient banking laws; they are the stockholders, depositors, and borrowers in banks. The stockholder has a just right to a fair return on his investment and to applause for his enterprise. The depositor not only does business with the bank, but his act is the certification of confidence and approbation, which is of great value to any fiduciary institution and may be regarded as the bedrock upon which the success of the bank depends. But the stockholder and depositor would live in vain if it were not for the borrower, the man who suffers most from panics.

The borrower made this mighty Nation what it is. First he borrowed from his imagination and his nerve; then he borrowed without limit from his brain, his bone, and his sinew; and when he had subdued this vast continent to the ways of civilization and the rule of reason he began to borrow from the banks, in order that he might enlarge his agricultural operations, build factories, construct railroads and bridges, improve highways, erect schoolhouses and scientific institutions to lift up all the people in the arts and comforts of living and to make a better and a higher civilization. It is the borrower who is on the firing line and always taking the chances of battle; it is he who is clothed in living light; it is he whose veins throb with good red blood; it is he whose plans and inventions and work fill the firmament with wonders. It is he, the borrower, not the stockholder nor the depositor, but he, the borrower, who took the fire from the altar of God and illuminated the world. Shall the fair door of equal opportunity be open to him?

This bill seeks to prove our sanity and to set us free. It illuminates the dark places in our economics. It is the foe of the double dealer. It is drawn in the interest of mankind in the land of the setting sun. It knows no creed, no class, no party.

It stands foursquare to all the winds that blow.

It is as broad as the continent, straight as the path of honor, and serviceable as the air we breathe. Who is there to cavil about it; who to paint pictures of approaching gloom; who to blow trumpets of calamity; who to ring bells of alarm; who to sound tocsins of danger? If such there be in its presence, let him hide his diminished head.

Mr. HEFLIN. Mr. Chairman, in the outset I want to congratulate the committee having in charge this great bill. It is legislation that the Republicans dared not touch for 16 years except upon the surface. The Democratic Party has been called upon to legislate upon the tariff and upon the currency—the two most vital and dangerous questions to tamper with in the Republic. I congratulate the House and its leadership upon its management of the tariff legislation.

I come now to congratulate the gentleman from Virginia, the chairman of the Committee on Banking and Currency [Mr. GLASS]. I did not see how it were possible for any Member to know as much about any other legislation as the chairman of the great Ways and Means Committee knew about the tariff legislation, but I come to lay a laurel wreath upon the brow of the distinguished gentleman from Virginia. He has handled this legislation in a masterly fashion. [Applause.] Those associated with him have contributed to this good legislation, and I congratulate those on that side of the House who will join with us in voting for this much-needed relief. [Applause.]

There are some other provisions that I would like to have in this bill, but could not get them all in. The Democratic caucus has thrashed out this measure and has brought here a bill representing the combined wisdom of the Democratic Party in the House, better than any bill that was ever produced by the dictation of Cannon, PAYNE, and Dalzell in this House. [Applause on the Democratic side.] Gentlemen have talked about the President dictating legislation. Have you ever come in contact with this great Democratic President? He does not dictate. When you come in contact with that ripe scholar, that great patriot, whose heart beats in sympathy with the masses of the people, he convinces you of the soundness of his position and you wonder oftentimes why you had not seen the truth of his suggestion before. [Applause.] Why, one gentleman on that side the other day resigned his place on the Committee on Ways and Means as a rebuke to the proceeding of the Democratic caucus, saying that he was unable to do anything on the Ways and Means Committee. We are responsible for legis-

lation, and we accept that responsibility, but the gentleman's real reason was not given. When he looked upon the victory achieved last fall by Democracy, when he saw this House Democratic and the Senate Democratic and a Democratic President in the White House, with two States alone going for the Republican candidate for President, with Senator REED SMOOT carrying half those votes around in his vest pocket and Vermont holding the other half, he looked into the near future and he saw what would come when this currency legislation would be enacted and this tariff legislation become a law, an era of prosperity would come, and he was like the general who went up on the mountain, took his field glasses, and looked over the opposition. He saw the triumphant army marching in his direction, and he went back and said to his men, "Boys, I know you are game, and I have but one request to make of you, and that is, if you do retreat, for God's sake retreat in order, and as I am a little crippled I will be going on to the rear now." [Applause and laughter.]

Mr. Chairman, the agitation of this question of rural credits must result in one of two things—a separate and distinct farmers' credit system or a broad and general recognition by banks generally of the farmer's land and staple products as good and valid security. The farmers of the South are very much handicapped and inconvenienced because of debts for fertilizers and other things coming due in October, right in the midst of the cotton-selling season. Under these circumstances if the price offered for cotton does not suit the farmer, what does he do? Why, he is forced to sell when he knows that the price should be better and when he firmly believes that it will be better. What causes this situation? The local bank in the South borrows money from New York, the local merchant borrows from the local bank, and the farmer does business with the local merchant. Right in the midst of the selling season, when the cotton producer should prevent a rush of cotton upon the market, and would if he could, the New York bank calls on the local bank and the local bank calls on the merchant and the merchant is compelled to call upon the farmer, and then what happens? The farmer is forced to sell his cotton, and at a time when he does not think it wise to sell it and when if he could possibly prevent it he would not sell it. This condition of affairs leaves the producer of the great product that brings to America the balance of trade at the mercy of a banking system that has lived beyond its time and greatly injured our people. [Applause.]

Mr. Chairman, the United States owes more to the producers than to any other class of people, and yet the banking system of the Republican Party has greatly imposed upon and oppressed these people. The average farmer wants to work. He wants to better his condition, and he is entitled to all the encouragement and substantial aid that a great and good Government can give. President Wilson has realized the need of these people. He has realized that there must be a credit system devised by which the farmer can obtain loans at a cheaper rate of interest and for a longer period of time than the present system will allow. He will submit to Congress in December a message upon the subject of a farmer's credit system. He has shown his interest in and his friendship for this great and deserving class of our people.

When the bears of Wall Street were whetting their teeth and making ready to rob and plunder the farmers of the South and West during the coming season what did Mr. Wilson do? He told the Secretary of the Treasury to deposit money in the South and West with which to move the crops. Why? Because the cotton gamblers and grain gamblers were trying to prevent the farmers from receiving fair prices and living profits for their products.

Mr. Chairman, he proposed to open the channels of legitimate trade, to unfetter commerce and let the law of supply and demand have full and free operation. He is the first President to recognize and respond to the wishes and needs of the great agricultural people of the United States. When the Republican panic came in 1907, Mr. Roosevelt, the Republican President, sent millions of dollars to New York upon the beck and call of Wall Street, but the great farming class of our people in the midst of the crop-moving season cried in vain to him.

The Scripture tells us that the laborer is worthy of his hire. The man who toils is entitled to fair reward. Those who produce the substance that feeds and clothes the world are entitled to fair and generous treatment at the hands of Congress and by the great President of the United States. President Wilson has saved the farmers of the South and West from the most cruel crop-juggling conspiracy that was ever planned by the cotton and grain gamblers of the United States. The bear conspirators had planned to take advantage of tariff and currency legislation and frighten the country with talk of a panic; and after the President announced his intention to deposit Gov-

ernment money in the South and West to help move the crop, the bears tried to turn this good deed into profit to themselves and to the injury of the farmers. They declared that this step meant a big corn crop and a big cotton crop, when the fact is the cotton crop is short and the corn crop in many States has been seriously injured by the drought. The size of the crop had nothing to do with the President's good offices in this matter. Fortunately, Mr. Chairman, for the farmers of the country we have a man in the White House, who stands with them and not with those who rob and oppress them.

In the State of Alabama the cities of Montgomery, Birmingham, and Mobile have received a portion of this crop-moving fund from the Government; the other Southern States are sharing in the fund, and for the first time a President of the United States, with the power of his great office, has stood between the great cotton producers of the South and those who have so long robbed and plundered them. For this kind and righteous act President Wilson is entitled to, and he has, the deep gratitude of our people. [Applause.]

The producer is entitled to have a voice in fixing the price of his own product; but under present conditions the cotton producer can not do that. This bill is a great improvement over the present obnoxious and oppressive banking and currency system.

This system seems to have been inaugurated in the interest of two or three large eastern cities and without regard to the needs of the people who had to borrow money and solely in the interest of banking institutions having money to loan. Thirty and sixty day loans are of no advantage to the man who has to make a crop or who wants to buy live stock or land. A farm-credit system must be devised, so that farm buying, farm improvement and operation can be carried on to the advantage of those engaged in these pursuits as well as to the advantage of those making the loans.

Mr. Chairman, thousands of farmers in the South and West have bought farms with borrowed money and improved them at great labor and expense to themselves. Misfortune overtook many of them through the drought, sickness in the family, or the loss of live stock, and they were unable to meet their payments because of the short-loan system and high rate of interest. Through this miserable system mortgages were foreclosed, and these farms, with all their improvements, passed out of the hands of farmers, who if they had had a longer time in which to pay and a lower rate of interest would be living on these farms now, contented, prosperous, and happy. [Applause.]

We hear much about how much the farmer ought to produce and how he ought to utilize his time and improve his farm. Mr. Chairman, in order to do these things the farmer must have money. He must have money with which to do business, and ways and means must be provided by which he can borrow money for a long period of time and at a lower rate of interest. The time that his debts become due must be arranged more to his liking and convenience. Debts coming due in October and November always embarrass him and sometimes seriously injure him financially. This system must be changed. The cotton producer ought to be free during the selling season; that is, he ought not to have anything to press him or force him into selling unless the price is satisfactory. If this were the case, the producer would exercise his right in helping to fix the price of his own product. He would be as he should be, the greatest factor in the world for fixing the price of that which represents his skill and toil and the strength of his land.

Ex-Gov. Herrick, of Ohio, who has been abroad investigating the farm-credit system of Germany and France, appeared before the Committee on Agriculture, of which I am a member, and made a very profitable and interesting statement to us about how these plans worked abroad. He told us how farmers were enabled to borrow money on long loans and at a low rate of interest. In this way they were encouraged to buy small farms and pay for them and improve them. They executed a mortgage in some instances, not for a short period, but for a long period of five years and upward. When Gov. Herrick was before the Committee on Agriculture I asked him some questions:

Mr. HERRICK. I shall be glad to answer any questions.

Mr. HEFLIN. To go back to that farm proposition, suppose a farmer desired to borrow money on a section of land, would he make a mortgage directly to the company?

Mr. HERRICK. If it was the Crédit Foncier scheme, French plan, he would, and would get his money at 4½ per cent. If it was a German mortgage, he would state the rate of interest he wanted to pay, and then when securities were issued at that rate he would get his money on it.

Mr. HEFLIN. Then the mortgage would be the basis for the issue of the bond.

Mr. HERRICK. Precisely.

Mr. Chairman, I shall welcome the day, and do all I can to hasten it, when we have a farmers' credit system that will

enable our farmers and those who want to buy farms to borrow money on a mortgage for a long period of time as is now done in France and Germany.

Mr. Chairman, I want to read, in this connection, a portion of an article on "Rural Banks," written by James B. Mormon for Farm and Fireside. Speaking of the difficulties under which the farmers of Europe have labored, he says:

Under these circumstances it has always been more or less of a problem for rural-credit banks to secure money enough for loans to meet the requirements of the farmers, especially at certain seasons of the year. This fact gave rise to the encouragement of rural credit by government aid. In this manner industrious farmers, gardeners, and others engaged in any form of rural industry have no difficulty in securing credit for productive purposes through their rural-credit banks, usually at about 4 per cent interest. To encourage industry and thrift, deposits by farmers in rural banks are allowed to draw interest at 4 per cent. The application of rural credit to personal needs has shielded the small farmer from usurious interest, has helped him in the purchase of fertilizers, feeding stuff, and other raw materials, and in the purchase of live stock for winter fattening.

But one of the chief advantages of agricultural credit has been its aid in regulating the price of farm products to the great benefit of the farmer. When harvest is over the crops must be sold. If the farmer is without money and can not secure credit, he usually sells at once when prices are low. Moreover, the very fact that large supplies are on hand has a tendency to keep the market price down. To counteract this falling market, the rural-credit banks furnish money to their members, who are then able to hold back their produce, and this tends to regulate the market and raise prices according to the law of supply and demand. In France, where more has been done along this line than in any other country, the rural banks have the reputation of never having lost a cent by the nonpayment of loans by farmers. Government aid to rural-credit banks has put agriculture on a firmer basis in France than in any other country in Europe. The bonds issued by the land-mortgage societies sell on substantially the same basis as any other banking, commercial, or railroad bond on the market.

Mr. Chairman, these suggestions speak for themselves and emphasize the thought that I have already advanced. The farmers of the United States need and they must have the benefit of a banking system that will enable them to do business in a manner most advantageous to themselves.

Mr. Chairman, the National Farmers' Union's demand for 15-cent cotton is entirely proper. Cotton ought to bring more than that. The high costs of everything that the cotton producer has to buy and the increase of cotton production makes it necessary for the producers to receive at least 15 cents per pound for cotton. The cost of labor, live stock, and fertilizers, the cost of housing and marketing cotton, has so increased that 15-cent cotton is absolutely necessary. As I have said, the cotton crop this year is short and the cotton consumed by the mills of the United States has increased over the consumption of last year up to September about 450,000 bales. The mills abroad have consumed more American cotton than last year, and the demand and consumption of American cotton have increased everywhere. The gentleman from New York [Mr. PLATT] said in a speech in this House a few days ago that he was surprised to find that a small country bank in his district was loaning a considerable part of its deposits to cotton planters in the South, and he said the bank got 6 per cent interest on the money loaned.

Mr. Chairman, if we can succeed in regulating the cotton exchanges so that real cotton and cotton to be produced will be the basis of all contracts, the time will come when the South will be full of spot-cotton exchanges, insured and bonded warehouses will be filled with real cotton; and there is no better product in the world on which to loan money than on cotton stored in these warehouses. There is no better investment than that of buying cotton and storing it in these warehouses and holding it for a better price.

Cotton has done more to maintain American credit abroad and to keep it on a sound financial basis than all of the other commodities combined. The failure of no one crop would so affect the world as a failure of the cotton crop. Millions of people would be thrown out of employment. Millions more would suffer and shiver in the cold. Upon the cotton plant and its snowy offspring rests the financial structure of this Government. Destroy this crop for one year and you will take out of circulation a hundred million more money than the entire national-bank currency of the United States. Destroy this crop for one year and you will paralyze the financial institutions of our country. In the catalogue of commodities cotton is the master production, the most readily cashed and the most widely consumed among the great staples of the earth. Cotton is the only product in the kingdom of agriculture every pound of which is converted into money and every dollar's worth of which contributes to the financial wealth of the United States. [Applause.] Cotton unlocks foreign vaults and brings gold into our country when all other products fail. It brings to America every year more gold than the world's annual output, and a hundred and forty-two million spindles look to the cotton belt of the United States for their cotton supply. Mr. Chairman, as the rulers of old went to Solomon for wisdom the cotton-using countries of the earth must come to us for the wherewith to be

clothed. In the light of these truths regarding cotton I declare to you that there is no safer or sounder security or collateral than certificates representing lint cotton baled and stored in insured and bonded warehouses. [Applause.] No tooth of time and no insect pest can harm it. It can be preserved for a hundred years and more and its splendid fiber will be just as good for spinning purposes as the day it was stored in the warehouse. Who can say, then, that baled cotton stored is not as good security as municipal bonds or railroad bonds on which Secretary Cortelyou issued currency for the railroads? In the last days of the Confederacy our fathers in the cotton belt arranged with England to take \$15,000,000 of bonds based purely and wholly on cotton.

Mr. Chairman, if England thought enough of the cotton of the Confederate States to take \$15,000,000 worth of cotton bonds in time of war, what should we think of this prince of American products as security or collateral in time of peace? [Applause on the Democratic side.] Cotton stored in insured or bonded warehouses is as safe a security as silver bullion stored away in the vaults of the United States Treasury. These cotton certificates representing this great American staple are safer and sounder than thousands of stocks and bonds now accepted in commercial transactions in the United States. I rejoice that we have been enabled to secure provisions in this bill that will guarantee to the owners of cotton-warehouse receipts the same treatment that will be accorded to other merchantable paper. [Applause on the Democratic side.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maine [Mr. GUERNSEY].

The question was taken, and the amendment was rejected.

Mr. WILSON of Florida. Mr. Chairman, I desire to offer the following committee amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 48, line 25, after the word "years," strike out the period and insert a comma and add the following: "or both, in the discretion of the court."

The question was taken, and the amendment was agreed to.

Mr. MORGAN of Oklahoma. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 48, by adding after the word "years," in line 25, the following as a new section:

"NATIONAL RURAL BANKS.

"SEC. 27a. That the reserve bank organization committee mentioned in section 2 of this act is hereby authorized and directed to organize a system of national rural banks, to include local and State rural banks, and this national rural bank of the United States, under the laws pertaining to the organization of national banks in so far as they may be applicable, and until further legislation by Congress the said organization committee, with the approval of the President, is authorized to make all necessary rules and regulations for the organization, control, and management of said banks, having in view that the purpose of organizing a system of rural national banks is to provide the farmers of the United States with better credit, cheaper interest, and larger capital with which to develop the agriculture of the United States."

Mr. GLASS. Mr. Chairman, I ask unanimous consent that all debate on this section and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate on this section and all amendments thereto close in five minutes. Is there objection?

Mr. MANN. The gentleman from North Dakota [Mr. Young] desires to offer an amendment.

Mr. GLASS. I will say in 10 minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. MORGAN of Oklahoma. Mr. Chairman, I have offered this amendment with a view to emphasizing my interest in establishing a better system of rural credits in the United States. Perhaps four-fifths of my constituents are farmers, and the State which I have the honor in part to represent largely consists of farmers. Perhaps 1,100,000 of our people reside upon the farm, but it is not simply in the interest of the farmers and the people of Oklahoma but in the interest of all the people of the United States that I am anxious, and at the very earliest time possible, that we shall have a better system of rural credits for the farmers of the United States. It is said that the farmers of the United States owe something like \$5,000,000,000 and pay something like \$500,000,000 annually in interest. Agriculture is our chief industry.

Nearly one-half of all the wealth produced in the United States every year is produced by the farmer. While manufacturing products amount in one year to about twenty-one billion, the manufacturers use about \$12,000,000,000 worth of material, and the net wealth added by all our manufacturing would be only equal to the net wealth added to the Nation by the farmers

of this country. If I had any criticism to offer, which I shall not offer, upon the majority of this House it would be this, that when you enact a reform in a currency system and banking system of this country you should have taken along with it a system of rural credits.

In my judgment there is more of an emergency for a better rural credit in this country than there is for a better system of banking or better system of currency. The very strength and greatness in this country depend upon agriculture. You are providing a currency for merchants, for manufacturers, for business men, for bankers, for speculators, for capitalists, taking care of this great class and letting the farmers go. It seems to me you are putting the cart before the horse, and that the first thing you should care for would be the great agricultural interests of this country.

I do not care to detain the committee. Here is a great bill prepared with great ability, upon which you have put great thought and great learning. You had the assistance of experts. It might be likened to and said to be a great edifice, a great financial structure, a magnificent building of finance and money and currency, but it seems to me, then, that when you get through with that you will undertake rural credits; you must make the rural credit system a mere "lean-to" to this magnificent structure that you have erected for the benefit of the manufacturing, commercial, and banking interests of the country. On the other hand, the rural credit system, the banks for the farmers of this country, the banks to promote the agricultural interests of this country, ought to be the very corner stone of our financial structure. [Applause on the Republican side.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma [Mr. MORGAN].

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. MURDOCK. Division, Mr. Chairman.

The committee divided; and there were—ayes 22, noes 97.

So the amendment was rejected.

Mr. YOUNG of North Dakota. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from North Dakota offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 47, line 2, after the word "authorized," strike out the rest of the line and all of the next line down to the word "to."

Mr. YOUNG of North Dakota. Mr. Chairman, I think there is an unnecessary repetition in these lines. Considerable attention has been given to them, but still I think there is need for correction. The words which I propose to strike out are clearly unnecessary and meaningless. The words to be stricken out, according to the amendment, in line 2, page 47, "to accumulate and loan the funds of its depositors," are repeated in the words immediately following and are clearly unnecessary. The reading of this section would be very much improved and simplified by striking out these words.

In my remarks yesterday reference was made to banks located in villages and rural communities. Some of my colleagues have since asked me why these small banks can not increase their capital to \$25,000 in order to qualify as members of the regional reserve banks to be created by this bill. The reason is simple and conclusive. In many of the localities there is not sufficient business to warrant a capitalization of \$25,000. They are sometimes located in villages of 100 inhabitants and they serve a useful purpose. It is only a few years ago when in these same villages currency was sent in by express every fall to pay for the grain hauled in to the different elevators. Now a draft or check is sent out instead of currency, and it is deposited in one of the small banks, where it is checked out to farmers in payment for the grain which they sell, and I am inclined to think they prefer to receive their pay that way, and it takes a big load off that arm of the Government which is charged with the duty of supplying currency sufficient to meet the requirements of business. I recall very distinctly the first grain I sold in North Dakota 23 years ago, in a small village, but it was about as big then as now. There was then no State bank, and I had to go to a storekeeper who did all the "paying off" for the elevators. He paid me \$589 in silver, which he delivered in one of the canvas money sacks in which it had been expressed. I had never seen so much real money in one package before. It seemed as though I was carrying away enough money in that bag to buy up a township, and I was mighty uneasy until I got over to the next town and had it safely deposited in a bank. I was afraid I would be robbed. [Laughter.] My trouble now is not of that kind, but rather to get a check for the grain grown on my land big enough to pay the labor, store, and other bills.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. MANN. Mr. Chairman, section 29, I think, has been read.

The CHAIRMAN. The amendment offered by the gentleman from Ohio [Mr. Fess] has been reported, the Clerk advises the Chair.

Mr. MANN. Let it be reported again.

The CHAIRMAN. Without objection, the amendment will be again reported.

The Clerk read as follows:

Page 50, line 12, after the word "repealed," strike out the period and add the following:
"Provided, That nothing in this act shall be considered to repeal the parity provision of the act of March 14, 1900, 'An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes.'"

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. GLASS. Mr. Chairman, the committee offers the following substitute.

The CHAIRMAN. The committee offers the following substitute for the amendment just reported, which the Clerk will read.

The Clerk read as follows:

After the word "repealed," in line 12, page 50, insert the following:
"Provided, That nothing in this act contained shall be considered to repeal the parity provision or provisions contained in an act approved March 14, 1900, entitled 'An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes.'"

The CHAIRMAN. The question is on the substitute offered by the gentleman from Virginia [Mr. GLASS].

Mr. FESS. Mr. Chairman, I will be very glad to accept this substitute, because I see it has changed some words that make a better statement of the amendment than the one I made myself.

The CHAIRMAN. Without objection, the substitute will become the original amendment. Is there objection? [After a pause.] The Chair hears none.

Mr. MANN. Mr. Chairman, I move to strike out the last word of the amendment, and ask leave to address the House for 10 minutes.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] asks unanimous consent to address the House for 10 minutes. Is there objection? [After a pause.] The Chair hears none. [Applause.]

Mr. MANN. Mr. Chairman, the progress of legislation is always interesting. For many years there has been discussion in the country as to the advisability and need of reforming the banking and currency legislation. All of us who have served long in the House remember the difficulties which confronted the members of the Committee on Banking and Currency for many Congresses past, where it seemed impossible for the members of the committee to agree among themselves or with anyone else.

Finally there was passed the bill creating a National Monetary Commission. I believe there never has been any commission created by any Government at any time that acquired more information for the benefit of a people at large than did the National Monetary Commission. They presented a unanimous report, advising what has been frequently referred to in debate as the Aldrich bill, which contained many things of value and some which were objectionable.

The present legislation, which will soon be passed in this House and in some form probably soon become a law, is the outgrowth of the statesmanship which projected the National Monetary Commission and gathered for the benefit of us all the information in the report by that commission. The present bill is largely founded upon the report of the commission. It contains many provisions identical, undoubtedly of value; it leaves out some objectionable provisions which were in the Aldrich bill, and inserts some others of value and some others which I think are objectionable.

But, Mr. Chairman, there have been a great many references in this debate to the existing money laws and banking laws. Apparently no one has taken the trouble to defend the existing laws of the United States relating to banking and currency, and it is not my purpose now to detain the committee for that argument. But possibly it is just as well for us to remember that under these laws that are in existence we have attained a marvel of prosperity. I have gathered together a few figures which I think will be entertaining as well as instructive to us now, as we are passing tariff and currency legislation.

The imports into this country for the last fiscal year amounted to \$1,813,000,000, the exports amounted to \$2,465,000,000, a total of foreign commerce in the one year of \$4,278,000,000, with a balance of trade in our favor of over \$652,000,000. [Applause.]

Even in my short service in this House the growth of our commerce has been beyond conception, and while we do not have accurate annual reports of our domestic commerce, we all know that the domestic commerce exceeds the foreign commerce from eight to ten fold. And when we remember that under existing laws this growth has been such as it is, we can only hope that it will not be injured by the legislation that we enact here to-day.

The exports of manufactures for further use in manufacturing during the last fiscal year were \$408,000,000. The manufactures exported, ready for consumption, were \$778,000,000, not including foodstuffs partly or wholly manufactured, which amounted to \$320,000,000; a total of exports of manufactured products amounting to over \$1,506,000,000.

In 1903, ten years ago, our total domestic exports amounted to \$1,392,000,000, and last year they amounted to over \$2,400,000,000—an increase in 10 years in our exports under existing laws of more than \$1,000,000,000.

We exported to Europe in 1904, \$269,000,000 worth of domestic manufactures; in 1912 we exported to Europe \$432,000,000 worth. We exported to other countries in North America in 1904, \$129,000,000 worth; in 1912, \$325,000,000 worth, an increase of 150 per cent.

We exported to South America of domestic manufactures in 1904, \$41,000,000; in 1912, \$115,000,000, an increase of 180 per cent.

We exported to all countries of domestic manufactures, not including foodstuffs, in 1904, \$523,000,000; in 1912, \$1,020,000,000.

This is a marvelous growth. I do not attribute it all to existing legislation; but it has come during existing legislation, owing to the marvelous ingenuity, intelligence, and activity of American citizens. [Applause.]

In 1903 we exported to Europe of domestic and foreign merchandise \$1,029,000,000; in 1913, \$1,479,000,000, an increase of 43 per cent. To other countries in North America in 1903 we exported \$215,000,000; in 1913, \$617,000,000, an increase of 186 per cent. To South America we exported in 1903, \$41,000,000; in 1913, \$146,000,000, an increase of 255 per cent.

I will not detain the committee with complete figures, which I shall insert in the RECORD.

We are told sometimes how much wiser the laws of other countries are than ours, and how much easier it is to increase the commerce of foreign countries under their laws than it is for us to increase our commerce under our laws.

In the year 1900 the United Kingdom—Great Britain, and so forth—exported of domestic manufactures \$1,111,000,000; in 1912, \$1,875,000,000; a remarkable showing, an increase of 68 per cent.

From Germany in 1900 there were exported of domestic manufactures \$710,000,000; in 1911, \$1,329,000,000, an increase of 87 per cent.

From France in 1900 there were exported \$435,000,000 of domestic manufactures; in 1912, \$744,000,000, an increase of 71 per cent.

From the United States there were exported in 1900 of domestic manufactures \$485,000,000; and in 1912, \$1,020,000,000, an increase of 110 per cent. [Applause.] And while Great Britain was increasing her exports of domestic manufactures 68 per cent, and France hers 71 per cent, and Germany hers 87 per cent, the United States of America, under the laws in force, was increasing her domestic exports 110 per cent. [Applause.] If you do as well with your legislation, we congratulate you and the country. I only hope you will succeed, because you come after legislation enacted by the Republican Party which has proven itself by its results, the greatest results that have ever come from any legislation, at any time, in any country, in the history of the world. [Applause on the Republican side.]

In connection with my remarks I insert the following statistics:

TABLE No. 1.—Imports and exports of merchandise, fiscal year ending June 30, 1913.

[These figures will appear in the Monthly Summary of Commerce and Finance for June, 1913.]

IMPORTS.	
Free	\$987, 569, 162
Dutiable	825, 484, 072
Total imports	\$1, 813, 053, 134
Excess of free over dutiable	\$162,085,090.
EXPORTS.	
Foreign	\$37, 377, 791
Domestic	2, 428, 506, 358
Total exports	2, 465, 884, 149
Grand total imports and exports	4, 278, 937, 283
Excess of exports over imports	\$652,831,015.

TABLE No. 2.—Exports of manufactures, fiscal year ending June 30, 1913. [These figures will appear in the Monthly Summary of Commerce and Finance for June, 1913.]

Manufactures for further use in manufacturing.....	\$408,992,111
Manufactures ready for consumption.....	778,008,349
Total, 2 groups.....	1,187,000,460
Foodstuffs partly or wholly manufactured.....	320,401,482
Total, 3 groups.....	1,507,401,942

TABLE No. 3.—Exports of merchandise from the United States during the fiscal year ending June 30, 1903 and 1913, grouped according to uses and degrees of manufacture, showing increases by amounts and percentage.

[The figures for 1903 are from a table on p. 37, Annual Review of the Foreign Commerce of the United States, reproduced from the Annual Report on Commerce and Navigation, 1912. The figures for 1913 will appear in the Monthly Summary of Commerce for June, 1913.]

DOMESTIC.

Exports.	1903	1913	Increase.	Per cent of increase.
Foodstuffs in crude condition and food animals.....	\$185,308,064	\$181,093,263	\$3,614,801	1.95
Foodstuffs partly or wholly manufactured.....	323,244,251	320,401,482	2,842,769	1.88
Crude materials for use in manufacturing.....	408,679,699	730,963,704	322,284,005	78.86
Manufactures for further use in manufacturing.....	140,415,620	408,992,111	268,576,491	191.27
Manufactures ready for consumption.....	327,482,757	778,008,349	450,525,592	137.57
Miscellaneous.....	7,100,911	8,447,449	1,346,538	18.96
Total domestic exports.....	1,392,231,302	2,428,506,358	1,036,275,056	74.43

¹ Decrease.

TABLE 3 A.—Foodstuffs.

For the three years 1892, 1897, and 1898, when the billion mark in exports was reached, exports of foodstuffs in crude condition and food animals, and foodstuffs partly or wholly manufactured, were as follows:

Year.	Value.	Per cent of total.
1892.....	\$512,894,391	50.50
1897.....	416,472,744	40.37
1898.....	589,988,742	48.75

In 1912 the exports of these items amounted to \$418,737,763, or 10.29 per cent of the total.

In 1913 they were \$502,094,745, or 21.47 per cent of the total.

(Annual Review of the Foreign Commerce of the United States, for 1912, p. 37, for figures prior to 1913; those for 1913 are from advance sheets, monthly summary for June, 1913.)

TABLE No. 4.—Exports of domestic manufactures from the United States, by grand divisions, during the fiscal years 1904 and 1912.

[These figures are from tables published in the Annual Review of the Commerce of the United States, p. 30, reproduced from the Annual Report on Commerce and Navigation, 1912, and compared and reviewed from Miscellaneous Series No. 11, Department of Commerce, 1913, p. 8.]

NOTE.—The figures for 1913 are not yet available.

	1904	1912	Per cent of increase.
Europe.....	\$269,953,298	\$432,528,046	60
North America.....	129,652,742	325,679,884	150
South America.....	41,137,793	115,393,327	180
Asia.....	40,332,284	66,566,462	61

Wood, boards, planks, and deals.....	20,965,328	61,975,919

TABLE No. 8.—Exports of domestic manufactures from the United Kingdom, Germany, the United States, and France in 1900 and 1912, of the latest available date, exclusive of foodstuffs partly or wholly manufactured.

[The figures for foreign countries are for calendar years; those for the United States for the fiscal year ended June 30, and are from a table on page 16, Miscellaneous Series No. 11, Department of Commerce, "American manufactures in foreign markets," published in 1913.]

	1900	1912	Per cent of increase
United Kingdom.....	\$1,111,000,000	\$1,875,000,000	68.8
Germany.....	710,000,000	(¹)	87.2
United States.....	485,022,156	\$1,020,417,687	110.0
France.....	435,000,000	744,000,000	71.0

¹ Not available. Germany, 1911, \$1,329,000,000.

² United States, 1913, \$1,187,000,460, Monthly Summary Commerce, June, 1913.

TABLE No. 9.—Growth of domestic exports of all kinds in 15 years and growth of manufactured exports in 16 years.

The first year that our total exports exceeded a billion dollars was in 1892, when total domestic exports were \$1,015,732,011; and again in 1897 they were \$1,032,007,603; in 1898 they reached \$1,210,291,913, and have not since been below the billion mark.

In 1898 exports of manufactures were 26.81 per cent of the total domestic exports.

In 1912 they were \$1,020,417,687, or 47.02 per cent of the total domestic exports, which were \$2,170,319,828.

In 1913 they were \$1,187,460,000, or 48.90 per cent of the total domestic exports, which were \$2,428,506,358.

Therefore manufactured exports are now greater in volume than were our domestic exports of all kinds 16 years ago, and our total domestic exports of all kinds are now more than double those of 15 years ago. By "manufactured exports" is meant the two groups only—manufactures for further use in manufacturing and manufactures ready for consumption.

(Annual Review of the Foreign Commerce of the United States for 1912, page 37, for figures prior to 1913; those for 1913 from advance sheets, Monthly Summary for June, 1913.)

TABLE No. 10.

[Statement of Secretary Redfield on the balance of trade, published in the CONGRESSIONAL RECORD, Apr. 30, 1913, p. 757, concerning imports and exports of the United States for the month of March and the nine months ended March, with the figures for the entire fiscal year ended June 30, 1913, shown in brackets.]

BALANCE OF TRADE IN FAVOR OF THE UNITED STATES.

DEPARTMENT OF COMMERCE,
Washington, D. C., April 30, 1913.

Secretary of Commerce William C. Redfield, in commenting to-day upon the detailed figures concerning the imports and exports of the United States for the month of March and the nine months ended March, made the following statement:

The figures are striking both in their magnitude and in their details. The aggregate business inward and outward of the United States with foreign countries for the nine months was a little in excess of \$3,300,000,000—an impressive total, which if maintained at the same rate would bring the business for the entire fiscal year well in excess of \$4,100,000,000 [\$4,278,937,883].

Great Britain is our largest customer, buying from us over \$478,000,000 [about \$590,000,000] and selling us over \$234,000,000 [\$295,000,000], an aggregate for the nine months in excess of \$712,000,000 [12 months, \$880,000,000], or a total business of nearly \$80,000,000 a month [\$75,000,000].

Canada is our second best customer, buying from us \$300,000,000 in nine months [\$397,000,000 in 12 months], equal to nearly \$1,300,000 every working day. A pretty fair customer, that.

Then Germany comes third, buying \$268,000,000 from us in nine months [\$329,000,000 in 12 months] and selling us \$146,000,000 [\$189,000,000]. She is a pretty fair customer, too—buys over \$1,000,000 a day.

And fourth comes France, to whom we sold \$120,000,000 [\$142,000,000] and from whom we bought \$112,000,000 [\$137,000,000].

It is when we come to look at the details of our foreign commerce, by what are called great groups, that we get at the most striking facts. If, for example, one is told that our exports fell off in March as compared with the same month a year ago by about \$18,000,000, so that we only sold \$187,000,000 abroad in March, that might not seem a favorable condition. But when one looks a little closer he finds that the falling off was almost wholly in the sales of crude materials for use in manufacturing, and that, so far from a loss, there was an absolute gain in the important items of manufactures, which in the two important classes of manufactures for further use in manufacturing and in manufactures ready for consumption actually increased in the month of March by about \$13,000,000. So that our manufacturers held their grip upon the foreign markets of the world more strongly in March than they did a year ago.

The figures for the entire 9 [12] months are such as to give just pride to every thoughtful American to whose notice they come. Out of the total transactions of \$3,300,000,000 [\$4,300,000,000] there is a balance in our favor of a little over \$500,000,000 [\$650,000,000]. Doing pretty well, that. But a few comparisons with 1912 make it look even better. For example, our sales of manufactures for further use in manufacturing increased over \$50,000,000 [\$61,000,000], and our sales of manufactures ready for use increased over the same period last year \$88,500,000 [\$108,000,000], an increase in these two lines of manufactured goods alone of over \$144,500,000 [\$167,000,000] as compared with the same period of last year.

This does not look like weakness in competing power, especially when one looks at the table of percentages published with the others and finds that the three groups, which include manufactured goods of all kinds, constitute 59.5 per cent of our total exports [62.07].

[Mr. CONNOLLY of Iowa addressed the committee. See Appendix.]

Mr. WITHERSPOON. Mr. Chairman, I want to enter my humble but emphatic protest against this goldbug amendment which a pretended Democratic committee has substituted for one offered on the Republican side. [Applause.]

We have had the goldbug standard for many years, and we have given it a fair test. We have a system of finances based on the gold standard, and we know from such experience, filled with disasters, darkened by panics, disturbed by strikes, and cursed by fabulous wealth on the one hand and widespread and extreme poverty on the other, the calamitous and intolerable effects of that system. Its legitimate and inevitable fruit is the existence of a Money Trust, by which less than a dozen men control the money and credit of the country, and before which every industry of the land bows in servile submission. The great bankers who compose this trust admit that it is a menace to the country. Under the baleful influence of the gold standard we have watched the ominous growth of this trust with its multitude of resultant evils, while the rich have grown richer and the poor poorer.

These evils have become so numerous and intolerable that the bankers themselves have joined all other classes of our people in demanding a radical change in our currency laws.

The very bill before the House is a recognition of the intolerable evils resulting from our gold-standard system of finances and is an effort to provide a remedy. It is strange, indeed, that a bill purporting to remedy the evils of a gold-standard system of finances should be based, as this is, on that same pernicious principle, but the principle of the bill is so covertly concealed that few have discovered it, and certainly it contains no express recognition or approbation of the Republican doctrine on which it is founded. It passed through the Democratic caucus with little discussion of its goldbug heresy, which elicited no express commendation in this council of Democrats. Nor did the principle of the bill find any approval in the debate which has continued for 10 days in the House until the closing paragraphs of the bill were reached and the last day of the discussion had come. But to-day Democrats have listened with wonder at the contest between the leading Democratic members of the committee, who brought the bill into the House, on the one side, and the Republicans on the other, vying with one another as to who were the most devoted advocates of the gold standard, and making it wholly uncertain who were the worst goldbugs in the debate. And when the next to the last paragraph of the bill was reached a leading Member of the Republican side offered an amendment which was an express recognition of the gold standard fastened upon the country in the act of 1900, and in his argument in support of the amendment he proposed, in substance, to the Democratic members of the committee in charge of the bill that if they would accept his amendment and thereby acknowledge that the time-honored position of the Democratic Party on the money question was wrong and that the Republican position, inspired and dictated by those who now form the Money Trust, had always been right, he would vote for the bill, and if they should not accept his amendment he would vote against the bill. This humiliating proposition for the Democratic side of the House to barter its principle for one paltry Republican vote was answered by a substitute offered by the Democratic members of the committee and was accepted by the gentleman from Ohio [Mr. Fess], who said it was better than his own, and this substitute now presents the pitiable confession of Democratic error and Republican triumph.

The substitute, Mr. Chairman, seems to have accomplished its purpose. It has at least purchased one Republican vote, and it may buy others. But if it does not buy but one, I want to give notice now that the bill will lose just as many votes as it gains, for I will never vote for a bill that has upon it an amendment which I regard as a useless, inexcusable, and wanton insult to four-fifths of the Democrats of the Nation. [Applause.]

The gold standard, Mr. Chairman, is, in my judgment, the product of selfishness, avarice, and greed upon the part of those who originated, propagated, and disseminated it and ignorance and stupidity on the part of those who accepted it. [Laughter and applause.]

I for one will never vote for it, because, Mr. Chairman, I want to tell you a thing you may not know—I am an honest man. [Applause.]

This amendment is useless. It accomplishes no purpose and was manifestly put up here to gratify Republican delusion on the gold-standard question, and I will simply not vote for it. I will not only not vote for the substitute, but I will vote against the bill itself if this infamous provision is tacked on to it.

Now, Mr. Chairman, I had made up my mind to vote for this bill, notwithstanding its many glaring defects. I regard the bill as based on wrong principles. It is utterly contrary to all my ideas of finance and currency. Its prime purpose, like that of our present system of finances, is to destroy the use of money as a medium of exchange, so far as the law can accomplish that senseless object, by requiring the banks to collect, monopolize, and lock up in their vaults as much money as possible, in order to create in them high credits which they can loan to the people as a substitute for money at rates of interest sufficiently high to compensate them not only for the loan but also for the idle cash they have stored away, and thus carry out to its logical conclusion the principle of the gold standard heresy.

It requires the banks to bundle up half of their cash money and send it to the regional reserve bank in a distant city, thus removing at one fell stroke the supply of actual money in every community in the country, and for this radical and violent revolution in financial conditions in every community in the country it offers as a compensation the privilege to local banks of rediscounting their paper at these regional banks at rates to be fixed by the Federal reserve board. The amount of the discounts will, of course, be added by the local banks to the interest which they will charge the people for the new currency notes to be loaned them.

The bill gives the Federal reserve board full power to exclude any class of paper as the basis of the proposed currency,

and this autocratic power could not be limited by amendment. If the members of the Federal reserve board have the same views as the framers of the bill and its friends have expressed, then no farmers' notes, though secured by warehouse receipts for the products of their toil, will be accepted as the basis of the proposed currency and will result in the usual discrimination against agriculture.

The bill contains a provision for the refunding of United States bonds at a higher rate of interest, which has been calculated to exceed \$100,000,000, a vast amount for the taxpayers of the country to pay its bondholders more than they are now entitled to.

The bill denies the country banks the right to make a reasonable charge for the collection of checks and drafts and therefore makes them the servants without compensation of the big merchants in the large cities.

The bill is not in reality a law, but a sort of proposition to the banks that it will become a law if they will accept it. If the bill confers upon the banks such favors as to induce them to accept it, then it will go into effect, but if they refuse to accept the scheme it can not possibly have any force, and the Democratic Party will become the laughing stock of the country.

These objections to the bill all result from the gold standard fallacy on which it is founded, and I do not believe that any other bill could be drawn on the same wrong basis which would not also be filled with as many and as great evils as this one.

But there are four features of the bill that effect a vast improvement upon what we have now:

First. It will to a great extent wrest the control of the money and credit of the country from the hands of the Money Trust and transfer it to a board, appointed by the President, and composed of the servants of the people.

Second. It will prevent the banks all over the country from sending to New York, as they are now compelled to do by law, about three-quarters of a billion of dollars, to be devoted and consecrated to the purpose of speculation and gambling on the stock exchange, and compel this vast amount of money to be used for the legitimate purpose of trade and banking.

Third. It will take from the vaults of the Federal Treasury about \$250,000,000, which is now idle and useless, and deposit it in the Federal reserve banks, which can put it to the uses of business.

Fourth. It provides for a currency which can be expanded in times of money stringency and will be the means of preventing the periodical panics which have marked the history of the present financial system.

Whether these advantages of the scheme of currency proposed in the bill outweigh the objections to it has presented a question of some difficulty. And while my heart has clung to the good of the bill and my conscience has rebelled against its evils, a comparison of its defects together with the intolerable conditions now existing on the one hand and the benefits which the bill promises on the other made my judgment waver, and my decision uncertain. But in view of the determination of the Democratic caucus and my obligations to abide by its decision, I felt that it was my duty to vote for it and intended to do so. But if this provision embodied in the substitute, which asserts that the gold-standard law shall not be repealed, is added to the bill, it will no longer be the bill which the caucus bound every Member to support, but it will then be a bill so formed as to suit the gold standard members of the committee and the Republican side of the House. With this Republican doctrine injected into the bill without authority from either the Democratic caucus or platform, it ceases to be a Democratic measure and becomes the expression of the alliance formed between the gold standard members of the committee and the Republican Party. Therefore, fidelity to the caucus, as well as to my own judgment and conscience, impels me to vote against the bill, and the gentleman from Kansas [Mr. MURDOCK] and the gentleman from Wyoming [Mr. MONDELL], who have wasted so much energy in describing the caucus chains of Democrats, can no longer say that the shackles of the caucus are on my wrists, for I burst them asunder now and give notice that I will not support any such bill. [Applause.]

Mr. WINGO. Mr. Chairman, if it were not for the fact that the gentleman from Virginia [Mr. GLASS] in offering this amendment said it was a committee amendment I possibly might not have taken up your time; but I for one challenge the right of the committee to bring in any such amendment. Under the rule adopted the committee was permitted to propose such amendments as would tend to perfect the phraseology of the bill, and nothing more. While I have no practical fault to find with my colleagues on the committee—there were six of them and one of me, and they outvoted me—yet in justice to myself I want to state why I am against this amendment, which is the

proposition of a Republican, the gentleman from Ohio [Mr. FESS]. I want to say to the Republicans that you have the gold standard; you bought it and you paid for it. I can not understand the credulity and denseness of any man who thinks there is one single line in the bill under consideration that has anything to do with basic money or the money standard of this country. Any man who understands the A B C of finance and the philosophy of credit knows that the present bill has absolutely nothing to do with the standard of value. As I said this afternoon, there is absolutely nothing in the bill that indicates an intention upon the part of the Democratic Party to repeal, alter, or change the standard of value as fixed by the act of 1900. I think I showed conclusively this afternoon by reading from provisions of existing laws that the national bank note, the child of the Republican Party, is redeemable in lawful money, not in gold or lawful money, as the pending bill provides. The Aldrich bill, which was not only indorsed by the Republicans, but by every banker in this country, provides that the notes issued under that bill should be redeemable in lawful money, and not in gold or lawful money, as provided by the pending act. The Republican act of 1908, known as the Vreeland Currency Act, provided that the notes issued under that act should be redeemable in lawful money, and not in gold or lawful money, as the pending bill provides. So, Mr. Chairman, I contend that there is absolutely nothing in the pending act that justifies the pending amendment, which does nothing more than raise an issue not raised by the bill.

I say in all kindness to those who propose this amendment, and without meaning any offense to anyone, that there is a deep-seated conviction in my mind that somebody is playing politics and trying to see if he can not humiliate Democrats into voting for something that is useless and that is purely an abstract indorsement of the gold standard. [Applause.]

Mr. BURKE of Pennsylvania rose.

Mr. WINGO. Mr. Chairman, I regret that I must decline to yield. If it is any satisfaction to the Republicans to have this useless amendment tacked on, which indorses the gold standard, and thereby humiliates those Democrats who opposed the gold standard when that issue was up, then that satisfaction is theirs. If it is any satisfaction to those Democrats who believe in the gold standard to put this amendment on this bill, and thereby humiliate their brethren who did not agree with them in other days, then you have that satisfaction. It occurs to me that it is absolutely useless and nothing more than child's play to raise this old issue when the pending bill does not involve the standard of value in this country; and it is childish and weak for Democrats, scared to death, to back off and let Republicans humiliate them by putting an abstract indorsement of the gold standard on their Democratic bill. [Applause.]

But, Mr. Chairman, I will content myself to vote against the amendment because I think it is unnecessary, and not because I care to repeal the act of 1900, which question is not before me now. While I am not authorized to speak for Mr. Wilson, I understand he wants this amendment placed in the bill. Mr. Bryan tells me that he does not object to this amendment. I presume that in view of these facts you will adopt the amendment, but you will do it without my vote. However, Mr. Chairman, I shall not, on account of the adoption of this amendment, vote against the bill, as some gentlemen say they will. I am a Democrat, and I believe in the rule of the majority. I believe it is necessary for Democrats to get together and settle their differences, and my observations have been that when the Democratic Party, as a party, considers any question and comes to a definite conclusion upon it, that subsequent events justify the judgment of the party and prove that it was wise and expedient for those who differed from their fellow Democrats to acquiesce in the judgment of the majority. [Applause.]

The CHAIRMAN. The time of the gentleman from Arkansas has expired?

Mr. WINGO. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MURDOCK. Will the gentleman yield to me there for a question?

Mr. WINGO. I yield to the gentleman from Kansas.

Mr. MURDOCK. I am curious about this. It seems that both President Wilson and Mr. Bryan are agreed upon this, and that the Committee on Banking and Currency, with the exception of the gentleman from Arkansas, has reported in favor of this amendment. To whom does the gentleman think he is bound in this instance—to the caucus or to the committee?

Mr. WINGO. Oh, Mr. Chairman, I do not care to yield for a question of that kind. I am not worried about that question.

I am not bound to anybody except my own judgment, and my judgment is that it would be too presumptuous for a young man like myself to put his judgment against the judgment of his party. [Applause.]

Mr. MURDOCK. I am surprised—

Mr. WINGO. Mr. Chairman, I decline to yield further. The gentleman says he is troubled, and he ought to be troubled.

Mr. MURDOCK. Oh, I did not. I think the gentleman is troubled.

Mr. BARTLETT. Mr. Chairman, I rise to call the gentleman from Kansas to order. The gentleman from Arkansas has refused to yield.

The CHAIRMAN. The gentleman from Kansas will be in order. The gentleman from Arkansas declines to yield.

Mr. WINGO. I will say this, Mr. Chairman, to my good friend from Kansas, that there is more in this bill than has ever been dreamed of in his philosophy. Mr. Chairman, I will proceed and get through, because I do not care to detain the committee further. I repeat, I think this amendment is useless, but I shall not vote against the bill if you adopt the amendment. I recognize that all legislation is effected by compromise, and I have very little respect for the practical ability of any man who stands back and says because he can not get just what he wants that he will not take anything. [Applause.] It is necessary for us to look at this question from a practical standpoint. There are a great many things in the bill that I do not like. There are a great many things that I wanted put in the bill that I could not get adopted. I succeeded in eliminating a good many things, and had a good many things put in, and notwithstanding the defects, there is no question in my mind that the pending bill is so much better than the existing law that I would be derelict in my duty if I did not vote for it, and for that reason I shall give it my vote, feeling that I am doing my duty and bound by nothing more than my conscience and my conception of my duty to my party and to the country. [Applause.]

But, Mr. Chairman, getting back to the pending amendment. I think that Mr. Bryan agreeing to this amendment ought to forever and eternally close the mouths of those who have been accusing Mr. Bryan of making a covert and underhanded attack upon the gold standard. By agreeing to this amendment he has called your hand, and if the amendment is adopted you Republicans have the grounds of your opposition to this bill cut from under you. This was the only excuse you had for opposing the bill, for the Democrats accepted every reasonable amendment that you offered, so you must walk up and vote for the bill.

Mr. BURKE of Pennsylvania. Will the gentleman yield?

Mr. WINGO. The adoption of this amendment should allay your fears and demonstrate that the Democrats have no desire to raise an old issue or interfere with the act of 1900. Now, come on and vote for the bill and get in line for the prosperity that is coming under a Democratic administration, which you will enjoy the same as we. [Loud applause on the Democratic side.]

Mr. GLASS. Mr. Chairman, I ask unanimous consent to conclude debate on this paragraph and all amendments and let us vote on it and go home.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that debate on this amendment and paragraph be closed. Is there objection?

Mr. MURRAY of Oklahoma. Mr. Chairman, I shall object unless I get an opportunity to speak. I have waited here, and I have spoken to the gentleman from Virginia. It occurs to me that the gentleman who has been so courteous to others should be courteous to me.

Mr. GLASS. I have no objection to the gentleman speaking. I did not know—

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that all debate upon the pending paragraph and all amendments thereto be closed in 10 minutes. Is there objection?

Mr. HENSLEY. I object.

Mr. MURRAY of Oklahoma. Mr. Chairman, I want to say—

The CHAIRMAN. Does the gentleman move to strike out the last word?

Mr. MURRAY of Oklahoma. Yes; the last three of them. I want to say to the committee and the gentlemen on this side of the House that it occurs to me in all fairness they should not submit to us an amendment of this character with a view of satisfying their opinions, to which they held 16 years ago. A practical gold standard has been adopted in this country. It was adopted by the Republican Party. Some men in this House on this side were for it. They ought not to ask us

to come in merely to ratify that view so they can say, "You had to come to our view, although we were but a handful," so they may claim to be the real Democrats at that period of time. It is unfair for the committee to make a vital change of this character after the caucus has spoken, and then say that is the Democratic caucus. I want, however, to speak of this proposition. This section 29 says:

That all provisions of law inconsistent with or superseded by any of the provisions of this act be, and the same are hereby, repealed.

I submit to any lawyer in this House that that is an unnecessary section. Subsequent legislation repeals former legislation when in conflict therewith, and it makes no difference whether you have a repealing clause or not; it adds no more to the section; has no different effect than if you struck it out. Now, it ought to satisfy our Republican friends if we strike out section 29 entirely. Certainly Democrats and Republicans who hugged this to their consciences so dearly 16 years ago ought to want to hold to it as their previous right of discovery and not force us to vote for a reenactment of it.

Now, I will admit the putting of that clause in does not affect the law; it will not change it a particle, any more than the striking out of this section will change anything in the law. All it does do is that you force us to come to your view of a thing that you really have been ashamed of for 16 years, and you call yourselves Democrats. Now, I say in all candor, in view of the fact that the Democratic caucus passed upon this bill, in view of the fact it has no effect, so far as law is concerned, you either ought to drop that amendment and not attempt to adopt it, or strike out section 29 entirely and settle the proposition.

While it does not affect the law, it does affect the politics in the South and West, and Democrats on this side ought not to want to drive from the Democratic Party men who have not stood for their views when it is unnecessary to do it and when, as a matter of truth, that issue ought not to be raised again. It is raised by gentlemen on that side and gentlemen goldbugs on this side holding the same view that they did 16 years ago and are trying to hug some delusion that other Democrats are forced to come to their view. But mark what I tell you, the rank and file of the Democrats of the South and West will not follow you who vote that way at the polls next election. [Applause.]

Mr. PHELAN. Mr. Chairman, I just want to call the attention of the Members present to the fact that there has not been anybody who has taken the floor on this side of the House at any stage of this debate with reference to this question who has stated that the proposed amendment changes the meaning of this bill in any respect.

Mr. MURRAY of Oklahoma. Will the gentleman yield? If it does not, why do you have us repeat that we are for the gold standard?

Mr. PHELAN. I will answer the gentleman, if he will give me the opportunity. In the first place, we do not say anything about it. We simply state that we do not repeal a present law, and we do it for the very same reason that the committee has repeatedly done precisely the same thing in the Democratic caucus, because we want to clear up the meaning to the satisfaction of everybody, and whether a suggestion came from the Republican side of the House or the Democratic side of the House this committee, and I believe the Democrats on this side of the House, has desired the meaning clear, so that anybody can understand it and not have any doubt as to the meaning. [Applause.]

And I wish to call to the gentleman's attention that in the caucus, although it has been contended that there was no need of certain language, because the meaning was clear, we repeatedly put in amendments to satisfy certain members of the caucus, so that the meaning might be expressed in such a way that they would have no doubt about it.

Mr. MURRAY of Oklahoma. Why not strike out the repealing clause altogether? Do you not know it has no different effect? All subsequent legislation will only repeal all that is in conflict, and your repealing clause does not do any more.

Mr. PHELAN. I suggest that the gentleman offer an amendment. I am not talking about the repealing clause.

Mr. BRUMBAUGH. Will the gentleman yield?

Mr. PHELAN. Certainly.

Mr. BRUMBAUGH. Do you think if this resolution had been presented to the Democratic caucus and explained the Democratic caucus would have adopted it?

Mr. PHELAN. Absolutely.

Mr. BRUMBAUGH. I absolutely think it would not.

Mr. PHELAN. I want to say this, in conclusion, that this committee is not offering this amendment because it believes it changes the bill in any respect. Various members of the com-

mittee have taken this floor this afternoon and have stated that there was nothing in the bill which is going to repeal the act of 1900, or that part of it which is the object of this amendment. We are simply putting it in to clear up the meaning, and we are willing to do that because we think it ought to be done.

Mr. BURKE of Pennsylvania. Mr. Chairman, the gentleman from Arkansas [Mr. Wingo] stated that Mr. Bryan had called our hand. Mr. Bryan has not called our hand, and Mr. Bryan or the Democratic majority in this House does not dare call our hand and strike out from the provisions of this bill line 19 on page 29, which provides that these notes shall be the obligations of the United States Government. Nor do the gentlemen on that side of the House or Mr. Bryan dare to call our hand and insert the word "gold" unqualifiedly, as it was in the bill introduced in this House on June 26. [Cries of "Vote! Vote!"]

Mr. MURRAY of Oklahoma. Mr. Chairman, I move to strike out section 29 and the amendment thereto.

The CHAIRMAN. The gentleman from Oklahoma moves as a substitute—

Mr. CRISP. Mr. Chairman—

The CHAIRMAN. Does the gentleman from Oklahoma [Mr. MURRAY] offer that as a substitute?

Mr. MURRAY of Oklahoma. Yes, sir.

The CHAIRMAN. The gentleman from Oklahoma [Mr. MURRAY] offers a substitute, which the Clerk will report, to strike out the section and the amendment.

Mr. BARTLETT. The section has not been adopted.

Mr. MURRAY of Oklahoma. Possibly it would be best to vote on that provision and then move to strike out. That would be in order of perfecting the section.

Mr. MANN. This motion is to perfect the text, and that comes first.

The CHAIRMAN. The motion of the gentleman from Oklahoma [Mr. MURRAY] will be pending.

Mr. CRISP. Mr. Chairman, while the present bill was being considered in the Democratic caucus I took occasion to express my views on several features of the bill and had not intended to make any remarks in the House on the subject.

As I can not support the amendment offered by the gentleman from Virginia, referring to the parity of metals, I desire to make a few remarks, placing in the RECORD the reason why I shall not support the amendment.

The bill, in my judgment, is a great piece of constructive legislation, and is a vast improvement over the present currency laws of our country. Business men in every section have for years realized the necessity for a more elastic currency and have advocated new currency laws. The bill before the House provides an elastic currency to meet the growing demands of commerce and contains provisions that, in my judgment, will commend it to the people of the United States.

Under the present laws the money of the country is concentrated in the city of New York and controlled by a few bankers, which gives them power to manipulate the finances of the country, which at times causes disastrous panics. The present bill corrects these evils and distributes the money of the country into 12 sections, in the regional banks, in lieu of it being massed in New York.

The bill prohibits the great New York City banks from lending money for the purpose of speculating and gambling in stocks in Wall Street, thereby making the money available for the purpose of carrying on the business of the country, furnishing a medium of exchange for agricultural, industrial, and commercial activities instead of gambling in Wall Street.

The bill permits national banks to loan money on real estate, which, under the present law, they are precluded from doing. The bill takes away from the national banks the right to issue money and restores this function to the Government of the United States, where it rightfully belongs, and one of the greatest features of the whole measure, to my mind, is the Government control and supervision of our finances.

Under the present law a few great banks control the money of our country, and thus dominate and control business, while under this Democratic bill they are shorn of this great power and the finances are under the control of the Federal reserve board appointed by the President of the United States, who will be the representatives of the American people, who will have the interest of all the people at heart and not be influenced by selfish and mercenary motives. For these reasons I heartily approve the bill and shall give it my support.

The bill as reported from the Democratic caucus had the unqualified approval of our Democratic President who by his courage and fidelity to the trust reposed in him has won the love, confidence, and esteem of all the American people; it was approved by Secretary of State Bryan, who for years has been the tribune of the people, and was also indorsed by the present Sec-

retary of the Treasury. The Democratic caucus approved it with but nine dissenting votes. No one contended it in any way affected the coinage laws of the United States or interfered with the parity of money, but at the eleventh hour of its consideration a Republican Member suggested the amendment offered by the gentleman from Virginia. The Republicans were not able to criticize the bill, it was so meritorious a measure, but their opposition has been based principally on the ground that the bill was prepared by a Democratic caucus. Mr. Chairman, in my judgment the people of the United States do not care whether a measure is prepared in a caucus or in the open House, but they will judge the party responsible for a measure by the measure itself. If a measure prepared in a caucus is in the interest of the masses of the people and against all special interests, and is for the welfare, peace, and happiness of the American people the people will approve and say "well done," but class legislation if prepared in the open House and passed the party responsible will be condemned. The people will judge the party by the fruits of the legislation and not the method of its preparation.

Mr. Chairman, I do not believe that the present bill interferes with the act of March 14, 1900, entitled "An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes," and I think the amendment offered by the gentleman from Virginia is not germane to this bill and is altogether unnecessary. The bill provides that the currency issued by the Government shall be redeemable in lawful money of the United States, just as all greenbacks of the Government are to-day redeemable in lawful money. The Aldrich-Vreeland Act, passed by the Republican Party and approved May 30, 1908, provided that notes issued thereunder were redeemable in lawful money. No one claimed the Aldrich Act repealed the act of March 14, 1900, and no man can logically argue that the provision of this bill providing for the redemption of notes issued thereunder in lawful money repeals said act.

Mr. Chairman, I am a Democrat and I participated in the Democratic caucus, and I am always willing on questions of party policy to be bound by the views of the majority of my associates. This great measure was indorsed by a Democratic caucus in which I participated, and I feel bound by that caucus; but, Mr. Chairman, the amendment offered by the gentleman from Virginia was not considered in the caucus. The caucus authorized the committee to offer minor amendments, but it was expressly stated in the caucus that should the committee offer amendments to the bill when it was up for consideration in the House that the Democratic Members were not bound by any caucus rule to support the amendments, but were free to vote as their judgment dictated. The caucus does not bind me to support this amendment. [Applause on the Democratic side.] Mr. Chairman, believing this amendment is superfluous, unnecessary, and not germane to the bill, and being proposed by a Republican, and fearing that its adoption might be construed by some to be a gratuitous reflection on the hundreds of thousands of staunch, patriotic, sincere Democrats who for years advocated the free coinage of silver, I can not vote for its adoption.

I will not trespass further upon the time of the House. I hope the amendment will not be adopted, but, being a Democrat and believing this measure is in the interest of the American people, I shall support the bill whether the amendment is adopted or not, but I desire to enter my protest against the adoption of this twelfth-hour amendment, inspired by our ancient enemies, the Republican Party, who in my judgment will vote solidly for it.

Mr. SHERLEY. Mr. Chairman, in the consideration of a great measure like this it seems to me that it is important that we keep a proper sense of perspective. Gentlemen seem to have been much aroused over the pending amendment. I can readily understand how our friends the Republicans, after many days of debate and after a futile effort to attack successfully the currency bill, should seek to inject into the debate some questions not really germane to the present measure in order to create division on our side; but I am unwilling to believe that after the Democratic Party has given to the country the unusual and splendid exhibition of a Committee on Banking and Currency able to agree in favor of affirmative legislation that has been so much needed for many years they are now to be led into any party quarrel by such a transparent effort on the other side.

There is not a man here but who, if he will read the bill with care and away from the heat of political controversy, will agree that the amendment proposed does not in the slightest degree change the proposed law.

We are not to-night passing a bill determining what shall be the standard of value in America. That matter has been settled. Whether wisely or unwisely, men will have individual views. But practical men, living in a practical age, recognize what is behind them and deal with what is before them; and the Democratic Party, being a party equal to the emergency of conditions, is dealing with what is before it, and that is a reformation of the currency system.

The gentleman from Illinois [Mr. MANN] undertook a rather difficult and somewhat lame defense of the existing currency law. He read, amid applause, of the great progress that this country had made, and we joined with him in rejoicing over that progress. But it is a peculiar fact that during all of this great progress and at times when there was no reason for the checking of it; because of a law that was archaic; because of a law that had but one virtue—that of safety as to issues, because everybody admits that the issues under the national banking law were safe—we were met time and time again with panics that stopped that tremendous prosperity; and the prosperity was not because of your currency law, but in spite of it. [Applause on the Democratic side.]

This is the only country on earth that I know of where you will find that because of a bad law the commercial discount rate is higher than the discount rate on speculative transactions. In every other enlightened country under the sun commercial discounts bear a lower rate than the discounts growing out of speculative transactions; and if this proposed law had but one feature in it to warrant its enactment, to take the place of the existing law, it is the provision in it that makes possible the rediscount of commercial paper and the using over and over again of the credit of the country instead of tying up money in each commercial transaction.

We are now at the close of weeks—aye, of years—of arduous work on this subject. This bill, like all great measures, will necessarily undergo some modification. Here and there a change will be made. Probably every man, taking the bill as it stands, would like to see some particular thing written into it or out of it.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. SHERLEY. I ask unanimous consent for two minutes more.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent that he may proceed for two minutes. Is there objection?

There was no objection.

Mr. SHERLEY. Mr. Chairman, I end as I began, by saying that in matters of this kind it is well to keep a sense of perspective. It is well not to be wrought up, and not to feel that the skies are about to fall because of an amendment that is in no sense one of the really material things in the bill. I do not believe that either the adoption or the rejection of the amendment changes the law one iota; but it has this value and this value only, and that was well stated by the gentleman from Massachusetts [Mr. PHELAN], that in enacting law it is well always to make the meaning of a section certain beyond even the querulous doubts of men. And while I believe there is no justification or basis for the criticisms that have been made on the other side, yet in the interest of making the intent of the law plainly apparent I think the amendment can do no harm, and may do some good.

And now, before taking my seat, I desire as one member of my party to express my profound appreciation of and gratitude to the distinguished chairman of the Committee on Banking and Currency [Mr. GLASS] [applause] and to the members of that committee who have labored with him, for the result of their splendid work. In my judgment they have performed an act of patriotism and of value to the country that is beyond any mere lip praise or measurement; and I glory in the fact that as members of my party we found them able and willing to perform the constructive work that other parties had failed to be able to perform in the generation that has passed. [Applause on the Democratic side.]

Mr. MURDOCK. Mr. Chairman, I should like two minutes from the gentleman from Virginia, to make a short statement.

Mr. GLASS. I yield two minutes to the gentleman from Kansas.

Mr. MURDOCK. Mr. Chairman, there seems to be a divided allegiance on the Democratic side just at this moment, as between the caucus and the authority of the committee, as between the caucus and Mr. Bryan and the President. I do not think it is a very material thing, but I want to say to the Democrats here, as one standing apart, that the Republicans are playing politics with you, and that is all there is to it. [Applause on the Democratic side.] This proposition is made with

the idea that there will be enough Democrats over there who, combining with this side, will be able to put this amendment into the bill. Then, when the committee rises and reports the bill to the House, the Speaker will ask, "Is a separate vote demanded on any amendment?"

The separate vote will be demanded, and you Democrats will be put on record, for no other reason on earth than to embarrass you. It is a trap, and if you want to walk into it, why do so.

The CHAIRMAN. The question is on the committee amendment.

The question being taken; on a division (demanded by Mr. Wingo) there were—ayes 104, noes 38.

Accordingly the amendment was agreed to.

The CHAIRMAN. The gentleman from Oklahoma [Mr. MURRAY] moves to strike out the section.

The amendment was rejected.

Mr. WINGO. Mr. Chairman, I tried to get the attention of the Chair. I do not think it is necessary, but I wish to give notice that in the House I shall demand a separate vote on the amendment which has just been adopted.

Mr. MURDOCK. The Republicans will do that.

Mr. FOWLER. Mr. Chairman, on page 49, line 6, at the end of the line, I move to strike out the word "branches" and insert in lieu thereof the words "branch banks."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Illinois [Mr. FOWLER].

The Clerk read as follows:

On page 49, in line 6, strike out the word "branches," at the end of the line, and insert in lieu thereof the words "branch banks."

Mr. FOWLER. Mr. Chairman, I do not desire to take up the time of the committee unnecessarily—

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. Is section 28 open to amendment?

The CHAIRMAN. Section 28 has been passed.

Mr. MANN. I have no objection to my colleague offering an amendment, but I wished to know whether section 28 was open to amendment.

Mr. FOWLER. I did not understand, Mr. Chairman, that that section had been passed.

The CHAIRMAN. The Chair will state to the gentleman that that section was passed before the House took a recess this afternoon, and the amendment is not now in order to that section.

A MEMBER. Except by unanimous consent.

Mr. FOWLER. Mr. Chairman, I ask unanimous consent to return to section 28 for the purpose of offering the amendment which I have proposed.

The CHAIRMAN. The gentleman from Illinois [Mr. FOWLER] asks unanimous consent to return to section 28 for the purpose of offering the amendment which the Clerk has reported. Is there objection?

There was no objection.

Mr. FOWLER. Mr. Chairman, it is immaterial to me whether this amendment is adopted or not.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was lost.

Mr. FOWLER. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman only got consent to return to the section.

Mr. FOWLER. I mean the last word of the section under consideration.

The CHAIRMAN. Section 30 has not yet been read. The Clerk will read.

The Clerk read section 30, the last section of the bill, as follows:

Sec. 30. That the right to amend, alter, or repeal this act is hereby expressly reserved.

Mr. GLASS. Mr. Chairman, I ask unanimous consent to return to various sections of the bill to offer four amendments slightly changing the phraseology.

Mr. FOWLER. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. FOWLER. If the request of the distinguished chairman of this committee is granted, will any rights be lost with reference to section 30?

The CHAIRMAN. No rights will be lost with reference to section 30.

Mr. FOWLER. I desire to move to strike out the last word of section 30.

The CHAIRMAN. If the gentleman can get the floor for that purpose, he will have that right. [Laughter.]

The gentleman from Virginia asks unanimous consent to return to various sections of the bill for the purpose of offering amendments in the way of changing the phraseology. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will report the first amendment. The Clerk read as follows:

Page 18, line 14, after the word "members," strike out the word "chosen" and insert the word "appointed."

The amendment was agreed to.

The Clerk read as follows:

Page 19, line 4, in the amendment heretofore adopted, strike out the word "chosen" and insert in lieu thereof the word "appointed."

The amendment was agreed to.

Mr. MANN. Did the gentleman have an amendment to page 18, line 21, to change the word "chosen" to "appointed"?

Mr. GLASS. Mr. Chairman, I move to amend page 18, line 21.

The Clerk read as follows:

Page 18, line 21, strike out the word "chosen" at the end of the line, and insert in lieu thereof the word "appointed."

The amendment was agreed to.

Mr. BURKE of Pennsylvania. The same change ought to be made in lines 12 and 15, page 20.

Mr. GLASS. The gentleman is right, and I offer that amendment.

The Clerk read as follows:

Page 20, lines 12 and 15, strike out the word "chosen" and insert in lieu thereof the word "appointed."

The amendments were agreed to.

The Clerk read as follows:

Page 42, line 11, after the word "and" insert the word "each."

The amendment was agreed to.

The Clerk read as follows:

Page 29, lines 9 and 10, after the amendment heretofore adopted, strike out "rediscount operation" and insert in lieu thereof "rediscount operations."

The amendment was agreed to.

Mr. BROWN of West Virginia. Mr. Chairman, I have worked long and hard by the side of the distinguished chairman of this committee, and with him have studied each and every section of this bill, and I expect to vote for it, although some of the provisions do not come up entirely to what I might desire. I expect to vote for it, because I believe it to be the best bill that could, under all of the circumstances, be agreed upon by the committee and offered to this House. For the purpose of assigning my reasons for supporting this bill, I desire to be permitted to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman has that right now.

Mr. BROWN of West Virginia. The Federal reserve act, as I said before, may not be perfect in every detail, but it contains the true fundamental principles underlying all modern systems of banking. Because of the radical changes made in the present inadequate and obsolete national banking system it has been assailed from many quarters by its enemies and ambushed occasionally by those who ought to be its friends. It is too progressive for some and too conservative for others. Its enemies may be divided into five classes and may be described as follows:

First. Those who are wedded to the present national banking system and desire no change.

Second. Those who oppose this new system because they are against Government control.

Third. Those who insist that money should be issued by State banks or private institutions without Government liability or obligation.

Fourth. Those who want an unlimited issue of greenbacks, based upon nothing but the credit of the United States Government.

Fifth. The fifth and last class is composed of those who are so narrow and partisan that they are opposed to any change, however desirable, proposed by the Democratic Party, and maintain that all truth and virtue is found in the Aldrich bill, which bill is the only true standard of banking from a Republican standpoint. This opposition would rather see the bill fail and the people denied its benefits than to see it passed by a Democratic Congress. Some of them even go so far as to resent the idea of the Democratic Party being able to write and pass a constructive banking bill; but while they attack the measure and endeavor to point out certain imaginary weaknesses in its construction, they offer no remedies, except those advanced by the friends of the Aldrich bill, and make a frantic effort to have these incorporated in the Glass bill.

The first and great fundamental change in the new bill is removing from the banks the money control they have so long

enjoyed and placing it in the hands of the Government, where it rightfully and constitutionally belongs. This is a privilege long enjoyed by the banks, and, but for their greed and selfishness, one that might have remained with them indefinitely. When the epidemic of trusts—which for the purpose of stifling all competition—swept this country, the opportunity was too alluring for Wall Street, and the Money Trust was conceived and formed. The best banker has always been the one who could make the largest dividends for his stockholders. The largest dividends for stockholders means combinations for money and credit control, usury, and many questionable if not dishonest methods. In their greed for gain these combinations were formed by a few masterful minds and the control of the money and credits of this country became a subject of barter and sale. So glaring were the abuses that the people of this country arose in their might, independent of political organizations, and demanded that the right to control their money and credits be restored to this Government, where it constitutionally belonged. This is sought to be done in this bill.

The President of the United States for this purpose is given the right to appoint a Federal reserve board. This board will be invested with wide and almost unlimited authority. The power given the President in this bill, it has been argued, is fraught with danger. This every careful, thinking man must admit, but this power must be lodged somewhere, and we all know that it is safer in the hands of any President of these United States, I care not to what political party he is allied, than it is in the hands of Wall Street. But the President appoints the judges of our higher courts, who hold office for life, and no one is apprehensive of this power. Under the proposed system, however, the appointees on the Federal reserve board must be confirmed by the Senate, and the majority of the board must retire when a new President is elected. In this way the people have the power to ratify or reverse the policy of any administration at the end of every four years.

Instead of having the reserve funds of all the banks in the United States congested in the central reserve cities, this country will be divided into 12 sections and a Federal reserve bank established in each. In this way the money that is now piled up pyramid high in New York will be returned and kept in the Federal reserve bank in the section from whence it came.

In order to have a citadel of financial strength to be used for their own protection, every national bank located within a given district shall be required to subscribe to the capital stock of its Federal reserve bank, so that no Federal reserve bank can commence business with less than \$5,000,000. Federal reserve banks may establish branches within their districts so that means of closer intercourse and business communication can be established between the member bank and the head of the family, so to speak. The Federal reserve bank is the family head of the banking system of its region. It is to be controlled by nine directors, six of whom are to be elected by the member banks, and three of these six shall be fairly representative of the agricultural, commercial, and industrial interests of their respective districts, and three to be appointed by the Federal reserve board, and the chairman of the Federal reserve board is to be known as the Federal reserve agent. In this way the control of every Federal reserve bank is left with the stockholding banks.

Upon their paid-up capital stock the member banks are to receive annual dividends of 5 per cent, and after a surplus fund of 20 per cent has been provided, 60 per cent of the earnings are to be paid to the United States and 40 per cent to the banks.

Upon conditions similar to those governing the admission of national banking associations, State banks and trust companies may become members and stockholders in the Federal reserve bank, but in becoming members of the Federal reserve bank they lose none of the special privileges enjoyed by them as State institutions.

The Federal reserve board has supervision and control of Federal reserve banks, and in times of emergency permit or require one Federal reserve bank to rediscount prime paper of another Federal reserve bank, in this way relieving any local stringency in the money market that may occur in widely separated sections of this country. They also supervise and regulate the issue and retirement of Federal reserve notes and prescribe the form and tenure of said notes. An advisory council, consisting of one representative from each Federal reserve bank, is provided, so that the Federal reserve board may be advised as to existing financial conditions throughout the different sections of the entire United States.

Upon the indorsement of any member bank the Federal reserve bank of the district may discount notes and bills of exchange growing out of commercial transactions, thereby encouraging and expressly providing for the discount of notes and bills

drawn for agricultural, commercial, or industrial purposes, and forbidding the rediscount of notes or bills issued or drawn for the purpose of stock gambling; also providing for the rediscount of paper secured by staple agricultural products or other goods, wares, and merchandise, the purpose of this being to take care of and provide for goods stored in warehouses or in process of either importation or exportation. In addition to discounting paper for member banks, every Federal reserve bank has power, under the restrictions and limitations of this bill, to do certain general banking business. The purpose of this is to enable it to earn its dividends and provide for fixed charges.

All moneys now held in the general fund of the Treasury of the United States are to be withdrawn from the favored cities and divided as equally as possible among the 12 Federal reserve banks, and in this way more than in any other the power of Wall Street will be broken down.

The Federal reserve board shall, at its discretion, issue Federal reserve notes, which shall be the obligations of the United States and be redeemable in gold or lawful money on demand at the Treasury Department of the United States, in Washington. Any Federal reserve bank, by depositing collateral security as provided for in this bill, may make application at all times to the Federal reserve board for and receive money in the shape of Federal reserve notes and pay out and disburse the same. In this way money can always be had to relieve a money stringency or avert a panic.

A wise and long-needed change is made in the national banking laws, whereby national banks are permitted to loan on farm lands, thereby relieving the farmer of the necessity of being driven to State banks or private individuals for such accommodation. In this way it opens up to him a new field wherein he can borrow money, and the result must be that it will lessen the rate of interest he is compelled to pay. It also gives to the national banking associations wider and more liberal privileges. They have been granted the right to establish savings banks. This is a long-felt want and will enable the banks to compete with the State banks and at the same time give to the man who deposits his savings a better security for this increment of his hard-earned toil that he is endeavoring to lay by for a rainy day.

Another splendid feature of this bill is the fact that it enables the banking institutions of this country to establish foreign branches and thus take care of the commerce of this Nation in other countries.

I have endeavored briefly to point out the advantages of this bill over the present system, which has been condemned by all political parties, and has been declared even by the bankers themselves to be inadequate and insufficient and wholly unequal to meet the growing demands of commerce and the enlarged business of the present day. By it, banking control is taken from Wall Street and placed in the hands of the Government.

The money piled up in the congested centers has been sent back to the districts from whence it came that it may be used there in the factory, in the mill, and on the farm to increase the prosperity and wealth of a happy community instead of being applied to gambling in the stock markets and grain pits of the large money centers. It forever and for all times will prevent the money panics by providing a sure and stable currency, which can be easily obtained in times of money stringency and retired from circulation when its usefulness has passed, thereby giving an elasticity to our currency which has so long been needed. It has given to commerce a wider scope and secured to the agricultural, industrial, and commercial interests of this country privileges consistent to their national importance and for the want of which they have long been handicapped and retarded. This is not a bankers' bill alone, for in it no class is overlooked. The wants of no section have been disregarded. It will carry prosperity and happiness into every home wherever thrift and economy preside as handmaidens to energy and industry.

It is not only a wise and useful measure, but it is a patriotic one; one in which there is no partisan politics involved; one which should meet with the approval of every broad-minded and liberal Member of Congress. It is a patriotic measure intended to benefit the whole country.

It is a great honor to have worked upon this committee, and too much credit can not be given to Chairman GLASS for the earnest and untiring labor he bestowed upon this bill.

[Mr. FOWLER addressed the committee. See Appendix.]

Mr. LOBECK. Mr. Chairman, I learned long ago that "speech is silver, silence is golden," and therefore have not taken any part in this discussion. [Laughter and applause.] During the Democratic caucus I was present and took an active part, and I voted at the conclusion of its work and discussion of the bill that I would support this great currency measure. Some one had the temerity to report in the public press—and it was telegraphed throughout the country—that I was opposed

to this bill. My object in speaking now is to correct that erroneous impression and state that I intend to vote for this measure [applause on the Democratic side], because it places our currency system directly under Federal control. This is my main reason; the other features of the bill are administrative, and I am willing to place confidence in the officials to whom the administration of the measure is intrusted.

Members have talked against the greenback, but this much-abused system has been honored and respected by the people of our land, and, after all is said and done, it is the acceptance by the common people of Uncle Sam's promises on the currency question that insures confidence. The common people are not easily fooled, and in the long run respond quickly to the needs of the Nation. The greenback paid the Civil War soldier and it became the means of business transaction when gold and silver disappeared at the time when the life of the Nation was at stake. It served its purpose because the American people accepted it, and they can be depended upon to act promptly and wisely whenever an emergency exists.

Gold mutilated or weighing less by abrasion than the value stamped on the coin is not taken for full value, which was so fully and lucidly explained a moment ago by the gentleman from Illinois [Mr. FOWLER]. During the Civil War the small coin disappeared, and I have seen greenback dollar bills cut in halves and used in mercantile transactions and each one-half passed current for 50 cents, or one-half of the original United States note.

The American people are always ready to do their share toward the public good. For instance, in the panic of 1907 they stood by the bankers, and when the bankers issued money certificates to be used in place of currency, which could not be had at the time, the commercial man in every line of activity, the manufacturer, the merchant, the salaried man, and the workingman accepted them in lieu of gold or silver or bank notes. Had not the American people stood by the bankers at that time the panic would have become universal throughout the Nation and we would have had a repetition of the panics of 1873 and 1893. Conditions that were true in my home city of Omaha during the panic of 1907 were also true throughout the producing sections of the country. As comptroller of my city, we were paying out an average of \$100,000 per month. Under the law the daily revenue receipts of the city were deposited with our banks, because we had faith in them. The Millards, the Kountzes, the Murphys, the Yateses, the Caldwells, and their associates in the management of their institutions had weathered every financial storm. Our banks and our people were loyal to each other. When the city warrants were presented to them for payment, certificates were accepted and used as current money. We knew that the resources of our banks were ample and we had faith that under the skillful and honest management by their officials they would weather the storm.

Much has been said about the blessings that other nations experience and enjoy under their banking laws. It is so natural to think that the other fellow has the best of it. It is an old saying that "the grass generally looks greener in the next pasture." But England, France, Germany, and other nations have had their troubles, and several times violated their stringent currency laws to avoid financial panics and to help the business interests of their countries. But with all the defects in our currency laws, this Nation has done pretty well. We have developed, by untiring energy, a great and rich country. As a people we have become one of the great nations of the earth. It is true that we have had natural resources to build upon, but it has taken intelligent thought and labor, together with the persistent energy and willing hearts of a great people, to succeed as we have done.

This banking measure as a proposed remedy for whatever defects that now exist in our banking laws is going to be helpful to the mercantile, manufacturing, and agricultural pursuits of this country. If the regional banks are located along the well-defined lines of commercial trade that exist and have been built up during the last century, they will no doubt be of great benefit. As stated, I believe in the Federal control as outlined in this measure, and I have no doubt that whoever the Chief Executive may be he will appoint as members of the Federal reserve board high-class men, men of ability and experience, who will use good common sense and sound business judgment in the performance of their duties as contemplated in this act.

Should this currency measure in its practical everyday business experience be found to have some defects, future American Congresses have the power to, and no doubt will, enact such remedial legislation as the necessities of our commercial, manufacturing, and agricultural activities may demand. Therefore I shall vote for this measure which seems to meet the wishes of a great majority of the American people. [Applause.]

Mr. KORBLY. Mr. Chairman, the American people understood and believed that the question of the measure or standard of value was not to be disturbed in any way by this bill. The question was raised whether or not this bill did disturb it, and that injected enough doubt to justify the parity amendment, which was offered in the abundance of caution. Had there been left even the shadow of a doubt about this matter, the good faith of the Committee on Banking and Currency and of the Democratic Party would have been questioned. [Applause.]

Mr. GRAY. Mr. Chairman, I move to strike out the last word, to return to section 13, providing for a guardianship over the Federal reserve board.

I am surprised that no progressive Democrat has offered to strike out this section.

I am surprised that none of the so-called Progressives, with all their claim of loyalty to the rule of the people, has allowed it to pass even without comment.

It is plain how it is that the Republicans readily agree with this section. It is in full harmony with their principles. They believe that the tariff should be revised by its friends, the men who profit by it; and on principle that the money lenders should administer usurious interest laws; that the employers should administer labor laws, and in keeping with that principle, the banks should administer public currency laws.

While this bill partakes both of a banking bill and a public currency bill, it is primarily a public currency bill, and the Federal reserve board is created to deal mainly, if not wholly, with public currency questions only.

Banking is one thing and public currency is another thing.

Banking involves receiving deposits and extending credit for private profit.

Public currency embraces the control of the issue of money, its volume and distribution, to promote the general welfare.

Banks should have no more to do with the issue and control of public currency than an elevator company should have to control the supply and distribution of grain.

There are two schools of finance.

One school treats of the use of money for selfish gain.

The other school treats of money as an instrument of public welfare.

While a banker may or may not be a student of the last-named school, which deals with money to promote the general welfare, as a general rule he is not a student of public currency, but private finance only.

History shows that wherever general public duty comes in conflict with private selfish gain in the same person, selfish gain always prevails over public duty.

What we contend for is not that bankers are worse or less to be trusted than other men, but that they are not better nor more to be trusted in serving the public welfare as against their own private interests than other men.

In other words, they are as good as other men, but they are no better than other men.

Bankers have no more legitimate interest in public currency than the farmer, merchant, doctor, lawyer, manufacturer, railroad man, or any other citizen of the country.

And they know no more about public currency than any other citizen of the country.

And there is no more reason why bankers should advise the Federal reserve board more than other citizens should advise them.

In fact, there is every reason why bankers should not be allowed to advise the Federal reserve board.

Bankers stand in a peculiar position and have a greater opportunity than other people to gain advantage by the control of public currency and should not, therefore, have the same right to advise respecting public currency that others have with only a common or public interest in the currency.

The object of this section is to bring into the Glass bill the bank control provided for in the Aldrich bill and thus secure indirectly what has been denied them directly.

It is to give the banks an excuse, a pretext, and an opportunity for meeting, conferring, and advising with the members of the Federal reserve board to influence its action in the issue and control of the volume and distribution of public currency.

It is to guard and shield the bankers in their operations to influence the administration of this law and protect them from interference as lobbyists.

This section should not only be stricken from the bill, but a section should be inserted in lieu thereof to prohibit any stockholder or director of any banking institution from approaching, conferring, or advising with the Federal reserve board, or any member thereof, on matters respecting public currency, except in an open public meeting, and where a public record is made of all the proceedings of the board, showing who appeared before

it, together with all matters presented before the board for its consideration.

Mr. GLASS. Mr. Chairman, I move that the committee do now rise and report the bill back to the House as amended, with the recommendation that the amendments be agreed to and that the bill as amended do pass. [Applause.]

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. GARNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. GLASS. Mr. Speaker, I move the previous question on the bill and all amendments to its final passage.

The SPEAKER. The gentleman from Virginia moves the previous question on the bill and all amendments to final passage.

The question was taken, and the previous question was ordered.

ADJOURNMENT.

Mr. GLASS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 11 o'clock and 2 minutes p. m.) the House adjourned to meet to-morrow, Thursday, September 18, 1913, at 12 o'clock noon.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. BRUCKNER: A bill (H. R. 8264) providing for the erection and completion of a public building in the Borough of the Bronx, New York City, in the State of New York; to the Committee on Public Buildings and Grounds.

By Mr. BRITTEN: A bill (H. R. 8265) for the enlarging of the Government torpedo station at Newport, R. I., and increasing the output of torpedoes; to the Committee on Naval Affairs.

By Mr. CANDLER of Mississippi: A bill (H. R. 8266) providing for a certain percentage of cancellation of stamps, and making an allowance for rents, fuel, and lights, etc., to fourth-class postmasters; to the Committee on the Post Office and Post Roads.

Also, a bill (H. R. 8267) to prohibit in the District of Columbia the intermarriage of whites with negroes or Mongolians; to the Committee on the District of Columbia.

By Mr. REILLY of Connecticut: A bill (H. R. 8347) authorizing the Secretary of the Interior to set aside certain lands to be used as a sanitarium by the Order of Owls; to the Committee on the Public Lands.

Also, a bill (H. R. 8348) making an appropriation for the improvement of Milford Harbor, Conn.; to the Committee on Rivers and Harbors.

By Mr. BYRNS of Tennessee: A bill (H. R. 8349) to prevent the desecration of the flag of the United States and providing penalties for violation of same; to the Committee on the Judiciary.

Also, a bill (H. R. 8350) to provide for the reduction of mileage to actual transportation expenses of Representatives and Senators; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CANDLER of Mississippi: A bill (H. R. 8268) for the relief of Matilda H. Reed; to the Committee on War Claims.

Also, a bill (H. R. 8269) for the relief of Dr. O. R. Early; to the Committee on War Claims.

Also, a bill (H. R. 8270) for the relief of Isabella Rowsey; to the Committee on War Claims.

Also, a bill (H. R. 8271) for the relief of Susan C. Robinson; to the Committee on War Claims.

Also, a bill (H. R. 8272) for the relief of Francis E. Whitfield and Lucy G. Whitfield; to the Committee on War Claims.

Also, a bill (H. R. 8273) for the relief of Lucretia Lambert; to the Committee on War Claims.

Also, a bill (H. R. 8274) for the relief of David Ingram; to the Committee on War Claims.

Also, a bill (H. R. 8275) for the relief of Mrs. E. A. Hubbard; to the Committee on War Claims.

Also, a bill (H. R. 8276) for the relief of Mary Johnson; to the Committee on War Claims.

Also, a bill (H. R. 8277) for the relief of A. W. McClure; to the Committee on War Claims.

Also, a bill (H. R. 8278) for the relief of J. R. Wilson; to the Committee on War Claims.

Also, a bill (H. R. 8279) for the relief of Sallie Sowell; to the Committee on War Claims.

Also, a bill (H. R. 8280) for the relief of B. H. Davis, administrator of the estate of Enos Davis, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8281) for the relief of estate of W. F. Young; to the Committee on War Claims.

Also, a bill (H. R. 8282) for the relief of estate of W. R. Smith; to the Committee on War Claims.

Also, a bill (H. R. 8283) for the relief of the estate of Richard Mann, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8284) for the relief of the estate of Mary H. Moore, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8285) for the relief of estate of J. M. Cumby, heir of M. B. Cumby; to the Committee on War Claims.

Also, a bill (H. R. 8286) for the relief of the estate of Richmond Pace, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8287) for the relief of the estate of Andrew J. Kincaid; to the Committee on War Claims.

Also, a bill (H. R. 8288) for the relief of the estate of William Clement, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8289) for the relief of the estate of J. W. Hopkins, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8290) for the relief of the estate of Richard D. Fielder; to the Committee on War Claims.

Also, a bill (H. R. 8291) for the relief of the estate of W. R. Smith, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8292) for the relief of the estate of Milton Crawford, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8293) for the relief of the estate of J. K. Morrison, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8294) for the relief of the estate of Josiah White, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8295) for the relief of the estate of R. C. Bumpass, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8296) for the relief of the estate of John Linton, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8297) for the relief of estate of Marcus Cook, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8298) for the relief of heirs or estate of T. M. D. Coln, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8299) for the relief of the heirs of Louisa Elliott, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8300) for the relief of the heirs of Sarah R. Farmer, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8301) for the relief of the heirs of Jeremiah E. Cunningham, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8302) for the relief of the heirs of Richard E. Holt, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8303) for the relief of the heirs of Gladney, Gardner & Co.; to the Committee on War Claims.

Also, a bill (H. R. 8304) for the relief of the heirs of Nancy Whitfield, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8305) for the relief of heirs of Sylvia Cannon; to the Committee on War Claims.

Also, a bill (H. R. 8306) for the relief of the heirs of M. A. McNulty, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8307) for the relief of the heirs of George W. Gardner, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8308) for the relief of the heirs of Harriet F. and Robert McPeters; to the Committee on War Claims.

Also, a bill (H. R. 8309) for the relief of the heirs of Mary A. F. Peters, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8310) for the relief of Jennie Gaston Henderson, sole and only heir of L. B. Gaston, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8311) for the relief of D. M. Whittaker and heirs of estate of H. H. Whittaker, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8312) for relief of George Kimberley and Sam Kimberley, heirs of M. P. Kimberley, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8313) for the relief of heirs of John Hamilton; to the Committee on War Claims.

Also, a bill (H. R. 8314) for the relief of the heirs of John B. Jones, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8315) for the relief of the trustees of the Baptist Church of Rienzi, Miss.; to the Committee on War Claims.

Also, a bill (H. R. 8316) to carry into effect the findings of the Court of Claims in the case of John Wood; to the Committee on War Claims.

Also, a bill (H. R. 8317) to carry into effect the findings of the Court of Claims in the case of T. A. Norris, administrator of estate of N. M. Aldridge, deceased; to the Committee on War Claims.

Also, a bill (H. R. 8318) to carry into effect the findings of the Court of Claims in the matter of the claim of the estate of Thomas J. Price, deceased; to the Committee on War Claims.

By Mr. CONNOLLY of Iowa: A bill (H. R. 8319) granting a pension to August A. Bemtgen; to the Committee on Invalid Pensions.

By Mr. EAGAN: A bill (H. R. 8320) granting an increase of pension to Ernest Gregor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8321) granting a pension to Catherine Sweeney; to the Committee on Pensions.

Also, a bill (H. R. 8322) granting a pension to Mary E. Sweeney; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8323) granting a pension to Helen Conrad; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8324) granting a pension to William Connel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8325) granting a pension to Catherine Van Aken; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8326) granting a pension to James A. Crowley; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8327) granting a pension to Adele Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8328) granting a pension to Elizabeth Mellady; to the Committee on Invalid Pensions.

By Mr. GARNER: A bill (H. R. 8329) to reinstate Stephen M. Borlaw as second lieutenant in the United States Army; to the Committee on Military Affairs.

By Mr. GOODWIN of Arkansas: A bill (H. R. 8330) granting an increase of pension to Ollie B. Wright; to the Committee on Pensions.

By Mr. LEWIS of Maryland: A bill (H. R. 8331) granting an increase of pension to Jennie Smith; to the Committee on Invalid Pensions.

By Mr. MCGILLICUDDY: A bill (H. R. 8332) granting a pension to Cecelia Kelleher; to the Committee on Pensions.

Also, a bill (H. R. 8333) providing for refund of certain customs duties improperly assessed and collected on certain imports of machine-glazed sulphite wrapping paper; to the Committee on Claims.

By Mr. MCKENZIE: A bill (H. R. 8334) granting an increase of pension to George H. V. Kelly; to the Committee on Invalid Pensions.

By Mr. PADGETT: A bill (H. R. 8335) granting a pension to Joseph McWilliams; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8336) granting a pension to Callie Mabry; to the Committee on Pensions.

Also, a bill (H. R. 8337) granting a pension to Jacob Horne; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8338) granting an increase of pension to Elizabeth Weems; to the Committee on Pensions.

Also, a bill (H. R. 8339) for the relief of John Jones; to the Committee on Military Affairs.

Also, a bill (H. R. 8340) for the relief of Eli A. Spain; to the Committee on War Claims.

Also, a bill (H. R. 8341) for the relief of S. A. Wilson; to the Committee on War Claims.

Also, a bill (H. R. 8342) for the relief of W. M. Crossthwait; to the Committee on War Claims.

Also, a bill (H. R. 8343) for the relief of Holly Prater, alias Plater; to the Committee on Military Affairs.

By Mr. TAGGART: A bill (H. R. 8344) granting a pension to Mary E. Bassett; to the Committee on Invalid Pensions.

By Mr. TALCOTT of New York: A bill (H. R. 8345) granting a pension to Hannah R. Grant; to the Committee on Pensions.

By Mr. TRIBBLE: A bill (H. R. 8346) for the relief of the estate of C. E. Rosser, deceased; to the Committee on War Claims.

By Mr. DAVENPORT: A bill (H. R. 8351) for the relief of the Ottawa Indian Tribe of Blanchard Fork and Roche de Boeuf; to the Committee on Indian Affairs.

By Mr. REILLY of Connecticut: A bill (H. R. 8352) granting a pension to Jennie Conraux; to the Committee on Pensions.

Also, a bill (H. R. 8353) granting an increase of pension to Mary Ann Gilbert; to the Committee on Invalid Pensions.

Also, a bill (H. R. 8354) for the relief of William J. Phillips; to the Committee on Claims.

By Mr. BYRNS of Tennessee: A bill (H. R. 8355) to compensate the Nashville Trust Co., of Nashville, Tenn., trustee under the will of E. W. Cole, deceased, for damages to a building situated on the corner of Union Street and Fourth Avenue north, in Nashville, Tenn., and known as the Cole Building, as a result of a blast in improving the channel of the Cumberland River by a United States Government boat on Monday, August 13, 1912; to the Committee on Claims.

Also, a bill (H. R. 8356) to compensate G. W. Wall, of Cheatham County, Tenn., for damages sustained by him on account of the construction of Lock and Dam A on the lower Cumberland River; to the Committee on Claims.

Also, a bill (H. R. 8357) to compensate J. E. Stewart, of Cheatham County, Tenn., for damages sustained by him on account of the construction of Lock and Dam A on the lower Cumberland River; to the Committee on Claims.

By Mr. HAMILL: A bill (H. R. 8358) granting a pension to James Duffy; to the Committee on Invalid Pensions.

By Mr. WINSLOW: A bill (H. R. 8359) granting a pension to Ida V. Kelley; to the Committee on Pensions.

Also, a bill (H. R. 8360) for the relief of Henry Van Ostrand; to the Committee on Military Affairs.

Also, a bill (H. R. 8361) for the relief of Henry Butterfield, alias Henry Johnson; to the Committee on Military Affairs.

Also, a bill (H. R. 8362) for the relief of Franklin C. Colburn; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER: Petition of the Department of the V. A. P., relative to taking part in partisan politics; to the Committee on Insular Affairs.

By Mr. DILLON: Petition of the Pierre Commercial Club, favoring deliberation in passing the proposed currency bill; to the Committee on Banking and Currency.

By Mr. GARNER: Indorsement of headquarters, Army of Cuban Pacification, Marianao, Habana, Cuba, and headquarters, Eleventh Infantry, Morro Barracks, Santiago, Cuba, relative to reinstatement of Lieut. S. M. Borlaw; to the Committee on Military Affairs.

By Mr. LIEB: Petition of sundry bankers of the first Indiana district, criticizing the banking and currency bill (H. R. 7837); to the Committee on Banking and Currency.

By Mr. LONERGAN: Petition of the Hartford Clearing House Association, Hartford, Conn., relative to the banking and currency bill (H. R. 7837), and offering amendments to same; to the Committee on Banking and Currency.

SENATE.

THURSDAY, September 18, 1913.

The Senate met at 2 o'clock p. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

NAMING A PRESIDING OFFICER.

The Secretary (James M. Baker) read the following communication:

WASHINGTON, D. C., September 18, 1913.

TO THE SENATE:

Being temporarily absent from the Senate, I appoint Hon. F. M. SIMMONS, a Senator from the State of North Carolina, to perform the duties of the Chair during my absence.

JAMES P. CLARKE,
President pro tempore.

Mr. SIMMONS thereupon took the chair as Presiding Officer and directed that the Journal of the proceedings of Monday last should be read.

The Journal of the proceedings of Monday last was read and approved.

ENROLLED JOINT RESOLUTION SIGNED.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the Speaker of the House had signed the enrolled joint resolution (H. J. Res. 130) to provide for the relief and transportation of destitute American citizens in Mexico, and it was thereupon signed by the Acting President pro tempore.

CLAIM OF WILLIAM T. EVANS (S. DOC. NO. 187).

The PRESIDING OFFICER laid before the Senate a communication from the Secretary of the Treasury, submitting an estimate of appropriation to pay the claim of William T. Evans, United States deputy surveyor, for surveys and resur-

veys of public lands in Oregon, etc., \$1,428.16; which was referred to the Committee on Appropriations and ordered to be printed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MYERS:

A bill (S. 3121) to authorize the President to provide a method for opening lands restored from reservation or withdrawal, and for other purposes; to the Committee on Public Lands.

By Mr. BRADLEY:

A bill (S. 3122) authorizing an appropriation and expenditure to make a survey and procure an estimate of the cost of the construction of a macadamized post road from Crab Orchard, Ky., to Cumberland Gap, in said State, said road to be known as the Boone Way; to the Committee on Post Offices and Post Roads.

By Mr. MARTINE of New Jersey:

A bill (S. 3123) extending to the port of Perth Amboy, N. J., the privileges of section 7 of the act approved June 10, 1880, governing the immediate transportation of dutiable merchandise without appraisement (with accompanying paper); to the Committee on Commerce.

By Mr. CHAMBERLAIN:

A bill (S. 3124) granting a pension to Mary B. Howland; to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 3125) to authorize the Atchison, Topeka & Santa Fe Railway Co. to change its line of railroad through the Chillicothe Indian Reservation, State of Oklahoma (with accompanying papers); to the Committee on Indian Affairs.

AMENDMENTS TO DEFICIENCY APPROPRIATION BILL.

Mr. OWEN submitted an amendment proposing to pay Thomas P. Kane the difference between the compensation allowed by law for the Comptroller of the Currency and the compensation allowed by law for the Deputy Comptroller of the Currency for services as Acting Comptroller of the Currency from April 28, 1913, etc., intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. JOHNSON submitted an amendment proposing to increase the appropriation for the erection of a public building at Bangor, Me., from \$400,000 to \$450,000, intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Public Buildings and Grounds and ordered to be printed.

ADDRESS BY DR. LE ROY HODGES (S. DOC. NO. 188).

Mr. SWANSON. I ask unanimous consent to have printed as a public document an address delivered by Dr. Le Roy Hodges, of Petersburg, Va., in connection with the Winston-Salem School in North Carolina. They are introducing a new system in the schools there in the training of young men. The address is very short, and I think it would be very valuable as a public document.

The PRESIDING OFFICER. The Senator from Virginia asks that the paper which he has sent to the desk may be printed as a public document.

Mr. GALLINGER. I did not hear the Senator; he spoke so low. Will the Senator restate the purport of the document?

Mr. SWANSON. At Winston-Salem, under Dr. Le Roy Hodges, they have had a cooperation in work between the board of trade and the high school in which they have introduced a new system, which is a very fine method of training young men for citizenship. I think from an educational standpoint the address is a very fine one and it should be published as a document.

Mr. GALLINGER. I quite agree with the Senator.

Mr. SWANSON. It will consist of only four or five printed pages.

Mr. FLETCHER. The rule requires that an estimate should be made. The Senator from Virginia has shown me this document. It is a short paper and I think it is very valuable from an educational standpoint. It will cost but very little to print it, and I will therefore make no objection.

The PRESIDING OFFICER. Without objection, the address will be printed as a public document.

ADDRESS BY HON. CHARLES FRANCIS ADAMS (S. DOC. NO. 186).

Mr. CLAPP. At the request of the senior Senator from South Carolina [Mr. TILLMAN], who is unable to be present, I make the following statement in his behalf:

I ask unanimous consent for the printing as a public document of the address of Hon. Charles Francis Adams, president of the Massa-

chusetts Historical Society, the title of which is "'Tis Sixty Years Since." This address was delivered on founders' day, January 16, 1913, before the faculty and students of the University of South Carolina, at Columbia.

Dr. Adams is so well known throughout the country that no one needs my assurance that it will be a very interesting and instructive speech, and will be read with a great deal of interest by everybody North and South, because of its valuable historical reminiscences and broad-minded patriotism.

The PRESIDING OFFICER (Mr. SMITH of Georgia in the chair). Is there objection to print as a public document the speech of Mr. Adams referred to by the Senator from Minnesota? There being no objection, it is so ordered.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes; agrees to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon; and had appointed Mr. UNDERWOOD, Mr. KITCHIN, Mr. RAINY, Mr. DIXON, Mr. PAYNE, Mr. FORDNEY, and Mr. MURDOCK managers at the conference on the part of the House.

ADJOURNMENT TO MONDAY.

Mr. SIMMONS. I move that when the Senate adjourns today it adjourn to meet at 12 o'clock on Monday next.

The motion was agreed to.

FOREST RESERVE LANDS AND INDEMNITY THEREFOR.

Mr. ASHURST. Mr. President, I wish to address the Senate for a few moments with reference to the effect of the act of June 4, 1897, so far as it relates to the surrender to the United States of a large amount of corporate land grants and the selection of other lands in lieu of those relinquished.

In order to state properly some of the abuses that have grown out of the improper construction of that law it will be necessary for me to make some reference to speeches of the Senator from Oregon [Mr. CHAMBERLAIN] and of Representative HUMPHREY upon this subject.

RELINQUISHMENT OF LANDS TO THE GOVERNMENT OF THE UNITED STATES, AND THE SELECTION OF OTHER LANDS IN LIEU THEREOF UNDER THE ACT OF JUNE 4, 1897.

Mr. President, on May 16, 1912, when the Senate of the United States was considering the Agricultural appropriation bill, the distinguished senior Senator from Oregon [Mr. CHAMBERLAIN], whose services as Senator have been of much value not only to the State of Oregon but to the Nation as well, inter alia, said:

Mr. CHAMBERLAIN: The act authorizing the President by proclamation to create forest reserves was passed March 3, 1891. The creation of these reserves was recognized as almost a necessity at that time, and the President proceeded, in pursuance of the power vested in him, to create these reserves in order to protect the great wealth of timber and mineral resources against monopolization by those who wanted to acquire them for speculative purposes.

In the creation of these reserves it became necessary, Mr. President, to include lands that were owned by entrymen under the several Federal statutes, railroad and wagon-road grants, and others who had acquired holdings before the reserve was created. Now, let us note the evolution and development of a great national wrong under an act that was beneficent in its purposes.

Occasionally there would be a homestead near the top of a mountain or on a mountain side or in an isolated valley at the time of an Executive proclamation creating a reserve. These holdings were, of course, not extinguished by the creation of the reserves; but where there was one private holder or one entryman under the land laws there were hundreds of thousands of acres that belonged to railroad and wagon-road grant companies and others who, through mesne conveyances, had acquired title from them.

Then began to be heard a plea in behalf of the poor entryman, who had a home in the center of a reserve without possibility of having any neighbors or churches or schools; that he ought to be protected, and allowed to surrender his little holding in the reserve, which could never be otherwise than isolated; and that he should be permitted to select in lieu thereof other lands outside of the reserve, where he would have the benefit of neighbors, schools, and churches. That was a plausible plea for the entryman; and nobody on earth could object to allowing that entryman to release his land to the Government of the United States and to select in lieu thereof an equal area in some other part of the public domain. The same plea is being made for the poor settler now as a reason for abandoning the forest-reserve policy. It looks ominous, Mr. President. The unwritten history of that plea is, that it originated, not by the fireside of the poor entryman, but in the office of a great railroad company in the Middle West; it was gotten up, not for the benefit of the small holder but for the purpose of enabling the big grant corporations, railroads, and others, and their successors in interest to release their holdings within the forest reserves, and to take up in lieu thereof other vacant Government lands in other sections of the country, which were far more valuable for all purposes than were the lands within the reserves. This was the origin of the indemnity selection or lieu-land law. It was conceived in iniquity and resulted in robbing the people of untold millions in land and money. On June 4, 1897, Congress passed what was known as the indemnity-selection law, ostensibly in the interest of the entryman who had his home within the forest reserve, allowing him and incidentally all others who had holdings within the reserves to release their holdings to the Government and to take up lands elsewhere in lieu of the lands which they might surrender to the Government.

Bear in mind that this law, ostensibly in the interest of the settler, was not confined to him. It would have been harmless with such a limitation; but it applied to the grant companies of all kinds and their

successors in interest, and millions of acres of land in these reserves, consisting of lava beds, denuded forests, and rugged peaks, were released under the act of 1897 to the United States, and lands valuable for agricultural purposes, for timber, for minerals, for coal, and for oil, surveyed and unsurveyed, were taken up in every State in the Union where there were vacant lands by these companies that hastened to surrender their holdings within the reserve and to take advantage of a law which it was pretended was in the interest of the settler.

Mr. CHAMBERLAIN. * * * That is not all, Mr. President. This thing had become so notorious and so infamous in every western State that a demand went up everywhere that this old indemnity-selection law should be abolished and repealed. What happened? On the 3d of March, 1905—I want the Senate to notice the wording of this repealing clause—there was passed and approved "An act prohibiting the selection of timber lands in lieu of lands in forest reserves," which is as follows:

"Be it enacted, etc., That the acts of June 4, 1897, June 6, 1900, and March 3, 1901, are hereby repealed so far as they provide for the relinquishment, selection, and patenting of lands in lieu of tracts covered by an unperfected bona fide claim or patent within a forest reserve."

If they had stopped there, the act would have repealed the indemnity-selection acts and would have stopped the looting of the public domain; but it goes on:

"But the validity of contracts entered into by the Secretary of the Interior prior to the passage of this act shall not be impaired: *Provided*, That selections heretofore made in lieu of lands relinquished to the United States may be perfected and patents issue therefor the same as though this act had not been passed, and if for any reason not the fault of the party making the same any pending selection is held invalid another selection for like quality of land may be made in lieu thereof."

Here was a qualified repeal of the indemnity-selection acts that were on the statute books at that time, but it excepted from the effect of the repeal contracts which had been made by the Secretary of the Interior.

On June 2, 1913, speaking in the House of Representatives, Hon. WILLIAM E. HUMPHREY, a Representative from the State of Washington, inter alia, said:

Mr. HUMPHREY. * * * Speaking in general terms, one-half of all the standing timber in the United States is in California, Oregon, and Washington. One-fourth of this amount is in forest reserves; one-fourth is owned by the railroads and the Weyerhaeuser syndicate; the rest by smaller private owners. How did these people get their vast holdings? It is a most interesting story, in which the Forest Service has played the leading part. The Weyerhaeuser syndicate secured most of its timber from the railroads. How did the railroads get theirs? In two ways. First, a part of the railroad lands came by Government land grants given for the building of these roads. Whether the vast domain that was given for this purpose was wisely given it is now too late to discuss. Many of the leading men thought so at that time and many believe so to-day. In any event, there was some consideration for giving this land to the railroads. Second, a mighty empire, consisting of millions of acres of land, has been given to the railroads practically for no consideration by the Forest Service, in the name of conservation, by what is known as the lieu-land system. It is this last proposition that I wish to discuss, and I hope that, as there are many Members of this body who believe as I once believed, that these forest reserves have been established and conducted in the interests of the public, and that they have not been run as private enterprises to glorify certain bureaus and departments and for the benefit of the railroads, they will for a few moments listen to the facts that I am going to present.

I reiterate that millions of acres of the most valuable of all our public domain has been given to the railroads in the name of "conservation." How was this done? The story is written in the records of the Government and there can be no dispute as to the facts. Why these facts have not been exploited it is not hard to understand.

In an evil hour Congress passed what is known as the lieu-land law as applied to forest reserves. Congress gave to the President the power to create forest reserves. Congress gave to the Secretary of the Interior the power to exchange land in forest reserves, acre for acre, for any unappropriated land in the United States. Congress supposed that this law would be used in behalf of the public. The cry of those who were clamoring for forest reserves was that the timber supply of the United States must be saved from monopoly. It was with this motto that they commenced to administer the lieu-land law and create forest reserves. What did they do under the pretense of acting in the interest of the people under this law which Congress had so unwisely placed upon the statute books? It is the most amazing story in the Nation's life. The facts that I shall use are taken from public documents, except where I indicate that they are taken from other sources.

Mr. MONDELL. Will the gentleman yield for a question?

Mr. HUMPHREY of Washington. If the gentleman will wait until I have finished this particular subject.

Mr. MONDELL. It is in line of the lieu-land proposition that I desire to address my question.

Mr. HUMPHREY of Washington. If the gentleman will withhold his question for a little while, I will be obliged.

By Executive order vast forest reserves were created in Arizona. Of course, we know now that these forest reserves were almost entirely treeless and some of them completely so. At first these reserves did not include much railroad land. But the Forest Service was dissatisfied with this condition, and again by Executive order about 1,200,000 acres of land belonging to the Santa Fe Railroad were included in these treeless forest reserves. Immediately thereafter great agitation was commenced by the railroads and the Forest Service for an exchange of these lands for other lands outside of the reserve. The Secretary of the Interior suggested, first, that the railroads should take an equal area of public lands within these reserves, and this would give both the railroad and the Government their lands in solid bodies. This the railroad refused.

The Secretary then offered to exchange outside lands of equal value anywhere in the United States. This proposition the railroad again promptly rejected. It may be well to recall that at this opportune and critical time Mr. Paul Morton was one of the great powers in the Santa Fe Railroad; that he had great influence in "conservation" circles. He was himself a great "conservationist." In one of these reserves, called the San Francisco Mountain Reserve, there were included 935,000 acres of land belonging to the Santa Fe Railroad. This land was practically useless for any purpose. Eight hundred thousand acres of this land

were valued by the railroads themselves at from 5 to 15 cents per acre. The railroads insisted that they be permitted to trade this land, acre for acre, for the best land that still remained in all the public domain. They made this offer, and in spite of the protest of the Commissioner of the General Land Office and in spite of the fact that the Secretary of the Interior had twice recommended against the proposition it was accepted, with the single restriction that 180,000 acres of the 935,000 should be located south of the thirty-seventh standard parallel of latitude and south of the Tehichipa Range of mountains; and under this contract, urged by the Forest Service, consummated in the name of conservation, for this vast, worthless, treeless waste, the Santa Fe Railroad selected 750,000 acres of the very best of all the public lands in the Republic. These selections were made with great care in 22 different States. The very cream of the public domain everywhere was secured. I have traced 53,000 acres of this selection to the State of Washington, although the Santa Fe Railroad does not own and never has owned a rail within 800 miles of that State. In the 53,000 acres in the State of Washington is found to-day some of the finest timbered land upon this globe. The Bureau of Corporations, in its recent report, says that some of this land thus received for nothing by the Santa Fe Railroad is worth from \$100 to \$200 per acre for the timber alone. The 53,000 acres secured in the State of Washington alone are worth many times what the entire 935,000 acres originally owned by the railroad is worth. The history of this Nation up to that hour contains no transaction that compares in disregard of all rights of the public with this transaction in making this princely gift to the Santa Fe Railroad.

At the instigation of Mr. Morton and the other officers of the Santa Fe Railroad, they were permitted to select for those 935,000 acres, absolutely worthless, 935,000 acres of the best public land beneath the flag. That is true. That is taken from the records, and I challenge any man to dispute it.

Mr. MURDOCK. Mr. Speaker, does the gentleman deny in that connection that after that transaction was made a bill passed through this Congress, in the last days of Congress, on March 3, 1905, validating that arrangement upon the part of Secretary of the Interior, and that the gentleman permitted it to pass without any objection at that time upon his part?

Mr. HUMPHREY of Washington. I do not know whether that occurred or not.

Mr. MURDOCK. The RECORD shows that.

Mr. HUMPHREY of Washington. Whether that is true or not, why did not the gentleman from Kansas raise his voice? He was here. Whether I voted for it or whether I voted against it does not change the facts. If I voted for it, I did exactly what the gentleman from Kansas did. I did not know what I was voting for, and I want to know whether the gentleman from Kansas will have the courage to denounce it now, as I do after I have discovered the truth?

Mr. MURDOCK. I certainly do denounce it.

Mr. MONDELL. Mr. Speaker, will the gentleman yield at that point for a question?

Mr. HUMPHREY of Washington. I yield for a question.

Mr. MONDELL. I am the author of the bill repealing the Heu-land law.

Mr. HUMPHREY of Washington. I am going to discuss that further on. Mr. MONDELL. My recollection is that after the bill passed the House repealing the Heu-land law in toto it was nearly nine months before it passed the Senate, and it became necessary to either have the Heu-land law remain on the statute books so that exchanges could be made everywhere, or accept Secretary Hitchcock's agreement.

Mr. MURDOCK. And the gentleman will remember that the proviso was added by the managers of the House in conference.

Mr. MONDELL. It was not added by the managers of the House at all. Mr. HUMPHREY of Washington. Mr. Speaker, I decline to yield any further at this time.

The SPEAKER pro tempore (Mr. HEFLIN). The gentleman from Washington declines to yield further.

Mr. HUMPHREY of Washington. The Grand Canyon Forest Reserve was created in Arizona. This reserve contained 375,000 acres of Santa Fe land also. These 375,000 acres were also mostly worthless. But in the name of conservation, and with the active assistance of the Forest Service, for these 375,000 acres of worthless land the Santa Fe Railroad was permitted to select 380,000 acres of the best of the public lands that yet remained. It was afterwards discovered that through some mistake they had been allowed to take 5,000 acres too much, but so far as I have been able to discover this little insignificant error was never corrected. Thus, more than a million and a quarter acres of our best public lands were given in the name of conservation to the Santa Fe Railroad for practically no consideration whatever. Is it any wonder that the officials of the Santa Fe Railroad were great conservationists?

Mr. President, the speech of Senator CHAMBERLAIN, as well as the speech of Representative HUMPHREY of Washington, from which I have quoted, attracted wide attention, and a number of persons have asked me whether such transactions as those described in the speeches of Senator CHAMBERLAIN and Representative HUMPHREY of Washington really occurred in this Nation in the twentieth century. Some Senators have asked me if it were possible that such transactions actually took place, to wit, the surrendering of large areas of nontimbered land in the now State—then Territory—of Arizona by the railroad company to the United States Government and the selection of valuable timbered lands in lieu of the lands surrendered? Indeed, it has been insinuated, and even directly charged, that if the people of Arizona, without protest or contest, stood mutely by and permitted such spoliation, such looting, such grabbing and grasping of valuable public lands and timber by the railroad company and did not realize that it was their duty to call the attention of the President and the Interior Department to such outrageous procedure they, the people of Arizona, did not upon that occasion live up to the high standard of citizenship and civic virtue which, as a people, they have so worthily won and so fearlessly maintained.

Therefore, Mr. President, in order that the truth of history shall not be distorted, in order that odium and blame shall not

hereafter be laid upon the fair State of Arizona, and in order that no remissness, lapse, or neglect may be charged against the people of Arizona, I desire here and now to say that not only were the people residing in the locality where were situated the lands proposed to be conveyed radically opposed to such transfer of lands under a scheme obviously so unfair to the United States, but in addition thereto, with all the power, vehemence, and emphasis at their command, and in every possible and proper way, they resisted such spoliation and juggling and contested it to the last. So soon as the people living in the region of Arizona where these basis lands lie obtained information of such proposed action on the part of the Interior Department they began to assemble themselves and to marshal their energies for the purpose of resisting this transfer, so far as in their capacity lay. The information of such proposed transfer of lands was the notice of a letter, signed by the then vice president and general solicitor of the Santa Fe Pacific Railroad Co. and some grantees of the railroad company, addressed to the Secretary of the Interior, as follows:

JANUARY 11, 1901.

Hon. E. A. HITCHCOCK,

Secretary of the Interior.

SIR: If the President of the United States, by proclamation, shall immediately extend the limits of the San Francisco Mountains Forest Reserve so as to include all the odd-numbered sections now owned by us falling within the present exterior limits of such reserve, we, the undersigned holders of title to such odd-numbered sections, hereby agree to surrender to the United States our titles in such forest reserve, under the act of June 4, 1897, on the following basis:

One hundred and eighty thousand acres of our said present holdings to be exchanged for nontimbered public lands lying south of the thirty-seventh standard parallel of latitude and south of the Tehichipa Range of mountains, and the remainder of our lands in said enlarged reservation to be exchanged by us under said act of June 4, 1897, and amendments thereto, without any other restrictions whatsoever, on the part of the Santa Fe Pacific Railroad Co., it being, however, understood that the company will not be expected to surrender any lands needed to be retained by it for railroad purposes, and such railroad purposes being understood to include rights of way of all kinds, station grounds, pumping stations, dams, reservoir sites, stone quarries, deposits of cinders, gravel, or other material for ballast, and also other land needed for railroad purposes, but not including lands held solely for the timber thereon.

This proposition is made with the further understanding that in case of its acceptance the Government will, in every reasonable way, so expedite all necessary surveys and approval thereof, and the issuance of patent to the railroad company, as to enable said company and the undersigned holders of title under its grant to carry out this agreement. Very respectfully,

Whereupon the board of supervisors of the county of Coconino, Ariz., through its chairman, transmitted the following telegram to the honorable Secretary of the Interior:

[Telegram.]

JANUARY 18, 1901.

The people of Coconino County, Ariz., learning that arrangements have been made with the Secretary of the Interior whereby over 1,000,000 acres of odd-numbered sections of grant lands within the Black Mesa and San Francisco Mountains Forest Reserves will be, by Executive order, included in said reserve, be relinquished to the Government, do, through the board of supervisors, earnestly protest against such action, for the reason that it will draw all said lands from taxation, destroy the large stock interests of the county by its exclusion from said reserves, which will bankrupt this and seriously damage Navajo County adjoining. We therefore urge that you withhold approval of the order effecting this until our representatives can reach Washington, and that you advise us by wire if order has already issued. There is a heavy bonded debt against that county—\$200,000—for the payment of which these lands are pledged and without which the requisite taxes can not be raised. The order if effected will withdraw \$1,000,000 in taxable values from the county.

J. C. PHELAN,

Chairman Board of Supervisors.

To which telegram the Secretary of the Interior made the following response:

JANUARY 20, 1901.

J. C. PHELAN,

Chairman Board of Supervisors, Flagstaff, Ariz.:

Your telegram of the 18th to the President has been received. The department will be pleased to hear any statement you may have to make before requesting the President to issue the order respecting the Black Mesa and San Francisco Mountains Forest Reserves referred to in your telegram. Please advise when the department may hear from you.

E. A. HITCHCOCK, Secretary.

A hearing, to begin on February 6, 1901, was then ordered by the Interior Department, to be held at Washington. Mr. Alexander Britton, representing the Santa Fe Pacific Railroad Co., appeared at the hearing and urged such exchange of lands. A number of public-spirited citizens of Arizona, such as Mr. David Babbitt and Mr. John C. Verkamp, of Flagstaff, appeared at the hearing and protested against the proposed exchange.

The chairman of the board of supervisors of Coconino County, Mr. J. C. Phelan, also appeared in opposition to such transfer, and there also appeared on behalf of Coconino County in opposition to such transfer Mr. E. S. Clark, of Prescott, Ariz. Mr. Clark delivered a complete and unanswerable argument in opposition to the proposed transfer, and I ask unanimous consent that I may include in the RECORD as a part of my remarks some excerpts from the argument made by Mr. Clark before the

Secretary of the Interior in opposition to the proposed surrender of these worthless base lands to the Government.

THE PRESIDING OFFICER. In the absence of objection, permission is granted.

The matter referred to is as follows:

[Excerpts from argument of Mr. Clark.]

MR. CLARK. Mr. Secretary, I have tried, as a citizen, to ascertain who first would be the beneficiaries. I concede, of course, in addition, that the preservation of the forests is a matter of extreme moment, not only to the people of the West, who live there and whose interests there ought to be quickly affected by anything affecting the forests, but to the people of the entire Nation. But in this instance, while it may be true that the cutting of timber will be retarded for a time—it will be retarded upon the slopes of the San Francisco peaks—is it not true that timber land must be and will be elsewhere given to these corporations in exchange for these very lands? Must not the whole stock of timber in the United States, at some time, yield its pro rata, yield the foot for foot, yield the cord for cord, of every tree that is standing within the railroad grant land of the San Francisco forest reserves to-day? If that be conceded—and I believe it will be, because under the terms of this order it is shown that only 180,000 acres of nontimbered land are required to be selected by this railroad company and by these other corporations—if it is true, then all the balance of the land owned by them will, as I believe, be exchanged for timberlands upon the public domain. If they are not at present surveyed, I, of course, understand that these selections may be restricted to surveyed lands. I understand the agreement contemplates that surveys be made; therefore that restriction will be a dead letter. So that I believe, as far as the public is concerned, the whole public, the general public, no benefit can be possibly figured out of this proposed exchange.

Now, I would also like to touch upon this: Where did the purpose to effect this exchange originate? I can not see, as far as I have been able to investigate, that it ever had its origin in the Government. I have investigated the early orders made. I have investigated the case of the Santa Fe Pacific Railroad Co., which, shortly after the order made, undertook to exchange one section of its lands in that reserve. I would refer to your office decision, or rather to your decision affirming the Commissioner of the General Land Office's decision of March 9, 1900, found in 29 L. D., 597. It was at that time the declared policy of the Government not to include the odd-numbered sections in the townships included in the San Francisco Mountains Reserves, and for the very reason that too much land of private ownership would thereby be included and would be, to summarize the language of the decision, a burden to the Government. It would permit the exchange of too many lands, too great a latitude in doing so; and the matter was held by this office to have been fully considered by the President and the Secretary before the reserve was created, and good reasons were then considered to exist for not making one large general reservation.

It can not for one moment be contended, even as to the 180,000 acres of nontimbered lands to be selected under this exchange, that it will lose, because the very vicinity in which they are to be selected, and the character of the lands which they are to relinquish in lieu thereof, show that it would be very difficult for them to select lands anywhere on the public domain which would be of less value than those they are surrendering. As to the other lands, aggregating over 700,000 acres, it is certain that if there were not other lands more desirable and valuable to this corporation they would not desire to make this exchange. So that I think, instead of this exchange being called for by an appeal from the public, it has come from those who are interested. I trust I may be pardoned for suggesting that, in my judgment, it seems to me as though the inclusion of so much private land in a forest reserve as is intended to be done in the San Francisco Mountains Reserve by its consolidation goes at least to the limit, if not beyond, the provision of the law authorizing the establishment of forest reserves. It is quite clear, from a glance at the law, that it contemplated only the inclusion of large areas of public domain, and, of necessity, such small tracts, held by small holders here and there, as might have occurred in a limited development of the country; but here is a proposition which takes in more land than there is in some States of the Union—more private land. It proposes to give timbered lands in one place for timbered lands in another. It proposes to give vast areas of nontimbered lands in one place for timbered lands in another.

THE SECRETARY. Why do you say that?

MR. CLARK. I say that simply on my belief. The terms of the agreement lead me to believe that. The agreement says that as to 180,000 acres of these proposed lands to be exchanged, that land shall be selected below the thirty-seventh meridian in California, and south of the Tehachapi Mountains, and all of the rest shall be selected without any restriction. Now it would seem to me to be a fair assumption that when this land may be taken with a free hand, when these corporations are permitted to select where they will—I say it seems to me they will naturally select the very best lands they can find on the public domain. I simply refer to a well-known trait of human nature in making this assertion, and state it as a matter of belief.

I will, with your kind permission, devote a few moments to a discussion of the statement just made by Mr. Britton reflecting upon the correctness of the figures set forth in the protest of the people of Coconino County. I will say, first, however, that I am unable to perceive any reason, unless the railroad corporations of this country have suddenly acquired a philanthropy hitherto a stranger to them, why the Santa Fe Pacific Railroad Co. should be so urgent and so persistent, even to the extent of interposing its argument into a special hearing afforded the citizens of Coconino County—I can not understand.

THE SECRETARY. Allow me to explain, just here, Mr. Clark, that the Santa Fe Pacific road is certainly one of the parties in interest in this controversy. They represent a very large amount of interest in the proposed property that is to be released for the purpose of solidification, and I do not exactly understand or appreciate your idea, if I understand you correctly, which is that they should have been excluded from this hearing.

MR. ASHURST. Mr. President, the opposition was not confined solely to one particular portion of Arizona; the population of almost the entire Territory was thoroughly alive to its responsibility and to the duty it owed to the Nation and to itself; that is to say, the duty to protest to the Interior Department against this transfer of such worthless land to the United

States. The twenty-first legislative assembly, which was one of the most useful and capable legislatures that ever convened in the Territory, was in session and took cognizance of the matter, discussed the same, and passed the following resolution:

[By Postal Telegraph-Cable Co.]

PHOENIX, ARIZ., February 2, 1901.

DAVID BABBITT,

Hotel Revere, Washington, D. C.

To the honorable the SECRETARY OF THE INTERIOR:

Your memorialists, the Twenty-first Legislative Assembly of the Territory of Arizona, would present that—

Whereas it is understood that negotiations are pending between the Department of the Interior and certain parties for the exchange of certain lands owned by the said parties in Coconino County, Ariz., for lands situated outside of said county; and
Whereas the consummation of said negotiations would result in the withdrawal from said county of Coconino of approximately one-half the taxable property of said county; and
Whereas the bonded indebtedness of said county, amounting to \$192,500, and of the incorporated town of Flagstaff, amounting to \$95,000, is an equitable lien against the property proposed to be exchanged; and
Whereas said exchange would practically bankrupt said county of Coconino and said incorporated town of Flagstaff, would jeopardize the rights of the holders of said bonded indebtedness, and would be an irreparable injury to the entire northern part of the Territory of Arizona: Therefore

We respectfully request that your honor refuse to sanction the proposed exchange of the aforesaid lands for lands situated outside the county of Coconino, and the secretary of the Territory is hereby requested to forward a copy of this memorial to the honorable Secretary of the Interior.

(Signed:) Eugene S. Ives, president; P. P. Parker, speaker of the house, indorsed memorial to the Secretary of the Interior.

I hereby certify the within act is a true copy of house memorial No. 1. (Signed:) Curt W. Miller, chief clerk.

Filed in the office of the secretary of the Territory of Arizona this 2d day of February, A. D. 1901, at 11 a. m. (Sealed and signed:) C. H. Akers, secretary of Arizona.

I hereby certify the above to be a true, full copy of house memorial No. 1. (Signed:) Charles H. Akers, secretary of Arizona.

Akers forwards original by mail to-night.

M. J. RIORDAN.

8.15 p. m.

The gentleman whose name is appended to the telegram, Mr. M. J. Riordan, was instrumental in securing the passage of the resolution and he caused a copy of the same to be telegraphed to the delegation of Arizona citizens in Washington in order that the resolution might be laid before and considered by the Secretary of the Interior in connection with the other protests. Mr. Riordan was at that time a member of the Territorial council—the council being the upper branch of the Territorial legislature—and he represented the county (Coconino) in which were situated the larger part of the lands proposed to be transferred; he is a man of learning and of high character, and is at all times responsive to the duties, privileges, and obligations which attach to an American citizen. This legislature was in every sense a representative body of men. Its membership embraced exceptionally strong men in various walks of life and of the two then leading political parties.

Later on in the same year—1901—Mr. Clark again went to Washington to protest against such proposed transfer of these lands; upon this occasion Mr. Clark was accompanied by Mr. J. E. Jones, a prominent attorney of Arizona. These two gentlemen addressed a strong argument to the President of the United States against such proposed transfer.

It should not be forgotten that when the railroad company and some of its grantees submitted the written proposition, under date of January 11, 1901, to the Secretary of the Interior, proposing to transfer railroad-grant lands as basis for lieu-land selections, the same Secretary of the Interior had, by decision of March 9, 1900 (Twenty-ninth Land Decisions, 597), in a forceful and well-considered opinion in the shape of a letter to the Commissioner of the General Land Office, declined to permit the Santa Fe Pacific Railroad Co. to transfer any of its grant lands as basis for lieu-land selections. I ask unanimous consent to incorporate in the Record a copy of the decision of the Secretary, in which he then held that railroad-grant lands were not of such character as were contemplated—by the act of June 4, 1897—to be relinquished to the Government as basis.

THE PRESIDING OFFICER. In the absence of objection, permission is granted.

The decision referred to is as follows:

DECISIONS RELATING TO PUBLIC LANDS.

LIEU SELECTIONS ACT OF JUNE 4, 1897.

Santa Fe Pacific Railway Co.: The act of June 4, 1897, with respect to lieu-land selections, was intended to provide for extinguishing private title to such lands only as would be a part of an established forest reservation if it were not for their private ownership.

Secretary Hitchcock to the Commissioner of the General Land Office, March 9, 1900:

I have considered the appeal of the Santa Fe Pacific Railroad Co. from the following decision of your office:

"On the 1st ultimo the register transmitted to this office the application of the Santa Fe Pacific Railroad Co. to select, under the act of June 4, 1897 (30 Stat., 36), lieu selection No. 1082, all of section 34, township 22 north, range 2 west, G. and S. R. meridian, in lieu of section

15, township 20 north, range 9 east, same meridian, each tract containing 640 acres.

"In said application it is alleged that the land made the basis of said selection, as above described, is situate and lying within the boundaries of the San Francisco Mountains Forest Reserves, Territory of Arizona, and that the said railroad company is the owner thereof, or at least was, prior to October 17, 1899, when it was deeded to the United States.

"The records of this office show, in regard to the creation of the San Francisco Mountains Forest Reserves, that in laying the papers in the case before the Secretary of the Interior this office directed attention to the fact that the same presented for consideration a very serious question of lieu-land selection, inasmuch as it was shown therein, in regard to some 200,000 acres of timbered railroad lands secured by certain individuals, that should the same be included in a forest reservation, after removing the timber therefrom the denuded and worthless scattered tracts of land might be used as a basis for a lieu selection of a compact body of fine valley lands under the provisions of the said act of June 4, 1897.

"In view of the grave proportions which it was recognized that this question of the relinquishment to the Government of private holdings within forest reservations and the selection of unreserved lands in lieu thereof had at that time assumed, this office suggested that, since the region in this case included lands granted to the Atlantic & Pacific Railroad, it would be advisable to guard against any complications that might arise from the inclusion within a forest reserve of a large area of railroad lands, and accordingly recommended that the proclamation reserve in express terms the even-numbered sections and thereby make a separate reservation of each even-numbered section, all to be grouped and known under the general name of the San Francisco Mountains Forest Reserves.

"The whole question of the advisability of not creating one general reserve which would include the railroad sections within its limits was, consequently, before the Secretary of the Interior and the President for consideration before the issuance of the proclamation of August 17, 1898, making instead thereof a separate reservation of each even-numbered section.

"From the above it is clear that the railroad section in question, viz, section 15, township 20 north, range 9 east, is not within a forest reservation, and consequently can not be made the basis of an exchange under the said act of June 4, 1897, i. e., relinquished or reconveyed to the United States and other lands be selected in lieu thereof.

"Accordingly the said selection by the Santa Fe Pacific Railroad Co., is hereby rejected, subject to appeal within the usual time."

In addition to the matter stated in the decision of your office the records of this department show that your office letter of August 12, 1898, recommending the establishment of the San Francisco Mountains Forest Reserves, and urging the propriety of making a separate reservation of each even-numbered section, with a view to avoiding the application of the lieu-land provision of the act of June 4, 1897, to the alternate odd-numbered sections granted to the Atlantic & Pacific Railroad Co., was laid before the President, and that in the light of that communication the proclamation establishing these forest reserves was issued in the form recommended by your office. The lands which by the terms of the proclamation are so reserved are "the even-numbered sections in" certain enumerated townships. (30 Stat., 1780.) Had the odd-numbered sections been public lands at the time of the proclamation, they would not, under its terms, have been reserved from entry or settlement or set apart as forest reserves, but would have continued to be subject to settlement and entry under the general land laws; and if the odd-numbered sections were now relinquished to the United States they would not become a part of these forest reserves, but would become subject to settlement and entry under the general land laws. Obviously it was intended by this lieu-land enactment to provide for extinguishing private title to such lands only as would be a part of an established forest reservation if it were not for their private ownership.

Your office decision is therefore affirmed.

Mr. ASHURST. Unhappily, however, those who chanced then to be at the helm of the National Government could not be made clearly to see the enormous injustice to the public welfare which such exchange of lands would produce. And thus against sound public policy, thus in complete and flat contradiction and opposition to the then latest decision upon the subject (see opinion of Secretary of the Interior, 29 Land Decisions, p. 597, supra), thus inequitably and unjustly the relinquishment of these corporate basis lands was accepted by the United States, as follows:

[Letter.]

DEPARTMENT OF THE INTERIOR,
Washington, April 2, 1902.

THE COMMISSIONER OF THE GENERAL LAND OFFICE.

SIR: In relation to the proposed consolidation of the existing San Francisco Mountains Forest Reserves and the inclusion in the consolidated reserve of the odd-numbered sections, a conference was recently had before the President between myself and representatives of parties to be affected, as a result of which an arrangement has been agreed upon or effected which is set forth and evidenced by letters between those interested in the private lands to be included within the limits of said reserves and myself, copies of which letters are hereto attached.

You will immediately prepare for the President's consideration and transmit to this department a proclamation creating a single forest reserve to be known as the "San Francisco Mountains Forest Reserve," embracing the lands now included within the San Francisco Mountains Forest Reserves and the odd-numbered sections and other lands within the exterior limits of such existing reserves.

Very respectfully,

E. A. HITCHCOCK, Secretary.

The proclamation was signed by the President on April 12, 1902, and in this manner these lands, which previously had been assessed for purposes of taxation at from 15 to 20 cents per acre, jumped to a speculative value of from \$5 to \$8 per acre, and this speculative, inflated, and artificial value was created for the reason that under the order of the transfer lands denuded of timber, lands upon which timber never grew, and lands upon which a jack rabbit could not live unless he

carried a haversack were permitted to be conveyed to the Government, and favorably located, well-timbered, or otherwise valuable lands allowed to be selected by the railroad company in lieu of those relinquished to the Government.

Mr. WALSH. Mr. President—

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Montana?

Mr. ASHURST. I do, cheerfully.

Mr. WALSH. I should like to inquire of the Senator from Arizona if the record discloses any documents evidencing the reasons upon which this action was taken, so obviously contrary to the public interest?

Mr. ASHURST. The arguments adduced at the hearing are so voluminous that I have not incorporated them into my remarks. One of the reasons given was that the department did not want to administer a "checkerboard" reserve, but wanted a solid reserve. I understand that another reason given was that the department wanted to conserve and store certain waters which, it was claimed, ran to the southern part of the State, whereas in truth and in fact nearly all of the water that falls upon the basis lands so relinquished goes north instead of south and flows into the Colorado River.

This is not a pleasant chapter in our American history. It is a chapter which reflects no credit upon anyone except the sturdy citizenship of Arizona, which always stands resolutely for the general interest instead of the "special" interest. The episode discloses that the part played by Arizona was eminently to her credit; was in behalf of the general welfare; was for the good of the Nation at large, and upon that occasion the people of Arizona displayed that virile fighting virtue for which they are so justly famous and which must always be possessed by a people who stand for justice and fair play. They opposed to the bitter end this corporate scheme which for immensity and audacity history furnishes few, if any, counterparts.

In conclusion, I ask unanimous consent in this connection to include in the RECORD as appendices to my remarks extracts from the two protests presented to the Interior Department by the board of supervisors of Coconino County, Ariz., in 1901 against the transfer to the Government of these corporate lands. I also ask unanimous consent to include in the RECORD as appendices to my remarks a letter and a copy of a letter which I have just received from Hon. Mulford Winsor, chairman of the State land commission of Arizona. Mr. Winsor is one of the ablest and most useful public men in the State of Arizona, or any other State, for that matter, and he points out some abuses and suggests some remedies respecting this situation well worthy of serious consideration.

The PRESIDING OFFICER. Without objection, the matter referred to may be printed in the RECORD.

The matter referred to is as follows:

[Extracts from protest of board of supervisors of Coconino County, Ariz.]

FLAGSTAFF, ARIZ., February 26, 1901.

HON. SECRETARY OF THE INTERIOR,
Washington, D. C.

SIR: As supplementary to the statements and arguments already submitted to you by the citizens and the board of supervisors of Coconino County, Ariz., against the proposed consolidation of the San Francisco Mountains Forest Reserve, we would respectfully represent:

1. That at least one-third of all the lands within said reserve are open or "park" lands, practically devoid of timber, or are timbered with scrub cedar, juniper, or pinon, classed as "nonmerchantable timber," and practically worthless except for fuel. The acreage of this class of lands within the reserve will not be far from 600,000 acres, and presumably one-half of this amount, or 300,000 acres, would fall upon odd-numbered sections.

In addition to this the sawmills operating within the reserve have, during the last 18 years, denuded at least 100,000 acres of railroad grant lands.

This makes a total of some 400,000 acres of the grant lands that might in justice and good conscience be called nontimbered, and if the contemplated exchange is made the corporations interested should be compelled to accept in lieu thereof nontimbered lands, or, to be strictly equitable, lands of equal character and value. Instead of this, however, under the inequitable arrangement now proposed, they would be restricted to the selection of only 180,000 acres of nontimbered lands. As to all the rest, or nearly 800,000 acres, they may select anywhere within the public domain without restriction, under the act of June 4, 1897, and amendments thereto.

Furthermore, while the areas relinquished to the United States by these corporations lie in a practically solid body, and must be accepted no matter how timbered or whether timbered at all, under the terms of the act referred to, the owners may select in lieu of them just such portions of the public domain as they may desire, and in tracts as small as 40 acres. They will thus be enabled to secure the choicest portions of the best lands in the country and reject whatever may not suit them. Presuming that the lands, which are really valuable for timber, have either been, or will be, cut over, these corporations will thus exchange some 380,000 acres of practically worthless lands for an equal area of the best lands they can find within Uncle Sam's domain. It is only fair to assume that, so far as possible, valuable timbered lands will be selected by them, so that instead of protecting one forest in Arizona, the exchange will result in the destruction of two—one on the San Francisco Mountains, the other wherever the lieu lands may be selected.

Moreover, the character of the timber of this region is such as to make any exchange for timber in the northwestern coast regions very undesirable for the Government. The timber of this reserve, even on what are classed as timbered lands, will not yield 2,500,000 feet per section on an average, while in the northwest, upon an equal acreage, it would be possible, by having the privilege of selection, to secure from three to four times that stumpage. Not only so, but whereas our timber yields an average of less than 10 per cent of clear lumber and a correspondingly small percentage of the next higher grades, the coast timbers yield from 40 to 80 per cent in clear and a corresponding amount of the next lower grades. The immense advantages which will thus result to the corporations surrendering this timber is too obvious to require more than mention.

If it be contended that the estimates heretofore made as to the value of the grant lands is induced by prejudice on the part of your petitioners, we beg to quote from the contract made by the Santa Fe Pacific Railroad Co. with the board of supervisors of Coconino County for the payment of taxes on their right of way (copy of which contract, duly certified, is submitted herewith) that company's own estimate of such value, as follows:

"Whereas said board of supervisors for said county propose to attempt to have the assessment of the grant and other lands in said county, amounting to a large number of acres, increased to a large amount by the board of equalization of said county; and

"Whereas the Santa Fe Pacific Railroad Co. is contesting the right to increase the same on the ground that the value of such lands, and each and every acre thereof, is less than 15 cents per acre."

While we are not disposed to accept as final the low valuation thus placed upon these lands, we desire to call the attention of the honorable Secretary to the fact that forest-reserve scrip is selling upon the market at this time for \$3.75 to \$4 per acre. The wide discrepancy in these values, we think, may help largely to account for the zeal which the relinquishing corporations are showing in the protection of the San Francisco Mountains forest.

2. The argument was advanced by the attorney for the Santa Fe Pacific Railroad Co. (Mr. Britton) at the hearing held before the Secretary of the Interior on February 6, 1901, upon the question now under discussion, that his company had long realized that the interests of the public, as well as its own interests in northern Arizona, depended upon the preservation of the forests, and that it was moved principally by this commendable philanthropy in urging the proposed consolidation. It seems to us especially deplorable that this corporation could not have been affected by this solicitude for the public weal before it sold the very heart of this forest to the man with the ax and the saw. And again it seems to us equally deplorable that its concern for the public interest should have been manifested for the first time simultaneously with its discovery that the best and most available of its timber was already disposed of, and that under a strained interpretation of the forest-reserve law it could secure the privilege of working off its threadbare and shopworn land grant upon Uncle Sam upon its own terms and could receive in its place a brand-new empire. And it might further be pertinent to inquire why, if the professed interest in forest preservation be genuine, it would not be willing to agree not to select timberlands elsewhere in lieu of those surrendered in the San Francisco Reserve.

It was further advanced by the gentleman that even though the railroad lands within the reserve should be relinquished to the Government and thus withdrawn from the tax rolls of Coconino County that the railroad company would still be the largest taxpayer in the county in that it would still be the owner of 1,300,000 acres of lands therein, beyond the reserve limits. He neglected to inform the honorable Secretary that not one acre of this 1,300,000 acres is taxable, for the reason that it is unsurveyed, and that it will never become taxable until the Government sees fit to survey it. That it has been the policy of his company in the past to resist taxation of these lands because they were unsurveyed, and that it would continue to resist on the same grounds. Inasmuch as the whole of said 1,300,000 acres is composed of worthless and barren land, unfit even for pasturage, except in certain seasons, it is not likely that it will soon be surveyed. And considering that the railroad company has never made any particular effort to have it surveyed—it should be remembered that the company must stand one-half the expense of the survey—although it has owned it since 1866, and considering further that it is permitted to exchange its lands within the reserve, it can well afford to be indifferent as to the residue, it is not likely that it will make any violent attempt to convert the nontaxable into taxable property. And even though the lands should be surveyed within the next decade, which is highly improbable, it could not be assessed with any hope of collection for more than 5 cents per acre. Indeed that would be, under present conditions, more than its cash value. In support of this we would again refer to the statement of this company in its contract with the county as to the value of its lands within the reserve.

It seems to us, and we make the assertion advisedly, that the railroad company evinces a degree of interest in this matter that is hardly to be accounted for by its philanthropic professions. Rather, it occurs to us, does it seek to veil its real motives, which are unquestionably selfish, behind the cloak of interest in the public welfare. * * * For what reason, may we ask, unless to obscure the real purpose of the transaction, unless to find some plausible pretext, unless groping for some specious appeal to the public opinion, in order that the light of truth may be averted from those who, because of their deeds, "love the darkness better"?

It was further urged, with considerable plausibility, by Mr. Britton that even though its reserve lands should be relinquished to the United States the railroad company would continue to pay taxes on its right of way at a valuation of \$2,500 per mile, according to its contract with the county—a contract which has only three years more to run, including the present year. If the company ever intended or now intends to pay taxes on its right of way, beyond the term of the contract, why did it expressly limit the period of payment to five years? If we may be permitted to answer this question, we would respectfully suggest that when the contract referred to was entered into the county authorities had it in their power to assess the lands of the company at a sufficient valuation to equalize the loss of the right of way, which had recently been declared exempt from taxation, upon public lands within the Territories, by the Supreme Court of the United States (172 U. S., 171-186). Realizing this, the company, in order to avert the pending increase in the valuation of its timberlands, agreed to return the right-of-way assessment at \$2,500 per mile for five years, provided the county would not raise the existing rate of 20 cents per acre upon its lands. And while the county authorities did not then understand why the contract was limited to five years, it was understood by the railroad company—and is now clear to the world—namely, that it already contemplated the relinquishment of its reserve lands, and probably felt

that it could accomplish it within the five-year period. Then, having enjoyed the profits of the last practicable moment of timber stumpage, having traded to Uncle Sam the only lands remaining in its grant within the county of any value, its right of way being exempt from taxation by the decision of the court of last resort, its remaining lands being unsurveyed, and therefore nontaxable, besides being worthless, what legal necessity would remain for the Santa Fe Pacific Railroad Co. to pay taxes to the county of Coconino? And when did, or when will, this railroad company or any other railroad company pay taxes except under legal necessity? Philanthropy finds no place in the creed of the twentieth-century corporation.

It was also asserted by Mr. Britton that the railroad mileage within the reserve was only 54 and a fraction. Just what relevancy this statement has we are unable to perceive. There are 106½ miles of the railroad within the county, and it is all exempt from taxation, whether within or without the forest reserve. If it declines to pay on one mile, it will decline to pay on all.

3. The discussion in this case ought not to be closed without a glance at its broad equities. It should be remembered that Congress endowed the Atlantic & Pacific Railroad Co. with this almost illimitable grant, which has come down to the Santa Fe Pacific Railroad Co. It was a gift taken from the heritage and birthright of the American people. This land, and no other, was granted. The company was glad to get it then—it ought to be satisfied with it now. Having received this princely grant, it ought to accept and retain it as it is. Having used and enjoyed and despoiled it for 35 years, it ought not now to be heard to ask for a new grant of virgin lands in its place. It has reaped almost the full benefit of the worth of its earlier grant, and now desires to exchange this worthless land for another grant of even greater value than that first received, thus obtaining as subsidy double the amount which Congress originally bestowed.

The rights of the American people in the public domain were disregarded when the original grant was made; but Congress at least limited it to certain fixed bounds in certain territories, and it knew what it was bestowing. Its intention was that the Atlantic & Pacific Railroad Co. should have just the lands granted, no others. It never entertained, nor would it for a moment have tolerated, the idea that this company or its successors were to have an option by which they might select the choicest of the public lands. Had the lightest breath of such a suspicion touched the Congress of 1866, the land-grant measure would have perished under the lightning of indignant opposition. The heat of popular resentment would have consumed it root and branch. Yet at the opening of the new century we see this corporation standing almost within the shadow of the Capitol whence this splendid dowry emanated, begging—yea, demanding—that America take back the million acres she once gave so freely, now that it is denuded and impoverished, and in lieu thereof that she open wide the gates of the public domain that they may have license to further ravage it for their gain. The public domain is a public trust. Shall it thus be pillaged, and are the sons and daughters of this Nation thus to be despoiled of their right and hope of home and hearthstone? It may so be written—it may thus be "nominated in the bond"; but we believe if it is done it will be done contrary to the dictates of either sound judgment or of justice.

The Government has expended thousands of dollars and employed scores of men in the endeavor to prevent fraud in the selection of lands under the homestead law. It has at this moment an agent in this forest examining homestead entries. We make no complaint of this, but on the contrary believe it to be right. But to what purpose is this care in small matters exercised if the interests thus conserved are to be later sacrificed wholesale at the behest of corporate greed, and with not even the small return to the Government which is represented by the payment of homestead fees?

Again, the law under which this corporation and its grantees are seeking this exchange was enacted by Congress for the relief of individual settlers whose rights might be infringed by the creation of forest reserves. It did not contemplate any such exchange as the proposed one, and it is safe to say that the law would have been properly safeguarded against it if such a thing had been dreamed of. As it is, the law has already been perverted to secure valuable timbered or oil or agricultural lands for the speculator and the investor, while the settlers have received but the minimum of benefit from its operation. It is now proposed to so broaden its application that any railroad company anywhere that is dissatisfied with that portion of its land grant which may fall within the exterior boundaries of a forest reservation, or that may wish to enhance the value of its grant as a whole, may surrender such portions as it may elect from the part so situated (and these will always be the most worthless lands) and obtain in lieu thereof the most valuable lands within the public domain. There will thus be a double injustice inflicted upon the Government, in addition to that inflicted upon intending settlers. First, having paid the full consideration for the building of these railroads at the outset, it will now be compelled to pay an additional and a very heavy consideration, without any return whatever; second, it will be compelled to submit to a disadvantageous exchange which will tend directly to the destruction of its remaining forests.

4. Further, the law of 1891, conferring upon the President the power of setting apart forest reserves, contains a limitation upon his authority, which we think will be clearly exceeded should an order issue covering these grant lands into the reserve. The law provides (sec. 24) "That the President of the United States may, from time to time, set apart and reserve, in any State or Territory having public lands bearing forests, in any part of the public lands, wholly or in part covered with timber or undergrowth * * * as public reservations," etc. Under this act the President may create forest reserves only out of the public lands, and if it shall chance that a homestead shall occur here and there, provision is made for their exchange in the act of June 4, 1897. But he may not set apart a reserve consisting wholly of private lands; nor can he, as may be attempted in this case, add to a reserve already created lands wholly in private ownership. The law, under its most liberal construction, grants him no such power. He has, in fact, already touched the limit of his power in setting apart the even-numbered sections within the reserve, as they are the only public lands within its limits. If it should be argued that the odd-numbered sections will become public lands upon their relinquishment, we reply that such an argument is evasive, it being manifest that such relinquishment would not be made in the absence of an agreement that the reserve should be made to cover the lands and that lieu lands should be given therefor.

5. But if the proposed consolidation of the San Francisco Mountain reserve should finally be made upon some equitable basis, we desire to respectfully protest against the exclusion of stock from such reservation. The stockmen of this region have spent the best years of their lives in building up this industry, and it would inflict great hardship and incalculable injustice upon them if they were now to be deprived

of the fruits, or much of the fruits, of their labor. These men have been the pioneers of this region who have "blazed the way for an advancing civilization," and it surely is not the policy of the Government to deprive the men who have endured the deprivations of frontier life to create new Commonwealths of the little possessions they may have accumulated.

Further, the stock interests constitute the backbone of the commercial prosperity of the county and furnish one of its largest available assets for purposes of taxation. To deprive the community of the revenue it derives from this source would mean the practical extinction of three-fourths of the business houses and would bring bankruptcy to the county, especially when it would follow the withdrawal from taxation of the lands which would be surrendered to the Government.

If it be contended that the preservation of the forest and of the watershed demands the exclusion of stock, we beg leave to demur to this statement as at least not proven; and it is the candid opinion of men who have spent most of their lives in this region and who have made the matter a subject of study and observation that the exclusion of stock from these forests, so far from tending to conserve them, would tend directly to their more rapid destruction. Our opponents may attribute these views to self-interest, but there is at least this to be said in their favor, that they are founded upon actual observation and experience and not upon theories evolved in the laboratory or upon experiments made under totally different conditions. We are as desirous as anyone that these forests should be preserved from wanton destruction and would recommend that the grazing of stock within the reserves should be allowed under such regulations and restrictions as to the Government may seem proper; and we are entirely willing that such regulations may be enforced within the forests of northern Arizona as may be warranted by the reports made thereon by Messrs. Pinchot and Coville, of the Bureau of Forestry, after their recent examination.

In conclusion, permit us to simply say, in view of the foregoing and other arguments submitted for your consideration, that it seems to us that the proposed exchange will result in a great injustice to the Government, while conferring an immense and altogether unmerited advantage upon the corporations making the exchange; that such advantage will be conferred at the sacrifice of both the public and private interests of Coconino County and to the direct injury of intending settlers upon the public domain, as well as to the destruction of the existing forest areas of the country.

Renewing our petition that the proposed consolidation shall not be effected, we beg to subscribe ourselves,

Most respectfully, yours,

BOARD OF SUPERVISORS COCONINO COUNTY, ARIZ.,
By GEO. BABBITT.

[Extracts from protest of board of supervisors of Coconino County, Ariz.]

FLAGSTAFF, ARIZ., May 14, 1901.

The honorable the SECRETARY OF THE INTERIOR,
Washington, D. C.

SIR: The board of supervisors of Coconino County, Ariz., beg leave to call your attention to the inclosed statement respecting the San Francisco Mountains and Grand Canyon Forest Reserves, and especially to that portion of the inclosure relating to the Grand Canyon Reserve. A copy of the within has been handed to the President.

Very respectfully, yours,

J. C. PHELAN, Chairman.

FLAGSTAFF, ARIZ., May 6, 1901.

To the SECRETARY OF THE INTERIOR:

Your petitioners, the citizens of Coconino County, Ariz., by and through the board of supervisors of said county, beg leave to represent:

I.

That by act of Congress of July, 1866 (14 Stat. L., 292), the Atlantic & Pacific Railroad Co. was granted a large tract of land in the Territory of Arizona and elsewhere along its proposed route to the extent of the alternate odd-numbered sections for 40 miles on each side of the said proposed railroad. The railroad has since been constructed, and traverses the county of Coconino from east to west, there being 106.66 miles of said road within said county. By act of March 3, 1897, all the grants, rights, privileges, and exemptions accruing to the Atlantic & Pacific Railroad Co. were vested in the Santa Fe Pacific Railroad Co., which is now the owner and holder thereof. Under the provisions of said acts of Congress and by decisions of the Supreme Court of the United States (172 U. S., 171; 172 U. S., 186) the right of way of said railroad is declared to be exempt from taxation within the Territories.

II.

The said railroad company is now, and for a number of years past has been, paying taxes on the surveyed lands of its said grant within said county, to the extent of 301,543 acres (somewhat less than one-fourth of its entire acreage therein, the balance being unsurveyed, the railroad company for that reason refusing to pay taxes upon it), at a valuation of 20 cents per acre. It is also paying taxes upon its right of way therein upon a valuation of \$2,500 per mile, under a contract with the board of supervisors of said county, wherein it is provided that in consideration of the taxation of said right of way at the valuation aforesaid the county will not tax the grant lands of said company upon a greater valuation than 20 cents per acre. The term of the contract mentioned is five years, the current year being the third thereof. In view of the fact, however, that the last session of the Legislative Assembly of Arizona enacted a law providing that lands of the character of these grant lands should not be assessed for taxation at less than 75 cents per acre, said railroad company is now threatening to absolutely refuse further payment of taxes upon its said right of way.

III.

By Executive order of August 17, 1898, there were established in the county of Coconino the San Francisco Mountains Forest Reserves, which reserves were, by express terms, limited to the even-numbered or public-lands sections of the townships mentioned in said Executive order, said reserves being wholly within the limits of the land grant of the railroad company aforesaid. The reason for excluding from the reserves so created the odd-numbered sections is found in the law authorizing the creating of forest reservations (act of Mar. 3, 1891, 26 Stat. L., p. 1095), section 24 of which reads as follows:

"That the President of the United States may from time to time set apart and reserve in any State or Territory having public lands bearing

forests in any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations; and the President shall, by public proclamation, declare the establishment of such reservations and the limits thereof."

Inasmuch as the authority of the President in creating forest reservations is restricted to the public lands, and as all the odd-numbered sections in the townships affected by said Executive order of August 17, 1898, were private lands, it is obvious that the Executive then considered that he had no power whatever to include within the reserves the lands in private ownership, particularly as such lands, alternating in checkerboard arrangement with the Government sections, comprise one-half of every township included within the order. A further reason for limiting this order to the even-numbered sections appears in the report of the Commissioner of the General Land Office for 1899, in which it is stated (p. 96):

"In creating the new reservations in Arizona the region which includes lands falling within the grant to the Atlantic & Pacific Railroad was set apart in a proclamation which reserved in express terms the even-numbered sections only in each township, thus making a separate reservation of each even-numbered section, all of which were grouped together under the general name of the San Francisco Mountains Forest Reserves. This action was taken to guard against any complications that might arise from the inclusion of a large area of railroad lands, since, as pointed out in my last annual report, the provision of the act of June 4, 1897 (30 Stat., 34-36), for the selection of lieu lands for relinquished tracts in forest reserves is being largely taken advantage of in a speculative way by the holders of tracts acquired by purchase from railroad corporations and others."

Thus it will be seen that the principal object of restricting the reserves aforesaid to the even-numbered or Government sections was to prevent the railroad company or its grantees from relinquishing the odd-numbered sections to the United States and selecting and securing in lieu thereof their choice of any unappropriated nonmineral lands remaining in the public domain.

IV.

In January, 1901, the Santa Fe Pacific Railroad Co. and its grantees, William F. Baker, E. B. Perrin, and Robert Perrin, made the following proposition to the Secretary of the Interior:

Hon. E. A. HITCHCOCK,

Secretary of the Interior.

SIR: If the President of the United States, by proclamation, shall immediately extend the limits of the San Francisco Mountains Forest Reserve so as to include all of the odd-numbered sections now owned by us falling within the present exterior limits of such reserves, we, the undersigned holders of title to such odd-numbered sections, hereby agree to surrender to the United States our titles in such forest reserve under the act of June 4, 1897, on the following basis: One hundred and eighty thousand acres of our said present holdings to be exchanged for nontimbered public lands lying south of the thirty-seventh standard parallel of latitude and south of the Tehichipa range of mountains, and the remainder of our lands in said enlarged reservation to be exchanged by us under said act of June 4, 1897, and amendments thereto, without any other restrictions whatsoever on the part of the Santa Fe Pacific Railroad Co., it being understood, however, that the company will not be expected to surrender any lands needed to be retained by it for railroad purposes, and such purposes being understood to include rights of way of all kinds, station grounds, pumping stations, dams, reservoir sites, stone quarries, deposits of cinders, gravel, or other material for ballast, and also other land needed for railroad purposes, but not including lands held solely for the timber thereon.

This proposition is made with the further understanding that, in case of its acceptance, the Government will, in every reasonable way, so expedite all necessary surveys and approval thereof and the issuance of patent to the railroad company as to enable said company and the undersigned holders of title under its grant to carry out this agreement.

Approved, and the Commissioner of the General Land Office will carry the above into immediate effect.

E. A. HITCHCOCK, Secretary.

Your petitioners respectfully beg leave to protest against the making of the order extending the limits of said reserves, as requested in the above agreement (the effect of which order, if made, will not be to extend the limits of the present reserves, but simply to consolidate them), for the following reasons:

First. There is no warrant or authority of law for the proposed action, either in the law of 1891 or elsewhere. The authority of the Executive in establishing forest reservations, as has already been pointed out, is limited to the public lands. If any order should now be made for the purpose of consolidating said reserve, it would operate and have effect only on private lands. The limit of the President's authority was reached, so far as these reserves are concerned, on August 17, 1898, when he set apart the even-numbered sections, or public lands, in the townships affected by the order. To go further at this time, and, as is proposed by the railroad company and its grantees, "extend the limits of said reserves so as to include all the odd-numbered sections" would be to clearly transcend the power granted by Congress. It is superfluous to state that your petitioners do not for a moment entertain the idea that the President of the United States would tolerate the merest suggestion of such action. At the same time, we recognize the possibility that an order accomplishing all that is purported in the agreement above set out, might be so skillfully worded as to appear to be entirely within the law of 1891, and yet relate entirely to lands over which the President has no jurisdiction under said law. For instance, an order might be framed ostensibly for the purpose of establishing exterior boundaries for the San Francisco Mountains Forest Reserves. The effect of such an order would be to make every acre of land within such boundaries a part of said reserves, and would give the owners of the grant lands therein an apparent right to relinquish their holdings under the act of June 4, 1897, and select other lands from the public domain in lieu thereof. Or an order might be framed for the purpose of creating a wholly new and larger reserve, including therein not only the present reserves, inclusive of the odd-numbered sections, but a sufficient additional area of public land to color the whole action with legality. Both such expedients, however, would be mere evasions of the law, and could only have the effect of permitting the grant lands to be relinquished and other lands to be selected in lieu thereof, a proceeding never for a moment contemplated by Congress in the act of June 4, 1897.

The act of June 4, 1897, is a remedial and beneficial statute. It was intended by Congress to operate for the benefit of the settler—the man who had acquired title to public lands under the homestead or other land law, who, finding himself surrounded by a forest reservation, hemmed in by its regulations and isolated because the settlement and

development of the region surrounding him had been arrested by the prohibition of settlement and entry upon the reserve lands, might wish to remove his home and family elsewhere. This law affords him an opportunity of doing so. Under it he may relinquish his quarter section or half section, as the case may be, to the United States, and in lieu thereof he may receive an equal area of public land elsewhere, regardless of the character of the land relinquished, or of the land selected in its stead, save only that it must be nonmineral. Congress never intended, in enacting this law, that the railroad companies, to which it had lavishly granted millions of acres of the public lands, should in effect secure an option on the choicest lands remaining. It granted them the lands contained in their original grant and none other. To now invite them to relinquish their holdings under the law of 1897 and exercise their choice of lands in lieu thereof would be such a perversion of the intent of Congress as would awaken the just indignation of the American people. It would be a heartless encroachment upon the rights and hopes of thousands of intending settlers as would stain the character of this Nation forever.

Second. No good or useful purpose can possibly be subserved by the consolidation of these reserves, nor can anyone possibly be benefited thereby save the Santa Fe Pacific Railroad Co. and its said grantees. That it will benefit them, and to an enormous extent, there can be no doubt, for the following reasons: First. The railroad company and its grantees own approximately 975,000 acres within the townships comprising said reserves. Of this amount fully 400,000 acres are entirely nontimbered or are partially covered with an inferior growth of "scrub" and are absolutely valueless as timber land. Such lands could not be sold to-day at 25 cents per acre; yet should this consolidation be effected, the railroad company and its grantees can sell the title to such lands at from \$3 to \$4 per acre, or, if they choose to do so, they may select any lands within the public domain in lieu thereof. It is true that as to 180,000 acres of such lands the railroad company must select nontimbered lands south of the thirty-seventh parallel in California, but there is absolutely no contractual restrictions as to the remainder.

Third. It is obvious, in view of the foregoing statements, that the forestry of this region will not be preserved or protected to any appreciable extent by the consolidation referred to, for the reason that, at the most, not more than 160,000 acres of timber lands will be secured. Against this it is only fair to assume that wherever possible the railroad company and its grantees will select timbered lands in lieu of those relinquished, and probably will thus secure much more timber than they surrender, so that, so far as the item of timber alone is concerned, the Government is almost certain to give more than it receives, aside from the great disadvantage it will suffer in the general character of the lands exchanged. Inasmuch as it is the declared policy of Congress that "no public forest reservation shall be established except to improve and protect the forest within the reservation, or for the purpose of securing favorable conditions of water flow," how futile it appears for the purpose of consolidating a reserve to buy nearly a million acres of almost worthless private lands to secure only about 160,000 acres of timber, and at the same time to throw open a million acres of the public forests to the option of the very men who have just surrendered a little more than one-tenth as much. If the Government should take the view that the proposed consolidation will tend toward securing "favorable conditions of water flow," we reply that inasmuch as practically all of the timber on the grant lands is certain to be cut under existing contracts and can not be prevented by consolidation, the question of water flow can not fairly be considered in this connection.

Fourth. The consolidation of this reserve would prove ruinous to Coconino County. It would immediately withdraw from its taxable resources about 670,000 acres of land which are now being taxed, and nearly twice as much that will become taxable if ever surveyed. Nearly 2,000,000 acres will thus be withdrawn from the assets of the county. And in addition to this, should stock be excluded from the reserve, which we have reason to think would be the case if it should be consolidated, the taxable values will be reduced to such an extent that bankruptcy will inevitably ensue. It must be remembered that sheep have already been excluded from nearly all the southern half of the reserves, and that, inasmuch as there are no available grazing lands in Coconino County outside of the forest reserves, exclusion from the reserves means exclusion from the county and a consequent reduction of the taxable property of the county. The apprehension as to whether they will not soon be excluded from the balance of the reserves and as to whether cattle will not be excluded also is already exercising a depressing influence upon the stock interests, as every stockman in the county realizes that should he be excluded from the forest reservation he must either break up his home and move to some other county or sacrifice his flocks.

Fifth. It is being urged by some that these reserves be consolidated upon the ground that the agricultural region of the Salt and Gila River valleys are suffering a shrinkage in the water supply required for irrigation, owing to the cutting of timber and the grazing of stock on these reserves. We have already pointed out that the cutting of timber can not be appreciably arrested by the consolidation, and as to the effect of stock grazing it may be said, first, that three-fourths of the entire area of these reserves drains north, or directly away from the valleys mentioned, the watershed being into the Colorado River, which is not available to the Salt or Gila valleys. * * * The only stream having its source upon these reserves is Oak Creek, and notwithstanding the operation of sawmills and the grazing of stock, which until March of this year has been unrestricted, its volume is unimpaired. * * *

THE GRAND CANYON FOREST RESERVE.

This reservation was created by order of President Harrison in February, 1893. It is nearly 60 miles square, and occupies the northern portion of Coconino County. There is no timber in it, excepting a narrow belt skirting the banks of the Colorado River for a distance, possibly, of 10 miles on either side.

The land grant of the Santa Fe Pacific Railroad Co. reaches into the southern portion of this reserve, and under a recent survey of that portion of the reserve covered by said grant it was determined that there were 366,000 acres of grant land therein.

The survey referred to was official and was ordered at the request of the railroad company. The company was careful to confine the survey to only its lands lying within said reserve for reasons that will appear hereafter.

Said company is endeavoring to secure patent for all its lands lying within said reserve, amounting, as has been suggested, to 366,000 acres. In order that it may relinquish said lands to the United States and select other and better lands in lieu thereof. Your petitioners desire to enter a most earnest protest against permitting such action for the following reasons:

First. The lands of said company ought never to have been included in said reserve, as, with the exception of possibly 10,000 acres, they are absolutely timberless and are naked, worthless desert lands, adapted

to no purpose save possibly a little agriculture here and there and for grazing at certain seasons. The watershed from them is to the north and directly away from the arable areas of the Territory. It is remote from any settlement and undesirable. Should the railroad company be permitted to exchange this large body of worthless lands for its choice of an equal area of the public domain elsewhere a great injustice will result not only to the people of Coconino County, but to the general public.

Second. As it is clear that these lands were improvidently included in said reserve, the error can easily be remedied by an Executive order restoring that portion of said reserve south of the northern boundary of the said land grant to the public domain. There is ample authority in law for such action; in fact, it is almost mandatory. The act of June 4, 1897 (30 Stat. L., 3436), provides that "No public reservation shall be established except to improve and protect the forests within the reservation or for the purpose of securing favorable conditions of water flow, * * * but it is not the purpose or intent of these provisions or of the act authorizing the establishment of such reserves to authorize the inclusion therein of lands more valuable for the minerals therein or for agricultural purposes than for forestry."

The act closes by bestowing upon the President a broad authority to restore to the public domain any area that may have been improvidently or mistakenly included within a forest reservation.

The grant lands referred to are valuable neither for timber nor because of their adaptation to favorable conditions of water flow, but are valuable both for their minerals and for agriculture, as grazing is held to be. The area in which they occur should therefore be immediately restored to the public domain, not only because said lands are clearly of the character forbidden by Congress to be included or permitted to remain within a forest reservation, but because their retention therein affords the railroad company an opportunity of relinquishing them to the United States and securing valuable lands in lieu thereof—lands that ought to be held for the homeseeker and the pioneer. Furthermore, if permitted to be relinquished, they will in consequence be withdrawn from taxation, and the county will thus lose the taxes on 366,000 acres of land for all time.

Your petitioners are able to show, even by the Government surveyors, who have recently surveyed these lands, as well as by other competent witnesses almost without number, the absolute truth of their statements, and a rigid investigation is most earnestly invited. We also, with equal earnestness, urge promptitude in whatever action may be taken, as we know the railroad company is striving to the limit of its power to secure the consummation of its proposed exchange before the Department of the Interior or the Executive shall have become fully advised as to the real situation. We urge these requests in the name of right and justice, in behalf of the homes and interests of the people of Coconino County, and in the interests of the people and the integrity of the United States, with an abiding faith in the high sense of justice and the distinguished honor which conspicuously characterizes the present Executive of this Nation and the heads of his executive departments.

For the several reasons aforesaid, your petitioners again earnestly but respectfully protest against the proposed consolidation of the San Francisco Mountains Forest Reserves, as well as the proposed relinquishment of the grant lands in the Grand Canyon Forest Reserve, believing that these matters would not only result in irreparable disaster to the people of Coconino County but to the county itself, and would from their very nature constitute transactions so questionable and so obviously against the rights and interests of the people, so contrary to law, to right, and justice, and so manifestly in the interests of powerful corporations as to array against them every dictate of the good conscience of those to whom this appeal is addressed. We therefore respectfully again urge that, before any action is taken, competent and reliable officials be sent to investigate the whole field, knowing that the result of such investigation can not fail to vindicate the position and the assertions we adhere to herein.

Very respectfully submitted.

J. C. PHELAN, Chairman,
T. E. PULLIAM,
GEO. BARBITT,

Supervisors of Coconino County, Ariz.

Britton & Gray, attorneys for the Santa Fe Pacific Railroad Co., to the Secretary of the Interior, June 13, 1902.

[A. T. Britton, A. B. Browne, Alex. Britton, Britton & Gray, attorneys and counselors at law, Glover Building, 1419 F Street NW.]

WASHINGTON, D. C., June 13, 1902.

Hon. E. A. HITCHCOCK,

Secretary of the Interior, Washington, D. C.

SIR: Referring to the recent conferences which you have so courteously extended to us with respect to the lands of the Santa Fe Pacific Railroad Co., lying within the Grand Canyon Forest Reserve in Arizona, we respectfully submit that in view of your conclusion not to reduce the area of the reserve and to relieve from suspension patenting to this company of its lands lying within said reserve the company is willing and does hereby agree to surrender to the United States its title to lands within such forest reserve under act of June 4, 1897, on the following basis:

One hundred and fifteen thousand acres of its present holdings to be exchanged under said act without any other restriction, and the balance of its present holdings, estimated at 260,000 acres, to be exchanged for nonmineral, nontimbered, vacant public lands of the United States lying south of the thirty-seventh standard parallel of latitude and south of the Tehichipa range of mountains, it being, however, understood that the company will not be expected to surrender any lands needed to be retained by it for railroad purposes; and such railroad purposes are understood to include rights of way of all kinds, station grounds, pumping stations, dams, reservoir sites, stone quarries, deposits of cinders, gravel, or other material for ballast, and also other lands needed for railroad purposes, but not including lands held solely for the timber thereon.

It is further understood that the department will, in every reasonable way, so expedite all necessary surveys and approval thereof, and the issuance of patents to the railroad company, as to enable said company to promptly carry out this understanding.

There being at the present time approximately 310,000 acres of company's lands surveyed, listed, and ready for patent, it is further submitted that the company may, upon the issuance of patents for this area, first select 205,000 acres of the nonmineral, nontimbered, vacant public lands within the limitations prescribed, and then be entitled to select 105,000 acres of unrestricted lands, without waiting for the acceptance of the survey of the balance of the lands within the reservation. Upon the completion of such survey, listing, and issuance of patent for the balance of said area, estimated at 65,000 acres, the com-

pany will then be entitled to first select 55,000 acres of the nonmineral, nontimbered, vacant public lands within the limitations prescribed, and thereafter to select the remaining 10,000 acres without restriction.

It having been demonstrated from the returns of the surveyors that there are small areas which are incapable of survey, it is further submitted that the area of same may be computed by the General Land Office by protracting the line of the adjacent surveys over the same, and that the railroad company will be entitled to list and have patented to it, as basis for relinquishment to the United States, such computed area.

Very respectfully,

BRITTON & GRAY,
Attorneys Santa Fe Pacific Railroad Co.

The Secretary of the Interior to Britton & Gray, attorneys for the Santa Fe Pacific Railroad Co., July 5, 1902.

DEPARTMENT OF THE INTERIOR,
Washington, July 5, 1902.

Messrs. BRITTON & GRAY,

Attorneys for Santa Fe Pacific Railroad Co.,
Washington, D. C.

GENTLEMEN: I have carefully considered your letter of the 13th ultimo, together with a report thereon dated the 30th ultimo by the Commissioner of the General Land Office, both relating to the exchange, under the act of June 4, 1897 (30 Stat., 36), of lands of said railroad in the Grand Canyon Forest Reserve in the Territory of Arizona for public lands of stated classes and location.

The proposal of the company named in your letter meets with my approval, excepting that I believe the railroad company should be required to designate, before entering upon the making of relinquishments and selections, the lands desired to be retained by it for railroad purposes, and to obtain approval thereof by the Secretary of the Interior. Without this modification the proposal of the railroad company can not be accepted, but if the proposal is modified as has been suggested it will be accepted by me, and directions will be promptly given for carrying the proposed exchanges into execution.

Very respectfully,

E. A. HITCHCOCK, Secretary.

The Secretary of the Interior to the Commissioner of the General Land Office, February 25, 1903.

DEPARTMENT OF THE INTERIOR,
Washington, February 25, 1903.

The Commissioner of the General Land Office.

SIR: Your favor of February 19, 1903, in the matter of the relinquishment of the Santa Fe Pacific Railroad Co. of the odd-numbered sections within the Grand Canyon Forest Reserve, Ariz., is at hand. In the arrangement made for the relinquishment of these lands by said company it was provided that the railroad company should designate, "before entering upon the making of the relinquishments and selections, the land desired to be retained by it for railroad purposes, and to obtain the approval thereof by the Secretary of the Interior." (See letter of July 5, 1902, to Messrs. Britton & Gray.) It is stated in your letter of the above date that the company has submitted its relinquishment of most of the lands within said reserve, with selections in lieu thereof, but has as yet filed no designation of the specific tracts within the reserve proposed to be retained by it for railroad purposes, and you forward a letter of February 16, 1903, from Messrs. Britton & Gray, as attorneys for said company, submitting a "preliminary designation" of the lands that may be reserved from relinquishment by the company, in the following terms:

"The Santa Fe Pacific Railroad Co. will not retain or reserve any lands within this reservation except such lands as may be found necessary to cover the right of way and necessary station grounds of the Grand Canyon Railroad."

In the opinion of the department, this may be accepted as a sufficient compliance with the requirement made in said departmental letter of July 5, 1902, and your office is accordingly so instructed.

Very respectfully,

E. A. HITCHCOCK, Secretary.

PHOENIX, ARIZ., September 9, 1913.

HON. HENRY F. ASHURST,

United States Senate, Washington, D. C.

DEAR SENATOR: Mr. A. T. Cornish and others of Winslow and Flagstaff and elsewhere have directed the attention of the commission to a situation existing in Navajo County which has been the subject of an examination by myself and concerning which I have written to the Secretary of the Interior, in accordance with a copy of my letter inclosed herewith. I think you are more or less familiar with the situation. If the subject is not clear in your mind, I believe a careful perusal of my letter to the Secretary, supported by reference to the map of Arizona, will make it so.

This matter is of more than usual importance, because of the fact that it bears upon a much larger question—that of the practice which has heretofore obtained of permitting the Atchison, Topeka & Santa Fe Railroad Co. to exchange its worthless lands lying north of the railroad in Navajo and Apache Counties for much more valuable lands elsewhere or for so-called "Moqui or Navajo scrip," which the company readily sells for \$2.50 per acre.

For your further information I am inclosing also a copy of my letter of this date to Senator SMITH. I sincerely trust that yourself and Senator SMITH and Mr. HAYDEN will give your particular attention to this subject and strenuously oppose the proposed exchange of lands belonging to the New Mexico & Arizona Land Co., as well as the proposed extension to the Navajo Indian Reservation.

Very truly, yours,

STATE LAND COMMISSION,
By MULFORD WINSOR, Chairman.

SEPTEMBER 8, 1913.

The honorable SECRETARY OF THE INTERIOR,

Washington, D. C.

SIR: It has come to the attention of the State land commission that there is pending in your department an application of the New Mexico & Arizona Land Co., successors to the St. Louis & San Francisco Railroad Co., to exchange certain odd-numbered sections of railroad grant lands in townships 21, 22, 23, and 24 north, ranges 15, 16, 17, and 18 east, Gila and Salt River meridian, now owned by the New Mexico & Arizona Land Co., for a like number of even-numbered sections within the area near Winslow, Ariz., and embraced in townships 18, 19, 20, and 21 north, ranges 15, 16, 17, 18, and 19 east, which was

temporarily withdrawn by Secretary's order November 18, 1904, under the first form of withdrawal authorized by the act of June 17, 1902 (32 Stats., 388), for the Little Colorado River project.

A portion of the land which the New Mexico & Arizona Land Co. wishes to exchange—that is to say, the west half of townships 21, 22, 23, and 24, in range 15 west—is included within the present boundaries of the Navajo Indian Reservation, while the balance of the area in which lie the odd-numbered sections proposed to be used by the said company as a basis for such exchange; that is, the east half of range 15 and ranges 16, 17, and 18 east, in townships 21, 22, 23, and 24 north, together with the corresponding townships in ranges 19, 20, and 21 east, in which the odd-numbered sections are owned by the Atchison, Topeka & Santa Fe Railroad Co., are withdrawn for the purpose of allowing Indian allotments. The State land commission is advised that the Commissioner of Indian Affairs has recommended that the application of the New Mexico & Arizona Land Co. for permission to make the said exchange be approved, and that the application only awaits the final ratification of the Secretary of the Interior.

The State land commission takes the liberty of directing your attention to this matter, in the hope that you will give it your serious attention, subjecting the aforesaid application to critical examination before ratifying the same. The commission urgently protests against the proposed exchange for the following reasons:

The lands proposed to be used as a base for the selection of lieu lands, which were acquired from the Government under the Atlantic & Pacific Railroad land-grant act of July 27, 1866 (14 Stats., 292), are of little value as compared with the lands which would be acquired by means of the exchange.

The New Mexico & Arizona Land Co. at the present time owns, by transfer from the St. Louis & San Francisco Railroad Co., the odd-numbered sections within the area in which it is now proposed to secure, by exchange with the Government, the even-numbered sections. If the said exchange were effected, the lands of the said company, which were granted and have been held in alternate sections, would thus be consolidated in a large body, greatly increasing the value of the company's holdings, increasing the opportunities for exploitation, and working to the injury of the State.

As before stated, the area within which the New Mexico & Arizona Land Co. proposes to secure the even-numbered sections was by Secretary's order of November 18, 1904, temporarily withdrawn under the first form of withdrawal authorized by the act of June 17, 1902, for the Little Colorado River irrigation project. This is evidence warranted by the facts of the existence of a feasible opportunity for the development of water and the reclamation of the tract which, by the proposed exchange, would be consolidated under the ownership of the New Mexico & Arizona Land Co. The exchange would thus give the said company the absolute control of the reclamation project in question and would enhance the value of the lands coming under the project to many times their present value and to many more times the value of the lands proposed to be used by the company as a basis for the exchange.

The State land commission is also informed that an effort is being made—and believes it to be a part of the general plan of effecting the exchange described, and of securing the issuance of a large additional amount of the so-called "Navajo base" scrip—to secure the addition to the Navajo Indian Reservation of townships 21, 22, 23, and 24 north, east half of range 15, and ranges 16 to 21, inclusive, which land was, on May 13, 1908, withdrawn for the purpose of Indian allotments. This proposal the State land commission also respectfully objects to, on the ground that the area already devoted to the Navajo and Moqui Indians is far greater than the needs of those Indians demand, and would effect no better purpose than the one above indicated—that is, than of effecting an opportunity for the exchange of lands desired by the New Mexico & Arizona Land Co., and the exploitation of the State of Arizona through the medium of another flood of so-called "Navajo scrip"—a species of exploitation from which this State has grievously suffered, and by means of which the United States Government has been shamefully imposed upon.

The State land commission, in conclusion, ventures to respectfully suggest, and recommend, in connection with the various matters above recited:

1. That the application of the New Mexico & Arizona Land Co. to exchange its lands in the townships named for other lands within the area withdrawn for the Little Colorado River project, or for any other land, be denied.

2. That the area withdrawn for the Little Colorado River project be restored to entry and selection, to the end that the State of Arizona and private individuals may have equal opportunity to develop the existing irrigation project, and to reclaim the lands coming under the same, on terms and conditions beneficial to the State and to settlers upon the land.

3. That the proposal to add to the existing area of the Navajo Indian Reservation be rejected, and that the townships withdrawn, on May 13, 1908, for the purpose of making allotments, be restored to entry and selection.

4. That the lands in townships 21, 22, 23, and 24 north, ranges 12, 13, 14, and the west half of 15 east, which were withdrawn for Indian allotments by Executive order dated November 14, 1901, be restored to entry and selection, to the end that the available portions thereof not allotted to Indians may be developed and settled.

Your attention is respectfully called to the fact that the frequent and oftentimes unwarranted additions to Indian reservations, and the withdrawal of large areas for long and indefinite periods for the purpose of making Indian allotments, and the exchange of valuable lieu lands for generally inferior lands within these Indian reservations, the additions thereto and the withdrawals therefor held under railroad land grants, have worked to the very great detriment of this State, and it is earnestly hoped that a recurrence of the scourge will, in the instance here noted, be prevented.

Yours, very respectfully,

STATE LAND COMMISSION,
By MULFORD WINSOR, Chairman.

WOMAN SUFFRAGE.

Mr. JONES. Mr. President, on June 13 last Senate joint resolution No. 1 was favorably reported from the Senate Committee on Woman Suffrage. It provides for the submission to the States of an amendment to the Constitution providing that the right to vote shall not be denied anyone on account of sex. That resolution is now on the calendar and ought to be considered and acted upon at once. Congress is in session. The Senate is not considering any legislation. We are adjourning three days at a time while this important legislation awaits con-

sideration. A short time ago petitions were presented from every State in the Union asking action upon this resolution one way or the other. Why not consider and dispose of it without delay?

No one can say that there is no demand for its passage. Millions of voters from the Pacific and Rocky Mountain States, where the broad expanse of territory and almost boundless horizon create a breadth of vision and desire for political liberty that take in the entire continent, have asked for its passage. The States of the East and the Middle West are agitated over it and thousands of their citizens ask us to pass it. Political parties representing millions of male voters have declared in favor of it, and farmer and labor organizations with millions of members have indorsed it. Under these circumstances we should pass this resolution, whether we believe in the merits of the proposition or not. While I do not think we are required to pass resolutions submitting amendments to the Constitution simply because the same may be asked for by a considerable number of citizens, I do believe that when there is a widespread and continued demand for such a resolution we should submit the same and give the people an opportunity to say in the method prescribed by the Constitution whether or not that instrument shall be amended. It is a right that belongs to the people, and any proposition that will command the support of three-fourths of the States of the Union can be safely incorporated in that instrument as a part of the fundamental law of the land.

There can be no reason for not acting upon this resolution except that inertness which characterizes a body like this when it does not desire to see any radical change made, and yet is afraid to oppose it, and therefore compromises by doing nothing. There is much complaint because of the difficulty of amending the Constitution, and a demand is growing that an easier method should be devised. We ourselves are largely responsible for this. We should be more responsive to the wishes of the people. When the provision was inserted in the Constitution providing for the submission of amendments upon the vote of two-thirds of the Members of each House of Congress it was not contemplated that we would disregard the desires of the people by refusing to submit such resolutions. It was not supposed that we would need to be practically forced to submit them. Propositions for which there is a widespread demand should be considered and discussed in Congress and then submitted to the people, who can be fully trusted to pass upon them wisely and well.

I desire to say that in the remarks I have just made I do not intend to criticize the chairman or the members of the committee who reported this joint resolution. I know that the chairman is doing everything he possibly can to secure its consideration and that he is earnestly in favor of it. I felt that I ought to make this statement, for fear some one might think I was intimating that he is not doing his duty in connection with the matter. I know that he is.

Mr. ASHURST. Mr. President—

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). Does the Senator from Washington yield to the Senator from Arizona?

Mr. JONES. Certainly.

Mr. ASHURST. I must thank the Senator from Washington very heartily. If he will permit me to say so, he has correctly stated my position.

I happened to have the honor of being delegated by the committee to write and submit this report. I have twice in the Senate asked unanimous consent that the Senate proceed to the consideration of the joint resolution, and objection was made. If my friend the Senator will permit me further, I will say that at the earliest opportunity, as soon as a majority of the Senators are present, I expect to move that the Senate proceed to the consideration of the joint resolution.

Mr. JONES. I am very glad the Senator has made that statement. I knew that was his intention, and I know he will take advantage of every opportunity that presents itself to bring up the joint resolution for consideration.

Not only is there widespread demand for the passage of this resolution, but the merits of the proposition justify not only our favorable action but its adoption by the people.

The demand for woman suffrage is but another step in the progress of woman to an equality with man that has been going on through the centuries and which we can no more stop than we can prevent the ebbing and flowing of the tides. It will be consummated just as surely as time rolls on. Barbarism and savagery mark woman's lowest condition and greatest subjection.

This results largely from her physical weakness and her natural docility. With education, refinement, and civilization has come her gradual emancipation until to-day she has most

of the civil rights of man. She can hold property, engage in business, sue and be sued, practice the professions, hold, sell, and devise real estate, and do practically everything that man can do. In many of the States marriage does not alter her civil or business rights. She can carry on business in her own name and hold, manage, and dispose of real and personal property. These rights, however, have come to her slowly and grudgingly and in the face of direful predictions of disaster and injury to her and to society, but they have come by the very force of civilization and the gradual evolution of thought and feeling that recognizes the mental and moral attributes of human nature rather than the physical, and none of the disasters predicted have resulted.

These privileges are the restoration by man of rights usurped by him in savagery and barbarism. Along with these civil rights have come political rights and privileges which man has permitted her to exercise from time to time. In most of the States of the Union she has been permitted to vote upon certain matters, notably school questions, and to hold certain offices, notably offices relating to the public schools. In all positions of responsibility she has shown her worth and capacity, whether in business or professional life, and she has discharged all the political duties that she has been given the power to discharge with equal, if not greater, fidelity and ability than man. If she is competent to vote on school matters, surely she is competent to deal with other subjects which are of really less importance. If she is capable of voting upon city or township matters, then why not on State matters? And if upon State matters, then why not upon national subjects?

We have a provision in the Constitution that prevents us from refusing to her the right to vote on account of previous condition of servitude. We can not deny her this right on account of color. Why should we be permitted to prevent her voting because of her sex? Do men have the right to vote because of their sex? What peculiar sexual difference is there that entitles man to vote and prevents woman? Can anyone point out any such peculiarity? No one has ever done so. There is none. If woman had always been the stronger physically and had alone exercised the right to vote, as she no doubt would, what peculiar attribute of sex could be urged in behalf of male suffrage? None whatever. The exercise of the voting privilege does not require any special sex qualification, and there is no justification for discrimination on that account. If this be true—and no one can deny it—there can be no ground for opposition to the adoption of this resolution and of the amendment when submitted.

I have heard much of the discussion on this subject. I have studied the hearings and the speeches made in opposition to this resolution and fail to find any substantial argument against it based upon sex or otherwise. One objection urged is that to confer franchise upon women would be to bring them into politics. That is not peculiar to women, and could with equal force be urged against man suffrage. There is just as much reason for denying men the right to vote on this ground as there is for denying women. In fact, if all women voted to-day and men did not there would be some valid argument against granting the franchise to men in order to keep them out of politics. It could well be urged that they are not so refined, so sympathetic, or so instinctively right as the women, and to permit them to enter into politics would degrade politics instead of elevating it.

Mr. CLAPP. Mr. President—

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Minnesota?

Mr. JONES. Certainly.

Mr. CLAPP. If the Senator will yield for a moment, while perhaps it is not germane to the argument, it is a fact that in the early history of this country, in many of the States, ministers of the gospel were forbidden to hold office, upon the theory that politics was so degrading and so corrupting that the minister could not withstand its degrading effects. It was not upon the theory that the church would dominate politics, but upon the theory that politics would debase, degrade, and lower the dignity of the minister of the gospel.

I thought it might be of interest in this connection to make that statement.

Mr. JONES. It certainly is.

It could be urged with much force that they are too busy to give proper attention to political questions, and it would be very difficult to meet such objections. Real, genuine politics will elevate woman and woman will elevate practical politics. For woman to study the theories, problems, and necessities of government can not help but strengthen and broaden her, and for her to bring her gentle and refining influence into practical politics can not help but make political methods and practices more open, clean, honest, reputable, and beneficial.

Another objection is that many men do not vote and that many women would not vote. Such an objection is not based upon sex, but upon the failure of both men and women to do their duty. This would be a good argument for denying the right to vote to some men, but it is no argument for denying to all women the power to discharge properly the duties of citizenship. Because some men fail to discharge their duty as citizens is no good reason for refusing to permit the women to discharge their duties. I know that the indifferent voter is responsible for many of the ills of practical politics, and I would like to see some way devised to punish all who neglect this great civic duty. Anyone who neglects to vote at an election should be disqualified from being a candidate for any office at the next election, or subject to a fine, or some other penalty should be imposed upon him for neglecting his duty as a citizen. It is wholly without justification, however, to punish those who want to do their duty because others neglect to do theirs.

Others object to this proposition on the ground that it will add to the already large ignorant class of voters. Such an objection is not based upon sex, but upon the individual capacity or individual qualification and applies to the men the same as to the women. It is true that it would increase the ignorant class of voters, but those who make this objection overlook the much greater increase to the patriotic and intelligent class of voters that would be made by giving the women the power to exercise the duties of citizenship. Male citizens over 21 years of age numbered in 1910 26,999,151. Of these, 2,273,803 were illiterate, leaving 24,725,348 educated male voters. Our female population over 21 years of age numbered about 24,000,000, and conceding that 2,000,000 of these were illiterate, we find that while you add 2,000,000 illiterate voters to the 2,273,000 illiterate male voters, you will add 22,000,000 of intelligent voters to the more than 24,000,000 educated male voters. It certainly is a wise thing to add to the electorate ten times as much intelligence as ignorance, and it is most unjust to deny 22,000,000 educated, intelligent women the opportunity to fulfill their duties as citizens in order to prevent 2,000,000 ignorant women from exercising the duties of citizenship. No, no; let us add to the intelligent, patriotic men the intelligent, faithful, educated, conscientious, refined women and the influence and power of the two will be better able to solve the problems of government than the one alone.

It may be that the right to vote should be restricted. I do not say that it should be, but if it is, all who are affected should have an equal voice in restricting it. If you say that the woman who can hardly speak our language and does not understand our institutions and principles of Government should not vote, why not say that the man who can hardly speak our language and does not understand our principles of Government shall not vote? Permit the women to have a potential voice in affairs of government and the necessary restrictions will be made to prevent not only undesirable women, but undesirable men from voting. In the last analysis the argument against woman suffrage is an argument for the restriction of the right of suffrage for men as well as for women, and indicates that woman suffrage would be a good thing in order that the indifferent and undesirable voter might be eliminated.

That women have great influence now is strangely enough urged as an objection to woman suffrage. She has great influence now, but give her the opportunity to discharge her duty as a citizen and she will not only have the influence she now has, but she will have a power which she does not now possess. We are not asking a right or a privilege for women in the passage of this resolution and the adoption of this amendment, but we are asking that they be given an opportunity to discharge fully and effectively the duty which they feel rests upon them as citizens. They see and appreciate the duties and possibilities of citizenship more than ever before and fully realize the inefficiency of their means of discharging those duties. They do not desire to threaten the men or to coerce them, but they want to do their own duty side by side with men in the solution of those problems which would especially affect the home and home life and the lives of their children and those they love. They may not care so much about the tariff, the currency, the merchant marine, or the holding of the offices, but they do care what the hours of labor are, under what conditions men and women live and work, what wages they receive, how the children are cared for, what the sanitary conditions are, and what goes to bring real comfort and happiness to life. This is what the thought, the advanced thought, of the times demands.

Men themselves are turning their attention to these questions more than ever before. The cry of humanity is being heeded in addition to the needs of commerce and business. Why not join the influence of women with the power to make that influence effective and put that force with man's force for good? Many women have the time and the inclination to investigate,

study, and solve the great social problems of the day, and they would engage much more earnestly in this work if they had the incentive that comes from the power of carrying out what they believe should be done.

Some oppose this proposition because they do not want the women to go to the polls to vote on account of unfit conditions or undesirable surroundings. If this objection has any force at all, it shows that the male sex are unfit to have charge of governmental affairs. If voting places are so undesirable that women should not go there, the men are to blame. Such conditions would not be permitted even if the antisuffragists had the power to change them. If there is disorder at the polls, it should be suppressed, and it will be suppressed if women have the power to do it. Men themselves should not permit disorder or be required to vote in disreputable places, and it will be of inestimable benefit to them to change such conditions if any exist. Such an objection is more of an indictment of male suffrage than an argument against woman suffrage, and it also admits the need of some elevating influence that would be supplied by woman suffrage. As a matter of fact, the presence of women at the polls has had and does have a good effect. But few men are so degraded that they will not show proper respect to woman and womanhood, and there are but few who would not resent quickly and vigorously any mark of disrespect to any woman visiting the polls for the purpose of discharging her duties as a citizen.

It is claimed that women do not vote where they have the right to do so. This objection is not peculiar to the sex, but can be applied to men as well as to women. It can not be shown, however, that women do not vote as generally as men, and it can be very safely assumed that those women who do vote have informed themselves upon the issues involved and vote even more intelligently than the men. As a matter of fact, the percentage of women voting is substantially the same as that of the men, and wherever her vote is proportionately smaller than that of the men it is because the more ignorant and undesirable class do not vote. This fact has been actually demonstrated in different localities and overthrows another objection that is urged, to wit, that the vicious and undesirable element will vote while the refined and educated do not. The contrary is true.

Another objection is urged to the effect that if a woman votes she will be expected to discharge all the public duties imposed upon men. There is no force to this objection. Not all male voters are held to the same duties and responsibilities. Some are excused from serving on juries for various reasons and others are excused altogether. Some men have to pay poll taxes; others are excused. Some men can enlist in the Army or Navy and others can not. These matters are all regulated now, and no one charges discrimination, and there is no reason why men and women can not make such exemptions as may be deemed wise by all.

Another objection made is that men and women are different mentally, physically, and temperamentally. This is true, but instead of being an argument against woman suffrage it is the strongest possible argument for it. Laws, whether made by men or women or by men and women, must deal with women as well as men, and these very differences make it impossible for men alone to legislate properly in regard to those whose needs they can not fully appreciate. Only woman can fully realize the conditions and needs of women in many lines of work, and her womanly knowledge, influence, and power combined with man can far better solve many of our legislative problems that must affect men and women than man alone.

Another objection is that it will break up the home. This is absolutely without foundation and is contrary to experience. As a matter of fact it strengthens home ties and makes more of a community of interest between the mother and son, brother and sister, and husband and wife, and develops a higher citizenship and sweeter companionship in both.

Will woman suffrage lessen man's respect for or chivalry toward woman? Not at all. It has not done so where tried, and, if it should do it, it would be a reflection on the men and not on the women, and would show the necessity of inculcating in men a higher regard for the proper discharge of the duties and responsibilities of citizenship. The man whose respect and regard for woman is lowered because she discharges her full duty by using her power for good is lacking in real manhood and demonstrates his own unfitness for exercising the franchise and furnishes a strong argument for restricted suffrage to begin with the male and not with the female.

No objection can be urged on the ground that woman is less educated than man. She is practically his equal in this respect. In 1910 the percentage of illiteracy of those over 10 years of age was for males 7.6 per cent and for females 7.8 per cent. In all the States, except Colorado, having woman suffrage the

percentage of female illiterates is less than males. In Washington the percentages are as follows: Females, 1.8 per cent, and males, 2.1 per cent; Oregon, females, 1.4 per cent; males, 2.2 per cent; California, females, 3.1 per cent; males, 4.2 per cent; Utah, females, 2.2 per cent; males, 2.7 per cent; Wyoming, females, 2.5 per cent; males, 3.7 per cent; Idaho, females, 1.6 per cent; males, 2.6 per cent; and Kansas, females, 2.1 per cent; males, 2.3 per cent. Not only is she equally fitted for full citizenship from an educational standpoint, but the education man receives comes largely through her. In the year 1910-11 there were 533,606 teachers in our public schools, and of these 423,273 were women. What justification is there for preventing those who prepare our boys not only for business but for citizenship from doing their full duty as citizens? It would seem not only just to them, but a wise provision for the efficiency, stability, and perpetuity of the Government itself to give to them the full powers of citizenship. They would be better teachers and better citizens. Mrs. May Wright Sewell, a teacher, expressed this idea most forcibly and eloquently:

It is from my point of view—and I speak with knowledge of my profession and with an abiding interest in it, an abiding conviction that it is the most influential, and consequently should be the most responsible of all professions pursued in our country. From my point of view it is utterly impossible, whatever the patriotism, whatever the ardent love of country with which women shall be filled, that they shall teach the history of the country and the principles of its Government—national, State, municipal—with the same intelligence and with the same interest and with the same sense of conviction that they could do it were they enfranchised. It is also quite impossible that the growing lads and the maturing young men who are being taught these subjects by women all over the United States shall listen to the instruction, of however high a character, proceeding from the lips of disfranchised with the same respect that they would listen to it proceeding from the lips of the enfranchised.

I hope you realize the great waste of which our country is guilty, not only in placing the instruction of our citizens with a disfranchised class but also in the expenditures of such vast sums of money in the education of a disfranchised class. It is true that all of the arguments are that the public-school system—the most democratic of all our institutions and equally democratic in all parts of our country, and almost the only institution that is equally so North and South, East and West—that great democratic institution is based upon the necessity for an intelligent citizenship. And millions of dollars are contributed to the support of public schools and agricultural colleges where women also study; even law schools, where women also study; medical colleges, where women also study; State universities, where women study on equal terms, study the same subjects, pass the same examinations, are endowed with the same degrees, are certified to represent the same education; but they can not bring their educated powers to bear upon questions of government, the sole method by which they can directly pay the expense of their education back to the Government which has paid for their education. This is a tremendous waste.

The opposition says that this amendment would take away the power of the States to regulate or restrict suffrage within its borders, and that no State should be deprived of that power. It simply says that the right to vote shall not be denied on account of sex. That is all. It puts into law the proposition which no one will have the hardihood to deny, and that is that intellectually, mentally, and morally women are the equal if not the superior of men. Any restrictions based upon intelligence, education, moral fitness, ownership of property, or anything of that kind are still within the power of the State and leave abundant power in it to make full protection of all its interests. This is not a question solely for the State. It is not solely for the benefit of the woman. The Nation is interested in it. We all are interested in it. I am not for it so much because the women want it, but because of the good it will be to the women, to the State and the Nation, and to humanity. I want it given to them as a benefit to them, to me, to all of us.

Conditions in the East are different from what they are in the West, and this is urged as an objection. It is said that the population of the large cities presents difficult problems and these would be rendered more difficult. I grant that there are difficult problems, but I do not grant that they would be rendered more difficult. I think this would help in their proper solution. The problems here are not so much problems of politics in the narrow sense. They are the problems of humanity, not so much problems of graft and dishonesty but problems of housing and decent, healthful living. These are problems in the solution of which we need the help and influence and power of women, and give them the right to enforce their influence and their opinions, and you will find many of the slum, tenement house, and alley problems being solved in such a way as to bring happiness to thousands who now merely exist. You need not tell me that the poor women who are to-day living in squalor, poverty, and vice will not welcome relief from such conditions and generally give their aid and assistance in alleviating such conditions when they are made to feel that there are those who are earnestly desirous of helping them. The East needs this powerful influence for good more than the West.

Mr. President, there is really no substantial objection that can be urged to the passage of this resolution and to the adoption of this amendment. Every objection that is urged can be urged

with greater force against male suffrage and has no force in sex distinction. It is most difficult to argue a proposition against which no valid objection can be urged. It is like fighting wind-mills. One good woman, opposing woman suffrage, says:

I want her to be a good home maker, a good mother, and a loyal, intelligent, active citizen.

So do we all; and to give a woman the power to discharge the duty of good citizenship will assist her in making not only her home better but other homes better; it will make her not only a good mother but enable her to be a more efficient mother, and as an example an inspiring one to her children, and enable her to protect them from pitfalls over which she now has an influence but no power, and it certainly will make her not only a loyal, intelligent, and active citizen but it will make her a powerful one and thereby stimulate her loyalty and activity. All this can be done without the loss of any of her womanly attributes or inspiring influences. In fact, this power to discharge the duties which she is beginning to realize more and more will make her more womanly, more inspiring, and more companionable than ever before—a better wife and a better mother—and instead of spending so much of her time in the frivolities of the day more of them will spend more of their time in carrying out the real purposes of every human life.

Never was a class so well fitted by intelligence, education, capacity, refinement, lofty motives, high aspirations, and native ability to receive the full power to discharge the duties of citizenship in a great nation as are the women of the United States. They demand this power and are entitled to it, not as a special privilege, but as a well-earned and well-deserved right.

TAX ON WINE SPIRITS OR GRAPE BRANDY.

Mr. POMERENE. Mr. President, during the pendency of the present tariff bill before the Finance Committee I had the privilege of suggesting an amendment providing for the repeal of what are known as the free-tax privileges relating to the use of wine spirits. That amendment as it was passed by the Senate is known as paragraph 254. It contains three propositions—first, the repeal of the free-tax provision of the law of October 1, 1890; secondly, it provides a tax upon so-called spurious or pomace wines; and, thirdly, it attempted to fix the amount of sugar and water that might be added to pure grape juice in the process of what is known as the amelioration of wine.

It will occur to the Senate that there are two principal features—one the taxing or revenue feature, the other the pure-food feature—in this bill. As it occurs to me, there is no room for an honest difference of opinion as to what Congress should do respecting the revenue features of this measure. As to the pure-food provisions, there is room for doubt; and this was realized by the members of the Senate Finance Committee in the last days of the consideration of the bill in Committee of the Whole, when the senior Senator from Missouri [Mr. STONE], who then had charge of the bill on the floor, said, among other things, with respect to this measure:

I am frank to say that I am not by any means satisfied with this provision myself; but the subcommittee, because of the press of business here, desiring to get the bill into the Senate and into conference, determined that it would not take the time necessary to go into this matter thoroughly—which perhaps would require several days—and that this provision would be offered by the committee and agreed to by the Senate in order that it might go into conference. In the interval the subcommittee will thoroughly go into the subject.

With this assurance I contented myself with not occupying the time of the Senate in discussing the facts relating to this provision. After the matter had gone to the conference, in my temporary absence from the Capitol, I was advised, not officially, however, that the conferees had decided to eliminate this provision entirely from the tariff measure. I had reason to believe that some opportunity would be given for the presentation of my views before the conference committee if there was to be adverse action, but it seems that the committee in their wisdom thought that they could not permit hearings of any kind, and with that I find no fault.

I was more than surprised to learn that though there is some doubt as to whether this measure may provide the necessary revenue the conference would be willing to strike out of the measure this provision which meant at the least from \$7,000,000 to \$8,000,000 per annum.

And now I desire to take a few minutes of the time of the Senate to explain the provisions of this amendment, for the reason that if the conference report should eliminate this provision I shall, with the permission of the Senate, ask Senators to instruct the conferees on the part of the Senate to insist upon this Senate amendment.

The provisions of the sweet-wine law are contained in the tariff act of October 1, 1890, in sections 42 to 49. I ask leave to print as a part of my remarks sections 42 and 45, which have

direct reference to the phase of the question which I am about to discuss.

The PRESIDING OFFICER. Without objection, it is so ordered.

The sections referred to are as follows:

SEC. 42. That any producer of pure sweet wines, who is also a distiller, authorized to separate from fermented grape juice, under internal revenue laws, wine spirits, may use, free of tax, in the preparation of such sweet wines, under such regulations and after the filing of such notices and bonds, together with the keeping of such records and the rendition of such reports as to materials and products, as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, so much of such wine spirits so separated by him as may be necessary to fortify the wine for the preservation of the saccharine matter contained therein: *Provided*, That the wine spirits so used free of tax shall not be in excess of the amount required to introduce into such sweet wines in alcoholic strength equal to 14 per cent of the volume of such wines after such use: *Provided further*, That such wine containing after such fortification more than 24 per cent of alcohol, as defined by section 3249 of the Revised Statutes, shall be forfeited to the United States: *Provided further*, That such use of wine spirits free from tax shall be confined to the months of August, September, October, November, December, January, February, March, and April of each year. The Commissioner of Internal Revenue, in determining the liability of any distiller of fermented grape juice to assessment under section 3309 of the Revised Statutes, is authorized to allow such distiller credit in his computation for the wine spirits used by him in preparing sweet wine under the provisions of this section.

SEC. 45. That under such regulations and official supervision and upon the execution of such entries and the giving of such bonds, bills of lading, and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, any producer of pure sweet wines as defined by this act may withdraw wine spirits from any special bonded warehouse free of tax in original packages in any quantity not less than 80 wine-gallons, and may use so much of the same as may be required by him, under such regulations, and after the filing of such notices and bonds and the keeping of such records, and the rendition of such reports as to materials and products and the disposition of the same as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, in fortifying the pure sweet wines made by him, and for no other purpose, in accordance with the limitations and provisions as to uses, amount to be used, and period for using the same set forth in section 53 of this act; and the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is authorized, whenever he shall deem it to be necessary for the prevention of violations of this law, to prescribe that wine spirits withdrawn under this section shall not be used to fortify wines except at a certain distance prescribed by him from any distillery, rectifying house, winery, or other establishment used for producing or storing distilled spirits, or for making or storing wines other than wines which are so fortified, and that in the building in which such fortification of wines is practiced no wines or spirits other than those permitted by his regulation shall be stored. The use of wine spirits free of tax for the fortification of sweet wines under this act shall be begun and completed at the vineyard of the wine grower where the grapes are crushed and the grape juice is expressed and fermented, such use to be under the immediate supervision of an officer of internal revenue, who shall make returns describing the kinds and quantities of wine so fortified, and shall affix such stamps and seals to the packages containing such wines as may be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury; and the Commissioner of Internal Revenue shall provide by regulations the time within which wines so fortified with the wine spirits so withdrawn may be subject to inspection, and for final accounting for the use of such wine spirits and for rewarehousing or for payment of the tax on any portion of such wine spirits which remain not used in fortifying pure sweet wines.

Mr. POMERENE. I wish to say in passing that prior to the enactment of the tariff law of 1890 wine spirits, or grape brandy, as it is commonly called, was subject to a tax of 90 cents a gallon. Some years later Congress increased the tax to \$1.10 per gallon. Some of the Californians came to Congress with the representations, as I have been informed by the Bureau of Internal Revenue, that the Government was not very well provided for the proper inspection of the distilleries of wine spirits; that some illicit producers of sweet wine were using the wine spirits free of tax; and this placed the legitimate users and producers of sweet wine at a disadvantage, and they thought that all should be placed upon a common footing and be given the wine spirits free of tax.

Again, it was said that with a little encouragement of this kind, with the advantages of climate and soil which they had in California, a sweet wine could be produced for table use which would compete with the product of the Old World. A Representative from the State of California in 1890 introduced a bill providing for the use of these wine spirits free of tax. It was referred to the Ways and Means Committee of the House, was incorporated into the bill as reported back to the House, and was later passed by the House. It then came to the Senate and was referred to the Finance Committee. The Finance Committee reported the bill to the Senate and eliminated from it all of its free-tax provisions. On the floor of the Senate Mr. Aldrich, then a Senator from Rhode Island, asked the adoption of the amendment of the Finance Committee. At that moment a Senator from California—Mr. Hearst—arose and suggested that he desired to offer certain amendments. He was assured by the Senator from Rhode Island that those amendments would be taken care of in conference. The bill passed the Senate with these provisions eliminated. The con-

ference committee reported the bill back with the House provisions reinserted into the measure. There was no discussion of the merits of the provisions of that bill, as I have been informed by those who have thoroughly examined the RECORD, either in the House or in the Senate. So, as a result of that legislation, the California sweet-wine producers were given grape brandy, or wine spirits, free of tax.

Now, when it is sought to restore the tax upon wine spirits the provision of the pending bill is, as I have been unofficially advised, to be thrown out without any further consideration. Hence, it seems to me that it is quite appropriate that I place the facts before the Senate for the benefit of those who have not had the opportunity to investigate the subject.

Why do I say that this was for the benefit of the California wine producer? I desire to call your attention to that part of section 42 of the law which limits the class of wine producers who may have this advantage. Note the language:

That any producer of pure sweet wines, who is also a distiller, authorized to separate from fermented grape juice, under internal revenue laws, wine spirits, may use free of tax, in the preparation of such sweet wines, * * * so much of such wine spirits so separated by him as may be necessary to fortify the wine for the preservation of the saccharine matter contained therein.

You will note that under the provisions of this section it is only "the producer of pure sweet wines who is also a distiller" who has this privilege. Now, note further. Section 45 provides for the taking out of bond of wine spirits by "any producer of pure sweet wines as defined by this act." Later is this provision in the same section:

The use of wine spirits free of tax for the fortification of sweet wines under this act shall be begun and completed at the vineyard of the wine grower where the grapes are crushed and the grape juice is expressed and fermented.

So, as I construe the provisions of this act, in order that a man may have the privileges of it he must be first a distiller of wine spirits; and, secondly, the use of the wine spirits must be begun and completed at the vineyard of the wine grower.

It now turns out that nearly all of the large sweet-wine producers of California have their own distilleries, and their wineries are at their vineyards; but when it comes to the wineries in the States east of the Rocky Mountains, as in Missouri and in Ohio, the wineries are usually in the towns and the grape growers have their vineyards in the country. In Ohio they are scattered along the shore of Lake Erie and upon the islands of the lake. So when these wine producers desire to make the pure sweet wine they are obliged to pay for the wine spirits which they use, or the neutral spirits which are used by some of them, a tax of \$1.10 per gallon.

Later, I think in 1896, a nominal charge of 3 cents a gallon was made by the Government under an amendment of the law for the use of these wine spirits. It, however, is contended by some of the Californians that we, who take the view of the law that I have expressed, have improperly construed it. Under an opinion which was given by the Internal Revenue Bureau, one of the ex-Commissioners of Internal Revenue, the one who immediately preceded the present commissioner, made the statement before the Finance Committee that prior commissioners had construed this law to mean that, if the owner of a winery would plant six grapevines about his winery, his winery would be at the vineyard within the contemplation of this act, and therefore he could take his grape juice from other vineyards far away, and unlimited in extent almost, to his winery, and have the privilege of getting the wine spirits necessary for the fortification free of charge, except the 3 cents a gallon. Such a construction of the law needs no comment. The lawyer who would so construe it ought to be disbarred because of his incompetency.

Now, what do we understand by the fortification of wine? After the juice is pressed from the grapes—I am referring now especially to the grape juice of California—and after it has been fermented to the desired extent, wine spirits or alcohol of some kind must be added in order to prevent further fermentation.

In the grape juice of California there is about 26 per cent of sugar. It is usually fermented down until there is about from 4 to 8 per cent of sugar. Then, there can be added to it wine spirits to the extent of 14 per cent free of tax, save the 3 cents a gallon. If these producers of sweet wine were charged at the same rate that other users of wine spirits are charged, they would have to pay \$1.10 a gallon; they are now therefore enjoying a legislative privilege of \$1.07 a gallon for every gallon of wine spirits they use.

In order that the Senate may be advised as to the extent of this privilege, I find, by reference to the report of the Internal Revenue Bureau, that in 1910 the producers of sweet wine used 4,888,445 gallons of wine spirits in fortifying their wine; in 1911, 5,101,517½ gallons; and in 1912, 6,322,303½ gallons. I

have before me a letter from the present Commissioner of Internal Revenue, under date of June 9, 1913, in which he says that—

Up to the present fiscal year the amount of tax remitted under this law was \$65,702,601.69, and during the last fiscal year of that period the tax so remitted (\$6,954,534.29), less the amount assessed to cover the cost of official supervision, exceeded by \$4,070,977.71 the total amount of revenue derived from spirits distilled from fruit, including grape brandy.

What is the present situation? Usually the sweet wines are fortified so that they contain about 22 per cent of pure alcohol. Under the provisions of the wine statute, to which I have referred, they can add 14 per cent of pure wine spirits without paying any tax except the 3 cents a gallon.

Now, what comes of the proposition that they were going to produce a pure table wine which would compete with the foreign wine? The fact is that they have so large a percentage of alcohol in their sweet wine that it is unfit for table use, and it is selling in competition with liquors of all sorts because of its high alcoholic content. With 22 per cent of pure alcohol we have 44 per cent proof. Whisky has 50 per cent of pure alcohol, or 100 per cent proof; in other words, there is one-half as much alcohol in the pure sweet wine produced in California as there is in whisky, so that the lady who desires to take her glass of sweet wine is in fact getting more alcohol than the man who drinks his highball. I never knew until I got to investigating this subject why it was that I have heard it said that sweet wine was so intoxicating.

Bear in mind, further, this fact: We tax beer at \$1 a barrel. The average alcoholic content in beer is about 4 to 5 per cent. We tax whisky \$1.10 per proof gallon. The alcoholic content in whisky is 50 per cent, but we allow the producer of pure sweet wine, with an alcoholic content of not exceeding 24 per cent, to be the favorite of the law.

We have permitted that in this country for 23 years under a statute which was passed by Congress and was not even discussed upon the floor of either House of Congress, and now when the matter is called to the attention of the Congress it is again to be thrown out of the bill. Why? It is said, as I understand, that there has not been time sufficient to consider this question properly. I concede that under conditions as I know them here in this country, when it comes to the question as to what shall be a pure wine or what shall be a proper sweet wine or a proper dry wine or a proper sparkling wine there is room for difference of opinion, and it is a matter, in my judgment, that should be taken up by the Pure Food Bureau or the Internal Revenue Bureau, or both; but when it comes to the question as to whether we shall have six or seven million dollars of revenue from these wine producers, in my humble judgment there is no room for any difference of opinion. If the conferees insist upon throwing this provision out of the bill and allow the producers of pure sweet wine to continue to have this privilege by paying 3 cents a gallon, they owe an apology to every brewer and to every distiller because of the favoritism that they are going to continue under the law to the producers of pure sweet wine.

But it is said—it was said on behalf of some very rich sweet-wine producers in California who came here like every other man comes who wants a special privilege and hides himself behind the poor farmer—that you will ruin the poor farmer if you place this tax upon sweet wines. Well, every Senator and every Representative has heard that excuse before when men came for special privileges. In the State of California they pay the poor farmer \$5 a ton for grapes at times; the average price is about \$8 a ton; and now they are paying \$10 and as high as \$12 a ton, according to an advertisement in one of the California papers which I have here. This increased price comes about at this particular juncture by reason of this fact: When this amendment was first considered it was suggested that it should go into effect as of January 1, 1914. If it should go into effect then, the producer of pure sweet wine which was made before January 1, 1914, would have his wine spirits free; and the sweet wine that was made before January 1, 1914, would have an advantage over the pure sweet wine produced thereafter amounting to the difference in the tax which he would have to pay under the provisions of this bill. So, in order that they might produce more of the wine, they were willing to pay the farmer a little bit more for his grapes.

If the gentlemen who are so much interested in the poor farmer who produces the grape in California would take it upon themselves to inquire why it is that the wine producer does not pay more for grapes, they would be taking better care of the farmer than by coming down here and lobbying for a special privilege.

In Ohio and Missouri, I am advised, the average price of grapes runs from \$30 to \$50 a ton. For the wine spirits, or

neutral spirits, which the wine producers in those States use to fortify their wine, they pay \$1.10 a gallon. Some people prefer the sweet wine made out of eastern grapes. Others may prefer the sweet wine produced in California. But it is amusing to hear of the intense interest they have in the farmer; and they are constantly saying that if we increase this tax we shall thereby lower the price which the California farmer can receive for his grapes.

This is a rather novel argument. If it be true that an increased tax on wine spirits decreases the price which the farmer receives for his grapes, it must also be true that when we placed a tax upon beer the farmer got less for his barley or his hops, and that when we placed a tax upon whisky the farmer got less for his corn or his rye. Did anyone ever hear it suggested that the farmer was prejudiced by reason of the tax upon beer or upon whisky?

I understand it has been suggested that if this matter is stricken out now at the next session of Congress the subject will be taken up in the House and will be given careful consideration. What does a delay of that kind mean? Simply this: The wine producer of California is now pressing his grapes. Within a few days after he begins to press the grapes he adds the wine spirits and the wines will be finished before the first of the year. A delay until the next session of Congress means a bonus to the California wine producers of from six to eight million dollars.

There is another feature of this question to which I wish to call attention. Before the Finance Committee the statement was made that the average cost of producing sweet wine in California was 20 cents a gallon. It sells in bottles—of course that is the best quality—for about \$3 a gallon. It does seem to me that there ought to be some room between the two extremes for the Government to get something out of the proposition.

What is done with this wine in part? One million gallons of it—and it is always the poorer grade of the wine—go to the makers of patent medicine. This is bought up in California, f. o. b. cars, at from 10 to 15 cents a gallon. In the making of the pure sweet wine they add about 1 gallon of wine spirits to every 4 gallons of grape juice. So the wine spirits or alcoholic content alone, which the wine producer gets free of tax, save 3 cents a gallon, would be worth, if there were a tax upon it, from 22 to 25 cents a gallon in the completed wine. The patent-medicine producers get this wine at from 10 to 15 cents a gallon when the Government ought to get out of it from 22 to 25 cents a gallon if the producers of pure sweet wine were placed upon the same footing with other users of alcoholic spirits. No wonder there is so much alcohol in some of these patent medicines.

Mr. VARDAMAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Mississippi?

Mr. POMERENE. Certainly.

Mr. VARDAMAN. Has the Senator any assurance that there is any possibility of that tariff being yielded to the House?

Mr. POMERENE. I am so informed, unless there is a change of heart.

Mr. VARDAMAN. How much revenue did the Senator say was involved—about \$7,000,000?

Mr. POMERENE. I will give the Senator the exact figures. Last year, according to the figures furnished me, the revenue on the wine spirits, if charged at the rate of \$1.10 a gallon, would have been \$6,954,534.29.

Mr. VARDAMAN. The Senator has not heard where they are going to get the revenue to supply that deficit, has he?

Mr. POMERENE. Oh, yes; they are going to get it from bananas for one thing.

Mr. VARDAMAN. They have given that up.

Mr. POMERENE. Then they are going to get it by a tax upon blankets, or currants and other edibles, and other things which are necessary to the comfort of the American people.

Mr. MARTINE of New Jersey. Mr. President—

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from New Jersey?

Mr. POMERENE. I do.

Mr. MARTINE of New Jersey. The Senator, of course, understands that the purpose of this measure was not especially to enrich the wine makers. I do not think the Senator believed that was the animus. It was the fact that you can not make humanity over in a day, and it would not be wise to do so if you could; and a large number of the people of this country and almost every other country are given to the use of spirituous liquors in some way or other. The thought was, as I understand, when the matter was debated before the committee, that it was wise to take the place of strong alcoholic drinks by inducing the people as much as possible to use the lighter sweet

wines, and that the sweet wines could not be kept sweet without a slight addition of these spirituous ingredients.

Mr. POMERENE. Oh, if the Senator please, it is not a very light wine that is half as strong as whisky.

Mr. MARTINE of New Jersey. It would depend upon how much the whisky was watered.

Mr. POMERENE. And if we were to make over the selfish dispositions of some men, it would take more than one day to accomplish the feat.

Mr. MARTINE of New Jersey. Yes; there is no doubt about that. Of course I do not know what the Senator refers to in speaking of the "selfish dispositions of some men."

Mr. POMERENE. I mean those who are here asking for this special privilege and whom you referred to when you stated that humanity could not be made over in a day.

Mr. MARTINE of New Jersey. I was not asking for it. I only expressed the thought, as I recall the argument that was used before the committee, it was that it would tend to lessen the abuse of strong alcoholic drinks to induce people to use the lighter sweet wines—grape juice, if you choose, and some other things of that character—and that they could not be kept in an unfermented state without the addition of this spirituous ingredient.

Mr. POMERENE. That was one of the reasons which was given by the advocates of this measure before the year 1890, when it was supposed that there would be only enough of the wine spirits or alcoholic content placed in the wine to make it a table wine. But instead of that, in view of the fact that the producers of wine get their wine spirits almost free of tax, they are adding to their product more than is necessary, and the result is the highly intoxicating character of the sweet wines.

Mr. VARDAMAN. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio further yield to the Senator from Mississippi?

Mr. POMERENE. I yield.

Mr. VARDAMAN. If the Senator will pardon me just a moment, I wish to suggest that the purpose of the tax, as it was expressed in the discussion of the bill before the committee, was not so much as a temperance measure as it was to levy a tax upon a pernicious luxury in order that it might be taken off of the necessities of life; and I think the tax ought to stay.

Mr. MARTINE of New Jersey. I realize that. I will stand with the Senator, or with any other Senator, in lightening the burden upon the necessities of life even to a far greater extent than has been encompassed by our bill, and I would impose upon whisky and upon tobacco the burden thus removed. I realize that very well. But I do say that whether it is a bad or a good trait, whichever way you choose to take it, humanity is much given to the use of alcoholic spirits; and the argument has been put forth, and I believe well and strongly put forth, that in thousands of instances the use of strong alcoholic drinks may be lessened by the use of light wines. Inasmuch as the light wines can not be preserved from fermentation without the addition of a small amount of alcohol, I believe it will be a temperance measure, and generally for the well-being of the people who use them.

Mr. POMERENE. If that be so, in view of the fact that beer contains only about 4 per cent of alcohol, why not take the tax off beer entirely?

Mr. MARTINE of New Jersey. I think there is a wide difference between the use of beer and the use of light wines. Wine is used in infinitely less quantities than beer. The average beer drinker is not satisfied until he has guzzled at least half a dozen beers. The average wine drinker would be satisfied with a very small, infinitesimal portion of wine.

Mr. POMERENE. It takes about half a dozen glasses of beer to get the same alcohol that you get from one glass of sweet wine.

Mr. MARTINE of New Jersey. I do not know that that is true. I am not a beer expert. I do say, however, that there are other ingredients in beer that are pernicious and detrimental, from my point of view, to the general user of it. I am not posing as a defender of the grape growers of Ohio or the wine distillers of Ohio or of California. I know the Senator can defend them if they need it.

Mr. POMERENE. Mr. President, I am not here defending any class of wine producers as against any other class of wine producers. I am here to assert that it is unjust for the American Congress to place a tax of \$1.10 a gallon on whisky, \$1 a barrel on beer, and next to no tax upon sweet wine, when it has so much alcohol in it.

If there is one subject which is recognized the world over as a proper subject for taxation, it is alcoholic spirits of all kinds. That has been the settled policy of this country. I was amazed

to learn that there was no tax on any wine produced in this country save upon sweet wines, and that only upon the wine spirits which entered into the making of them, at the rate of 3 cents a gallon.

While on that subject, in order that there may be no misunderstanding, permit me to say that the representatives of the Ohio wine producers who are here have said to me that they believe the time has arrived when there ought to be an equitable tax, not only upon the sweet wines but upon the dry wines as well. I am glad to say for them that they have some American patriotism about them that shines over and above the selfish spirit that has actuated some of the lobbyists who have appeared here before committees.

Before I was interrupted I was discussing the alcoholic content of patent medicines. I received under date of August 5, 1913, from Dr. Carl Alsberg, Chief of the Bureau of Chemistry of the Department of Agriculture, a letter, in which he says:

Out of 150 samples of liquid proprietary medicinal preparations selected at random from those recently examined in this laboratory, 43, or 29 per cent, contained no alcohol; 37, or 25 per cent, contained less than 10 per cent alcohol; 29, or 19 per cent, contained 10 per cent to 20 per cent alcohol; 11, or 7 per cent, contained 20 to 30 per cent alcohol; 11, or 7 per cent, contained 30 to 40 per cent alcohol; 8, or 5 per cent, contained 40 to 50 per cent alcohol; and 11, or 7 per cent, contained more than 50 per cent alcohol.

In other words, some of them are stronger and more intoxicating than whisky itself. It is no wonder that some of the patent medicine manufacturers are waxing rich when they are getting this sweet wine they put in their so-called patent medicines free of tax. And yet we will take another year to investigate the subject!

The wine producers of California are much interested in the farmer. Let us see what is the protection they have against the foreign grape grower. Under the pending bill and under the old law there is a duty of 25 cents per cubic foot on foreign grapes. So they are protected against the foreigner. When it comes to wine there is a duty of 45 cents a gallon on all imported wines with an alcoholic content less than 14 per cent. There is a duty of 60 cents per gallon upon all imported wines with an alcoholic content of 14 per cent and under 24 per cent. So they are protected against the foreign producer. Then they have a law so rigid as to give them the special privilege of wine spirits free of tax save 3 cents a gallon against all other producers of pure sweet wines which do not come within the provisions of this act.

If it was intended that these wine spirits should be free of tax in order to benefit the industry of pure sweet wines, why was it not said that all wine spirits used in the manufacture of pure sweet wines should be subject to a tax of 3 cents a gallon? But no; that would not have suited the purposes of somebody. So they limited it by saying every producer of pure sweet wine who is also a distiller of wine spirits shall have this privilege. But more than that, the winery must be at the vineyard.

Mr. President, there was no opportunity to discuss this measure—at least none seemed to present itself to me—in the closing days of the long debate, and I have felt justified this afternoon, and even before the report from the conference committee comes in, to place some facts in the Record so that Senators might be advised.

There is another matter to which I desire to call attention. I think I said a little while ago that there was some doubt as to just what the pure-food provision of the bill should be, or, in other words, what might constitute a pure wine. It is my belief that the present provision of the pending bill could be amended so as to confer full authority upon the Department of Agriculture, which has control of the pure-food department, or upon the Internal Revenue Bureau, or upon both, to provide suitable regulations which might not hamper unduly the industry and would be just both to the Government and to the producer.

It is necessary that there should be some latitude, for this reason: In California there is often an excess of sugar and not enough acid in the grapes produced in that State. They are varying quantities, dependent upon the locality and upon the season. East of the Rocky Mountains there is usually an excess of acidity and not sufficient sugar, and they vary from year to year in one locality from what they are in another locality, and with one variety of grapes as compared with another variety of grapes. They have this same situation in the old countries. In Germany, as I am advised, the making of wines is under the control of the administrative department of the Government, and the administrators of the law permit a varying quantity of sugar or water, or of both, to be added from year to year, depending upon the character of the grapes.

It must stand to reason that if the grape this year has a given amount of acidity and a given amount of sugar, and is there-

fore fit for the production of wine, it ought not to be said that the owner of the grapes shall not use his grapes the next year for the production of wine if the amount of acidity is in excess of what it was the year before, or if the amount of sugar is less than what it was the year before. Grapes vary as wheat varies.

I recognize that there ought to be stringent regulations. You can not make the pure-food provisions too strict to suit me. I do not believe the public ought to be imposed upon; and an honest man never attempts to impose upon the public; but I was a little bit amazed the other day to see a statement from a prominent food expert to the effect that the addition of sugar and water was an adulteration of a wine, when sugar and water have been added to wine time out of mind, not only in this country but in Europe. I suppose if the mother of the same expert had been making an apple pie, and it was a little tart, and she thought it was necessary to add a little sugar, he would compel her to brand the pie as an adulterated pie.

Mr. President, it does seem to me that Congress ought to provide for a tax upon this brandy or wine spirits. It is my judgment that there ought to be a tax upon all wines which are manufactured for sale. There is no reason which can be given for the exemption of the alcoholic content of wine that can not be applied with equal force to the exemption of the alcoholic content of every other kind of liquor, whether it be spirituous or malt.

In the interest of justice and in the interest of the Government it seems to me that the tax ought to be placed upon these wines and taken off of some of the necessities of life.

EXECUTIVE SESSION.

Mr. SMITH of Georgia. Mr. President, it may be necessary for the Senate this afternoon to take a short recess, as there are matters to come to the Senate from the House which, in view of the fact that we have agreed to adjourn until Monday, ought to be disposed of this afternoon. The currency bill will be here from the House in the course of an hour. In the meantime, there are several Senators who have reports and matters to come before an executive session, and I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 20 minutes spent in executive session, the doors were reopened.

MESSAGE FROM THE HOUSE—THE CURRENCY.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED—THE CURRENCY.

H. R. 7837, an act to provide for the establishment of Federal reserve banks, to furnish elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, was read twice by its title.

Mr. OWEN. I move that the bill be referred to the Committee on Banking and Currency.

The motion was agreed to.

Mr. OWEN. I ask that 10,000 additional copies of the bill be printed for the use of the Senate and for public distribution.

There being no objection, the order was agreed to, and it was reduced to writing, as follows:

Ordered, That 10,000 additional copies of the bill H. R. 7837—the currency bill—be printed for the use of the Senate document room.

Mr. SMITH of Georgia. I move that the Senate adjourn.

The motion was agreed to; and (at 4 o'clock and 22 minutes p. m.) the Senate adjourned until Monday, September 22, 1913, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate September 18, 1913.

WITHDRAWAL.

Executive nomination withdrawn September 18, 1913.

COLLECTOR OF INTERNAL REVENUE.

Bernard M. Gannon, of New Jersey, to be collector of internal revenue for the fifth district of New Jersey.

HOUSE OF REPRESENTATIVES.

THURSDAY, September 18, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Almighty God, our heavenly Father, without whose breath we should wither and fade, without whose light we should grope in darkness, without whose love we should sink into despair, impart unto us wisdom, strength, and grace sufficient unto the needs of this day, that we touch nothing that is unclean, but with singleness of purpose do the work Thou hast given us to do with patience, trusting in Thy ruling and overruling providence.

Our little systems have their day;
 They have their day and cease to be;
 They are but broken lights of Thee,
 And Thou, O Lord, art more than they.

For Thine is the kingdom and the power and the glory forever.
 Amen.

The Journal of the proceedings of yesterday was read and approved.

CURRENCY.

The SPEAKER. The unfinished business is the bill H. R. 7837, on which bill and amendments thereto the previous question has been ordered. Is a separate vote demanded on any amendment?

Mr. WINGO. Mr. Speaker, I demand a separate vote on the amendment to line 12, page 50, which indorses the gold standard.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them in gross.

The question was taken, and the amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which the gentleman from Arkansas [Mr. Wingo] demands a separate vote.

The Clerk read as follows:

After the word "repealed," in line 12, page 50, insert the following: "Provided, That nothing in this act contained shall be considered to repeal the parity provision or provisions contained in an act approved March 14, 1900, entitled 'An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes.'"

The SPEAKER. The question is on agreeing to the amendment.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. WINGO. I demand a division, Mr. Speaker.

The House divided; and there were—ayes 165, noes 43.

Mr. WINGO. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 209, nays 68, answered "present" 5, not voting 56, as follows:

So the amendment was agreed to.

The Clerk announced the following pairs:

For the session:

Mr. SLAYDEN with Mr. BARTHOLDT.

On the vote:

Mr. EDWARDS with Mr. PROUTY.

Mr. NEELEY with Mr. HAYES.

Mr. BROWN of New York with Mr. SMITH of Idaho.

Until further notice:

Mr. MCKELLAR with Mr. LEWIS of Pennsylvania.

Mr. EVANS with Mr. MILLER.

Mr. CARTER with Mr. MCGUIRE of Oklahoma.

Mr. TALBOTT of Maryland with Mr. MERRITT.

Mr. MCCOY with Mr. STEVENS of Minnesota.

Mr. CANTRILL with Mr. GOOD.

Mr. FOWLER with Mr. DANFORTH.

Mr. STEPHENS of Texas with Mr. BURKE of South Dakota.

Mr. RICHARDSON with Mr. MARTIN.

Mr. TOWNSEND with Mr. PARKER.

Mr. KINKEAD of New Jersey with Mr. LAFFERTY.

Mr. MORGAN of Louisiana with Mr. PATTON of Pennsylvania.

Mr. GILMORE with Mr. HULINGS.

Mr. FITZGERALD with Mr. HUGHES of West Virginia.

Mr. DRISCOLL with Mr. BRYAN.

Mr. CURLEY with Mr. BARCHFELD.

Mr. KEATING with Mr. AINEY.

Mr. MURRAY of Massachusetts with Mr. FAIRCHILD.

Mr. TALBOTT of Maryland. Mr. Speaker, I am paired with the gentleman from New York, Mr. MERRITT. I voted "yea." I want to withdraw that and vote "present."

The SPEAKER. The Clerk will call the gentleman's name.

The Clerk called the name of Mr. TALBOTT of Maryland, and he answered "Present."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. WALTERS. Mr. Speaker, I move to recommit. I send the motion to the Speaker's desk.

The SPEAKER. Does any gentleman on the minority of the committee desire to offer a motion to recommit? If not, the Chair will recognize the gentleman from Pennsylvania [Mr. WALTERS]. Is the gentleman from Pennsylvania opposed to the bill?

Mr. WALTERS. I am.

The SPEAKER. The Clerk will report the gentleman's motion.

The Clerk read as follows:

By Mr. WALTERS: I move to recommit the bill to the Committee on Banking and Currency, with instructions to amend the bill as follows:

On page 17, after line 17, add a paragraph to read as follows: "No officer or director of any national bank, State bank, banking association, or trust company admitted to membership in a Federal reserve bank under the provisions of this act shall be an officer or director of any other bank or financial corporation or institution admitted hereunder who is an officer or director of any national bank, State bank, or trust company which is not a member of a Federal reserve bank or who is a member of a firm or partnership of bankers engaged in the business of receiving deposits."

Mr. GLASS. Mr. Speaker, on the motion to recommit I move the previous question.

The SPEAKER. The gentleman from Virginia [Mr. GLASS] moves the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the motion to recommit.

The question was taken, and the Speaker announced that the yeas seemed to have it.

Mr. MURDOCK. Mr. Speaker, I demand a division.

The SPEAKER. The gentleman from Kansas [Mr. MURDOCK] demands a division. Those in favor of the motion to recommit will rise and stand until they are counted. [After counting.] Seventy-one gentlemen have arisen in the affirmative. Those opposed will rise and stand until they are counted. [After counting.] Two hundred and six gentlemen have arisen in the negative. On this vote the yeas are 71 and the noes are 206.

Mr. MURDOCK. Mr. Speaker, I demand the yeas and nays.

The SPEAKER. The gentleman from Kansas demands the yeas and nays. Those in favor of ordering the yeas and nays will rise and stand until they are counted. [After counting.] Fifty-one gentlemen have arisen in favor of taking the vote by yeas and nays.

Mr. YOUNG of North Dakota. One more, Mr. Speaker.

The SPEAKER. It is too late after the vote is announced.

Mr. MURDOCK. The other side, Mr. Speaker.

The SPEAKER. Those opposed to ordering the yeas and nays will rise and stand until they are counted. [After counting.] Two hundred and seventy-five gentlemen have arisen in the negative.

Mr. MURDOCK. Mr. Speaker, I demand tellers.

The SPEAKER. The gentleman from Kansas demands tellers. Those in favor of ordering tellers will rise and stand until they are counted. [After counting.] Forty-four gentlemen have arisen—a sufficient number—and the Chair appoints as tellers the gentleman from Virginia [Mr. GLASS] and the gentleman from Kansas [Mr. MURDOCK].

Mr. BORLAND. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BORLAND. The vote on this teller vote is to determine whether or not there shall be a roll call, is it not?

The SPEAKER. Yes; on ordering the yeas and nays. Those in favor of ordering the yeas and nays will pass between the tellers and be counted.

The House divided; and the tellers reported—yeas 68, noes 265. Accordingly the yeas and nays were ordered.

The SPEAKER. Those in favor of the motion to recommit with instructions will vote "yea," those opposed "nay," and the Clerk will call the roll.

The question was taken; and there were—yeas 100, nays 266, answered "present" 3, not voting 59, as follows:

YEAS—100.

So the motion to recommit with instructions was rejected.

The Clerk announced the following additional pairs:

Until further notice:

Mr. MCCLELLAN with Mr. ROBERTS of Nevada.

Mr. FINLEY with Mr. PATTON of Pennsylvania.

Mr. CANTRILL with Mr. BRYAN.

On this vote:

Mr. EDWARDS with Mr. PROUTY.

Mr. NEELEY with Mr. HAYES.

Mr. BROWN of New York with Mr. SMITH of Idaho.

The result of the vote was announced as above recorded.

The SPEAKER. The question is, Shall the bill pass?

Mr. BURKE of Pennsylvania. Mr. Speaker, on that I demand the yeas and nays.

Mr. GLASS. I join in that request.

The yeas and nays were ordered.

The question was taken; and there were—yeas 287, nays 85, answered "present" 2, not voting 55, as follows:

YEAS—287.

Donohoe	Kinkad, N. J.	O'Hair	

So the bill was passed.

The following additional pairs were announced:

Until further notice:

Mr. KINKAD of New Jersey with Mr. DANFORTH.

On this vote:

Mr. EDWARDS (for) with Mr. PROUTY (against).

Mr. NEELEY (for) with Mr. HAYES (against).

Mr. BROWN of New York (for) with Mr. SMITH of Idaho (against).

The SPEAKER. The Clerk will call my name.

The Clerk called the name of Mr. CLARK of Missouri, and he voted "yea," as above recorded.

During the roll call the following occurred:

Mr. THOMPSON of Oklahoma. Mr. Speaker, I would like to know what we are voting on.

The SPEAKER. On the passage of the bill.

Mr. THOMPSON of Oklahoma. Then I will not vote.

After the completion of the roll call,

The SPEAKER. On this vote the ayes are—

Mr. THOMPSON of Oklahoma. Mr. Speaker—

The SPEAKER. For what purpose does the gentleman rise?

Mr. THOMPSON of Oklahoma. I would like to vote.

Mr. MANN. It is too late.

The SPEAKER. The Chair is inclined to think it is too late.

Mr. BARTLETT. Mr. Speaker, the gentleman's name has been called, and if he can bring himself within the rule, he is entitled to vote.

The SPEAKER. The rule is that if he was in the Hall and listening and did not hear his name when it was called, he can vote.

Mr. BARTLETT. But the Chair did not ask him whether he was in the Hall and listening.

The SPEAKER. The Chair considered it superfluous, because the gentleman from Oklahoma asked what we were voting on and declined to vote.

Mr. BARTLETT. I submit that, if he desires to vote, he can state what the fact was and the Speaker can rule on whether he is entitled to vote or not—of course, before the vote has been announced.

The SPEAKER. The Chair had just started to announce the vote. If the gentleman from Oklahoma will state that he was in the Hall and listening and did not hear his name called, the Chair will allow him to vote.

Mr. MANN. But the Speaker would know that that was not true, because the gentleman did hear his name called and rose to his feet.

The SPEAKER. The Chair is not supposed to pass upon a question of veracity. If the gentleman from Oklahoma will state that he was in the Hall listening and did not hear his name, the Chair will rule that he can vote; and if he does not, he will rule that he can not vote.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. Is it not possible for a man to change his vote after the roll call?

The SPEAKER. That is true; but if the gentleman did not vote it is physically impossible for him to change his vote.

Mr. MURDOCK. I understood that the gentleman from Oklahoma voted.

The SPEAKER. No; he refused to vote.

Mr. FOWLER. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. FOWLER. Under the rules of the House is it proper for a Member to make an inquiry as to what the proceedings are during a roll call?

The SPEAKER. If the rule is construed strictly, no; but the Chair thinks it is easier to let him ask it than it is to get into a wrangle.

The result of the vote was then announced as above recorded.

On motion of Mr. GLASS, a motion to reconsider the vote by which the bill was passed was laid on the table.

ADJOURNMENT UNTIL MONDAY.

Mr. UNDERWOOD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next.

The SPEAKER. The gentleman from Alabama asks unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next. Is there objection?

Mr. MANN. Reserving the right to object, will the gentleman from Alabama give to the House his best understanding as to when the conferees will be likely to report on the tariff bill?

Mr. UNDERWOOD. I am satisfied, Mr. Speaker, they will not be able to report before Monday, and I think it is more probable that it will be the middle of the week, at least.

Mr. MANN. May I ask one further question for the information of Members? Of course, under the rule, when a conference report is presented it would have to lie over one day and be printed in the RECORD. Is it the expectation of the gentleman that when the conference report is made it will follow that rule, or will there be a special rule?

Mr. UNDERWOOD. I think it would be proper for the conference report to lie over one day and let everybody have a chance to read it.

Mr. MANN. Then it is certain that the conference report will not be acted upon before Tuesday or Wednesday?

Mr. UNDERWOOD. I think that is so.

The SPEAKER. Is there objection to the request of the

gentleman from Alabama that when the House adjourns it adjourn until Monday next?

There was no objection.

PERSONAL STATEMENT.

Mr. GLASS. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. The gentleman from Virginia asks unanimous consent to address the House for two minutes. Is there objection?

There was no objection.

Mr. GLASS. Mr. Speaker, there appeared in the Washington Post this morning a statement concerning the proceedings of the House on yesterday, in which occurs this language:

Admitting that the contention of Representative S. D. Fess, Republican, of Ohio, that the Glass currency bill, in the form it was reported to the House, automatically repealed the parity provisions of the gold-standard law of 1900 and subtly provided for practically the free coinage of silver, Chairman GLASS and the other members of the Banking and Currency Committee last night agreed to an amendment insuring the maintenance of the gold standard in the monetary system.

Mr. Speaker, as a practical newspaper man of 40 years' experience, I know very well that misrepresentation of that sort carries its own penalties and punishment, but I think I ought to say to the House that I could scarcely conceive that any newspaper, with any respect for the truth or regard for its own reputation, would be guilty of mendacity of that description. [Applause on the Democratic side.] The RECORD of yesterday teems with protestations from myself and from other Members on this side of the House against the charge that there was one single, solitary word, sentence, or suggestion in this bill that undertook, directly or indirectly, to repeal the act of March 14, 1900. The truth of the matter is that when gentlemen on the other side, unable to assail successfully the fundamental soundness of the bill, undertook by political stratagem to raise an utterly false cry over an alleged assault by this side on the gold standard, and when it plainly appeared they would attempt to excuse their opposition to this currency legislation on the pretense that we had assailed the standard of value, the committee deliberately decided to cut away this excuse by calling their bluff; and the committee itself therefore proposed an amendment to the bill, which amendment was adopted by the House to-day. That is all I care to say.

Mr. MANN. Mr. Speaker, I ask unanimous consent to address the House for two minutes.

The SPEAKER. The gentleman from Illinois asks unanimous consent to address the House for two minutes. Is there objection?

There was no objection.

Mr. MANN. Mr. Speaker, the gentleman from Virginia [Mr. GLASS] is perfectly at liberty, of course, to deny a statement in a newspaper, although I think it is usually useless. The other day one of the newspapers published that I had recommended the Republicans to vote for this bill, and that they were generally going to do so. I did not take the trouble to deny that statement. My sympathy is very largely with the boys who have to write the stuff in the newspapers, and sometimes I wonder how they fill up the columns, even with vivid imaginations.

But the gentleman from Virginia [Mr. GLASS] now undertakes to say at this late hour what is absolutely incorrect, that the opposition to the bill on this side of the House was based upon the question of the gold standard being involved in the bill. The opposition to the bill on this side of the House was based upon many provisions in the bill radically and fundamentally wrong and was not based on any misconception of what the bill carried. [Applause on the Republican side.]

BOLL WEEVIL AND HOG CHOLERA.

Mr. LEVER. Mr. Speaker, I call up privileged resolution 254, directing the Secretary of Agriculture to communicate to the House of Representatives the cost and result of the investigation of the boll weevil and hog cholera plague, which I send to the desk and ask to have read.

The Clerk read as follows:

House resolution 254.

Resolved, That the Secretary of Agriculture is hereby directed to communicate to the House of Representatives at the earliest practicable day, not later than the first Monday in December, 1913, a full report of the methods used and the results thus far secured in the study and investigation of the boll weevil and hog cholera plague, and also the amount of money thus far expended in the study and investigation of each.

Mr. LEVER. Mr. Speaker, I ask that the Clerk also read the report of the committee as an explanation of the resolution.

The SPEAKER. The Clerk will read the report of the committee.

The Clerk read as follows:

The Committee on Agriculture, to whom was referred House resolution 240 and House resolution 245, to wit:

H. Res. 240—

"That the Secretary of Agriculture is hereby directed to communicate to the House of Representatives at the earliest practicable day, not later than the first Monday in December, 1913, the result thus far secured in the study and investigation of the boll weevil and the amount of money thus far expended in such study and investigation."

And H. Res. 245—

"That the Secretary of Agriculture is hereby directed to communicate to the House of Representatives at the earliest practicable day, not later than the first Monday in December, 1913, the result thus far secured in the study and investigation of hog cholera and the amount of money thus far expended in such study and investigation." respectively report the following as a substitute for the same and recommend its adoption:

"Resolved, That the Secretary of Agriculture is hereby directed to communicate to the House of Representatives at the earliest practicable day, not later than the first Monday in December, 1913, a full report of the methods used and the results thus far secured in the study and investigation of the boll weevil and hog cholera and also the amount of money thus far expended in the study and investigation of each."

The passage of the resolution is recommended for the reason that in recent months great interest has manifested itself in the country both with respect to the boll weevil and the hog cholera. It is thought advisable that the methods used by the Department of Agriculture in its study of the boll weevil and hog cholera and the results so far accomplished by these methods and the amount of money thus far expended in the prosecution of these studies and investigations should be made available to the Congress before consideration of the regular appropriation bill for the Department of Agriculture begins.

Mr. LEVER. Mr. Speaker, I move the adoption of the resolution.

The question was taken, and the resolution was agreed to.

SANTA BARBARA TIE & POLE CO.

Mr. ADAMSON. Mr. Speaker, there are on the Calendar of the House—

Mr. HUMPHREY of Washington. Mr. Speaker—

Mr. MANN. Mr. Speaker, the gentleman from Washington [Mr. HUMPHREY] has a privileged matter to bring before the House.

The SPEAKER. The gentleman from Washington will present it if it is privileged.

Mr. HUMPHREY of Washington. Mr. Speaker, I call up House resolution 249.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 249.

Resolved, That the Secretary of Agriculture be, and he hereby is, requested and directed to give to the House full detailed information in regard to any contracts made or proposed to be entered into between the Santa Barbara Tie & Pole Co., a corporation organized under the laws of the Territory and existing under the laws of the State of New Mexico, having an office and place of business in Albuquerque, county of Bernalillo, State of New Mexico, party of the first part, and the Secretary of Agriculture, representing the United States of America, party of the second part, whereby said party of the first part agrees, in consideration of permission to cut and remove, in accordance with certain conditions and requirements of the Secretary of Agriculture, certain saw timber from Government land within the Pecos National Forest, to convey to the United States in fee simple all right, title, and interest in sections 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, and 35, township 11 north, range 12 west, New Mexico principal meridian, containing about 11,520 acres, together with a copy of said proposed contract and all correspondence relating thereto.

Mr. HUMPHREY of Washington. Mr. Speaker—

Mr. BARTLETT. Mr. Speaker, is this a resolution reported from a committee or a motion to discharge a committee?

Mr. HUMPHREY of Washington. I was trying to get recognition to move to discharge the committee.

The SPEAKER. The gentleman from Washington moves to discharge the Committee on Agriculture from the further consideration of the resolution and to pass it.

Mr. LEVER. Mr. Speaker, if the gentleman will yield for a moment, I desire to say that the Committee on Agriculture, as far as I know, has absolutely no objection to the passage of this resolution, although the Committee on Agriculture has not had the resolution called to its attention by the gentleman from Washington. If he had done so, I am sure the committee would have recommended the passage of the resolution, but the committee has no objection to its passage at all.

Mr. HUMPHREY of Washington. Mr. Speaker—

Mr. BARTLETT. Mr. Speaker, may I inquire of the gentleman if the resolution has assumed the degree of a privileged resolution, having been introduced for seven days?

Mr. HUMPHREY of Washington. Yes; it has. And, Mr. Speaker, I desire to ask permission to extend my remarks in the Record.

The SPEAKER. The Chair will put that request after he puts the question. The question is on discharging the Committee on Agriculture and passing this resolution.

The question being taken, the resolution was agreed to.

The SPEAKER. The gentleman from Washington asks unanimous consent to extend his remarks in the Record. Is there objection? [After a pause.] The Chair hears none.

Mr. HUMPHREY of Washington. Mr. Speaker, I think that I should make a brief statement as to why I introduced this resolution. On August 22, 1912, an act was passed that permitted the exchange that is proposed to be made in the contract referred to in the resolution. As to just what it is proposed to do a letter that I have received from the Secretary of Agriculture under date of September 10, 1913, clearly sets forth. That letter is as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, September 10, 1913.

HON. WILLIAM E. HUMPHREY,
House of Representatives.

DEAR SIR: Your letter of September 6 is received. The exchange to which you refer was authorized by the act of Congress of March 22, 1912, a copy of which is inclosed. The exchange involves 11,520.44 acres of patented land lying in odd sections in the northern portion of the Zuni National Forest. This land was part of the original grant to the Atchison, Topeka & Santa Fe Railroad, but has subsequently been acquired by the Santa Barbara Tie & Pole Co., of which Mr. A. B. McGaffey is president.

An estimate of the timber on this area, made by an expert lumberman in the employ of the Forest Service and checked by a representative of the Santa Barbara Tie & Pole Co., indicates that it contains 46,204,000 board feet of yellow pine, Douglas fir, and limber-pine saw timber, together with 8,715 cords of pinon and cedar. The timber was appraised by representatives of the Forest Service as having a market value of \$2.50 per thousand board feet for saw timber and 25 cents per cord for cordwood. The land was appraised at 62½ cents per acre, this being its value for grazing purposes only at a 4 per cent capitalization on the annual rental. The total value of the private property involved, land and timber, is thus \$124,389.02½.

In exchange the Santa Barbara Tie & Pole Co. is to receive an equal value in stumpage on the northern portion of the Pecos National Forest, N. Mex., appraised at the same rate as the saw timber on the private lands deeded to the Government, or \$2.50 per thousand board feet. The company will thus obtain 49,755,000 board feet of standing timber from the Pecos National Forest, to be cut under regulations prescribed by this department for the renewal and protection of the forest, which are identical in all respects with those customarily required in timber sales.

In accordance with the authority conferred by the act cited, a contract was prepared between the Department of Agriculture and the Santa Barbara Tie & Pole Co. providing for the exchange, and approved by the acting secretary of this department on April 26, 1913. A copy of this agreement is inclosed. You will note that it does not become effective until the date when the Attorney General approves the title and the deeds vesting title in the United States to the lands offered in exchange by the company. The deeds and abstract of title have been submitted to the Attorney General for this purpose, and the final consummation of the exchange awaits his action thereon.

This exchange bears no relation to the former transactions of the Santa Fe Railroad under the lieu selection act. I do not know to what extent the Santa Fe Railroad is interested in the exchange, although the dealings of the United States in the matter are wholly with the Santa Barbara Tie & Pole Co. The extent of such interest, if any, seems to me wholly immaterial. The exchange is not made for the benefit of any individual or corporation, but for the mutual business advantage of the United States in the administration of the national forests of New Mexico and the Santa Barbara Tie & Pole Co. in conducting its lumber operations. By this exchange the Government obtains a solid block of timber in the northern portion of the Zuni National Forest where formerly it owned only alternate sections. This consolidation will greatly facilitate the administration of the lands in question and particularly the disposal of their timber. As long as the ownership was divided by checkerboard holdings it was difficult to secure the development and exploitation of this tract. As soon as the exchange is consummated, however, and title to the odd sections passes to the United States, it is probable that a timber sale at favorable terms to the Government, at a stumpage price of not less than \$2.50 per thousand feet, can be made.

The Santa Barbara Tie & Pole Co. is benefited to probably an equal degree by obtaining the value of its holdings in the form of a solid block of stumpage on the northern end of the Pecos National Forest in the vicinity of its former timber operations.

You will readily understand, therefore, that this exchange is radically different from those formerly made under the lieu selection act. Under the old exchanges equal acreage only was considered and valueless lands were often deeded to the United States in return for exceedingly valuable lands outside of the national forests. In the present instance the exchange is on a strict basis of value for value. Neither party is benefited by obtaining property of greater value than that which it relinquishes. The mutual advantage is simply one of consolidation of holdings. The timber deeded to the United States by the Santa Barbara Tie & Pole Co. is equal if not superior to that obtained by this company in commercial quality and will be of equal accessibility when combined with the adjacent sections operated under Government ownership.

The entire matter was viewed by this department from the outset as simply a question of sound business sense in the administration of national forest lands. Under such conditions, where use of national forest resources will be facilitated and costs of administration reduced, consolidations of lands with private holdings, when specifically approved by Congress, are favored.

Very truly, yours,

D. F. HOUSTON, Secretary.

Two letters have been handed to me bearing upon this subject. They were not written to me and I am not acquainted with the writers. For me to make public the authors of these letters, if I knew, would probably be to cause them some injury, as it is evident that they are in some way connected with the Government service.

I read from the first letter, as follows:

I am reliably informed by another party that the timberland which McGaffey is unloading on the Government is situated in a remote, mountainous portion of the Zuni Forest. The cost of construction of a railway necessary for the removal of the timber will absolutely prohibit its removal at any reasonable price.

You will note that while McGaffey parts with 11,520 acres, the Government exchanges to him 66 per cent of the timber standing upon 70,120 acres. In other words, it required 71,120 acres cutting 66 per cent on the Pecos to afford the value grown on 11,520 acres on Zuni, plus the land at 62½ cents per acre. If there is 46,204,000 feet of the Zuni 11,000-acre tract, why does the company want to exchange it to cut over more than six times as much land to cut the same amount of timber?

The presence of cordwood in such large quantities on the Zuni land is in itself indictment of character of timber, since, as you undoubtedly know, in the Southwest timber having any merchantable value comprises a pure stand of its own species. The presence of limber pine is also indicative of inferior stand, since this species is only found in high, rough, inaccessible, poorly timbered localities. It is of little or no value as a commercial tree and is almost as worthless as the cordwood referred to.

McGaffey receives in exchange for this inaccessible timber an equal amount of the Pecos Forest located upon one of the best drivable streams in that country. As you are undoubtedly aware, and all lumbermen know, water transportation is much cheaper than railway haul of even a much shorter distance. I have frequently seen streams driven for 100 miles or more that had a railroad paralleling it. It obtains, therefore, that the Forest Service has recommended that the Government part with this valuable and accessible timber, located on a drivable stream, and gives it the same stumpage value in exchange for the inaccessible timber \$2.50 per thousand, on the Zuni.

The presumption of allowing the vendor an "advance cutting" of 3,000,000 feet prior to the approval of the exchange as provided by a special act under which this fraud is made possible, to be approved by the Attorney General, is in itself a very serious offense.

You will note that the contracts submitted for the signature of the Secretary of Agriculture carefully refrains from making any reference to the "advance cutting" which has been allowed.

When this contract is rejected, as it now undoubtedly will be upon investigation, it will be found that the contracting company has cut all the young timber suitable for hewn cross-ties for the Santa Fe Railroad and mature timber which will soon rot is left standing.

It is simply ridiculous that this branch of the Forest Service spends annually \$5,000,000 to collect a little more than \$2,000,000. You will note by examination of the records that the receipt will be less than \$1,000,000 if they depend wholly upon timber sales, which they properly should, since grazing on the public domain is no part of the forest management.

The records will show that on one forest, the Deer Lodge, they have spent \$9 per thousand board measure for simply designating trees and scaling them which were given away under "free-use permits," and their timber sales frequently amount to \$5, \$6, and \$7 per thousand on national forests for marking and scaling timber—a sum sufficient under ordinary management to cut, log, saw, and put on sticks lumber ready for sale.

From the second letter I desire to read the following extracts:

I am inclosing a contract which partially explains itself. This contract is not yet in effect. They are waiting on the Attorney General to approve title. Most everyone that knows anything about this suspects crooked work. Mr. A. B. McGaffey is the president and, in fact, the head of the Santa Barbara Tie & Pole Co. He is the man who put the deal through, and the lumber jacks all say McGaffey got the best of it or he would not have traded. Some of them say he has been working on the trade since about three years ago. Some also say the timberland he is trading in has been cut over. They also laugh at the idea of putting a value on piñon and juniper. Furthermore, McGaffey has just started up a 60,000 mill in the Zuni Forest, cutting odd-section railroad and even-section Government, and it seems funny to everyone that he would trade 46,000,000 feet of good timber off these and cut Government timber under "Government regulations" here.

The district office is accused by the local forest assistant and supervisor of trying to favor this company all they can. Bob Mook is doing the Government scaling for this same McGaffey in the Zuni Mountains, where the 60,000 mill is located. One of the lumber jacks told me in a general conversation that the company gave Mook his board free. It is generally known that McGaffey has a great stand-in with the district office.

All of the timber cut up to date is small stuff that has gone into hewn ties.

McGaffey and the Santa Barbara Co. are representing the Santa Fe Railroad, and their only object is ties.

If the deal failed to materialize and the company ceased cutting, it leaves the forest in very bad scientific shape, for all of the young stuff has been put into ties and it would leave all of the mature and over-mature stuff on the ground. Furthermore, their hewn ties are costing them only about half what it will cost to produce sawn ties, it is easy to be seen when they are contracting the actual making at a little less than 10 cents each, or \$3 per thousand feet, while logging and skidding for sawn ties is costing this same company \$6 per thousand and over the line on private holding of the company. This is also by contract.

This Government timber they are cutting is located from ½ to 3 miles from drivable stream, which is and had been driven by this same company at least three seasons before this deal was agreed to. Therefore you will see it is equal to being located right on the railroad. All timber cut in this vicinity is driven down this and other streams into the Rio Grande, thence to Albuquerque.

If the timberland in the Zunis has the timber of equal stumpage value as the contract claims, I can not help but believe it is inaccessible or very defective from rot, etc.

I heard on good authority that "Mook" took annual leave off and estimated timber for McGaffey at a big salary last fall, and I suspect he did the estimating on this tract they are obtaining from McGaffey; in fact, I think it is held by the railroad company and McGaffey is trading for them.

I have absolute confidence in the Secretary of Agriculture and believe that he wants to do exactly what is right in this matter, and this resolution is not intended in the least degree to in any way reflect upon his action. There are some things

in relation to this contract, however, that call for explanation. First, why is it that the Santa Barbara Tie & Pole Co. is willing to exchange some 46,000,000 feet of timber growing on 11,000 acres for a like amount of the same character growing on 71,000 acres? It may be that there is a good explanation for this, but certainly it is not usual to trade timber standing on a comparatively small area for a like amount of the same quality scattered over six times the amount of territory.

Another thing, if it be true, that needs explanation is that the timber exchanged by the Government is on a "drivable" stream, while that that the Government is receiving is comparatively inaccessible.

Another thing that needs explanation is the immense amount of cordwood to be found upon the land that the Government is to receive. It looks to me like this fact alone shows that the timber the Government is receiving is not of much value. I seriously doubt if cordwood of piñon and cedar is worth 25 cents a cord. I also doubt if lumber that can be secured from limber pine is worth \$2.50 per thousand.

All these questions certainly need investigation and explanation. I have read with some care the law under which this transfer is left to the discretion of the Secretary of Agriculture. I am unable to find therein anything that would justify the cutting of timber before the contract is finally executed. If it is true, as stated in both letters that I have received, that cutting has already been done in prospect of making this contract, then this is something that needs to be fully explained. This I consider a serious charge and one about which there ought not to be any trouble in knowing the truth.

I know it may be urged that this exchange has been approved by the Forest Service. But looking at the history of the Forest Service for the last 10 or 15 years the fact that it approves an exchange of this character does not raise any presumption that it is not greatly to the disadvantage of the Government. It may be recalled that it was in this section of the country, in the San Francisco Mountain Reserve, where the Santa Fe Railroad exchanged 935,000 acres of treeless land, consisting of sagebrush deserts, for an equal number of acres of land, the very best that could be found in the entire public domain. This transaction had the approval of the Forest Service.

It may also be well to recall the fact that in the Grand Canyon Forest Reserve that the Santa Fe Railroad was permitted to exchange 375,000 acres of practically treeless land of little value for 375,000 acres of fine timber land, some of it the best in the United States. This transaction was also approved by the Forest Service.

It might be well also to recall the fact that a private company near Santa Barbara, Cal., was permitted to exchange 48,000 acres of land, worth 40 cents an acre, for very much more valuable land outside, in order that this treeless land might be included in a forest reserve. This transaction was also approved by the Forest Service.

I cite these few illustrations to show that the Forest Service in the past has had peculiar ideas, to say the least, about protecting the interests of the Government. I trust that the Secretary of Agriculture will not rely upon their recommendation in this transaction.

Mr. ADAMSON. Mr. Speaker—

POLITICAL ASSESSMENTS.

Mr. MANN. Mr. Speaker, I rise to present a privileged matter to the House. It is a matter of high privilege.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 256.

Whereas the act to codify, revise, and amend the penal laws of the United States, approved March 4, 1909, provides in section 118 that no Senator or Representative * * * shall directly or indirectly solicit or receive, or be in any manner concerned in soliciting or receiving any assessment, subscription, or contribution for any political purpose whatever * * * from any person receiving any salary or compensation from moneys derived from the Treasury of the United States; and

Whereas it is provided in section 119 of said act that no person shall in any room or building occupied in the discharge of official duties by any officer or employee of the United States mentioned in the preceding section * * * solicit, in any manner whatever, or receive any contribution of money or other thing of value for any political purpose whatever; and

Whereas it is alleged that the Democratic national congressional committee, composed in chief part of Members of this House, has directed to be sent, and it is alleged there has been sent, to the Democratic Members of this House, a letter stating that an assessment has been levied upon the Democratic Members of this House soliciting contributions from such Members for political purposes, and it is alleged that said letter has been signed by a Member of this House and delivered to other Members of this House in the Capitol Building and in the House Office Building, which letter is alleged to read as follows.

"SEPTEMBER 15, 1913.

"At a meeting of the Democratic national congressional committee, August 28, 1913, the following resolution presented by Senator THOMAS, of Colorado, was unanimously adopted:

"Resolved, That an assessment of \$100 be made on each Democratic Member of the House of Representatives and the United States Senate, to be paid to the chairman of the congressional committee as follows: \$25 at once; \$25 on or before January 1, 1914; balance on or before July 1, 1914.

"The committee is in debt to the extent of nearly \$4,000 and has no money in the treasury. The object of the foregoing resolution is to secure funds with which to pay the debts of the committee and begin the work of the approaching campaign.

"Checks should be made payable to Hon. WILLIAM G. SHARP, treasurer, and handed to _____, member of the committee from your State, who will make return thereof to the treasurer. The entire amount may be paid at once or in installments provided by the resolution.

"Trusting that you will favor the committee with an early payment, I beg to remain,

"Very sincerely, yours,

"FRANK E. DOREMUS, Chairman."

Mr. CRISP. Mr. Speaker, I move to refer the resolution to the Committee on Election of President, Vice President, and Representatives in Congress, and on that I demand the previous question.

Mr. MANN. The Clerk has not finished the reading. The next paragraph is very important, and I want the gentleman to hear it.

The SPEAKER. The Clerk will proceed with and finish the reading of the resolution.

The Clerk read as follows:

And whereas section 122 of said act provides that whoever shall violate any provision of section 118 or section 119 shall be fined not more than \$5,000 or imprisoned not more than three years, or both: Therefore

Resolved, etc., That a committee of seven Members shall be appointed by the Speaker to investigate and report to this House whether any Members of this House have been guilty of violating any of the provisions of the Criminal Code by soliciting or receiving or by being in any manner concerned in soliciting or receiving any assessment, subscription, or contribution for any political purpose whatever from any person receiving any salary or compensation from moneys derived from the Treasury of the United States, and particularly from Members of this House, to the end that it may be ascertained whether the Members of this House, constituting in part the lawmaking branch of the Government, are above the law.

Mr. CRISP. Mr. Speaker, I move to refer the resolution to the Committee on Election of President, Vice President, and Representatives in Congress, and on that motion I demand the previous question.

The SPEAKER. The gentleman from Georgia [Mr. CRISP] moves that the resolution offered by the gentleman from Illinois—

Mr. MANN. It should go to the Committee on Rules if it goes to any committee.

The SPEAKER (continuing). Be referred to the Committee on Election of President, Vice President, and Representatives in Congress, and on that he demands the previous question.

The question was taken, and the Speaker announced that the yeas had it.

Mr. MANN. Mr. Speaker, I ask for a division—I ask for the yeas and nays.

The SPEAKER. The gentleman from Illinois demands the yeas and nays. Those in favor of ordering the yeas and nays will rise and stand until they are counted. [After counting.] Evidently a sufficient number, and the yeas and nays are ordered, and the Clerk will call the roll. The vote is on the previous question.

The question was taken; and there were—yeas 207, nays 91, answered "present" 1, not voting 129, as follows:

YEAS—207.

So the previous question was ordered.

The Clerk announced the following additional pairs:

For the session:

Mr. METZ with Mr. WALLIN.

Mr. UNDERWOOD with Mr. MANN.

Until further notice:

Mr. ADAIR with Mr. WOODS.

Mr. DOUGHTON with Mr. VOLSTEAD.

Mr. CARLIN with Mr. VARE.

Mr. CLINE with Mr. SMITH of Minnesota.

Mr. BREMNER with Mr. POWERS.

Mr. TAYLOR of Arkansas with Mr. SELLS.

Mr. SISSON with Mr. ROBERTS of Massachusetts.

Mr. SHACKLEFORD with Mr. ROBERTS of Nevada.

Mr. OLDFIELD with Mr. PORTER.

Mr. LINTHICUM with Mr. PLATT.

Mr. KEY of Ohio with Mr. PAYNE.

Mr. LEVY with Mr. NELSON.

Mr. KETTNER with Mr. MAPES.

Mr. CLARK of Florida with Mr. MANAHAN.

Mr. MORGAN of Louisiana with Mr. LANGLEY.
 Mr. MOON with Mr. LANGHAM.
 Mr. McCLELLAN with Mr. LAFFERTY.
 Mr. LEWIS of Maryland with Mr. KINKAID of Nebraska.
 Mr. LEE of Georgia with Mr. HELGESEN.
 Mr. NEELEY with Mr. HAYES.
 Mr. BROWN of New York with Mr. SMITH of Idaho.
 Mr. EDWARDS with Mr. PROUTY.
 Mr. JOHNSON of South Carolina with Mr. GRIEST.
 Mr. HARRISON with Mr. GOOD.
 Mr. GREGG with Mr. FRENCH.
 Mr. COVINGTON with Mr. CAMPBELL.
 Mr. WILSON of Florida with Mr. CALDER.
 Mr. BOOHER with Mr. BURKE of Pennsylvania.
 Mr. BURKE of Wisconsin with Mr. ANTHONY.

The result of the vote was announced as above recorded.

The SPEAKER. The question is on agreeing to the motion to refer.

Mr. MANN. On that I demand the yeas and nays.

The SPEAKER. The gentleman from Illinois [Mr. MANN] demands the yeas and nays. Those in favor of ordering the yeas and nays will rise and stand until they are counted. [After counting.] Sixty-two gentlemen have arisen in the affirmative—a sufficient number. The Clerk will call the roll. Those in favor of the motion of the gentleman from Georgia [Mr. CRISP], to refer the resolution to the Committee on the Election of President, Vice President, and so forth, will, when their names are called, answer "yea"; those opposed will answer "nay."

The question was taken; and there were—yeas 208, nays 96, answered "present" 1, not voting 123, as follows:

YEAS—208.

Doremus	Kitchin	Patton, Pa.	Weaver
Doughton	Knowland, J. R.	Payne	Wilson, N. Y.
Edwards	Lafferty	Peterson	

So the motion to refer the resolution was agreed to.

The Clerk announced the following additional pairs:

Until further notice:

Mr. ALLEN with Mr. MANAHAN.

Mr. BOOHER with Mr. ANTHONY.

Mr. HARRISON with Mr. J. M. C. SMITH.

Mr. FRANCIS with Mr. PORTER.

Mr. MANN. Mr. Speaker, I am paired with the gentleman from Alabama, Mr. UNDERWOOD, who is detained in conference on the tariff bill. I voted "no." I desire to withdraw my vote and ask to be recorded "present." In this connection, if I may be permitted to say so, on the previous roll call I should have been paired, but I voted inadvertently.

The SPEAKER. Does the gentleman ask to have that roll call corrected?

Mr. MANN. If it is not too late.

The SPEAKER. The Chair thinks it is not too late to have it done by unanimous consent.

Mr. MANN. Then I ask unanimous consent.

The SPEAKER. The gentleman from Illinois [Mr. MANN] changes his vote on the last roll call, and also on this one, and desires to be recorded "present" on both. Is there objection?

There was no objection.

Mr. NORTON. Mr. Speaker, I desire to vote.

The SPEAKER. Was the gentleman in the Hall and listening when his name was called?

Mr. NORTON. No; I was not.

The SPEAKER. The gentleman does not bring himself within the rule.

The result of the vote was announced as above recorded.

PRINTING OF CURRENCY BILL.

Mr. GLASS. Mr. Speaker, I ask unanimous consent that 5,000 copies of the currency bill (H. R. 7837) as it passed the House be printed.

The SPEAKER. The gentleman from Virginia asks unanimous consent that 5,000 copies of the currency bill as it passed the House be printed. How does the gentleman desire it distributed?

Mr. GLASS. Through the folding room.

Mr. LANGLEY. Does the gentleman think 5,000 copies will be enough?

Mr. MANN. You had better send them to the document room.

Mr. GLASS. I intended to say the document room.

The SPEAKER. The gentleman from Virginia asks unanimous consent that 5,000 copies of the currency bill as it passed the House be printed and sent to the document room.

Mr. LANGLEY. Mr. Speaker, reserving the right to object, I want to suggest to the gentleman that he increase the number.

There is quite a demand in my district for copies of this bill, and 5,000 copies would give each Member only a very few copies. I believe the number ought to be more than 5,000.

Mr. SABATH. The demand is for the bill itself.

Mr. LANGLEY. There is some demand for the bill itself.

Mr. GLASS. I am glad to make the number 10,000. I ask unanimous consent that 10,000 copies be printed.

The SPEAKER. The gentleman asks unanimous consent that 10,000 copies of the currency bill be printed and placed in the document room. Is there objection?

There was no objection.

UNCONTESTED BRIDGE BILLS.

The SPEAKER. Has any other gentleman a privileged resolution or matter?

Mr. ADAMSON. Mr. Speaker, if no other brother has anything to offer, I wish to submit a small request. There are on the calendar, reported by the Committee on Interstate and Foreign Commerce, four uncontested bridge bills. I ask unanimous consent that they be considered at this time.

The SPEAKER. The gentleman from Georgia asks unanimous consent for the present consideration of four uncontested bridge bills. Is there objection?

There was no objection.

LEAVE TO PRINT.

The SPEAKER. Before we begin the consideration of those bills the Chair promised to recognize the gentleman from New York [Mr. TALCOTT].

Mr. TALCOTT of New York. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by printing an article from the Scientific American in relation to steel cars.

The SPEAKER. The gentleman from New York asks unanimous consent to print in the Record an article on the subject of steel cars. Is there objection?

Mr. BARNHART. Mr. Speaker, reserving the right to object—

Mr. BORLAND. I object.

The SPEAKER. The gentleman from Missouri objects.

LEAVE TO ADDRESS THE HOUSE.

Mr. HOWARD. Mr. Speaker, I ask unanimous consent that on Monday, after the routine business of the House has been disposed of, I be permitted to address the House for 40 minutes upon the postal savings-bank system as now upon the statute books.

The SPEAKER. The gentleman from Georgia [Mr. HOWARD] asks unanimous consent that on Monday, after the routine business is disposed of, he may have 40 minutes to address the House on the subject of postal savings banks.

Mr. BARNHART. Reserving the right to object, Mr. Speaker, I should like to inquire, if the conference report on the tariff bill should come in, would that be considered routine business?

Mr. MANN. It could not be acted upon on Monday.

The SPEAKER. It will have to go over for one day under the rule.

Mr. HOWARD. I made the request with that in view, Mr. Speaker.

The SPEAKER. The gentleman from Georgia asks unanimous consent that on Monday, after the disposition of the routine business, he may have 40 minutes in which to address the House on the subject of postal savings banks. Of course that would be subject to the priority of the conference report if unanimous consent should be given to consider it.

Mr. HOWARD. Certainly.

The SPEAKER. Is there objection?

There was no objection.

MARE ISLAND NAVY YARD.

Mr. J. R. KNOWLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by inserting an article by my colleague, Mr. CURRY, dealing with the situation at the Mare Island Navy Yard.

The SPEAKER. The gentleman from California asks unanimous consent to extend his remarks in the Record by printing an article by his colleague, Mr. CURRY, on the condition of affairs in the Mare Island Navy Yard. Is there objection?

There was no objection.

PRINTING AND BINDING FOR COMMITTEE ON EXPENDITURES IN DEPARTMENT OF JUSTICE.

Mr. BROUSSARD. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution which I send to the Clerk's desk and ask to have read.

The SPEAKER. The Chair will suggest that unanimous consent has already been given to the gentleman from Georgia for the consideration of certain bridge bills.

Mr. BROUSSARD. Mr. Speaker, I will state to the gentleman from Georgia, and I know he will have no objection to it, that the Committee on Expenditures in the Department of Justice has been having hearings, and there is no authority for printing these hearings.

Mr. ADAMSON. Mr. Speaker, I never object to anything in the world, only I am just trying here to pass some bills for my friend.

The SPEAKER. The gentleman from Louisiana asks unanimous consent for the present consideration of the resolution which the Clerk will report.

The Clerk read as follows:

House resolution 257.

Resolved, That the Committee on Expenditures in the Department of Justice is authorized to have such printing and binding done as shall be necessary for the discharge of the work of such committee during the Sixty-third Congress.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

REPORTS ON CURRENCY BILL.

Mr. GLASS. Mr. Speaker, I ask unanimous consent to have printed 5,000 copies of the report on the currency bill, to be distributed through the document room. (H. Rept. 69.)

The SPEAKER. The gentleman from Virginia asks unanimous consent to have printed 5,000 copies of the report on the currency bill. Does the Chair understand that that includes the views of the minority also?

Mr. GLASS. Yes.

The SPEAKER. Including the views of the minority—to be distributed through the document room. Is there objection?

There was no objection, and it was so ordered.

BRIDGE ACROSS TENNESSEE RIVER AT CHATTANOOGA, TENN.

The SPEAKER. The Clerk will report the first bridge bill.

The Clerk read as follows:

A bill (H. R. 6635) to authorize the county of Hamilton, in the State of Tennessee, to construct a bridge across the Tennessee River at Chattanooga, Tenn.

Be it enacted, etc., That the county of Hamilton, in the State of Tennessee, be, and it is hereby, authorized to construct, maintain, and operate a public bridge and approaches thereto across the Tennessee River, from Market Street, in the city of Chattanooga, Hamilton County, Tenn., on the south side of said river, to the north side of said Tennessee River, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 3. That the right to alter, amend, or repeal this act is hereby expressly reserved.

With the following committee amendments:

Page 1, line 5, strike out the word "public."

Page 1, line 6, after the word "street," insert the words "at a point suitable to the interests of navigation."

Page 1, line 9, after the word "river," insert the words "at a point suitable to the interests of navigation."

Page 2, line 3, after the word "six," insert: "Provided, That the said bridge shall be a fixed high bridge with a clear channel way of not less than 500 feet, and a clear headroom of not less than 100 feet above low water."

Mr. MOON. Mr. Speaker, I also offer the following amendment which I send to the desk and ask to have read.

The Clerk read as follows:

Amend the last committee amendment on page 2, at the end of line 6, by adding the words "or at water level or above, provided sufficient draws are used and maintained to permit the uninterrupted navigation of the river at all times, the draws to be constructed under the direction of the Secretary of War."

Mr. ADAMSON. Mr. Speaker, I have no objection to that.

Mr. MANN. Mr. Speaker, would it not be better not to adopt that amendment, and to leave out all of the committee amendments?

Mr. ADAMSON. I do not care.

Mr. MANN. And do what we have always done—leave it, under the general law, to the War Department. They will determine the type of bridge, and would undoubtedly require a bridge at low level with draws, unless it is preferred to build a high bridge without draws. Putting in these two provisions would be putting in two provisions that are directly contradictory to each other, and it would be almost sure to make confusion in the War Department.

Mr. ADAMSON. Mr. Speaker, I am in sympathy with the gentleman from Illinois, because that amendment was only put in at the suggestion of the War Department. It is unnecessary, because they have the discretion to manage it, anyway. I am willing, if agreeable to the gentleman from Tennessee, Judge Moon, to abandon the amendments.

Mr. MOON. Mr. Speaker, my whole purpose is to get rid of the proposed proviso, and if it does that I have no objection.

Mr. MANN. Mr. Speaker, the proviso is a committee amendment, and I ask for a separate vote on it.

The SPEAKER. The Clerk will report the first committee amendment.

The Clerk read as follows:

Page 1, line 5, strike out the word "public."

The amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Page 1, lines 6 and 7, after the word "street," insert the words "at a point suitable to the interests of navigation."

The amendment was agreed to.

The SPEAKER. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 1, lines 9 and 10, after the word "river," insert the words "at a point suitable to the interests of navigation."

The amendment was agreed to.

The SPEAKER. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 2, line 3, after the word "six," insert: "Provided, That the said bridge shall be a fixed high bridge, with a clear channel way of not less than 500 feet and a clear headroom of not less than 100 feet above low water."

Mr. COOPER. Mr. Speaker, do I understand that that proviso was inserted at the suggestion of the War Department?

Mr. ADAMSON. Yes; it was.

Mr. COOPER. For what reason?

Mr. ADAMSON. I suppose because they thought the fixed bridge would be better and more economical. But the gentleman from Tennessee [Mr. Moon] fears that it would not be. He wants it in the alternative, and the whole matter is within the control of the War Department.

Mr. COOPER. Would not the War Department have the power without this proviso?

Mr. MOON. Yes; they could make the bridge either way.

Mr. COOPER. If they have such power, what reason did they give for asking for this amendment?

Mr. ADAMSON. They did not give any reason at all; they just suggested the amendment. They have the power to do it without our putting in this amendment.

Mr. COOPER. It is evident that they wished to escape pressure on them in behalf of some other and, as they think, inferior kind of a bridge, and therefore they asked to have the law itself fix the style of bridge which, in their judgment, ought to be built there.

Mr. ADAMSON. Perhaps that is so.

Mr. MOON. We want the matter left as it is, so that under the law, after the proper facts are presented, the War Department can determine what kind of construction they will have.

Mr. ADAMSON. Sometimes pressure is a good thing.

Mr. COOPER. And sometimes it is not. I think that the officials of the War Department knew what they were doing when they requested that this proviso be made part of the law.

Mr. ADAMSON. The gentleman from Tennessee, Judge Moon, thinks this is not a good place to use pressure, and it is his home and his river.

Mr. COOPER. No; it is not his river; it belongs to the people of the United States.

Mr. MOON. I assure the gentleman from Wisconsin that I do not own the river and do not want to own it.

The SPEAKER. The question is on the last committee amendment.

The question was taken, and the amendment was lost.

Mr. MOON. Now, Mr. Speaker, I withdraw my amendment.

The SPEAKER. The gentleman from Tennessee withdraws his amendment. The question is on engrossment and third reading of the bill.

The question was taken; and the bill was ordered to be engrossed and read a third time, was read the third time, and passed.

BRIDGE ACROSS BEAUFORT RIVER, BEAUFORT COUNTY, S. C.

The next business on the House Calendar was the bill (H. R. 7472) authorizing the city of Beaufort, a municipality chartered under the laws of the State of South Carolina, to construct, maintain, and operate a bridge and approaches thereto across Beaufort River, in Beaufort County, S. C.

The Clerk read as follows:

Be it enacted, etc., That the city of Beaufort, a municipality chartered under the laws of South Carolina, its agents, successors, and assigns, be, and are hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across Beaufort River, in

Beaufort County, State of South Carolina, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. The Clerk will report the committee amendments.

The committee amendments were read, as follows:

Page 1, lines 3 and 4, strike out the words "the city of Beaufort, a municipality chartered under the laws of," and insert in lieu thereof the words "Beaufort and St. Helena Townships, Beaufort County"; line 4, strike out the words "its agents" and insert in lieu thereof the word "their"; line 6, after the word "thereto," insert the words "at a point suitable to the interests of navigation."

The question was taken, and the amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read as follows: "A bill authorizing Beaufort and St. Helena Townships, Beaufort County, S. C., to construct, maintain, and operate a bridge and approaches thereto across Beaufort River, in Beaufort County, S. C."

BRIDGE ACROSS LITTLE RIVER, LEPANTO, ARK.

The next business on the House Calendar was the bill (H. R. 7469) to authorize the construction, maintenance, and operation of a bridge across the Little River, at or near Lepanto, Ark.

The Clerk read as follows:

Be it enacted, etc., That the county of Poinsett, a corporation organized and existing under the laws of the State of Arkansas, its successors and assigns, be, and they are hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Little River, at or near Lepanto, Ark., at a point suitable to the interests of navigation, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

BRIDGE ACROSS BLACK RIVER, NEAR CORNING, CLAY COUNTY, ARK.

The next business on the House Calendar was the bill (H. R. 7470) to authorize the construction, maintenance, and operation of a bridge across Black River at or near the section line between sections 8 and 9, in township 20 north, range 5 east, being a short distance south and east of the town of Corning, Clay County, Ark.

The Clerk read as follows:

Be it enacted, etc., That George A. Booser, a citizen of Corning, Clay County, Ark., and his successors and assigns, be, and are hereby, authorized to construct, maintain, and operate a bridge, and approaches thereto, across Black River at or near the intersection of sections 8 and 9, in township 20 north, range 5 east, being a little south and east of the town of Corning, Clay County, Ark., at a point suitable to the interests of navigation, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

Mr. COOPER. I understand this bill gives a right to a private individual.

Mr. ADAMSON. Yes, sir. We have discussed that on the floor very often. I am opposed to it, but the sense of the House has always been to support such bills.

Mr. MANN. It is not only giving a right to a private individual, but it says to a "booser."

Mr. ADAMSON. Yes; that is mighty bad, but it may reform him.

Mr. MANN. We are giving to "A. Booser."

Mr. ADAMSON. Perhaps the War Department will keep sober and superintend the construction.

Mr. COOPER. Mr. Speaker, who is this private individual, and what is the purpose for which he proposes to erect this bridge over a navigable stream?

Mr. ADAMSON. My understanding is that it is simply—but here is the author of the bill, who will answer the question.

Mr. CARAWAY. Mr. Speaker, he is a manufacturer of wooden wares, who built a private tramway out to get a large body of timber.

Mr. COOPER. He has built what?

Mr. CARAWAY. A tramway to bring in timber for the purpose of manufacturing from a body of timber that he owns to a sawmill that he has in Corning.

Mr. ADAMSON. There is not much harm about that.

Mr. COOPER. No; but on general principles there is nothing to commend this practice of indiscriminately passing private bills for bridges over navigable streams without any opportunity for real discussion or investigation on the floor. Very valuable privileges can be given away in this manner, especially where they are granted to a private individual and his assigns.

Mr. GOULDEN. Mr. Speaker, I should like to ask the author of the bill whether this will interfere with navigation at all?

Mr. CARAWAY. Not at all; it is a stream not as wide as this room, and it is absolutely of no use for navigation at all.

Mr. GOULDEN. The erection of this bridge, then, will not interfere with navigation at all?

Mr. CARAWAY. Not at all. I took the matter up with the department, and have their approval.

Mr. ADAMSON. Mr. Speaker, we have got the entire War Department watching, guarding, and superintending the construction of this bridge. If we can not trust them on that, we had better turn them off and arrange some other kind of defense for the country.

The SPEAKER. Does the gentleman yield to the gentleman from Colorado?

Mr. ADAMSON. Certainly.

Mr. TAYLOR of Colorado. I want to ask the gentleman, the chairman of the committee, whether it ever occurred to him that it would be a simple act of justice, judging from the way it has been administered throughout the West, if all these corporations that are permitted to use the navigable waters of the United States for expensive and important bridges that are very valuable to them should be required to pay something for the use of them?

Mr. ADAMSON. I think the Constitution authorizes the Ways and Means Committee to tax everything and everybody they want to tax. I have no objection to that if the gentleman wants to go into it. I do not understand the spasmodic, senseless, modern effort to make special gouges into all institutions, and especially new enterprises, discriminating against the new ones in favor of those old and established.

Mr. TAYLOR of Colorado. That is the reason, Mr. Speaker, I call the gentleman's attention to it. There is a spirit shown in this House all the time to gouge the West. Whenever we want to develop our country, whenever we want to allow a homesteader to get a home, whenever we want to permit him to dig a ditch or to use the waters of our own nonnavigable streams for any purpose, to irrigate his land, there seems to be about three-fourths of the membership of this House who want to tax us for it or gouge the State or the settler and make him pay a royalty into the Treasury of the United States for trying not only a new enterprise, but when it is for the benefit and for the upbuilding of this entire country. It seems to me that if beef and pork should go up to \$1 a pound and flour to \$25 a sack, it would only be a just retribution on the conservationists of this country who are so persistently retarding the settlement and development of the West and driving our people to Canada for homes and treating everybody who wants to get a home under our flag as if he were a criminal. [Applause.] The trouble is that the high cost of living, which is in large part caused by the policy of withdrawing and withholding public lands from settlement and cultivation, does not fall heavily upon the wealthy theorists who cause this condition.

Now, I object to anybody gouging any State or any legitimate industry, but it is an illogical and unjust discrimination for Congress to grant without a cent of charge these rights, which are worth millions of dollars, to large corporations, and whenever we of the West try to develop any portion of our country we are met here with a howl about conservation and are charged with trying to loot the public domain; and you insist that Uncle Sam is granting something valuable that ought to be paid for. It does seem to me that we ought to improve and develop our country without penalizing any part of it.

Mr. COOPER. Mr. Speaker, I ask the gentleman from Colorado if the Congress of the United States, with practical unanimity, did not vote the irrigation law onto the statute books, and thus add millions upon millions of dollars to the wealth of the West?

Mr. TAYLOR of Colorado. Yes; and Uncle Sam does not pay a dollar of that money.

Mr. COOPER. And does the gentleman think that anybody was very seriously gouged by that beneficial legislation?

Mr. TAYLOR of Colorado. As a matter of fact, every dollar of that money was and is being collected from the settlers of the West, and it is all paid back into the Treasury of the United States. You spend millions of dollars upon your rivers and harbors, and you use those rivers and harbors absolutely free, and we of the West help pay all that money, and none of it ever comes back into the Federal Treasury, and we get no use or direct benefit of it.

Mr. COOPER. On the contrary, it is the theory of river and harbor appropriations that by improving transportation facilities we reduce the cost of transportation, and thereby the cost of the things that are carried, and thus directly benefit all the

people of the country, including the gentleman from Colorado and his constituency whom he says have been gouged.

Mr. TAYLOR of Colorado. That is a very remote theory, but theoretically the whole country is benefited by the developing of the West, and yet we foot the bills ourselves, and we do not come to Congress to get the money to do it with. We pay back every dollar of the reclamation fund.

Mr. ADAMSON. Mr. Speaker, this is a very interesting colloquy which is going on while I am on the floor. I like it very much. I have a great deal of sympathy with all that the gentleman from Colorado has said, and if he wants any bridges, or dams, or lighthouses on Pikes Peak, or anywhere else in the altitudinous land of Colorado, and will show that it will not interfere with navigation and will promote commerce, our committee will never discriminate against him on the face of the earth. But while this interesting colloquy is going on this sawmill is stopped, the logs are not being hauled across the stream, and the citizens who want to populate the alluvial bottoms of Arkansas are not able to build their houses. And I want to vote on this bill.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. ADAMSON, a motion to reconsider the vote by which the several bills were passed was laid on the table.

ADJOURNMENT.

Mr. MANN. Whose business is it to move to adjourn?

Mr. FOSTER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 58 minutes p. m.) the House adjourned, pursuant to the order previously made, until Monday, September 22, 1913, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. CLARK of Florida, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 7875) to increase the limit of cost of the public building at Augusta, Ga., reported the same without amendment, accompanied by a report (No. 77), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 7465) granting a pension to William H. Townsend, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. TAVENNER: A bill (H. R. 8363) providing for an advisory referendum by the people of the District of Columbia on certain questions relating to municipal self-government and representation in Congress; to the Committee on the District of Columbia.

By Mr. FERRIS: A bill (H. R. 8364) to authorize the President to provide a method for opening lands restored from reservation or withdrawal, and for other purposes; to the Committee on the Public Lands.

By Mr. SMITH of New York: A bill (H. R. 8365) to approve of the celebration of the one hundredth anniversary of the treaty of Ghent; to the Committee on Foreign Affairs.

By Mr. GOODWIN of Arkansas: A bill (H. R. 8366) to create the Red River Commission and to define its duties; to the Committee on Rivers and Harbors.

By Mr. GREEN of Iowa: A bill (H. R. 8367) to amend the act to regulate commerce as amended; to the Committee on Interstate and Foreign Commerce.

By Mr. KETTNER: A bill (H. R. 8368) to provide for the completion of certain homestead entries for lands within the abandoned Mount Whitney Military Reservation; to the Committee on the Public Lands.

By Mr. ASHBROOK: Resolution (H. Res. 255) allowing the Committee on Enrolled Bills a clerk at the rate of \$6 per day for the remainder of the Sixty-third Congress; to the Committee on Accounts.

By Mr. MANN: Resolution (H. Res. 256) providing for the appointment of a committee to investigate and report whether

Sam!

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

Also, a bill (H. R. 8404) granting a pension to Thomas G. Stevens; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Also, papers to accompany bill (H. R. 3308) granting a pension to Ralph E. Henderson; to the Committee on Pensions.

Also, papers to accompany bill (H. R. 3308) granting a pension to Ralph E. Henderson; to the Committee on Pensions.
